1. Justice in the ANE. In the ANE the gods Shamash and Enlil were regarded as the gods of justice. They appointed kings to act as their representatives in the administration of justice (*ANET*, 159; 164). Among their important responsibilities was to act as guardians of justice especially as it related to the poor, the widow, the orphan, the alien, and the oppressed people (Whitelam 1979: 17–19). This explains why King Urukagina of Lagash reported to his god that, at his accession to the throne, he immediately enforced justice and equity (Akk *mēšerum ukinātum*) by declaring a general amnesty for the poor and by rescinding social and economic constraints which were oppressing the common people and driving them into poverty. In Israel a general amnesty was declared every seven years, during the period referred to as the year of solemn rest (Heb *šĕnat šabbātôn;* Lev 25:5). This was a year of the dropping of debts and obligations (Heb *šĕnat haššĕmittâ;* Deut 15:9). Debtors and slaves were freed and had a new lease on life. The sabbatical year also required that land tilled for six years be left fallow during the seventh year. The plot with its fruit trees and vines reverted to God, who repossessed it for the common good of all the people and animals. For this reason, harvesting the yield of fallow land was prohibited by law. But sojourners, widows, orphans, and the poor in general were free to take the food as long as they did not hoard any for future consumption. In Ugaritic literature, the Kirta epic provides a good example of the role of the king as the guardian of the rights of the disadvantaged, that is, the downtrodden, the widow, and the orphan (*CTA* 16.6.45–57; cf. 2 Sam 15:1–4).

2. Administration of Justice in Israel. The Israelites, like the people of Mesopotamia, regarded Yahweh as the God of justice (Heb *mišpāṭ;* Gen 18:25). The earthly judges (Heb *šôpĕṭîm*) and kings were appointed by and answerable to him (Deut 1:16, 17). This is the reason why King Solomon prayed to God for wisdom (Heb *ḥokmāh*) to rule *(špṭ)* the nation of Israel (1 Kgs 3:19). At any rate, God remained the judge *par excellence,* the *šôpēṭ kōl hā-āreṣ* (Gen 18:25) to whom the oppressed people could directly call whenever they were confronted with injustice (Judg 11:27; Ps 82:8; cf. Gen 16:5). Kings were regarded as Yahweh's representatives and their chief role was to administer justice in the land as his deputies (2 Sam 8:15; cf. 1 Kgs 3:28).

3. Justice and the Rights of the Poor. As in Mesopotamia and Ugarit, kings of Israel were responsible for safeguarding the rights of the poor, the widow, the orphan, and the sojourner (Ps 72:1–4). There are many instances in the OT where these classes of people are mentioned with reference to justice. In Exod 22:21–27, the people of Israel are strongly warned against wronging strangers and the poor in general. If

the poor and the strangers were oppressed and they in turn cried *(ṣ‹q)* to God, the compassionate king of Israel, he would listen and mete out retribution to the oppressors (cf. Deut 10:18; 14:29; 16:11; Ps 146:9; Isa 1:17; etc.). In Ps 82:1–8, God is portrayed as taking the radical step of deposing the gods (i.e., rulers) from their divine and immortal status to that of humans because of their dereliction of judicial duty as it applied to the poor, the widow, and the orphan. OT ethics aimed at an egalitarian society where every Israelite was compassionate enough to care for those in need. When there was a complete breakdown of justice, the Israelites expected God to intervene directly and restore peace and justice (Ps 82:8). Because Yahweh, the holy one of Israel, was their Lord, it behooved the Israelites to reflect Yahweh's righteousness by being just (Deut 1:16–17).

J. The Teaching of OT Ethics

Several classes of people were entrusted with the responsibility of teaching ethical norms to the people, beginning with the children.

1. Parents as Moral Teachers. OT ethics was to begin at home, where the parents were expected to teach the Torah to their children (Deut 6:1–4). This is the reason why Yahweh had chosen (Heb *yd‹*) Abraham so that he might charge (Heb *yĕṣawweh*) his children and his household to carry out the way of the Lord (Gen 18:17–19). The Torah was to be taught not by word only but by practice and example (Deut 6:1–19). The children, after observing their parents' diligent observance of the law, would be provoked to ask the question: "What is the meaning of the testimonies and the statutes and the ordinances which the Lord our God has commanded you?" That is the time when the children are ready to listen and learn to observe the statutes, ordinances, and precepts prescribed in the Torah (Deut 6:17, 20–25). The major reason for Yahweh's displeasure with Eli was that he had failed to teach his children the right ethical standards (1 Sam 3:12–24). Several instructions in the book of Proverbs reveal that parents played a vital role in the teaching of children (Proverbs 2–8). The role parents played in the teaching of the Torah emphasizes the reason why the family unit was considered to be ordained by God at the creation of the universe and why its preservation was to be guaranteed.

2. Judges and the Torah. During the time of the tribal league, the Deuteronomistic Historian attributes the administration of justice and the teaching of the Torah to the so-called judges (Judg 2:17–19). Deborah, who is presented as both a prophetess (Heb *nĕbî›â*) and judge, is portrayed as moving about Israel deciding (Heb *špṭ*) cases. Samuel, who was also a judge, priest, and prophet, moved in a circuit between Ramah, Gilgal, and Mizpah judging *(špṭ)* cases (1 Sam 7:15–17). The judges *(šôpĕṭîm)* served as governors, administrators of justice, and teachers of the Torah. This explains why, during their tenure of office, the Israelites lived according to the will of God and worshipped God alone. Apostasy followed the death or absence of the judge (Judg 2:18–19).

3. Ethical Teaching of the Sages. The sages taught the proper way of conduct to the children of aristocratic families for pay. Their teaching was based on wisdom acquired by education and confirmed by observation and experience (Job 8:8–10; cf. Eccl 7:5; 9:17–18). The sages, like the Deuteronomist who came after them, believed that Yahweh's retribution was administered according to discernible rules. A person's behavior brought with it God's reward or punishment in this world (Job 8:3–6). The key to success was summed up in the proverb: "The fear of the Lord is the beginning of knowledge …" (Prov 1:8). In Matthew's gospel it was explicitly stated that those who seek God's rule and his righteousness first would have all their material needs satisfied (Matt 6:33). OT ethics is clearly theocentric.

4. Priests and Ritual Law. The priests as well as the prophets supervised and gave advice on matters concerning the sacrifices and other ritual acts of worship which were performed in the holy places (1 Sam 9:12; cf. 2:27–30).

5. Classical Prophets and Ethical Conduct. The classical prophets interpreted the Torah in a radically new way. Basing their message on the one universal God who directed historical events, the classical prophets, beginning with Amos and Hosea, emphasized several attributes of Yahweh which had not been previously stressed. Worship and ritual acts which were performed by people who were devoid of justice were not acceptable to the holy God of Israel (Amos 5:21–24; Mic 6:6–8). Unless the Israelites practiced righteousness (Heb *ṣĕdāqâ*) and good neighborliness among themselves as a covenant community, God

would punish them for their iniquities (Amos 2:6–8). True worship of Yahweh demanded a change of heart in those who believed in the holy God (Jer 31:33). This would be evidenced by their showing justice toward the poor, who were being crushed economically by the unscrupulous rich (Amos 4:1–3). Whereas, according to the sages, luxury indicated God's favorable retribution and poverty his punishment for sin (Job 8:1–22), the classical prophets turned the tables and indicated that God was not with the rich but was on the side of the poor and the oppressed (Jer 22:16; Ezek 16:49). See also POOR, POVERTY (OT). The prophets also confronted the Israelites who were constantly transgressing against the covenant, exhausting Yahweh's kindness (Heb *ḥésed;* Hos 3:1–5). But because the people of Israel had forgotten what the Lord their God had done for them (Hos 11:3), Yahweh had no choice but to punish them (Hos 11:5–6). The people of Israel could avoid the punishment of God by returning to him (Hos 14:1–2; cf. Amos 5:4–6). For further discussion, see *ROTT*.

NEW TESTAMENT

In the NT, morality finds its setting in religion. The concept of NT ethics, as well as ethics in general, can be variously defined and must be analyzed in several areas.

A. Definitions of Ethics
B. Sources of NT Ethics
C. Approaches to NT Ethics
    1. Christian "Code"
    2. Universal Principles
    3. Encounter with the Living God
    4. Contextual Response in Love
D. Jesus and the Synoptic Gospels
    1. Jesus' Preaching of the Kingdom
    2. Mark: Suffering Discipleship
    3. Matthew: Jesus' Higher Righteousness
    4. Luke: Forgiveness and Compassion
E. Exhortation in the Pauline Tradition
F. Themes in NT Exhortation
    1. Worship
    2. Relationships within the Community
    3. Sharing Wealth
    4. Sexual Morality
    5. Love of Enemies
    6. Relationship to the World

A. Definitions of Ethics

The philosopher Aristotle insisted that ethics, the study of correct human action, was a form of "practical knowledge." Its intention was to enable persons to conduct their lives and those of their communities well by choosing actions appropriate to the specific circumstances at hand on the basis of

reasoned deliberation (*Eth. Nic.* 1.3.1095ab; 2.1.1103b27–29). Stoic and Epicurean philosophers from the NT period argued that the study of philosophy developed moral character by converting individuals from lives dominated by passions and false desires to lives of self-control: "Certainly it teaches one to be above extravagance; it trains one to have a sense of shame, and to control one's tongue, and it produces discipline, order and courtesy, and in general what is fitting in action and bearing" (Musonius Rufus, *That Kings Should Also Study Philosophy* Fr. 8; Malherbe 1986: 31).

In the Hebrew Scriptures the Torah defines how persons should conduct themselves as members of a people living in covenant with God (Exod 20:1–24:8; Deut 10:10–30:20). The prosperity of the nation in the land which Yahweh would give them is seen as a blessing for wholehearted devotion to the Lord and faithful obedience to the commandments and ordinances of the Torah. Justice is not discovered through the reasoned deliberation of morally serious persons as in Aristotle. Rather justice is found through the efforts of persons and the community to enact "what the Lord requires" as made known through the Torah (Isa 1:12–17; Mic 6:8). Job 31 describes the actions of an individual who is just.

The philosophical tradition would agree with the biblical view that the law which establishes a community is its basic expression of justice. Law understood in the broad sense as all that a community of persons holds to be good shapes the habits of individuals so that they will act justly. Both traditions agree that virtuous action is the only way in which humans can attain happiness and well-being. Both traditions see that for the most part human beings do not live and act justly. A conversion is required. The Hebrew prophetic tradition addressed its summons to repentance and renewal to Israel. Failure to live according to the covenant stipulations, though attributed to the actions of individuals, is a failure that touches the whole people. It represents breaking an obligation owed to God. God rightly punishes the people by removing their prosperity or allowing Israel to fall to her enemies. However, punishment is moderated by God's faithful love for the people who should repent and return to the Lord (Hos 11:1–14:9).

Both the imperative to "do justice" as a religious obligation, a way of living in relationship to God, and the call for communal repentance and reform are lacking in the philosophic tradition. Though the philosopher may address kings and persons from the local aristocracy, whose behavior has an impact on the lives of all persons subject to them, the philosophic appeal is made to individuals. Philosophers spoke of themselves as "physicians" of the soul which must be governed by reason rather than passions and false opinion. Since the "hardships" of the philosophic life lead most people to return to their old ways of living, the philosopher constantly exhorts people to virtue: "… never deserting his post of duty, but always honoring and promoting virtue and sobriety and trying to lead all people thereto, partly by persuading and exhorting, partly by abusing and reproaching, in the hope that he may thereby rescue somebody from following low desires and intemperance" (Dio Chrys., *Or.* 77/78.38; Malberbe 1987: 56).

Jews who lived in cities where the education, government, and culture were shaped by Greek thought and institutions often sought to show that their tradition embodied the best of the ethical insights of Greek thought. Writers emphasized aspects of the Torah most likely to win a hearing from sympathetic gentiles: (a) the superiority of monotheism to pagan idolatry; and (b) the high standard of sexual morality among Jews, including opposition to homosexuality, adultery, rape, abortion, and the exposure of children. Jews avoid all forms of divination and astrology; are free from greed and generous in aiding the poor, "fulfilling the word of the great God, the hymn of the Law, for the Heavenly One gave the earth in common to all" (*Sib. Or.* 3.218–47). A counterpart to the Stoic ideal of the "passionless" soul could be found in the single-minded person: "the single-minded person does not covet gold; does not overreach his neighbor; does not long for many luxuries; does not delight in varied clothing; does not desire to live a long life but only waits for the will of God" (*T. Iss.* 4.2–6).

While the formative traditions of the Greek polis and the Hebrew covenant presumed stable, homogeneous communities that would "approve" a single vision of justice, the upheavals of the Hellenistic and Roman periods had fractured the established communities. Persons migrated to cities in which they were outsiders or, like the Jews of Alexandria, formed an organized political minority *(politeuma)* within a city-state *(polis).* Jewish attempts to attain citizenship in the polis were rejected and even led to episodes of violence. The famous Stoic philosopher Epictetus (ca. 55–135 C.E.) had been the

slave of Nero's freedman and secretary. Banished from Rome with other philosophers in 89 C.E., he took up residence in Nicopolis, where he spent the rest of his life teaching Stoic philosophy.

The philosophic response to this social upheaval was to emphasize the "wise person" as a "universal citizen," one who transcends the accidents of birth or fate. Freedom lies within reach if one learns to control the mind and the passions; "And how shall I free myself?—Have you not heard many times that you ought to eradicate desire utterly; direct your aversion to things that lie within the sphere of the moral purpose, and those only; that you ought to give up everything, your body, your property, your reputation, your books, turmoil from office, freedom from office? For if once you swerve aside from your course, you are a slave, you are a subject" (Epict., *Diss.* 4.4.33). The tension evident in Epictetus' definition of freedom between individual self-sufficiency and a life of involvement in public affairs was resolved by those philosophers, like the Epicureans, who advocated withdrawal from public and civic life. Epicureans formed structured communities of "friends" who admonished and supported one another. Their opponents insisted that virtue required willingness to participate in public affairs. Quietism and withdrawal are simply marks of "low status" and "cowardice," not virtue.

Philo of Alexandria pictured Moses as one of the great lawgivers of humanity (*Vita Mos.* 2.12–20). But Philo's allegorical interpretations of the Law transformed the universal validity of Mosaic lawgiving from the external realm of public affairs to the internal one of education for the soul. Just as the "wise person" of Stoic philosophy lived in harmony with the eternal law of nature, so Mosaic law guides the soul to a life of reason in harmony with universal law. Then, drawing upon Platonic tradition, Philo argued that the soul is capable of attaining a vision of God (*Vita Mos.* 1.48; 75–76; *Praem* 24–56).

The turmoil of the 2d century B.C.E. in Palestine produced a different form of "withdrawal" among some Jews, withdrawal into sectarian groups which sought to purify both themselves and a land defiled by foreign occupation, customs, and ideas. The Essene writings discovered at Qumran have provided a fascinating glimpse into the life of a sectarian group which also had adherents in Egypt. Philo treats the Essenes as examples of the superior virtue mediated by Moses (*Quod Omn.* 75–91). Their own community rules and books of biblical interpretation show us a community of the "new covenant" which sought perfect obedience to the will of God: "All those who freely devote themselves to his truth shall bring all their knowledge, powers and possessions into the Community of God, that they may purify their knowledge in the truth of God's precepts and order their powers according to his ways of perfection and all their possessions according to his righteous counsel" (1 QS 1: 11–13).

The Essene writings picture the world and the struggle for moral perfection in apocalyptic terms. God has permitted the world to be torn apart in the conflict between powers of light and darkness. But this dualism is part of God's hidden plan in which God knows those who will become "children of light": "The Master shall instruct all the children of light and shall teach them the nature of all the children of humanity according to the kind of spirit which they possess, the signs identifying their works during their lifetime, their visitation for chastisement, and the time of their reward. From the God of knowledge comes all that is and shall be. Before ever they existed, he established their whole design, and when as ordained for them, they came into being, it is in accord with his glorious design that they fulfil their work. The laws of all things are unchanging in his hands, and he provides them with all their needs. He has created humanity to govern the world, and has appointed for them two spirits in which to walk until the time of his visitation: the spirits of truth and falsehood. Those born of truth spring from a fountain of light, but those born of falsehood spring from a source of darkness. All the children of righteousness are ruled by the Prince of Light and walk in the ways of light; but all the children of falsehood are ruled by the Angel of Darkness and walk in the ways of darkness" (1QS 3:13–21).

This conflict between light and darkness will soon be brought to its end at the judgment. Consequently, persons are called to separate themselves from others who are walking in darkness: "They shall separate from the congregation of people of falsehood and shall unite with respect to the Law and possessions, under the authority of the sons of Zadok, the Priests who keep the Covenant, and of the multitude of persons of the community who hold fast to the Covenant" (1QS 5:1–3). Isaiah's summons to prepare a path for the Lord in the wilderness was being realized in this community: "This (the path) is the study of

the Torah which he commanded by the hand of Moses, that they may do all that has been revealed from age to age, and as the prophets have revealed by his Holy Spirit" (1QS 8:12–17). Despite their withdrawal to create a new community of obedience, purity, and holiness, the lists of virtues and vices found in the community rule might be shared with any moral teacher of the time: "spirit of humility, patience, abundant charity, unending goodness, understanding, intelligence … greed, slackness and pride, falseness and deceit, cruelty and abundant evil, ill-temper and much folly and brazen insolence, abominable deeds in a spirit of lust and ways of lewdness in the service of uncleanness, a blaspheming tongue, blindness of eye and dullness of ear, stiffness of neck and heaviness of heart …" (1QS 4:3–11).

Such lists indicate there was widespread agreement about the type of behavior that was considered "good" even between groups which disagreed about how persons came to lead a virtuous life. The Essene requires life in a strictly ordered community devoted to study of the Torah. The philosopher requires a life of reasoned analysis and self-control. For the Essene, the urgent imperative behind the moral ordering of human life lies in the impending judgment by God. For the philosopher, however, the moral life itself renders a person like the gods: "Therefore as God, through the possession of these virtues, is unconquered by pleasure or greed; is superior to desire or envy, and jealousy; is high-minded, beneficent and kindly (for such is our conception of God), so also a human being in the image of Him, when living in accord with nature, should be thought of as being like Him, and being like Him, being enviable; and, being enviable, he would forthwith be happy, for we envy none but the happy" (Musonius Rufus, Fr. 17; Meeks 1986: 47).

A sense of cultural agreement about the norms of ethical behavior can be grounded in the Stoic view of "reason as operative in nature" or in the Jewish vision of all creation existing under the sovereign rule of God. Such agreement makes it possible for preachers from one school to appeal to common views accepted by their hearers and even to adopt ethical arguments from other groups. The combination of a Platonic view of the soul's progress toward a vision of the divine and an ethic that is shaped by a Stoic understanding of reason and the passions such as we find in Philo is not uncommon in this period. Christians presume that their decent behavior will influence outsiders (1 Pet 2:12). Conscience enforced common moral norms by castigating the wicked with inward pain (Wis 17:11; *T. Reu.* 4:2–4). The self-scrutiny that was part of an education in the moral life might intensify the warnings of conscience. Philo treats the Sabbath rest as an occasion for such self-analysis: "… a seventh day holy, abstaining from other work that has to do with earning a living, and giving their time the one sole object of philosophy with a view to the improvement of character and submission to the scrutiny of conscience. Conscience, established in the soul like a judge, is never abashed in administering reproofs, sometimes employing sharper threats, sometimes gentler admonitions, to guard against a similar lapse in the future, when the misconduct seemed unintentional and the result of want of caution" (*Op.* 128). Paul can argue that the harsh accusations of their "weak conscience" might cause Christians eating meat that has been used in an idol sacrifice to lose their new faith, even though eating such meat in a nonritual context is not an offense against the Lord (1 Cor 8:1–13).

B. Sources of NT Ethics

The NT does not have to create legal or ethical structures to guide the lives of persons. We do not find in its pages a legal interpreter and community founder like the Essene Teacher of Righteousness. Nor do we find there a philosophic rendering of the Torah as in Philo. We are not told how to govern cities or what sort of education is required if the soul is to progress in virtue. However, most of the NT is concerned with ethical exhortation. Its readers are being admonished to live in a way that will be pleasing to a God who stands in judgment on human activity (Matt 7:24–27; 1 Thess 1:10; 3:12–4:1). Conversion to Christianity can be described in terms of the moral reform and conquest of passions advocated by philosophers (1 Pet 4:2–5).

Since the God who judges human conduct is the one who has spoken through the Scriptures, they remain a guide to how human conduct is evaluated by God even though the Christian community is not devoted to Torah observance (Matt 5:17–20; Jas 2:8–13). Its stories served as *exempla* in ethical exhortation (1 Cor 10:1–13; Heb 12:14–17; 1 Pet 3:5–6). The Synoptic Gospels represent Jesus' conflicts

with the Pharisees over interpreting the Law as reflecting a higher standard of obedience to God's will than that made possible through the interpretations of the Law advocated by the scribes and Pharisees (Mark 7:1–13; 10:2–12). In some instances, such as the critique of the Pharisees for "manipulating" the Torah to adjust to human concerns rather than the will of God, Jesus' remarks parallel those of the Essenes, who also argue that the immediacy of God's judgment requires a higher standard of human obedience. However, neither Jesus nor his disciples engage in the sustained study and interpretation of the Law which form the basis of that radical obedience among the Essenes.

Unlike the scribes and Pharisees, who gathered students around interpretation of the Torah, Jesus summons disciples from the populace at large (Mark 1:16–20; 2:13–14). His preaching is directed to the people as a whole rather than to persons who will become specialists in the Torah. He uses parables and proverbial sayings (Luke 6:39, 40) which are similar to the use of parable and proverb in Jewish wisdom traditions (Luke 14:34–35 and Job 6:6). Sayings about worthless servants were frequently used in exhortation (Luke 17:7–10 and *m. Abot* 1:3: "Be not like slaves that serve the master for the sake of receiving a bounty; be like slaves that serve the master not for the sake of receiving a bounty but let the fear of heaven be upon you"; and maxims on the treatment of servants such as Sir 33:24, 31). Some of Jesus' sayings have the pragmatic character of wisdom exhortations which seek to instruct one on how to get along in the conflicts with others that make up human life (Sir 8:2; Matt 5:25–26).

Other parables and sayings carry the overtones of apocalyptic warning. The present generation must repent before God's judgment comes. Yet most people will remain deluded by evil and fail to respond to the prophetic warning. Instead they malign God's messengers (Matt 11:16–19, 20–24; 12:33–37, 38–42). Just as the Hebrew prophets castigated the priests for leading people away from justice and bringing certain condemnation on the nation (Jer 5:30–31), Jesus contends with the Pharisees, who are pictured as "blind guides" (Matt 15:10–13). God uproots the unfaithful vine (Isa 5:1–7) or throws out the wicked vineyard tenants who hope to profit by rejecting God's messengers (Matt 21:33–44). Divine judgment plays a role in ethical exhortation in the NT. Faithful Christians are assured of reward or vindication for their suffering when the Lord comes (1 Thess 4:13–18; Phil 3:8–11; 1 Pet 1:3–9; Rev 6:9–11; 21:1–8). They are exhorted to continue lives of virtue, worship of God, and mutual love in view of the coming judgment (1 Thess 5:1–24; Phil 3:12–21; 1 Cor 7:25–31; Eph 5:6–20; Heb 10:19–31; 12:14–29; Rev 2:1–3:22). Those who remain under the domination of sin or who have been enemies of the Christian message will be condemned at the judgment (e.g., 1 Thess 2:14–16; Rom 1:18–2:16; Phil 3:18–19; Jas 5:1–7; Rev 19:1–4, 11–21; 20:11–15).

Jewish apocalyptic writing also contributed to the picture of human bondage to sin and the renewing activity of God's spirit necessary to break free of an evil age that appears in the NT. *1 Enoch* 6–36 contains mythic traditions which appear to have developed in the last two centuries B.C.E. Evil came to dominate the world when the fallen angels of Genesis 6 seduced human women. The angels taught them magical, medicinal, and cosmetic arts that led to deception. They are the cause of passion and sexual immorality. The offspring of this polluted union, the giants of Genesis 6, are the cause of bloodshed, violence, and oppression. Until God eradicates the offspring of this evil from the earth, righteousness and truth cannot flourish (*1 En.* 10:8–22). The whole earth is corrupted and suffers the effects of sin (Rom 8:19–25). The righteous see their suffering as part of the experience of living in a world dominated by sin. When the Lord has cleansed and purified the earth, human toil and anguish will come to an end. A time of abundant harvest will ensue: "And in those days the whole earth will be worked in righteousness … and every seed that is sown on her, one measure will yield a thousand. And you cleanse the earth from all injustice, and from all defilement and from all oppression, and from all sin and from all iniquity … And all the children of the people will become righteous, and all nations shall worship and bless me; … And the earth shall be cleansed from all pollutions and from all sin and from all plague, and from all suffering; and it shall not happen again that I shall send [these] upon the earth" (*1 En.* 10:17–22).

The moral problem of living in such a world is encouraging the righteous minority to persevere. Life may be described as a choice between two spirits (as in the passage from 1QS 3 above) or as a choice between walking in one of the two ways, righteousness or wickedness, life or death (*1 En.* 94:1–5; Matt

7:13–14; Rom 8:1–8). Woes against the wicked and blessings pronounced on the righteous serve to consolidate such teaching (*1 En.* 94:6–9; 96:1–97:10; 98:9–99:2, 11–16). The apocalyptic view of evil, its demonic embodiment and the cosmic dimensions of its corruption, carries with it two convictions about the possibilities for establishing justice. First, in the world as it exists righteous persons will always be a minority whose lives seem irrational to the wicked. Even the righteous could not persevere without God's help. Second, cleansing the earth of injustice requires God's intervention. The righteous may establish sectarian groups in which they are able to pursue justice, but no human efforts can overcome the pervasive effects of evil. Apocalypses frequently presume that the "last days" in which the addresses are living will be characterized by particularly violent outbursts of evil aimed at destroying the righteous (*1 En.* 100:1–6; Mark 13:5–8, 14–23; Rev 13:11–18). The disorder of the world is too great for human reasoning to advance any claims to discovering the truth (*1 Enoch* 42; Rom 1:18–31).

When the NT adopts the rhetorical forms and content of Greco-Roman philosophical ethic, it does so within the framework of biblical and apocalyptic images of salvation which negate a central claim of the philosopher-preacher. Human reason properly schooled by philosophic conversion is not the source of happiness, justice, or truth. The "renewal of mind" (Rom 12:2) which makes Christian ethical exhortation possible comes through God's saving activity.

However, the general moral consensus of the Greco-Roman world does enable NT writers to draw on ethical material from popular philosophic preaching. For some, the gospel picture of Jesus accompanied by a band of disciples as he wandered from town to town preaching his message would easily be assimilated to that of wandering Cynic philosophers. Paul also makes use of Cynic themes in picturing his own missionary efforts. Like Paul, itinerant philosophers could well emerge from the artisan class, who abandoned their trades to take up the philosopher's cloak. The philosopher is "God's gift" to awaken humanity. A true philosopher will speak boldly even when afflicted rather than flatter the audience. A philosopher might warn the audience of the hardships faced in adopting the philosophic life. The Cynics were well known for their opposition to the conventions of a society which cares only for its own pleasures and remains blind to the pains which stem from their pursuit (1 Thess 2:1–12; Malherbe 1987).

Other elements in early Christian preaching would have reminded the audience of Epicurean circles. Christians formed small groups which met in private households, spoke of one another in affective terminology (more usually with kinship terms like "brother" and "sister" than the Epicurean "friends"), and engaged in mutual exhortation. Paul also commends a quietist withdrawal from the world of public affairs (1 Thess 4:11–12). Paul may have been sufficiently sensitive to the criticisms of philosophic withdrawal to insist that the Christians whose "retirement" involved continuing their trades would gain the respect of outsiders. Instead of using Epicurus' description of the philosopher as "self-taught," Paul has apparently coined the neologism "taught-by-God" (1 Thess 4:9; Malherbe 1987: 96–106).

Other elements of form and content found in the NT have counterparts in popular philosophic literature. Philosophers of all schools write epistles which advise addressees on moral topics. Lists of virtues and vices as well as summaries of philosophic teaching and collections of gnomic sayings are common forms of instruction. Similar to the short philosophic saying *(gnome)*, the *chreia* was an instructive anecdote illustrating the teaching of a particular philosopher. Many of the controversy stories in the gospels can be assimilated to this pattern (Luke 12:13–14; 17:20–21; 21:1–4). The summaries of the duties of members of the household, "household codes" (Ger *Haustafeln*), in Col 3:18–4:1, Eph 5:21–6:4, and 1 Pet 2:18–3:7, are comparable to philosophic descriptions of a person's duties: "… how a man must bear himself in his relations with the gods, with his parents, with his elders, with the laws, with strangers … that one ought to reverence the gods, to honor one's parents, to respect one's elders, to be obedient to the laws, to yield to those in authority, to love one's friends, to be chaste with women, to be affectionate with children, and not to be overbearing with slaves" (Plutarch, *On The Education of Children* 7DE; Malherbe 1986: 31). Philosophic exhortation frequently dealt at length with duties toward relatives, diverse responsibilities of men and women in the household, and the management of households generally (Malherbe 1986: 96–104). See also HOUSEHOLD CODES; HAUSTAFELN.

The diatribe style of popular philosophic instruction appears in Paul's letters and in James. Supposed questions or interjections of a questioner (1 Cor 15:35; Rom 4:1; 6:1; 9:19; Jas 2:18) serve to advance the argument. Ironic or satirical remarks also form part of the dialogue style of such preaching (1 Cor 4:8; 2 Cor 11:1; Gal 5:12); or the author may point to common assumptions which the audience should accept (Rom 6:16; 1 Cor 3:16; 6:15; 9:24). Some scholars have even argued that Paul shaped entire letters according to the conventions of Hellenistic rhetoric. Galatians has been described as an "apologetic letter" (Betz, *Galatians* Hermeneia, 14–28); Philemon as an intercessory epistle (Stowers 1986: 51–57; 155).

C. Approaches to NT Ethics

The NT draws upon the diverse resources of its cultural context. Its ethical exhortation cannot be described as the formal development of a particular line of biblical tradition such as a school of legal interpretation. Nor does it fit the mold of a philosophic teacher who expounds the doctrines of a particular school as did Epictetus. Outside the gospels, the teachings of Jesus are only occasionally introduced as explicit warrants for particular actions. The authors of the epistles and Revelation did not present themselves as disciples building upon the teaching of Jesus. Most of the ethical material in the NT has parallels in other writings of the period. The content of NT ethical teaching cannot be described as innovative; nor do NT authors claim uniqueness for their teaching.

Ethical exhortation in the NT fits the pattern of "occasional" treatment of particular themes that is typical of ethical teaching as we find it in the prophets, Wisdom Literature, Jewish apocalyptic as well as philosophic moralists. Unlike the latter, NT writers do not engage in extensive rational arguments for the positions that are advanced on particular issues. Warrants for a given statement may include Scripture, common opinion, usual practice, or the exemplary behavior of Jesus or Paul. Diversity in its sources, lack of systematization in its argument, and ambiguity about the weight attached to the warrants for concrete ethical recommendations make the NT difficult to use as the basis for a synthesis of Christian moral philosophy. A descriptive approach to NT ethics traces the sources, particular themes, and dominant perspectives of individual NT writers or schools. One may also attempt to trace recurring themes in several strands of the NT. Both approaches will be followed in this article.

Most NT writings presume that God's salvation in Jesus makes it possible for those addressed to lead lives worthy of the Lord. They also presume that individuals are members of Christian communities in which mutual exhortation takes place. Ethics is not pursued as an independent topic whose conclusions must recommend themselves to persons who are not part of a religious association which worships God and acknowledges Jesus as Lord. Since NT writers share a soteriological conviction that the decisive salvation humans expect from God has already been realized in Jesus, their rendering of apocalyptic motifs includes the view that the domination of evil powers over the cosmos has already been shattered by the exaltation of the risen Lord to God's throne (Phil 2:6–11; Rev 1:5–20). Matt 28:16–20 invokes the authority of the exalted Lord as the basis for a universal preaching of his teaching. The NT claims general applicability for its ethical exhortation on the basis of what God has done in Jesus, not on the basis of the particular examples of moral teaching used to describe what "walking in the Spirit" or "entering the kingdom of God" requires of persons and communities.

Since NT exhortation follows upon God's eschatological salvation in Christ, its demands upon human action presume that those addressed have been freed from bondage to sin, slavery to passions, and the other handicaps which mar human life in the "present evil age." Its writers do not calculate their advice on the basis of what "weak" and "corrupted" humans might be asked to achieve. Forgiveness of sin has already set persons in a new relationship with God. They are expected to achieve a life which expresses that reality. At the same time, the ongoing process of communal exhortation, forgiveness, and reconciliation (Matt 18:15–35; Gal 6:1–5; Rom 12:14–18; 14:10–15:13; Jas 4:11–12; 5:16, 19–20) shows that transformation of persons presented a continuing process of moral conversion. Early Christians were no more able to generate immediate and stable adhesion to virtue than their philosopher counterparts. However, their religious understanding of salvation and divine judgment provided a more pressing call addressed to a wider range of persons than one finds among those converted to the philosophic life of virtue.

Attempts to divorce NT ethics from its context and the particularity of its treatment of ethical topics usually result in generalities which fail to describe the data. Four approaches to systematizing NT ethics are commonly attempted (Longenecker 1984).

1. Christian "Code." The NT contains passages which are prescriptive, such as the command to love God and neighbor (Mark 12:29–31), to honor one's parents (Mark 7:10), or to reject divorce (Mark 10:7–8). One cannot object that such demands are "too difficult," since God's will establishes the norms for human obedience. This approach would make the task of NT ethics one of formulating other commands and ordinances which ought to govern the lives of Christians. However, the NT writers never treat prescriptive statements as part of a legal code that is to be elaborated, interpreted, and reapplied. Such involvement with "the Law" seems to be rendered inappropriate by the conviction that Christians live from a standard of righteousness that exceeds anything which could be formulated in legal terms (Matt 5:20; Gal 5:22–23).

2. Universal Principles. The NT contains passages which claim to summarize all that is required by the Law in terms of love and mercy (Matt 5:43–48; 22:34–40; John 13:34–35; Gal 5:14; Jas 2:8). It also affirms an equality of treatment for all persons based on their status as children of God, who loves all equally (Matt 5:43–48; 18:10–14; Luke 15:1–2, 11–32; 1 Cor 8:11–12; Rom 14:1–11). No one is excluded from God's salvation. Jesus' fellowship with sinners and other marginal persons demonstrates the universality of God's love. Such passages are then used to advance general principles which are said to be the normative core of a Christian ethic: (a) God's love for all persons as the basis of their human dignity and equality; (b) the "unity" of all persons as brothers and sisters before God; (c) the claim which all persons have to our love, assistance, and concern. Liberation theologies, which often begin with the image of God as liberator of the oppressed in Exodus, advocate a reading of the "love command" as an option for the liberation of the poor and oppressed.

The various versions of a "universal principles" approach assume that the "specifics" of NT exhortation merely exemplify the general principles. Only the latter translate into binding obligations for Christian action today. In order to maintain the specifically religious context of NT ethics, this approach has to involve the "motivating power" of its appeal to God. Otherwise its principles are indistinguishable from a philosophic humanism or a liberation praxis based on critical philosophy.

3. Encounter with the Living God. NT exhortation flows from a conviction that salvation has been given to humans. God's forgiving word is prior to the moral efforts of human beings, all of whom stand in need of God's righteousness in Christ (Rom 3:9–21). Therefore it is not possible to formalize NT ethics in particular rules or principles. The Christian life of love and service represents a response to the love and forgiveness received in the saving encounter with God. God's free gift of righteousness is matched by an equally free giving of oneself in service and love (Gal 5:1–14; Rom 6:1–14). While this approach preserves the religious emphasis of the NT on conversion and God's free gift of salvation, it negates the obvious need of Christian communities for concrete expressions of what the Lord requires of human beings.

4. Contextual Response in Love. Ethical exhortation in the NT is primarily concerned with relationships between persons. The basic characteristics of such relationships are described in terms of love, reconciliation, humility, placing the needs of another above one's own interests (Phil 2:1–5; Col 3:5–14; Acts 4:32–37). Exhortations to love, service, overcoming hostile behavior and words, impartiality, and the like in the NT epistles are all ways of discerning what the example of God's love in Christ requires for a specific situation. Christians today should emphasize building up communities in which such relationships are the norm. But specific actions cannot be mandated in advance. Christians must discern the appropriate, loving response in each particular context. This approach emphasizes the communal concerns of NT ethics and the self-sacrificing character of love. As such, it challenges the modern preoccupation with individuals asserting their rights in competition with the claims of other individuals. However, if the NT contains only "tactical examples" of how Christians responded in love in the past, then love remains indeterminate. It is not clear how Christians might respond to situations in which none of the options can be described as the expression of love.

D. Jesus and the Synoptic Gospels

The moral urgency of NT exhortation follows from the religious conviction that in Jesus God's eschatological act of salvation has begun. The teaching of Jesus was not preserved as an ethical or legal system. It served as an indication of what is required of those who would be Jesus' disciples, persons who acknowledge the risen Jesus as Lord and anticipate their own participation in that exaltation at the judgment (Matt 19:28–30; Phil 3:20–21; Rev 3:21–22). Before the mission to the gentiles created the form of Christianity which would dominate the movement, household communities of the Greco-Roman cities, Jesus' movement would have been viewed as a Jewish sect devoted to the renewal of Israel and claiming the risen Jesus as God's Messiah. Jesus had summoned persons to repent in light of the impending reign of God (Mark 1:15). Repentance implied breaking with the status quo of the everyday world of human behavior. Without a radical change in one's orientation, a person could not be saved (Luke 13:3–5). As the Synoptics incorporate traditions of Jesus' sayings and deeds into a narrative of his life, they also adapt this tradition of radical discipleship to the settings of largely gentile communities in a Greco-Roman milieu. (John does not preserve any ethical teaching of Jesus except the command to mutual love and service among members of the group; e.g., John 13:12–16, 34–35.)

1. Jesus' Preaching of the Kingdom. Jesus proclaimed that the power of God's reign was already breaking into human experience (Matt 12:28; Luke 17:20). His exorcisms are a manifestation of the liberating power of God overthrowing that of Satan (Mark 3:27; Luke 10:18; 11:20). Jesus' seed parables announce the time of unexpected, "toil-free" harvest and rejoicing that marks God's salvation (Mark 4:3–9, 26–29, 30–32; compare *1 En.* 10:17–22 above). Unlike many Jewish apocalypses, Jesus' preaching does not envisage a "gap" between his ministry and the manifestation of God's rule (Mark 9:1; Luke 10:18) which would lead the "righteous" to speculate about "when" the end would come (Mark 13:22; Luke 17:20). Joyous reception of the reign of God (Matt 13:44–46) makes righteousness more than an effort against the evils of a world doomed to destruction. Jesus' disciples are to live as persons who experience the renewing power of God. Forgiveness and mercy are characteristics of God's power and its expression in the ministry of Jesus to those who are marginalized and oppressed. Forgiveness becomes a standard of the disciple's own standing before God (Matt 6:14–15; 7:1–2; 18:21–22, 23–34).

From this perspective, Jesus criticizes his contemporaries' Torah interpretation. The rules and distinctions associated with applying the Torah to the activities of persons, such as what constitutes permitted activity on the Sabbath (Mark 3:1–6), valid grounds for divorce (Matt 19:3–10), purity or impurity in food preparation (Mark 7:2–8), a binding oath (Matt 5:33–37), products on which one must pay tithes (Matt 23:23–24) or required provision for aging parents (7:9–13), are all so many diversions from the radical conversion of heart which expresses itself in realizing the true intention of the Torah (Matt 5:21–48; Mark 7:20–23). A number of Jesus' sayings and parables reject the economic arrangements of debt repayment which kept the tenant farmers obligated to wealthy landlords or those from whom they had to buy grain and which made it possible for the creditors to avoid the Torah's own provisions for debt relief and return of land to those whom God had settled there (Leviticus 25; the steward in Luke 16:1–8 provides a negative example of "the system"). One is to lend without demanding repayment (Matt 5:42). Forgiving debts is a condition of receiving God's forgiveness (Matt 6:12; 18:23–34). Jesus' preaching does not attack the Torah as God's expression of justice. It condemns the application and manipulation of the Torah to make it fit the conditions of a world marred by sin.

Other sayings of Jesus represent the radical nature of discipleship by asking people to break with customs which all societies hold sacrosanct, such as the obligation to bury one's parents (Luke 9:59–60). The usual requirements of hospitality to a guest (Luke 10:38–42) and even family ties themselves (Mark 3:31–35) may be suspended in light of the reign of God. The gospels also express the negative or incredulous response of disciples to Jesus' demands. Disciples are reassured that they can put aside anxieties about day-to-day sustenance and rely on God to provide (Matt 6:11, 25–34; 10:16–31). The possibility of such a life depends upon God's power, not upon calculation of human potential (Matt 19:10–11, 16–30).

Many of these sayings suggest that one can only be a disciple of Jesus by breaking with all the normal preoccupations and relationships of society. Such behavior makes Jesus and his band of followers appear much like the Cynic preachers encountered in the Greco-Roman cities (Mark 6:8–11). Some exegetes presume that the earliest Jesus movement represented a symbiosis of radical, itinerant preachers and sympathetic peasant villagers who gave them shelter and responded to their message of God's coming renewal but did not become wandering disciples (Theissen 1978). Others think that the gospel writers created a picture of Jesus as wandering teacher by assimilating the traditions handed down about Jesus to the Cynic model. The relationship between itinerant Christian preachers and those to whom they preached as well as the obligations of villager disciples remain unrecoverable (see Meeks 1986: 106–8). Exegetes committed to uncovering the warrants for liberation theology in the Jesus movements insist that it is the "renunciation" which has been added "from above" by later tradition. Jesus and his disciples emerge from a disenfranchised peasantry in which possible homelessness, hunger, debt servitude, abusive treatment by social superiors whether Jews or Romans, were all part of the crushing realities of life. They might be imprisoned and embittered by the attitudes engendered by their experience (Matt 20:1–15), but they are not implicated in the system (Horsley and Hanson 1985; Schottroff and Stegemann 1986).

2. Mark: Suffering Discipleship. Mark emphasizes Jesus' summons to discipleship (1:16–20; 2:14; 3:13; 8:34; 10:52). The shape of discipleship emerges as the reader learns that the Jesus who appeared as an authoritative teacher (1:27–28; 2:10) and miracle worker (1:32–34; 4:41) has come to suffer and serve (8:31–33). Discipleship requires that Jesus' followers show the same willingness to suffer (8:34–38). References to suffering (Mark 13:9–13) and the need to persevere in times of tribulation (Mark 4:17) suggest that discipleship patterned on the cross emerges from a community which is endangered by persecution. Those attracted by the powerful teaching and miracles of Jesus must learn the harsh lessons of suffering. As the narrative progresses, Jesus' closest disciples prove fearful and hardhearted (4:40; 6:50–51; 8:32–33; 9:32; 10:32; 14:50; 16:8a), while he carries out his entire ministry under the hostile eye of authorities who are seeking to destroy him (3:6; 8:15; 12:13; 14:1–2). Judas' betrayal plays into their hands (14:10–11), but it also enables Jesus to accomplish his mission, offering his life as "ransom for many" (10:45).

Mark 13:5–6, 21–22 warns Christians against responding to the sufferings they experience (13:9–13) by following prophetic figures who might claim Jesus' name or authority. Mark may have in view the prophetic figures active in the turmoil of the Jewish revolt against Rome (66–70 C.E.). The only route to "greatness" lies in suffering as Jesus has done. Power and greatness as exercised by rulers of the nations are rejected (10:35–44). Herod's execution of John the Baptist serves as advance warning of what one might expect from earthly kings (6:17–29). Along with rejection of the desire for power in social terms, Christians are also exhorted to adopt the place of those who count for nothing in Jesus' world, children (10:13–16). The story of the rich man serves as a sad lesson that wealth may keep even a good person from renouncing self to enter the reign of God (10:17–27). Had the rich man been willing to renounce his possession, he would have been able to enter the community of disciples (10:28–31).

3. Matthew: Jesus' Higher Righteousness. Matthew includes the most famous epitome of Jesus' teaching, the Sermon on the Mount (5:1–7:29). The risen Lord commands his disciples to carry this teaching to the nations (28:16–20) and thus removes the earlier restriction of Jesus' ministry to seeking and saving the "lost sheep" of the house of Israel (10:5–6). The gospel has to make its case for Jesus' "greater righteousness" (5:20) on several fronts. Some have adopted an "antinomian" stand. For these deceptive prophets Christianity is a matter of miraculous powers and confessing the name of Jesus without leading a life that bears "fruit" in one's actions (7:15–23). Consequently, Jesus' coming in judgment will mean sorting out the chaff and wheat that have grown up together within the Christian community (13:36–43; 22:11–14). Others are overly influenced by the teachings and practices of the Pharisees and may even be seeking to establish a form of "Christian Pharisee" within the Church. Matthew counters that threat by intensifying the traditional tensions between Jesus and the Pharisees into bitter accusations against the Jewish teachers for being hypocrites, who only seek to place heavy burdens on the backs of the people and to advance their own honor and glory (6:1–6, 16–18; 23:1–36).

Matthew carefully avoids the dangers of Christian Pharisaism by insisting that Jesus' "yoke" (an expression used of obedience to the Torah) is a light burden (11:28–30). It focuses on what really counts in the Torah: justice, mercy, and faithfulness (23:23). The Christian who follows Jesus' righteousness recognizes that it comes from the "suffering servant" who bears the spirit of God in order to make God's justice victorious among the nations (12:15–21).

The Sermon on the Mount begins with a series of beatitudes (5:3–12). Wisdom traditions used the form "Happy are …" to designate the blessings which could be expected by wise and pious persons in life (Psalm 1). Apocalyptic writers contrasted the punishments awaiting the wicked who prosper in this life with the reversal of fortunes that judgment would bring to the righteous (as in Luke 6:20–26). Here the beatitudes express both the situation and the character of Jesus' true disciples. "Poor in spirit" suggests the *ʿanawîm,* "lowly ones," of Hebrew piety (5:3). Mourning, hungering and thirsting for righteousness, and even persecution on its account (vv 4, 6, 10) can also describe the righteous who seek to do God's will in an evil age. Other beatitudes suggest more active traits of character which Matthew may have formulated with Scripture passages in view: mercy (Mic 6:8); meekness (= humility; Ps 37:11); purity of heart (= single-minded devotion to God, not hypocritical; Ps 24:3–4); peacemaking (Ps 34:14; also the effect of God's salvation, Zech 9:9–10). Matt 5:11–12 warns disciples that they must expect to be reviled and persecuted for Jesus' sake. Thus the beatitudes are not simply ethical traits that anyone might cultivate. They represent a new community of discipleship that is coming into being through Jesus.

Matt 5:13–16 makes it clear that the faithfulness of that community is not an indifferent matter. As a light to the nations (Isa 9:1–2), the community continues Jesus' mission. Its exemplary conduct is responsible for bringing the world to acknowledge God. Matt 5:17–20 sets the agenda for what follows. Jesus will make possible a righteousness that does not negate the Torah but brings it to its completion. The epitome of this righteousness which is to follow has been shaped by antitheses and contrasts which indicate the superiority of Christian discipleship to the obedience taught by the scribes and Pharisees. The antitheses which follow do not imply that Jesus rejects the Torah or the formal practices of piety such as prayer, fasting, and almsgiving. Nor do the sayings which follow establish a new Christian legalism. They specify what single-minded devotion to God implies by using concrete examples that contrast acceptable but "old" forms of righteousness with the new discipleship.

Matt 5:21–48 expresses the contrast by gathering sayings of Jesus together in six antitheses. Christians not only avoid murder, they reject anger and hostile words; seek reconciliation with persons they have offended as more important than an act of sacrifice; and adopt the prudent policy of settling disputes before they come into courts (vv 21–26). Christians not only avoid adultery, they root out the lusts of eye and body which provoke it (vv 27–30). Christians will not avail themselves of the Torah's permission for husbands to divorce their wives except in the extreme case of a marriage which involves sexual immorality (vv 31–32). Christians do not require that their word be backed up by the legal apparatus of oaths (vv 33–36). Even more remarkable, Christians do not seek to protect themselves against abuse by others even when the Law permits them some recourse (vv 38–42). Their extraordinary behavior expresses the love which God shows toward all, since it implies loving enemies as well as friends (vv 43–48).

Matt 6:1–18 turns from "love of neighbor," now expanded to love of enemy, to "love of God" as it is expressed in the fundamental expressions of piety: prayer, almsgiving, and fasting. Here the element of "higher righteousness" finds expression in the distinction between behavior which is seen and applauded by others and that which is known only to the individual and God. But Christians are also reminded of two other attributes of their relationship to God which have a bearing on their general conduct. Trust in God to provide the bread needed for one's survival (6:11) makes it possible to overcome the anxieties about material goods which can destroy the life of discipleship (6:19–21, 24, 25–34; 7:7–11). The mercy and forgiveness which disciples expect from God require that they show the same mercy to others (6:12, 14–15; 7:1–5). This emphasis on mercy makes it clear that the holiness required of the Christian community does not require that it become a harsh, perfectionist group, which punishes transgressions. Matt 18:10–35 explains how transgression and forgiveness are to operate within the Church. Only those

who are unwilling to accept exhortation and correction from the community are excluded. Otherwise, unlimited forgiveness is the norm. The golden rule (7:12) serves as a conclusion to the section on righteousness. The final section (7:13–27) warns of divisions within the Church, even among those who claim to be teachers. The wise person keeps Jesus' word.

The emphasis on witness to the world (Matt 5:11–16) makes it clear that the "perfection" by which Christians are called to imitate their heavenly Father (5:48) is not simply an individual matter. Nor is it simply oriented toward escaping condemnation in the judgment. This "higher righteousness" has to be proclaimed among the nations. The community itself is the sign of its message about God's righteousness. The parable of the Sheep and the Goats (Matt 25:31–46) suggests that the standard of righteousness expressed in the gospel is ultimately binding on the nations. Some exegetes think that the sufferers aided by the just are identical with the persecuted Christian minority as in Matt 10:40–42. The nations may not be converted by Jesus' preaching, but they will be judged by their response to those who preach God's word. Traditionally, this passage is seen as establishing the basic requirements of social justice for all people. Response to the need of those who are weak and suffering, a response that forgets all distinctions, is the foundation of God's justice. It is not even necessary that the "just" recognize Christ in those they serve.

4. Luke: Forgiveness and Compassion. The canticles in the Lucan infancy narrative (1:46–55, 68–79; 2:14, 29–32) as well as Jesus' opening sermon (4:16–22) announce that the time of God's salvation is at hand. Salvation is to extend from Jerusalem to the nations. The experience of salvation is frequently presented in the rejoicing of repentant sinners who find forgiveness (5:8; 15:1–6; 19:1–9). God declares the sinner who acknowledges his sin righteous over the Pharisee who takes pride in his piety (18:9–14). Jesus even carries out this ministry of calling sinners back to God while on the cross (23:39–43).

The stories of the early Church in Acts provide a model for the type of Christian community Luke envisages. There we find Christianity established in the households of wealthy patrons in different cities. Such persons are not poor or hungry. Though the apostles suffer persecution for preaching, their local patrons only do so occasionally (Jason in Thessalonica, Acts 17:5). The lesson which these persons must learn is one of compassion and generosity, since they are called upon to support the weak and poor members of the community (Acts 4:32–5:11). Some resistance to the early Christian mission stems from its interference with money earned from idolatrous religious activities (Acts 16:19; 19:23–25). Not surprisingly, Luke 16:14–15 identifies excessive love of money as the primary vice of Jesus' Pharisee opponents. The dramatic parable of the Rich Man and Lazarus (16:19–30) illustrates the fate which awaits the wealthy who do not give alms to the poor at their doorstep. Paul tells the Ephesian elders that Christians are to work to meet not only their own needs but those of others (Acts 20:34–35).

When Luke describes forgiveness and love of enemies, he emphasizes compassion as the attitude which motivates persons. Those who love their enemies exemplify God's mercy (6:35–36). Compassion motivates the father to welcome back the prodigal son with joy (15:20). Compassion also moves the Good Samaritan to care for the Jew who had been beaten even though the two groups were deadly enemies (10:33). Christians are expected to act like the Samaritan (10:37).

Luke sets the emergence of the Christian movement on the stage of "world history." Jesus represents true peace in contrast to the promises of the emperor Augustus (2:1, 14). The activities of its apostles are public and well known to governing officials (Acts 26:26). Both Jesus and the apostles are tried before Jewish and Roman officials where, despite abusive treatment suffered by all prisoners, they often find a more sympathetic hearing than their enemies anticipate (23:13–16; Acts 5:34–42; 24:22–23; 25:13–27; 26:28–32). In other cases, the Lord rescues the apostle from his enemies (Acts 12:6–11; 16:25–39).

Luke's narrative includes the violent and capricious elements of Roman administration: beatings before courts, lengthy imprisonment even when the magistrate is persuaded of an individual's innocence, the sharp difference in treatment of subject peoples and Roman citizens, expectation of bribes for favorable judgment, pressuring judges by the local aristocracy. But the Roman trials in Luke-Acts are more ordered and protective of the apostles than the proceedings of Jewish officials or local magistrates. Therefore, scholars have suggested that Luke has a political perspective which is different from the apocalyptic

perspective of passages like Mark 13:9 or 1 Thess 2:14–16 where trial before Jewish and gentile authorities shows their hostility to God. In the apocalyptic perspective, the persecuted anticipate the destruction of such enemies. Luke's narrative suggests that Christianity can coexist within the Roman order. That order may even protect Christians from more abusive exercise of power by local officials incensed at Christian preaching. At the same time, Christians are apparently loyal to the regime. Jesus' parents comply with a census aimed at establishing Judea's subordination through direct Roman rule and taxation (2:1–5). Paul's inherited Roman citizenship, and hence superiority to both his accusers and some of his captors, is emphasized in Acts (16:37–39; 22:25–29; 23:27; 25:10–12, 21, 25; 26:32).

E. Exhortation in the Pauline Tradition

For Paul the ethical life of Christians expresses their new identity as persons who are "in Christ," able to walk in the Spirit (Gal 5:25; Rom 8:1–14). Exhortations to be holy, blameless, pleasing to God (1 Thess 3:13; 4:27; 5:23; 1 Cor 1:8; 7:34; 2 Cor 7:1; Phil 1:9–11; 2:15–16) show the importance of shaping the moral life of local communities. This concern was hardly unique to the Pauline mission since it is evident in the exhortation of 1 Peter and James as well. 1 Thess 4:1–12 contains a brief description of holiness which is similar to that of 1 Pet 1:14–22 and 2:11–12. Both authors presume that conversion to Christianity implied adopting a style of moral life in contrast with the individual's past life as a pagan. This life requires holiness, freedom from sexual immorality, and mutual love. It ackowledges God as the judge of all human action. Both agree that such behavior should commend the respect of outsiders.

Love and nonretaliation in the face of such hostility is common (1 Cor 4:12b–13a; Rom 12:14–18; 1 Thess 5:15; 1 Pet 3:9). Christ can be invoked as the model for the disciple's willingness to endure such suffering (2 Cor 4:8–10; 1 Thess 1:6; 1 Pet 2:18–24; 3:13–18; 4:13–14). The expectation attached to such behavior is not that individuals will actually be martyred but that they will come through the suffering sustained by God's power. Such patient endurance may also ameliorate the hostility and suspicion of the persecutor. In situations where Christians are not being persecuted or abused by masters, love may include meeting physical needs of the enemy or outsider (Rom 12:20; 1 Thess 5:15). It extends to the heart of Christians by insisting that not only do they accept hostility without retaliation, even in the verbal form of cursing, but that they actually speak a word of blessing. Christians seek to "convert" their enemies by active concern for their welfare.

This posture of love, nonretaliation, and willing subjection to authority, which is evident in the "household codes" of the NT, formed a fixed topic in early Christian exhortation. Parallels between Romans and 1 Peter indicate that it was widespread. 1 Pet 2:13–3:12 incorporates "household code" material into the series: (a) Christians show respect for all governing authorities including the emperor (2:13–17); (b) Christian slaves are submissive even to cruel masters (2:18–25); (c) Christian wives are to win over their husbands by submissiveness and moderate dress and behavior (3:1–7); (d) Christians are to love one another (3:8); (e) Christians bless those who revile or persecute them (3:9–12). Romans picks up three of these themes: (a) Christians are willing subjects of governing authorities even when subjection involves taxation (13:1–7); (b) Christians love one another (12:9–13, 15–16); (c) Christians love their enemies (12:14, 17–21). Exhortations to Christian wives and slaves to be obedient to those who rule over them appear in Colossians and Ephesians. Christian women are told to dress and behave modestly in 1 Tim 2:9–11.

Comparison with popular philosophic preaching shows these themes to be conventional. The good order of society is maintained by submission and obedience of inferiors to their superiors. Women are to dress and behave modestly, managing affairs within the household while their husbands devote themselves to public business. Such advice was even given by women Pythagorean writers: "The temperate, freeborn woman must live with her legal husband adorned with modesty, clad in neat simple white dress … For the woman who strives for virtue must not have her heart set on expensive clothing but on the management of her household … a husband's wishes ought to be an unwritten law to an orderly wife, and she should live by them" (Malherbe 1986: 83). When the Stoic, Musonius Rufus (ca. A.D. 30–101), defends the thesis that women who study philosophy will become just, courageous, and more suitable to govern their households and aid their husbands, he has to answer the charge that such study will only turn women into

quarrelsome imitators of men: "some will say that women who associate with philosophers are bound to be arrogant … in that abandoning their own households and turning to the company of men they practice speeches, talk like sophists … I should not expect women who study philosophy to shirk their appointed tasks any more than men, but I maintain that their discussions should be conducted for the sake of their practical application" (Musonius Rufus, Fr. 3; Malherbe 1986: 134). Christians clearly adopted the same measures to answer objections to the place of women in their groups: women are more devoted to their appointed roles; instruction of women must involve practical exhortation; women are not permitted to "abandon their households" for the male practices of public teaching and dispute (1 Cor 14:33b–36).

Although the standards of Christian behavior represent a conventional understanding of "good order," the Pauline epistles suggest that they are not simply demonstrations of Christian philosophy. There appear to have been persons who insisted that the new life of walking in the Spirit gave Christians the freedom to break with social conventions. Paul's own preaching that Christians become righteous in Christ and not through the Law could have provided fuel for such efforts (Rom 6:15–23). Some exegetes suggest that the Galatians sought to adopt a form of Christian "Jewishness," with circumcision as its sign, to avoid possible abuses of Christian freedom. Paul's own example of "celibacy" would also suggest a radical rather than a conventional approach. Philosophers concerned for the good order of society, like Musonius, insisted that persons have a duty to marry and raise children. The children are future citizens and the households are necessary to the good of the larger society. The Cynics, on the other hand, argued against marriage. It only binds a person to false values, slavery to sexual pleasure, seeking to please a mate, worrying about money and the like.

1 Corinthians 7 suggests that some Christians even sought to dissolve their marriages. Paul defends marriage as an appropriate expression of sexuality, unlike frequenting the prostitutes of the city, which corrupts a body that should be holy to God (1 Cor 6:12–20). But Paul also defends the superiority of his own style of life for those who can follow it since it permits complete devotion to the Lord. When Paul returned the slave Onesimus to his master, Paul argued that Philemon should receive Onesimus as his "brother in the Lord." He certainly implied that the legal penalties against the runaway should be waived and may even have expected Philemon to free the slave or return him to Paul's mission. But 1 Cor 7:20–24 adopts a more conservative view. Slaves and free persons may be equal as Christians, but the Christian slave should not agitate to change his or her social status. Women have clearly been involved in the mission from the beginning, sometimes with their husbands and sometimes as individuals. They are patrons of communities which meet in their homes and are also involved in preaching the message to others (Rom 16:1–16; Phil 4:2–3; Acts 16:14–15; 18:1–4). However, Paul insists that those who are prophets in the assembly dress in ways which reflect the conventions of a created distinction between male and female rather than their unity in Christ (1 Cor 11:2–16). Exegetes have suggested that the elaborate regulations limiting those who can be enrolled as "widows" (1 Tim 5:3–16) are aimed at curbing the tendency of women to follow Paul's advice and not remarry (1 Cor 7:34–35, 38–40). The requirements for public leaders of the community, "bishops and deacons" (1 Tim 3:1–13), show concern for the acceptability of Christians in the eyes of their neighbors. Propriety is the norm.

Exegetes are divided over the significance of eschatological language in shaping Paul's solutions to specific ethical problems. Obedience to political authority is commanded (Rom 13:1–7). But Paul also asserts that that authority is temporary, the day of the Lord is at hand (13:11–14). Remaining unmarried allows one to devote oneself to the Lord without other concerns. Besides, the time which remains is very short (1 Cor 7:29–31). Both married and unmarried are to conduct themselves with a detachment that is born of the "time" in which they live. Christian freedom and detachment appear to be born of the conviction that one lives between God's salvation in Christ, which permits one to walk in the Spirit now, and the coming of God's judgment, which will overthrow all the structures of the world as we know it. The possibility of living in a way that is free from bondage to sin and passion now is grounded in the Spirit. So are the relationships of mutual love, self-sacrifice, and harmony that are the signs of the Spirit's work in building the Christian community. This new reality makes it possible for Christians to live in holiness without reintroducing the Law and the practices which set Jews apart from the pagan world that

surrounded them. But Paul's eschatology also has a conservative side. He often rejects radical attempts to change social conventions.

However, Paul does not always favor the status quo. Although the details of the conflict are difficult to reconstruct (Achtemeier 1987), Gal 2:11–14 alludes to an instance in which Paul opposed an accommodation to Jewish food rules by Peter, Barnabas, and other Christians at Antioch. An earlier meeting in Jerusalem had permitted Paul and others to convert gentiles without imposing any Jewish stipulations on the converts (Gal 2:1–10). If the emissaries from James were insisting that table fellowship between Jewish and gentile Christians required that the latter observe the minimal rules reflected in the "apostolic decree" (Acts 15:19–21), then Peter and the others who concurred may have felt this change to be an accommodation to conventional behavior, not an affirmation that the Law is necessary for salvation. Paul's violent reaction makes their withdrawal from table fellowship with those who would not accept the requirements a theological issue. They are not only going back on the earlier agreement about gentile churches, they are denying that Christ is the source of righteousness for all, Jew and gentile.

Elsewhere Paul is quite willing to insist that Christians moderate their freedom to the needs of "weaker" persons. One should refrain from eating idol meat if doing so would scandalize the conscience of a weaker person (1 Cor 8:7–13; 10:23–32). One should avoid disputes over matters like food. Paul would even become a vegetarian if another's faith were at stake (Rom 14:1–15:6). Paul's freedom includes adapting his behavior to whatever will serve to bring others to Christ. He is willing to live like a Jew or like a gentile (1 Cor 9:20). It is clear that Paul had to contend with persons who wanted to introduce the requirements of circumcision, food rules, and Jewish holidays into the gentile churches (Gal 5:2–3, 11–12; 6:12; Phil 3:2–19). Paul's failure to win the Antioch church to his side in the earlier dispute, as well as his uncertain relationships with the Jewish Christian leadership at Jerusalem, served the purposes of his opponents.

Paul's refusal to accommodate conventional behavior in the case of Jewish and gentile Christians emerges from what he sees as a threat to the gospel message. The Torah, even in some minimalist form, is understood to be the principle of salvation, of a right relationship with God, in the Jewish community. But the gospel insists that righteousness is God's gift in Christ which is given to Jew and gentile alike. Paul wishes that his fellow Jews would discover that righteousness (Rom 10:1–4). Any suggestion that requirements of the Torah be imposed on gentile Christians, even for the sake of fellowship with their Jewish brothers and sisters, compromises Paul's message. Some exegetes suggest that this case serves as an analogy for other situations in which Christians find themselves obligated to break with the established views of "good order." When the acceptance of slavery or the exclusion of women from public leadership in the community becomes a scandal to preaching the gospel that all persons have been made righteous before God in Christ, then Christians must demand to support the status quo.

F. Themes in NT Exhortation

Christian life requires obedience to the will of God. Conversion and new life "in Christ" presumes that limits to human action expressed in phrases like "bondage to sin" and "hardness of heart" no longer apply. One does not calculate the likely success of a course of action against the probability that others will be dishonest, abusive, fail to return what is borrowed, or the like. One does not accept the view that what corresponds to the will of God can be specified in concrete, legal form so that what the Law permits defines what is "good" human behavior. The Law is made for those who still live under the domination of sin and hardheartedness (Matt 19:8; Rom 7:7–25; Gal 5:18–24; 1 Tim 1:8–11). Nor is the good defined by philosophical arguments about how humans should govern themselves, their households and cities in order to achieve happiness. Such rational constructions of self and world stand under God's judgment. Christian allegiance to them is tempered by the recognition that they are not the source of justice, salvation, or happiness. They are merely the structures of a transitory world, which many NT authors suggest has already been condemned in God's eyes.

Although it is not possible to systematize the ethical exhortation one finds in the NT, some topics recur in different contexts. Christians from different traditions would have recognized that such topics are essential to the new life of holiness. Common themes include: (1) worship; (2) harmonious relationships

within the community, including mutual encouragement and support; (3) sharing wealth; (4) sexual morality; (5) love of enemies and active concern for outsiders; (6) relationship to the larger world and its values.

1. Worship. The obligation to worship God forms the first part of the Decalog as well as the first part of the double love command (Mark 12:28–34). Biblical ethics are not motivated by appeal to human reason or self-interest. Justice, mercy, etc., follow from the person's devotion to God. For gentiles, conversion to Christianity required abandoning the gods and goddesses of family, city, trade association, and empire for the one God. Ethical life can also be characterized as obedience to Jesus, the exalted Son of God. In addition to the obligation to worship God alone, we also find exhortations to participate in communal forms of worship (Eph 5:18–20; Phil 4:6; Col 3:16–17; 1 Thess 5:17–21; 1 Tim 2:1–8; Heb 10:25; 1 Pet 4:7). In some cases tensions within the community created by social divisions of rich and poor or the "divisions" in individual endowment with spiritual gifts require affirmation that all persons in the community are equal before God. Signs of status and divisions between members of the community corrupt its identity (1 Cor 11:17–14:40; Jas 2:1–13).

2. Relationships within the Community. NT writers spend a great deal of time addressing the problems of relationships between Christians. The gospel sayings about mutual forgiveness, reconciliation, and authority as service rather than "lording it over subordinates" already point to such concerns. Vice lists frequently point to anger, envy, malice, conceit, drunkenness, quarreling, and other sins of speech which also corrupt the love which is to exist between Christians (Rom 13:13; Gal 5:19–21; Eph 4:25–32; Col 5:9–10; Jas 3:1–18). Positive forms of speech include the mutual exhortation to virtue which was an ongoing part of Christian life (1 Thess 5:14). The peaceable ordering of the community requires respect and even financial support for those who are its leaders (1 Thess 5:15; Gal 6:6; 1 Tim 5:17–20).

Christian leaders must also be reminded of their obligations toward others in the community. They must not "despise" persons who may have strayed (Matt 18:10–14). They must treat those whom they instruct with appropriate respect (Gal 6:1–5; 1 Tim 5:1–2; 1 Pet 5:1–4). Christians in general must learn to avoid judging and condemning the conduct of others, since God will be the judge of all conduct (Matt 7:1–5; Rom 14:10–12; Jas 4:12). Humility reflects a willingness to consider others and their needs before one's own (Phil 2:1–5; Jas 1:9). These various examples of relationships between Christians also include the material obligations of Christians to aid those who are poor and afflicted (Jas 1:27), as well as the hospitality which traveling Christians might expect from other communities (Rom 12:13; Phlm 22; Rom 16:1–2). Such actions represent the concrete shape which commands to "love one another" could take in early Christian churches.

3. Sharing Wealth. Though the Jesus movement may have emerged among the rural peasantry which looked on local notables, wealthy landowners, and the aristocracy of Herodian and Roman circles from below, many NT authors presume that their audience includes Christians with sufficient wealth to dispose of it for the good of others in the community. They can be required to cancel debts, to invite the poor rather than wealthy friends to banquets, to provide assets for the community to use in supporting its poor and widows, and to provide the place for the community to meet as well as the food for the Lord's Supper. Such persons might also provide material support for Christian missionaries both in the form of money and perhaps persons to assist the apostle as the Philippians did for Paul (Phil 4:10–20). Though Paul also provided for his needs by laboring at his trade, he acknowledges that Jesus' saying that missionaries should be supported by those among whom they preached (Matt 10:9–11) was generally followed by other apostles (1 Cor 9:1–14).

1 Tim 5:4, 16 prohibits enrolling widows who have children, grandchildren, or other family able to support them. This rule suggests that there may have been some who abused the charity of the community. A similar difficulty must lie behind reports of a dispute between Hebrew and Greek-speaking widows over their distribution in Acts 6:1–6, which Luke treats as the origin of the office of deacon in the Church. Paul's refusal to demand money from those among whom he was actively working (1 Thess 2:8–9; 1 Cor 9:12b–18) led to conflict and suspicion about his ministry in Corinth. Though Paul apparently

adopts the view of one group of Cynics that the harsh life of the laborer and refusal to depend on others is a mark of freedom, the Corinthians knew that Paul had received aid from other churches. He was also soliciting contributions from his gentile churches for the poor in Jerusalem (1 Cor 16:1–4). The exact accusations made against Paul are unclear (2 Cor 11:7–11; 12:13–18), but they involved some form of deceit in handling money or representing his financial dealings. Paul claims that his freedom from local support sets him apart from other missionaries, who have made abusive demands for support (2 Cor 11:12, 19–20).

Gal 2:10 claims that the collection for the poor at Jerusalem was part of the agreement Paul had reached with James and the others about the gentile mission. 2 Cor 8:1–9:15 contains appeals for those in Corinth and Achaia to contribute to this collection. Apparently the instructions in 1 Cor 16:1–4 had not been sufficient to complete the process. Paul endeavors to "shame" the addressees by reminding them of the great generosity of the much poorer churches in Macedonia. He also assures them that Titus and other unnamed Christians are going to accompany the collection to Jerusalem. They can testify that the funds are used for their stated purpose (8:19–24). This appeal does not mention the former agreement. Instead, Paul uses a more general topos: those to whom God has given material wealth have an obligation to be generous. Such service is reciprocated by the prayers of those who receive the aid. Concern for reciprocity in giving and receiving was fundamental to the ethos of the ancient world. Luke 14:12–14 argues that Christian charity breaks with the normal patterns of obligation. Normally the recipient was under obligation to his or her wealthy patron to render any services required, or, if the gift were from a social equal, to repay in kind at an unspecified future time. Both Paul and Luke present Christian charity as the obligation of the wealthy to God. As such, it does not create the reciprocal obligations that society attached to such exchanges. Since such gifts are really "to God," a superior, the giver remains under obligation to give. Repayment can only be anticipated from God's side. Rom 15:25–33 anticipates Paul's trip to Rome with the collection with some foreboding. There the rationale for the collection is again inserted into Paul's understanding of his mission among the gentiles. It reflects the debt which gentile Christians owe those at Jerusalem for the spiritual blessings that they have received.

Two elements stand out from the ethos of the ancient world in connection with the collection. First, it establishes the principle that one might have material obligations to aid the poor in a community that is not connected to one's own by any of the usual ties of kinship or ethnic origins. Second, it exemplifies the challenge which Christianity posed to the usual understanding of gift giving and exchange. Gifts to individuals created obligations which might link families together for generations. Gifts to religious cult groups, trade associations, or cities created an obligation for the group to provide appropriate honors for the donor: such as a statue, inscription, or titular honors. By insisting that gifts of wealth are really "owed" to God, the Christian community deprived its wealthy patrons of the possibility of obligating the poor members of a community in return for benefits received.

4. Sexual Morality. Jews frequently associated the idolatry of pagans with sexual immorality. Artistic representations in the baths and houses of Pompeii and Herculaneum show that any form of sexual act between humans as well as acts between humans and animals were regularly depicted. Prostitutes were frequently attached to the baths. Since the baths were used by both sexes, such open displays of diverse sexual acts cannot have been limited to "men only." Though philosopher moralists might have argued against submitting to sexual passion and insist that sex was only appropriate for begetting legitimate children, the sexual mores of the Greco-Roman city were almost as open as the slogan Paul attributes to the erring Corinthians: "All things are permitted." Restrictions came into play only where the legitimacy of a man's offspring was threatened or where marriage or sexual liaisons violated class lines. A woman who had sex with her slave might be condemned to death. A patroness who sought to marry her freedman was to be prevented from doing so by the court. Other liaisons between freedwomen and slaves were denounced, though not necessarily punished. Freeborn women who cohabited with another's slave against the owner's consent were reduced to slavery. But a daughter still under her father's control was only denounced for union with a slave. Otherwise the parent would suffer for an act of his child.

Within this social context, both Jews and Christians insist that holiness requires a much different standard of sexual morality (Rom 1:24–27). Prohibitions against incest were more extensive than in Roman society. These prohibitions may be the reference of the general word *proneia*, "sexual immorality," in the exception made to Jesus' prohibition of divorce (Matt 5:32). The Essenes claimed that unchastity, wealth, and defiling the sanctuary were the three nets by which Satan traps humans (CD 4:12b–5:14a). Unchastity includes divorcing one's wife and marrying one's niece, which the author argues is equivalent to the explicit prohibition against marrying one's aunt (Lev 18:15). Other versions of the divorce prohibition circulated without the exception (1 Cor 7:10–11). The exception in Matthew's version may be intended to permit new converts to Christianity to dissolve marriages that fell within the forbidden degrees of kinship. Early Christians also adopted the Jewish prohibitions against homosexuality and bestiality, though neither appears outside vice lists. Paul does not envisage the possibility of a Christian spouse separating from a pagan who is willing to continue the marriage, but he does permit Christians whose pagan spouses have divorced them to remarry if they choose.

Since marriage was a contractual agreement that could be dissolved if either party were willing to incur whatever stipulations were stated in the original document, opposition to divorce on religious grounds, whether by sectarian Jews like the Essenes or by Christians, probably struck many persons as peculiar. Paul's primary opposition to divorce in 1 Corinthians 7 comes in conflict over religious motivations, not social or legal customs. The main problems are being created by Christians who think that holiness demands that they refrain from sex altogether (1 Cor 7:1). They wish to divorce, to abstain from sex in marriage, or to avoid contracting a promised marriage in order to realize this ideal. Paul answers by insisting that lifelong marriage to one person is the legitimate expression of human sexuality. It does not subject the individual to the imprisoning passions of lust that are evident in the widespread "sexual immorality" which Christians have been told to flee.

5. Love of Enemies. Love of enemies takes on an important place in early Christian exhortation because Christians frequently found themselves objects of suspicion, persecution, or mockery. Christians who were in a subordinate position to a non-Christian, such as wives or slaves, were particularly vulnerable, since they had little recourse against abusive treatment. But other Christians were also told to reject any form of legal or even verbal retaliation against enemies. Instead, the "enemy" should meet with words of blessing and even kind treatment. Those who remain enemies will suffer God's judgment (Rom 12:19–20). But the general motivation for kind treatment does not seem to be vindictive pleasure in God's wrath. Rather, kindness to an enemy may win the person over. It also demonstrates the superiority of Christians to their enemies, since they are not implicated in the anger or the hostility of the relationship (Rom 12:21). They refuse to be persons who "return evil for evil" (1 Thess 5:15; 1 Pet 3:9; Rom 12:17).

6. Relationship to the World. Christians are in an ambiguous position over against the social world in which they live. Conversion has separated them from the normal religious ties to family, trade association, and city that constitute an ongoing part of life. Their break with old associates and patterns of behavior might lead to scorn or even persecution (1 Pet 4:1–5). They are exhorted to reject values and behavior common in the world around them (Rom 12:2). Yet Christians do not withdraw into an isolated sect. They seek to live "peaceably" or "quietly" within that society (Rom 12:18). Doing so apparently involved demonstrating by one's conduct that generally accepted standards of "good" and "honorable" behavior were practiced among Christians (Rom 12:13; Phil 4:8). Their own practice of doing good to others extended beyond group boundaries (Gal 6:10; 1 Thess 4:15).

Negotiating the inevitable tension between radical renewal which challenges the given realities of the world and accommodation to generally accepted views of good behavior was clearly a problem in NT churches. Resolution of particular instances depended upon the discernment, persuasive or prophetic power of individual Christian teachers and communities. The apocalyptic radicalism of Revelation, for example, posed a prophetic challenge to accommodation in the churches of Asia Minor. Rome is not a power whose order can be accepted, even provisionally, as "good." She is the end-time incarnation of Satan, the great beast, the whore of Babylon who drinks the blood of subject nations, including Christ and faithful martyrs (11:7; 13:1–10; 17).

Christians are warned of "harlotry," possibly participating in religious ceremonies sponsored by the trade guilds of their cities (2:6, 15). Citizens in these cities eagerly supported the cult of Augustan emperors. Revelation warns that the "beast" will compel all the peoples on earth to worship it (13:4, 8, 12; 14:9, 11; 20:4). The wealth of the Laodiceans is condemned by Christ (3:17). The *Sibylline Oracles* (3:350–55; 4:145–48; 8:11–92) castigate Rome for bleeding the provinces of Asia of their wealth and even enslaving its populace. Revelation depicts the collapse of the arrogant Roman Empire (17:4; 18:1–16). Faced with such a mammoth incarnation of evil, the prophet requires that Christians withdraw from participation in the life of the flourishing cities of Asia Minor. The "mark of the beast" is depicted as a parody of Christian sealing of the elect (7:1–8). If the "mark" refers to the imperial image on coinage, then the only way in which Christians could avoid it would be to withdraw from economic activity which involved use of Roman currency (14:9–11).

Other forms of withdrawal may be indicated in praise for the "virgin" martyrs, who are permitted to share in the first resurrection when Jesus reigns on earth (14:1–5; 20:4). Some exegetes have linked this idea of ascetic purity with the author's use of "priests" for Christians (1:6; 5:10). The Essenes extended rules for priestly holiness to all members of their sect, which had also favored celibacy in some of its groups, and withdrawal from the rest of Judaism, which limited one's economic transactions with those who did not belong to the sect. Only God's heavenly forces can destroy the imperial beast which has polluted and corrupted the world. Faithful Christians must divorce themselves from any entanglements with the beast and endure suffering until the end. When they have triumphed, they will share the glorious exaltation of the Lamb. This demand for loyalty rejects the benign coexistence between Christians and the larger socioeconomic world that Paul, Luke, and even the suffering Christians of 1 Peter think is possible. Lydia would hardly be allowed to pursue her trade as seller of purple cloth (Acts 16:4) in Thyatria if John has his way. Indeed, such "lukewarm" Christians are objects of particular scorn (3:16). For Revelation this extreme form of discipleship is the only way in which Christians can defend the truth which they alone know: Christ is the Lord of the kings of the earth (Rev 1:5)—a claim which all NT ethics seeks to express.

PHEME PERKINS

ETHIOPIA (PLACE) [Gk *Aithiopia* (Αἰθιοπια)]. ETHIOPIAN. The place name "Ethiopia" (possibly meaning "land of the people of burnt faces," i.e., dark skin; cf. Jer 13:23) appears, as such, only once in the Bible (Acts 8:27), but in the LXX it usually translates the Heb *kūš* (Cush), a name which appears several dozen times in the OT. "Ethiopian" (Gr *Aithiops*) similarly translates *kūšī/kūšīt* (pl. *kūšīm*). The only exceptions are the few instances when the Hebrew words are treated as proper names and transliterated as "Cush" (LXX *chous,* e.g., Gen 10:6–8=1 Chr 1:8–10) or "Cushite" (LXX *chousi,* e.g., 2 Sam 18:21–32).

In Egyptian texts Cush (or Kush) appears as a country to the S of Egypt, inhabited by non-Egyptians. See also KUSH (PLACE). The N border of Cush during Egypt's early dynasties lay between the first and second cataracts of the Nile but by the time of the OT had been pushed as far S as the fourth cataract. Cush extended deep into east-central Africa, but its S boundaries were never sharply delineated. From the

Roman period onward the region was commonly known as Nubia and apparently comprised much of what today are the Sudan and Ethiopia (also known as Abyssinia). Cush was most easily reached from the Levant by way of the Red Sea or the W coast of the Arabian peninsula. Although Egypt and other nations traded with the region during the biblical period, obtaining from it spices, incense, ivory, rhinoceros horns, ebony, topaz (Job 28:19), gold, slaves, and other commodities, relatively little is known about the history of the country during that time.

A. Geography and Ethnology

Cush occupied a portion of E Africa that was at least as large as the Arabian peninsula. It had widely diverse geographical regions, the characteristics of which have largely persisted to the present day. The N region consists largely of arid steppeland, which gives way in the SW to the Sudd, a vast, virtually impenetrable swamp through which flows the White Nile. To the SE, rising above a torrid coast, is a vast massif with elevations averaging some 7,000–8,000 ft (4,400–5,000 m), where the climate is equable and the land generally arable, with sufficient rain in the winter to produce good crops. Two major sources of the Nile, the Takkaze and the Blue Nile, rise in these highlands, and farther to the S are other rivers.

The migrations of the peoples who inhabited ancient Cush cannot be fully traced, but from an early time there was considerable ethnic diversity. The population of the N portion was, as it is today, predominantly negroid. The Ethiopian highlands probably were inhabited in the 2d millennium B.C. by a local "Cushite" populace which, according to implications in the eponymous ethnic list in Genesis, may also have occupied parts of the W coast of the Arabian peninsula (Gen 10:6–8). During the 1st millennium B.C. there was considerable migration into Ethiopia by Semites from the Arabian peninsula, who made an impact on the languages and other aspects of culture of the highlands (Ullendorff 1973: 45–50). The Ethiopians of this region tend to be tall and slender with dark skin (cf. Isa 18:2), thin lips, and aquiline noses, some of which features are akin to those of the inhabitants of Arabia.

B. In the OT and Intertestamental Literature

Although geographically distant from Palestine, Cush was known to the Israelites not only because of its commercial activity, which was already under way by the time of Solomon in the 10th century B.C. and continued in subsequent centuries, but also because some Cushites frequented Palestine or even settled there. Individual Cushites are occasionally mentioned as having linked their lives with those of Hebrews. A Cushite was among the servants of King David (2 Sam 18:21–32). Jeremiah was released from imprisonment at the behest of one Ebed-Melech, a Cushite (described as a "eunuch," whether in fact or *pro forma*) who held a responsible position in the household of King Zedekiah of Judah (Jer 38:7–13; 39:15–18). Two other OT persons bear the name "Cushi" (Jer 36:14; Zeph 1:1), but their association with the country of Cush, if any, is unknown. Regarding Moses' "Cushite" wife (Num 12:1), see below.

The OT writers knew of the geographical proximity of Cush to Egypt, and in their literature often paired the two countries (e.g., Isa 20:3–4; Ezek 29:10; 30:4; cf. Dan 11:43; Nah 3:9; and Ps 68:31). Occasionally they mention details about the region, but inasmuch as their knowledge came largely from hearsay or conventional geographical conceptions it is not surprising that information was sometimes imprecise. Gen 2:13 asserts that a primeval river, Gihon, flows around the land (cf. Jub 8:15, 23 and the LXX of Jer 2:18). Isa 18:1 speaks more plausibly of the "rivers of Cush" (cf. Zeph 3:10) and notes that the region beyond these rivers (though presumably still within Cush) sent ambassadors down the Nile "in vessels of papyrus"—a statement that may reflect knowledge that the inhabitants of parts of Cush constructed boats from bundled stalks of papyrus. The same passage also refers to Cush in obscure words that the KJV translates as "land of wings on both sides" and the RSV translates as "land of whirring wings," but which may mean "land of shadows on both sides," that is, a region where, because of S Cush's location near the equator, shadows fall on one side of an object during the summer and on the other in the winter—a phenomenon noted by ancient Greek writers. In Esth 1:1 and 8:9, Cush is named as the W extremity of the Persian Empire. Several OT passages show knowledge of a region to the S of Cush, probably located in present-day Somaliland, which the Egyptians called "Punt" and the OT writers "Put" (e.g., Jer 46:9; Ezek 30:5; Nah 3:9). It is possible that in some OT passages Punt was understood to include a part of the coastal region E of Cush.

During the late 8th and early 7th centuries B.C. Egypt was briefly dominated by a Cushite dynasty which figured considerably in Hebrew history. 2 Kgs 17:4 mentions the attempt of Hoshea, the last ruler of the N kingdom of Israel, to ally himself with "So, king of Egypt," i.e., Sebichus (Shebitku), a pharaoh of the 25th Dynasty. In Isa 20:3–4 Assyria's invasion of Egypt toward the end of the 8th century is treated as an attack on both Egypt and Cush (cf. Nah 3:8–9). Around 689 B.C. Egypt mounted a military campaign in Palestine against the Assyrians. In recording that venture 2 Kgs 19:9 (= Isa 37:9) identifies by name the leader of the Egyptian army, Tirhakah (Eg *Taharqa*), and dubs him "King of Cush."

In view of these circumstances it is not surprising that for some time following the Ethiopian dynasty's control of Egypt, and perhaps even from as early as ca. 750 B.C., "Cush" was sometimes used as a virtual synonym for "Egypt." Amos 9:7 mentions Cushites in a context evocative of the Hebrew exodus, in which case the term may be equivalent to "Egyptians." The references to Cush and Cushites in Zeph 2:12 and 3:10 may similarly allude to Egypt. 2 Chr 14:9–13, a story describing an invasion by an otherwise unknown "Zerah the Ethiopian" that is ostensibly set in the time of King Asa of Judah (913–873 B.C.), is not present in the corresponding account in 2 Kings, and possibly was a postexilic addition to the text; if it is historical, it may originally have alluded to an Egyptian, or possibly Arab, attack made at a later time than Asa's reign, perhaps around the time of the Ethiopian rule of Egypt.

The story of the visit of the Queen of Sheba to Solomon's court (1 Kgs 10:1–13) has long been cherished in Ethiopian religion and national tradition (see Hubbard 1957), but the location of Sheba (i.e., the kingdom of Saba) was more likely on the W side of the Arabian peninsula than in Cush (see Ullendorff 1988: 131–45). The association between the Sabeans and the Cushites is not entirely unwarranted, however, and sometimes appears in the OT (e.g., Isa 43:3 and 45:14). A few OT passages seem to link Cushites closely with Arabs of the NW Arabian peninsula, the Negev or Edom. The statement that Moses' wife was a Cushite woman (Num 12:1) is hard to reconcile with the tradition that Zipporah was a Midianite (Exod 2:15b–22) unless "Cushite" is an error for "Cushanite" and therefore is synonymous with "Midianite" (cf. the linking of "Cushan" and "Midian" in Hab 3:7). 2 Chr 21:16–17 briefly narrates an otherwise unknown invasion (not found in the corresponding passage in 2 Kings) made into Judah during the reign of Jehoram (849–843 B.C.) by "the Philistines and the Arabs who are near the Cushites."

The relevance of Ethiopia for the understanding of the OT goes beyond the biblical references to Cush. It has been noted (e.g., Ullendorff 1988) that even into the 20th century the inhabitants of the Ethiopian highlands preserved concepts and practices evocative of the ancient Hebrew culture. Not only have town life, agriculture, and animal husbandry in that region long been broadly evocative of the world of the OT, but details of culture are also sometimes similar, such as an Ethiopian aristocrat's riding on a donkey as a symbol of rank. For centuries the Falashas of Ethiopia have regarded themselves as true Israelites, and Ethiopian Christians also have rites and customs which have affinities with the religion of Israel, among which are the celebration of the Sabbath on the seventh day of the week, the reckoning of the day as commencing at sunset, adherence to preexilic Israelite festivals, and the use of apotropaic devices similar to Hebraic ones (Ullendorff 1988: 2–3, 73130). Such elements in Ethiopian culture have been suspected to have their origin in a community of Jewish merchants or expatriates that was established in Ethiopia during the OT period, perhaps before the Exile.

C. In the NT

Ethiopia, as such, is not mentioned in the NT. The only reference to an Ethiopian is in the story of Philip's baptism of an unnamed Ethiopian who is "a eunuch, a minister of Candace the queen of the Ethiopians, in charge of all her treasure," who had just completed a visit to Jerusalem to worship (Acts 8:27). Although the statement bristles with difficulties, there is no doubt about the fact that Ethiopia (both in the broader and narrower use of that term) had ready contact with Palestine in the 1st century A.D., and that Jerusalem occasionally would be visited by Ethiopians influenced by the Hebrew religion.

ROBERT HOUSTON SMITH

ETHIOPIAN EUNUCH. Acts 8:26–40 narrates the story of the Ethiopian eunuch who is converted to Christian faith through the agency of the deacon Philip. In addition to the intriguing presentation of the character himself, the story is significant for the questions it has raised regarding the tradition that may stand behind it and for the role it plays in the larger framework of Luke-Acts.

Luke describes the character in some detail: "And behold, an Ethiopian, a eunuch, a minister of Candace the queen of the Ethiopians …" (Acts 8:27 RSV). The geographical name "Ethiopian" would signal to Luke's audience that this man was from territories south of Egypt. Since he is also identified as an official of Candace, 1st-century readers would connect him specifically with the kingdom of Meroe, the queens of which traditionally were called "Candace." A late 1st century B.C. military campaign against Meroe, a scientific expedition into the same kingdom in A.D. 62, and another military campaign (planned but not executed) during the reign of Nero would have made Ethiopia a place of contemporary interest. Greek writers had long demonstrated a curiosity about and appreciation of Ethiopians, as is evidenced in Homer's reference to Ethiopians as the "farthermost of men" (*Od.* 1.22–23) and in Herodotus' description of Ethiopians as the tallest and most handsome of all peoples (3.17–20). Luke's audience would have seen in the Ethiopian a positive figure, perhaps one to whom even an element of mystery would be attached because of his distant homeland.

What has puzzled interpreters is that Luke identifies this particular Ethiopian as a eunuch, which means that he cannot have been a proselyte to Judaism (cf. Deut 23:1 and Joseph. *Ant* 4.290–91), despite the fact that he has been to Jerusalem to worship and is reading from a scroll of Isaiah as he travels (8:27–38). Narrating the conversion of a presumed gentile at this point introduces an anomaly into Luke's story, since Luke later portrays Cornelius as the first gentile convert (10:1–11:18). Interestingly, Luke himself does not comment on the restrictions about converting eunuchs, which may suggest that Luke is less interested in that feature of the story than he is in some others. For example, eunuchs frequently held places of respect and trust in Eastern courts, as does this one, and the identification of this figure as a eunuch may simply reinforce the reader's impression that he is an unusual person, a person who has come from the "end of the world"—at least from the end of Luke's world.

Within the story, the Ethiopian's actions underscore this portrayal of him as an intriguing, romantic, even exotic personage. Luke initially explains that the Ethiopian has been to Jerusalem to worship and is in the process of returning home when he encounters Philip. Since there are indications that gentiles worshipped in the temple in Jerusalem, and since both Ethiopians and eunuchs seem to have been regarded as especially interested in religious matters, this feature of the story serves to underscore the readiness of the Ethiopian for the events that follow. By contrast with Philip, who responds almost passively to the instructions given him by the Spirit and the questions asked him by the Ethiopian, the Ethiopian takes an active role in his own conversion. (See CONVERSION.) He invites Philip to join him in his chariot (v 31); he asks Philip for interpretation of the scroll he has been reading (v 34); he actively seeks baptism (v 36); and he goes on his way rejoicing (v 39).

Particularly because this story appears to contradict the presentation of Cornelius as the first gentile convert, scholars have been eager to determine the history of the story itself; i.e., where the story originated and what happened to it during its transmission. Several positions have been argued, with the following among the most prominent: (1) the story originated in an experience of Philip, who had prophetic and spiritual gifts like those of his daughters (see Acts 21:8–9), and who passed the story along to Luke; (2) the story did come from Philip, but originally it concerned the conversion of the first gentile, and Luke altered the story in order to preserve the role of Peter as the apostle involved in the first conversion of a gentile; and (3) the origin of the story has been lost in legendary elements that are typical of early Christian legends about the conversions of prominent individuals. No real consensus has emerged about the origin of this story. In fact, the very difficulty of deciding among these positions indicates the degree to which Luke's sources remain hidden.

At least as important as the question of the history that stands behind the account is the question of its place within the scheme of Luke-Acts. In Acts 1:8, the Risen Lord announces that his apostles will be his witnesses "in Jerusalem and in all Judea and Samaria and to the end of the earth." Just prior to the story of the Ethiopian and Philip, persecution forces believers out of Jerusalem and into "the region of Judea and Samaria" (8:1), where Philip preaches among the Samaritans. The Ethiopian, coming as he does from the "end of the earth," stands at the threshold of the worldwide mission as yet another announcement of that mission (Ps 68:31). He prefigures Cornelius and the attending change in the Church's understanding of its mission (cf. Acts 10:34, 11:18). His own eagerness to hear Philip and his subsequent request for baptism symbolically convey Luke's understanding of the willingness of the gentile world to receive the gospel of Jesus Christ. Small wonder that early Church writers pass along a tradition that the Ethiopian returned to his own country and preached the gospel there (Euseb. *Hist. Eccl.* 2.2.13–14; Iren. *Haer.* 3.12.8).

ETHNAN (PERSON) [Heb *ʾetnān* (אֶתְנָן)]. Son of Asshur (1 Chr 4:7). Nothing is otherwise known about him. It is possible that the name may actually be the name of a town, and it is often identified with Ithnan, a city in S Judah (Josh 15:23).

H. C. LO

ETHNARCH [Gk *Ethnarchēs* (Ἐθναρχης)]. See PALESTINE, ADMINISTRATION OF (ROMAN ADMINISTRATION).

ETHNI (PERSON) [Heb *ʾetnî* (אֶתְנִי)]. A Levite, ancestor of Asaph the musician (1 Chr 6:26—Eng6:41). The name Ethni is found only once in a genealogical list of levitical singers which attempts to trace ancestry back to the time of David. The list is secondary, perhaps based upon the preceding list (1 Chr 6:1–15—Eng6:16–30). The name may be equivalent to Jeatherai in 1 Chr 6:6—Eng6:21. Noth (*IPN*, 171) suggested that Ethni is a shortened form of Ethnan.

TOM WAYNE WILLETT

EUBULUS (PERSON) [Gk *Euboulos* (Εὐβουλος)]. A Christian who was with Paul (2 Tim 4:21) during the imprisonment from which 2 Timothy purportedly was written. While that confinement is usually assumed to have been in Rome, Dibelius and Conzelmann, for example, argue that Caesarea also might well have been the place of composition envisioned by the author of 2 Timothy (*Pastoral Epistles,* Hermeneia, 126–27). Eubulus sends greetings to Timothy along with Pudens, Linus, Claudia, and others. Since Eubulus was a rather common Greek name, one often found in papyri and inscriptions, one suspects he was a gentile by birth.

A person named Eubulus—identified as one of the presbyters in the Corinthian community—is also mentioned in the letter from the Corinthians to Paul in the Acts of Paul (8.1.1), where Eubulus, along with others, send greetings to Paul. While the author of the apocryphal Acts may have known and used the Pastoral Epistles, it is also possible that both independently relied upon the same oral traditions and thus contain complementary information about Eubulus (see the discussion in MacDonald 1983: 65–66). At the same time, however, the commonality of Eubulus' name cautions against a solid identification of Paul's prison companion with the Corinthian presbyter.

FLORENCE MORGAN GILLMAN

EUGNOSTOS AND THE SOPHIA OF JESUS CHRIST. *Eugnostos* and *The Sophia of Jesus Christ* are closely related gnostic tractates. Most of the didactic portions of *Eugnostos* (which constitute its bulk) are found on the lips of Christ in *Soph. Jes. Chr.* For this reason, it is appropriate to consider them together. Both tractates occur in the Nag Hammadi library: *Eugnostos* is found twice, in significantly different versions, in Codices III and V; *Soph. Jes. Chr.* is found only in Codex III. However, another copy has been preserved, outside the Nag Hammadi library, in Papyrus Berolinensis 8502. All copies are written in the Sahidic dialect of Coptic, although other dialectal influences are occasionally found. In addition, a fragment of *Soph. Jes. Chr.* in Greek (the language of composition) was discovered at Oxyrhynchus (P. Oxy. 1081). The number of preserved copies, and the evidence for two major recensions of *Eugnostos*, suggest wide usage and popularity.

The major portion of *Eugnostos* has the form of a religio-philosophical controversy discourse. The distinctive structure of this widely used literary genre was as follows: announcement of theme; position(s) of opponents; refutation of opponents; presentation of one's own position (for another example, see Ptolemaeus' *Letter to Flora*). This discourse is framed by a letter format from an otherwise unknown religious teacher named Eugnostos. (It has been suggested that he was the scribe of the colophon of *The Gospel of the Egyptians* [NHC III,*2*], who is also named Eugnostos [Doresse 1960: 160], but that seems unlikely, since the tractate *Eugnostos* is undoubtedly to be dated considerably earlier than the time of the copyist of *Gos. Eg.*) The letter is directed to "those who are his" (Codex III *Eugnostos* only; in Codex V *Eugnostos*, the section is mostly in lacuna). Although "his" may refer to Eugnostos, it could also designate a deity. In Codex III *Eugnostos*, Eugnostos is given the honorific title "The Blessed," perhaps indicating the belief that he had died.

The discourse portion of *Eugnostos* is divided into two parts. (In what follows, references are to the Codex III version unless otherwise noted.) Part I (70.3–85.9) consists of a description of the "true" nature of that portion of the cosmos beyond the visible sphere. The writer of *Eugnostos* believed that the invisible realities were mirrored (albeit imperfectly) in the visible world, and that by examining it, with the help of a divine principle called Thought (Gk *ennoia*), those higher realities could be known (III,74.13–19 and *Eugnostos*-V, par.).

The invisible world is understood to have originated with a being who himself has no origin, because he is eternal and unbegotten. He is the source of every mental power (73.8–11). Subsequent realities come into being through various means: self-mirroring, spiritual sexual activity by various male-female pairs, and direct creation. These realities establish the patterns for "our aeon" and the various aspects of it having to do with time (83.20–84.10). In the process of the coming into being of these realities, a special group is produced, consisting of those subsequently to be embodied as gnostics (75.12–23).

The shorter Part II (85.9–90.3) depicts the highest level of the visible cosmos, called "chaos." Although three aeons are spoken of at the beginning, the first two are largely ignored and the description focuses on the third, named "assembly" (86.15–87.8). From it come divine beings and structures, as well as the patterns for the remainder of the cosmos. At its conclusion, *Eugnostos* looks forward to the appearance of one who will interpret (V,*1*) or simply repeat (III,*3*) the teachings of the tractate.

Names given three of the major divine beings (Immortal Man; Son of Man, also called Adam; and Son of Son of Man, also called Savior) appear to refer in a partly veiled way to the sequence God, Adam, and Seth in Genesis 1–5. If that is correct, the tractate should be considered early Sethian gnostic in its present form. (There is reason to think that the names were added to an earlier speculative document.)

Eugnostos probably originated in Egypt. There is a reference in the text to "the 360 days of the year" (84.4–5), which was a calendrical concept only current in Egypt during the time when *Eugnostos* was probably composed. Although various suggestions have been made about evidence of Christian influence in the composition of *Eugnostos* (Wilson 1968: 115–16; Tardieu 1984: 66), none has been convincing and *Eugnostos* is generally considered non-Christian, except for what appears to have been a late modification of the concluding prophecy in Codex III *Eugnostos.* Influence of a speculative type of Judaism (perhaps

the same as the early Sethianism mentioned above) is to be found in both parts of *Eugnostos.* Also, there is numerological speculation in Part I, which may indicate Neopythagorean influence.

One other influence should be noted; namely, that of Egyptian religious thought. The sequential pattern of deities in Part I seems to be a reflection of a similar pattern developed in the Theban theology of the New Kingdom (1551–1070 B.C.E.). That pattern—an initial being without a consort, who produces another consort-less being, who in turn creates a group of sexually paired divinities whose sole function is to create other divinities directly involved in the world-creating process—was unique to Egyptian religion. Its use in *Eugnostos* may have influenced later gnostic speculative developments; e.g., compare the description of the highest being in Eugnostos with those in the probably later *Apocryphon of John* (NHC II,*1;* III,*1;* IV,*1;* and BG *2*) and *Tripartite Tractate* (NHC I,5) (Parrott 1987: 91–92).

As to the date of *Eugnostos*, these observations point to sometime in the 1st century C.E. A recent suggestion that it be dated in the latter part of the 2d century is not well supported (Tardieu 1984: 66).

Soph. Jes. Chr. has the form of a postresurrection revelation dialogue between Christ and his male and female followers. Although it is said that all the disciples, as well as the women followers of Jesus, are present, the only ones who are named and who participate in the dialogue are Philip, Matthew, Thomas, Bartholomew, and Mary. These seem to have been given a special status, here and elsewhere, as recipients of distinctive gnostic revelations from Christ (Parrott 1986).

Eugnostos was probably a source for *Soph. Jes. Chr.* rather than the other way around (Krause 1964). It seems likely that the writer of *Soph. Jes. Chr.* wanted to attract non-Christian gnostics, who would have known and perhaps revered *Eugnostos*, to a version of Gnosticism that placed Christ at the center, as revealer and savior. Christ, depicted speaking the words of *Eugnostos*, would have been understood as fulfilling the concluding prophecy of *Eugnostos* In the non-*Eugnostos* material in *Soph. Jes. Chr.*, of which there is a significant amount, Christ is also emphasized. There, he is seen as revealer and as the one whose triumph over the wicked powers opened the way for his followers to do the same.

Typical gnostic themes also found in the non-*Eugnostos* material, although in somewhat abbreviated form, are the wicked creator god Yaldabaoth, the fall of Sophia, the evil of sex, and the ultimate difference between those with pure knowledge and those with defective knowledge.

Soph. Jes. Chr. should probably be dated early in the 2d century. This is suggested by the reason discussed above for its composition, the fact that references to the controversy with orthodoxy are missing, and the lack of any clear signs of the gnostic systems of the mid-2d century C.E. Earlier suggestions that *Soph. Jes. Chr.* should be dated late in the 2d or 3d centuries overlooked these considerations (Till and Schenke 1972: 56; Puech in *NTApocr* 1: 248).

DOUGLAS M. PARROTT

EUMENES (PERSON) [Gk *Eumenēs* (Εὐμενης)]. Eumenes II Soter, son of Attalus I and brother of Attalus II, king of Pergamum (197–159 B.C.; 1 Macc 8:8). He was given vast territories in Asia Minor by the Romans after the defeat of Antiochus III (the Great). In the year Eumenes began to reign, Antiochus III began the reconquest of former lands of the Seleucid empire. Many of the cities under the control of

Pergamum were lost. Through political negotiations and military alliance. Eumenes convinced Rome that Antiochus was a threat to Roman control in Asia Minor and that war should be declared. After Antiochus was defeated decisively at the battle of Magnesia (190 B.C.), Rome rewarded Eumenes with vast holdings, making him the most powerful ruler in Asia Minor. In the period 180–170 B.C., Eumenes rebuilt the city of Pergamum, erecting many shrines including the Great Altar of Zeus mentioned in Rev 2:13. Following the death of Seleucus IV in 175 B.C., Eumenes formed an alliance with Antiochus IV in order to undercut the former alliance between the Seleucid and Macedonian empires. Following Antiochus IV's death, Eumenes supported the pretender Alexander Balas against the claims to the throne of Demetrius. As a result of these alliances, Rome feared that Eumenes' power was becoming too great. Therefore, before his death Eumenes was stripped of many of the honors bestowed by Rome in spite of the fact that he remained a loyal ally of Rome unto the end.

RUSSELL D. NELSON

EUNICE (PERSON) [Gk *Eunikē* (Εὐνικη)]. A resident of the city of Lystra in Lycaonia where she, her mother Lois, and her son Timothy were apparently converted by Paul and Barnabas on their journey together into Asia Minor (2 Tim 1:5; Acts 16:1). Timothy eventually became one of Paul's most significant helpers.

The writer of 2 Timothy describes Timothy's faith as "a faith that dwelt first in your grandmother Lois and your mother Eunice" (1:5). Thus he seems to be aware of a tradition that their conversion preceded Timothy's. Later in the letter Timothy is reminded that "from childhood you have been acquainted with the sacred writings which are able to instruct you for salvation through faith in Jesus Christ" (3:15). Perhaps this text is intended to refer to Eunice and Lois as Timothy's earliest teachers. While there is no reason to think that the author of 2 Timothy was incorrect about the names of Eunice and Lois and that they were converted before Timothy, the idea that he had been taught the Scriptures from childhood, thus implying an orthodox upbringing by Eunice and Lois, may be a development of Christian legend (Dibelius and Conzelmann *Pastoral Epistles* Hermeneia, 98). Information in Acts 16:3 indicates that Timothy was uncircumcised, i.e., in reality the product of "a lax Judaism" (Haenchen *Acts* MeyerK, 478).

From Acts 16:1, which states that Timothy was "the son of a Jewish woman who was a believer; but his father was a Greek," it becomes evident that Eunice was a Jewess who had married a gentile and later had become Christian. Since no interference from Timothy's father is noted when Paul decides to circumcise Timothy, some have assumed that he must have been dead. Accordingly, a few manuscripts (generally considered secondary) refer to Eunice as a widow in 16:1.

The marital situation of Eunice and Paul's circumcision of Timothy have caused ongoing debate over whether her children were considered Jewish or gentile. As a Jewess married to a gentile, Eunice's marriage would have been looked upon unfavorably by Jews. Many commentators observe, however, that her offspring would have been considered Jewish because they had a Jewish mother. Yet it has been questioned whether that matrilineal principle was actually in effect in Eunice's day and milieu. The suggestion has been made that in fact "lineage was matrilineal when it was matrilocal. When the Israelite woman moved abroad to join her Gentile husband, her children were considered Gentile" (Cohen 1986: 266). But a response has countered that matrilineal emphasis could very well have been operative in Eunice's situation (Bryan 1988: 294).

EUODIA (PERSON) [Gk *Euodias* (Εὐοδιας)]. A Christian at Philippi who, in company with Syntyche, is described by Paul as having "labored side by side" with him in the gospel along with Clement and other coworkers (Phil 4:2–3). Euodia and Syntyche are mentioned in Philippians because of a disagreement between them which Paul had become aware of, probably via EPAPHRODITUS (cf. 2:25).

The identity of these two quarreling parties, whose Greek names are in the feminine gender, as they also appear in numerous inscriptions, has been questioned on various accounts. One theory claims that Syntyche ought to be spelled as the masculine Syntyches, and that "he" was actually the jailer at Philippi (cf. Acts 16) and the husband of Euodia. But the Greek feminine plural pronouns ›*autais* and *haitines* in Phil 4:3, which can only refer back to Euodia and Syntyche, require that both names belong to women. Another view, advanced by the Tübingen school, interpreted Euodia and Syntyche not as individuals but as symbols for Jewish and gentile Christians respectively. This approach viewed the person called Syzygus in 4:3, often rendered "true yokefellow," instead as "the unifier," i.e., as being in reality Peter, who was called to mediate between the Jewish and gentile factions within the Church. But Paul hardly seems given to writing with such obscure symbolism. Another theory concerning the identity of Euodia and Syntyche is that one or the other of the two women was in fact the LYDIA of Acts 16, her name there being an adjective indicating her place of origin, i.e., "the Lydian." The important role played by Lydia in the founding of the church at Philippi lends some support to this hypothesis.

The quarrel between Euodia and Syntyche which prompted Paul's reference to them must have had ramifications for the entire Philippian community or it would hardly have been mentioned in a letter to the whole Church. Thus Paul's concern for these women reflects their importance in the group, probably due to leadership roles as deacons or leaders of house churches. This accords with the Acts 16 account where women are prominent among the original core of Philippian believers. While the content of Euodia's and Syntyche's quarrel is left unspecified, one suspects it was related to matters of church leadership as they exercised it. In any case, Paul urges the two to be reconciled in the Lord, emphatically repeating the phrase "I entreat" (Gk *parakalō*) to each (4:2). He asks them to be of one mind in Christ.

To help bring about the reconciliation of Euodia and Syntyche, Paul calls for the intervention of someone referred to simply as "true yokefellow" (Gk *gnēsie syzyge*). In addressing this latter person, Paul states that Euodia and Syntyche had "labored side by side" (Gk *sunathlein*) on behalf of the gospel with Clement, the other fellow workers (Gk *sunergoi*), and himself. It has been argued that the term Gk *sunathlein,* also used by Paul in Phil 1:27, where it implies resisting external opposition, bears the same nuance of confronting an outside force in 4:3, i.e., it "suggests strife, danger, opposition, courage, memorable loyalty, not leadership, ministry, preaching, presiding" (Malinowski 1985: 62). Malinowski uses this observation to argue that Euodia and Syntyche thus could not have had leadership roles in the Philippian community. But this analysis overlooks the very noticeable singling out of these women for mention which necessarily accords them a distinction. Further, the theory fails to consider that Euodia's and Syntyche's "laboring side by side" (if indeed it be restricted to facing external opposition) was probably carried on precisely in their being strong leaders or preachers—hence the seriousness of their quarrel for the church of Philippi.

Paul, by reminding the mediator "true yokefellow" of Euodia's and Syntyche's collaboration with him, indicates respect for their work; thus, they are not to be degraded for their disagreements, but recognized as esteemed members of Paul's team (Hawthorne *Philippians* WBC, 180). Nor does there appear to be any reason to assume, retrojecting the roles of later deaconesses onto Euodia and Syntyche, that the two labored for the spread of the gospel only among women. Rather, as the text implies, in Paul's eyes they were obviously his co-workers, equal in importance and role to Clement and the other co-workers. Paul reminds the Philippians that the names of each of these workers are "in the book of life" (4:3), i.e., Euodia, Syntyche, and the others are indeed God's faithful servants.

EUPHEMISM AND DYSPHEMISM IN THE BIBLE. See BIBLE, EUPHEMISM AND DYSPHEMISM IN THE.

EUPOLEMUS. A Jewish historian who flourished in Palestine in the mid-2d century B.C.E. He wrote a work in Greek entitled *Concerning the Kings in Judea*, of which five brief fragments have been preserved. Other works entitled *Concerning the Prophecy of Elijah* and *On the Jews of Assyria* are also mentioned in connection with Eupolemus, but for convincing reasons are not now attributed to him.

He is confidently identified as the Eupolemus who was a member of the priestly family Accos and sent as an ambassador to Rome by Judas Maccabeus (1 Macc 8:17; 2 Macc 4:11; Josephus *JW* 12.10.6 §415–16).

The major source for the Eupolemus fragments is Eusebius *Praep. Evang.*, Book 9. In certain instances, however, the earlier testimony of Clement of Alexandria *(Str.)* provides an alternate (Frg. 1) or abridged (Frg. 2) version of fragments preserved in Eusebius; and in one case (Frg. 5) Clement preserves an additional fragment not mentioned by Eusebius. Both Clement and Eusebius attribute their knowledge and use of Eupolemus to the pagan author Alexander Polyhistor (ca. 112–30 B.C.E.), who in his work *Concerning the Jews* had quoted portions of Eupolemus' work.

The contents of the fragments may be briefly summarized. Frg. 1 (*Str.* 1.23.153.4; *Praep. Evang.* 9.26.1) briefly portrays Moses as the "first wise man" and cultural benefactor responsible for originating the alphabet and recording laws. Frg. 2 (*Str.* 1.21.130.3; *Praep. Evang.* 9.30.1–34.18), the longest of the fragments (over 200 lines of Greek text), concentrates on David and especially Solomon, and provides a quite detailed, and in some respects unique, account of the preparation and building of the temple. One remarkable feature is the set of letters between Solomon and Souron (Hiram), king of Tyre, based on 1 Kgs 5:2–6 and 2 Chr 2:2–9, and the similarly constructed apocryphal correspondence with Vaphres, king of Egypt. Frg. 3 (*Praep. Evang.* 9.34.20) briefly mentions Solomon's enormous wealth and length of reign. Frg. 4 (*Praep. Evang.* 9.39.1–5) rehearses events from the life of Jeremiah during the reign of "Jonacheim" and mentions the capture of Jerusalem by Nebuchadnezzar. Frg. 5 (*Str.* 1.21.141.4–5) calculates the length of time from Adam and the Exodus respectively until the reign of Demetrius I Soter (162–150 B.C.E.). Typical of such chronographical summaries, this fragment has some problematic features that have prompted textual emendations. Yet its mention of "the 5th year of the reign of Demetrius" makes it fairly certain to date Eupolemus' work ca. 158/7 B.C.E.

The fragments reflect use of both the LXX and MT, thus suggesting a bilingual author. The form of his syntax and use of language suggest that Hebrew or Aramaic was his first, Greek his second language. Nevertheless, he is skilled in the use of the latter and the fragments reflect knowledge, and perhaps direct use, of Greek sources, such as Ctesias and Herodotus.

While he has made careful use of the biblical text, he also exhibits considerable independence from it. He frequently incorporates nonbiblical traditions into his account of the biblical story (Moses as inventor of the alphabet and legislation: the Solomon-Vaphres correspondence). There are numerous alterations and contradictions of the biblical text (the expanded measurements of the temple; David identified as Saul's son; the vastly extended territories over which David and Solomon reigned). The fragments also exhibit numerous geographical, chronological, and grammatical anachronisms. Territorial divisions of the Maccabean period are read back into the period of the monarchy. Certain features of Eupolemus' description of Solomon's temple appear to be drawn from the temple of Zerubbabel.

The tone of the fragments is nationalistic and encomiastic. Typical of the Hellenistic historiographical tradition in which such authors as Manetho and Berossus wrote to glorify their national history and tradition, Eupolemus recounts the biblical story proudly and magnifies the accomplishments of biblical characters. He presents Moses as cultural benefactor of other nations, David and Solomon as international

figures reigning over greatly expanded territories. Solomon is more than a peer to his counterparts Souron and Vaphres, he is their superior. The temple of Solomon is fabulously appointed.

It does not appear that Eupolemus is theologically narrow. He reports without demur Solomon's giving Souron a golden pillar that was erected in the temple of Zeus at Tyre. Polemic against pagan worship is absent from the fragments. Yet in Solomon's correspondence with Souron and Vaphres, Eupolemus proclaims the "Most High God," and has the pagan kings acknowledge "so great a God" and the Creator God.

Eupolemus' work is best understood within the historical and cultural context of Maccabean Palestine. His preoccupation with the temple may be seen not only as a reflection of his priestly background but may also be related to the purification and rededication of the temple following the Maccabean war. The latter can be seen as an appropriate context for producing such a lavish description of the temple. Moreover, newly established independence and the hopes of the Hasmonean kings might well have become the occasion for recalling the earlier glory of the monarchy and embellishing it in the process. Expansionist policies might be served well by recalling the territorial expansions of David and Solomon, however exaggerated. Noting their willingness to deal with Egyptian and Syrian kings could also combat isolationist tendencies while promoting expansionist policies.

CARL R. HOLLADAY

EUPOLEMUS, PSEUDO-. A designation used to identify two fragments about Abraham preserved by Eusebius in *Praep. Evang.*, Bk. 9, both of which are taken from an earlier work *Concerning the Jews* by the pagan author Alexander Polyhistor (ca. 112–30 B.C.E.).

The term "Pseudo-Eupolemus" is used as a designation for these fragments because Eusebius attributes the first of them to the Jewish historian Eupolemus. Since Freudenthal (1874–75: 82–103), it has been widely held that, because of important differences in content and outlook between this fragment and the five other fragments generally attributed to Eupolemus, it, along with the second, unattributed fragment, should be attributed to someone else, an anonymous author, probably a Samaritan, commonly designated Pseudo-Eupolemus. Recently, however, a strong case has been made for attributing the first fragment to the historian Eupolemus (Doran, *OTP* 2: 873–76), and for seeing the second fragment as a collection of traditions unattributable to any single person (Walter 1976: 137–38).

Even though it may not be possible to identify with certainty the author of these two fragments, it is nevertheless possible to establish some limits for their dating. Since they were originally preserved by Alexander Polyhistor, they obviously must have been written prior to the mid-1st century B.C.E. There is some evidence of dependence (in the first fragment) on *Berossus Babyloniaca* (ca. 293–292 B.C.E.). Thus, the fragments are to be dated sometime between the early 2d and mid-1st century B.C.E. Since they appear to presuppose the existence of the temple at Mt. Gerizim, which was destroyed by the Hasmoneans in 132 B.C.E., a date in the first half of the 2d century B.C.E. is generally favored.

Frg. 1 (*Praep. Evang.* 9.17.1–9) is said by Polyhistor to come from a work by Eupolemus entitled *Concerning the Jews of Assyria*, but the accuracy of the title has been disputed and therefore emended to simply *Concerning the Jews.* If it is to be attributed to the historian Eupolemus, it would appear to come from another work besides *Concerning the Kings in Judea.* The fragment, which consists of approximately 50 lines of Greek text, treats (in slightly rearranged order) events recorded in Genesis 6–14: the postdiluvian founding of Babylon by the giants, their building of the tower (of Babel), and its

destruction by God; Abraham's Babylonian origins, his migration to Phoenicia (Canaan), his military exploits (against the Armenians!), his hero's welcome at "the temple Argarizin" (Mt. Gerizim), his receiving gifts from Melchizedek, his migration to Egypt. Frg. 2 (*Praep. Evang.* 9.18.2), consisting of about 10 lines attributed to "anonymous works," in certain respects represents a condensed version of Frg 1: Abraham's lineage traced to the Babylonian giants, his migration first to Phoenicia, then to Egypt. It only alludes to the Flood, however, and omits reference to the destruction of the tower.

In both fragments Abraham is portrayed in heroic terms as a sage of noble descent, pious servant of God, friend of kings, benevolent warrior, and cultural benefactor. Especially emphasized is his mastery of the "movements of the sun and moon," and his role in transmitting this "Chaldean science" to the Phoenicians and Egyptians. Indeed, he (along with Enoch!) is credited with the discovery of astrology.

The fragments reflect clear dependence on the LXX and possible use of the MT. They are especially characterized, however, by the inclusion of nonbiblical traditions, both haggadic (giants as builders of Babel, the destruction of the tower of Babel, Pharaoh's inability to have sexual intercourse with Sarah, Enoch as master of heavenly lore) and pagan mythological traditions drawn from Babylonian and Greek sources (the use of Babylonian chronology in tracing Cush and Mizraim back to Kronos, identification of Atlas and Enoch, attributing the building of the tower of Babel to Belus).

Of particular significance is the mention in Frg. 1 of Abraham's being "received as a guest by the city at the temple Argarizin, which is interpreted as 'mountain of the Most High.' " This prominence given to Mt. Gerizim as the site where Abraham received Melchizedek is one of the primary reasons for attributing the fragment to a Samaritan author. It was especially difficult to reconcile this primacy given to Mt. Gerizim as a sacred shrine with the primacy given in the genuine Eupolemus fragments (esp. Frg. 2) to the Jerusalem temple. Accordingly, two separate authors were proposed to represent these theologically polar viewpoints (Freudenthal 1874–75: 85–86). In addition, the conspicuous willingness to embellish the biblical account with pagan mythological traditions has been seen as a type of syncretism thought to characterize Samaritans. The attention given to Phoenicians within the fragments may also reflect a Samaritan bias since Samaritans appear to have been identified as "Sidonians of Shechem" (Josephus *Ant* 11.8.6 §344; 12.5.5 §§257–64; so Collins 1983: 38, 55).

In spite of the continued debate about the authorship of these fragments, they remain important primary sources for the study of Samaritan traditions in the Hellenistic period. Their dependence on the LXX, like the Eupolemus fragments, makes them a useful source in tracing development and use of the LXX. The generous blending of pagan mythological traditions with biblical traditions provides a usual barometer for measuring degrees and kinds of Hellenization. The probable dependence on Berossus provides another concrete instance of Jewish or Samaritan incorporation of identifiable pagan traditions. The interpretive treatment of Abraham and Enoch within these fragments bears close resemblance to traditions in other noncanonical writings, such as the *Genesis Apocryphon, Jubilees, 1 Enoch*.

CARL R. HOLLADAY

EUREGETES. See BENEFACTOR.

EUSEBIUS OF CAESAREA (PERSON). Late 3d/early 4th-century Christian historian, biblical scholar, and theologian; the "Father of Church History." Born ca. A.D. 260, he was bishop of Caesarea, the administrative capital of Roman Palestine, from ca. 313 until his death, May 30, 339. Regarded by his contemporaries as the greatest Christian scholar of his time, he wrote a history of Christianity covering

the first three centuries (his *Historia Ecclesiastica* or *Church History*) and a *Life of Constantine* celebrating the Christianization of the Roman Empire; compiled in a *Chronicle* a detailed comparative chronology of biblical, ANE, Greek, and Roman history; made the most successful early systematic study of gospel parallels (the *Evangelical* or *Eusebian Canons*); and wrote other works on biblical geography *(Onomasticon),* the pagan divine man motif *(Contra Hieroclem),* the interpretation of Scripture *(Prophetic Eclogues, Demonstratio Evangelica, Commentary on Isaiah, Commentary on the Psalms, Gospel Questions and Solutions),* martyrology *(Martyrs of Palestine),* various theological issues *(Praeparatio Evangelica, Theophany, Contra Marcellum, De Ecclesiastica Theologia, On Easter),* and other topics (the *Panegyric to Constantine* and *Treatise on the Church of the Holy Sepulcher,* important to the history of church-state relations, are contained in chaps. 1–10 and 11–18 respectively of his *De laudibus Constantini*).

He was born ca. A.D. 260, probably in Caesarea, where he seems to have spent his entire life. The assessment of Eusebius' life and character has changed markedly with the establishment of more accurate dates for the various editions of his *Church History* (Grant 1980; Barnes 1981; Chesnut 1986). He lived the first forty years or so of his life during the Great Peace of the Church, when Christianity could be practiced openly. He developed his massive scholarship as a research librarian in the large library—of 30,000 volumes, according to one ancient source—assembled by the wealthy presbyter Pamphilus in Caesarea in honor of the Christian teacher Origen. Eusebius was often identified simply as Eusebius Pamphili [Gk *Eusebios ho tou pamphilou*], "Pamphilus' Eusebius."

Richard Laqueur began the modern debate over the date and nature of the first edition of the *Church History* in 1929 by pointing out that the reference in the preface (*Hist. Eccl.* 1.1.2) to the Great Persecution under Diocletian in 303 had to be a later editorial redaction. It now seems clear that the first edition was not only written before 303, but that most of Bks. 1–7 represents unchanged text from that edition (Barnes 1981: 145–46, 346, n.10; Chesnut 1986: 116–21). Eusebius was still a research librarian in Pamphilus' library. There was no Constantine in that first edition, no Christian emperor, no triumph of the cross at the battle of the Milvian bridge. Eusebius at that time believed in religious pluralism and argued for tolerance for all religions in the Roman Empire. He nowhere sanctioned coercion or persecution of pagans, or of those regarded as heretics, and proclaimed that the gospel would ultimately triumph by the pure preaching and teaching of its truth.

He was often strongly antimilitaristic: soldiers were decried as "men stained with blood and with countless murders for the sake of children and fatherland and that sort of thing" (*Hist. Eccl.* 5.pref.3; cf. 7.15.4). His recitation of the legend of the Thundering Legion (*Hist. Eccl.* 5.5.1–7) has been cited to show that he did not disapprove of Christians serving in the military, but here he was simply following his practice of incorporating in his history all the early Christian traditions he could find, and this was too well known a locus to omit. The usual point of this legend in its earliest Christian form was to show that Christians could aid the empire by praying for it as well as they could if large numbers of them had been willing to serve in its legions. In spite of the evidence that there were some few Christians in the Roman army during the first three centuries, Christians were regularly accused by the pagans of being unpatriotic in their more general unwillingness to fight in the legions. As he was finishing the first edition, Eusebius did, however, come across Dionysius of Alexandria's account of a group of Christians who had successfully used violent resistance on one occasion to drive off persecuting Roman soldiers (*Hist. Eccl.* 6.40.4–9). But this does not seem to have moved him to suggest that other Christians follow their example, either in the first edition of the *Church History* or in the second.

The beginning of the Great Persecution on February 23, 303, produced eight years of almost constant attack on Christians in the East. Eusebius' patron Pamphilus was tortured and sentenced to prison on November 5, 307, and eventually martyred on February 16, 310 (Eus. *Mart. Pal.* [both recensions] 7.3–6 and 11.1–5; Barnes 1981: 152–54). The reigning bishop of Caesarea denied the faith at some point during this strife-filled eight years and the Christian flock of that city was left leaderless for the remainder of the persecution (Eusebius as a matter of principle refused to record how he fell, the length of time Caesarea was without a bishop, or even the man's name; see Lawlor and Oulton 1928: vol. 2, 263; Chesnut 1986:

122). But then in 312 Constantine defeated his rival Maxentius at the battle of the Milvian bridge and became sole ruler of the western half of the Roman Empire. At Milan in early 313, Constantine met with the pagan Licinius, who now ruled the entire eastern half, and obtained an agreement that persecution of Christians would be halted all over the empire.

At about the same time Eusebius, the quiet research scholar, was made bishop of Caesarea and found himself confronted with the task of renewing the spirit of a scattered and demoralized flock, living under the pagan emperor Licinius, who had been temporarily persuaded to give toleration to them. It is important to note that Eusebius was never Constantine's "court bishop," even though most of the literature written prior to the 1980s tends to portray him that way—he did not come under Constantine's direct rule until 324, when he himself was in his sixties.

The second edition of the *Church History,* written ca. 313, portrayed Constantine calling upon "God who is in heaven" (the Christian god? or the sun god Apollo/Mithras/Sol Invictus whose vision Constantine claimed he had seen in 310?) and praying for Jesus Christ (identified as the Platonic "Logos" of the "Heavenly God") to be his "ally" or "fellow fighter" (Eus. *Hist. Eccl.* 9.9.2). The pagan emperor Licinius was honored equally with Constantine for his "understanding and piety" (*Hist. Eccl.* 9.9.1). Eusebius seems to have felt it safer to depict Constantine in language ambiguous enough to fit either a real Christian convert or simply a Platonic sun-worshipper (Plutarch, *To an Uneducated Ruler* 781f–782a) who was willing to ally himself with the Christians in the same way in which the emperor Philip the Arabian had done back in the mid-3d century (*Hist. Eccl.* 6.34, 6.36.3, and 6.39.1).

Constantine defeated Licinius and took over the eastern half of the Roman Empire in 324, but Eusebius was not willing to regard him unambiguously as a believing Christian until eleven years later, in 335, when Eusebius himself was already in his seventies (Chesnut 1986: 135). Even then Eusebius was no more a servile tool of a Roman emperor than was Athanasius or Ambrose. His goal was always to control the ruling emperor in matters affecting the Christian community and to avoid being controlled by him. Public flattery was sometimes the best method—one that Ambrose of Milan also used on occasion.

At the Council of Nicaea in 325, Eusebius subscribed to the conciliar decision, though with hesitation. But afterward, in an effort to undo the council's supporters, he managed to topple Eustathius, the patriarch of Antioch, in 330, and Athanasius, the patriarch of Alexandria, in 336. Eusebius is therefore often said to have been an "Arian." He would, however, better be described more as a defender of Origen's radical trinitarian and christological teaching, rather than as a supporter *per se* of Arius' version of the old, conservative, 2d-century angel christology, for there were many passages in Eusebius' hero Origen which could not fit the *homoousios* doctrine either.

Constantine died on May 22, 337, and Eusebius almost immediately began his *Life of Constantine.* He had essentially finished it before his own death two years later, when he was almost eighty. It was not a "biography," except perhaps in terms of the Platonizing theory of biography that one sees in Plutarch (*Life of Pericles* 1–2). It was instead a political manifesto cast in a form similar in ways to the medieval "Mirror of Princes." It was directed at Constantine's three sons, who now jointly ruled the empire. The message was simple: the throne must be kept in Christian hands and the idol temples, whose followers had so recently carried out the bloodthirsty massacre of helpless Christians, should be closed down permanently. Constantine was portrayed both in Hellenistic style as the philosopher-king who was the saving image of the Logos on earth (*Vita C.* 1.5; *De laud.* 1–2) and in more Hebraic fashion as the great eschatological Warrior of God. The surprising new "Warrior of God" motif—unknown in earlier Christian writings, even Eusebius' own—was one that would appear again and again in the Middle Ages, from the religious self-understanding of monarchs like St. Louis of France to the ethos of the Arthurian legends (Chesnut 1986: 140–74).

Eusebius developed a complex philosophy and theology of history which stood as the only significant alternative in both the ancient and medieval worlds to Augustine's predestinarianism and determinism—without sacrificing a profound understanding of human fallenness and the role of the nonrational. He should not be linked with the theological conservatives of his period, for he was a rather radical Origenist, who upheld the Origenistic doctrine of preexistence of souls and applied his vast knowledge of the history

of Greek philosophy to theological problems. He argued for human free will against classical Greek fatalism and contemporary astrology and gnosticism, but also believed that a divine providence controlled the "accidents" of history (*ta symbebēkota,* an Aristotelian term, *Ph.* 2.5.197a). Hence God's providence determined even the affairs of emperors and kings. As a radical Origenist, he rejected the apocalyptic idea of a future millennial kingdom of Christ on earth in favor of a more Platonic concept of immortal life in some supercosmic realm. But he also believed that this present cosmos would come to a cataclysmic end at some point several generations (or at most several centuries) after his own time. In a kind of "expanded eschatology" the events of the apocalyptic end times were spread out over hundreds of years. The Pax Romana which began under the emperor Augustus was identified by Eusebius with the eschatological kingdom of peace (Isa 2:1–4; Mic 4:1–4), while the emperor Constantine and his descendants were "the saints of the Most High" (Dan 7:18), the eschatological rulers who were to govern Rome, the fourth kingdom (Dan 2:31–45), until the final tribulation, when the world would be destroyed and the last judgment held.

Eusebius' *Church History* was the first full-length continuous narrative history written by a Christian. Nothing truly comparable to it had been created before, for Hegesippus' *Memoirs* (completed between A.D. 175 and 189) seems to have been, from the surviving fragments, an anecdotal, basically antignostic work, nonchronological in organization. Sextus Julius Africanus' *Chronographies* (completed ca. A.D. 221) seems also, from the fragments we still possess, not to have been a true narrative history but an attempt to establish dates, with only rare sections of historical commentary, for the primary purpose of calculating when the end of the world would come. (Having convinced himself that Daniel and other biblical texts proved that the millennium would arrive in what would be the 500th year after the birth of Christ and the 6000th year after the creation of the world, he wished to turn this into a date in his own Roman calendrical system.)

Eusebius' *Church History* was true, continuous historical narrative, chronologically told, unlike either Hegesippus or Africanus; its influence over the following thousand years or more made it one of the four or five most important seminal works in the history of Western historiography. It relates the history of Christianity from the time of Jesus to the early 4th century, and is in fact the only such account which we possess of that 300-year period. He "picked from the flowered meadows" of early Church history (*Hist. Eccl.* 1.1.4) a host of extended quotations from ancient writers, many of which would otherwise be lost to us, and included them at appropriate points in his *Church History.* He cites almost 250 passages in all, from Papias, Hegesippus, Quadratus, the Legend of Abgar, Clement of Alexandria's lost work the *Hypotyposes,* and many other sources. Nearly half of this material is preserved in Eusebius alone.

Eusebius also preserves traditions about the early Christian community in Jerusalem, early Syriac Christianity, and the Ebonites; and about individuals such as the evangelists Matthew and Mark, James the brother of the Lord, Simon Magus, Valentinus, and Marcion. Some of the earlier traditions contain legendary or improbable material but can still be used, with the help of modern critical methods, to aid in putting together reconstructions of early Christian history. Robert M. Grant's *Eusebius as Church Historian* (1980) now gives a full analysis of some of the most important passages. Eusebius further records information about the development of the NT canon: which books were used by the earliest orthodox writers, which were read publicly in orthodox churches, and which were disputed (e.g., *Hist. Eccl.* 2.23.24–25; 3.3; 3.16; 3.24.2; 3.24.17–18; and 3.25). His detailed discussions are at least as important as, if not more so than, the early canonical lists.

Based on the studies of Grant and Barnes (see also Chesnut 1986: 125), the various editions of the *Church History* can be reconstructed as follows:

	First edition:
before the beginning of persecution in 303	Most of the Books 1–7, excluding the preface at the beginning of the history at least in its present form, but going at least as far as the present *Hist. Eccl.* 7.30.22a and probably including also *Hist. Eccl.* 7.31 and *Hist. Eccl.* 7.32.5–21. Nothing past that point could be first edition material.

	Second edition:
	Books 1–7.
ca. 313	An eighth book incorporating the entire short recension of what is now called the *Martyrs of Palestine.*
	Book 9.
	Third edition:
ca. 315	Books 1–10.7 (including the present book 8, newly written to replace the older eighth book).
ca. 325	*Fourth edition:*
	Books 1–10 (with any older material favorable to Licinius altered or removed).
	A minor additional reediting:
ca. 326	Removal of any reference to the name of Constantine's son Crispus (executed by his father in 326).

Grant gives a full account of editorial changes which Eusebius made within previously existing sections—for example, a two- or perhaps even three-stage change in Eusebius' attitude toward the book of Revelation and Papias (Grant 1980: 130–36).

In another work by Eusebius, the *Chronicle,* he established thousands of ancient dates to produce a comparative chronology of ANE, Greek, Roman, and biblical history. It survives in a Latin version by Jerome and in an Armenian version. Unlike the critically naive *Chronographies* of his 3d-century predecessor Julius Africanus, who had thought he could discover the precise year in which the world was created, Eusebius explicitly stated that there was no way of dating anything in the OT, even approximately, prior to the time of Abraham. His *Chronicle* contains material, such as Manetho's Egyptian king list, which was of inestimable value in our own modern period for reconstructing the history of the ANE, and also valuable dates and other information on secular Greek and Roman history. The *Eusebian Canons,* still printed in standard critical texts of the NT, were invented by Eusebius as a means of indicating parallel passages in the gospels. His use of this device shows that he clearly recognized—though it was not safe to state it explicitly in his period—that one cannot set up a detailed chronology of the period of Jesus' active ministry. He also produced an *Onomasticon,* a work on biblical place names, giving geographical locations of some 600 towns, historical sites, districts, mountains, and rivers, and connecting them with contemporary Roman place names. It is still of great importance to Palestinian archaeologists for the data it gives. It his *Onomasticon* and *Chronicle,* Eusebius was also attempting, at the theological level, to create the sense of a *Christian* space and time for Roman Palestine (Groh 1986).

In *Against Hierocles,* Eusebius argued that Jesus, rather than the pagan philosopher and miracle worker Apollonius of Tyana, had been the true *theios anēr* or divine man. In Origenist fashion, Eusebius asserted that Jesus was a man who was truly divine because his human soul possessed the full unfallen vision of God, and that his profound effect on other human beings demonstrated his divinity.

After years of neglect, Eusebius is now increasingly being recognized as a major Christian thinker, who gave a serious alternative to the Augustinian theology of history, and who furnished a fascinating example in his own forty-year career (290s–339) of Christianity's transition from a persecuted, nonmilitaristic minority to upholders of the combined ecclesiastical, governmental, and military establishment created by the 4th-century Christian emperors.

GLENN F. CHESNUT

EUTYCHUS (PERSON) [Gk *Eutychos* (Εὐτυχος)]. A young boy who, while listening to Paul in Troas, went to sleep and fell from an upstairs window (Acts 20:9). The story indicates that he was "taken up dead" (not "as dead"). Paul is said to have "bent over him" and embraced him and then said, "Do not be alarmed, for his life is in him." Whether or not the boy was actually dead is impossible to determine. Although the story is told as if he were dead, Paul's words, "his life is in him," may be understood as implying he was not actually dead. However one may resolve this ambiguity, the story appears to be attributing to Paul the ability to bring the dead boy back to life as Elijah and Elisha did in a similar manner. Paul's actions resemble the OT incidents involving Elijah and Elisha stretching themselves out over children in order the bring life back to them (1 Kgs 17:21; 2 Kgs 4:34–35).

EVANGELIST. See MINISTRY IN THE EARLY CHURCH.

EVE (PERSON) [Heb *ḥawwâ* (חַוָּה)]. Eve, the first woman, is an enigmatic figure. Apart from Genesis 2–4, she is mentioned very rarely in biblical material and yet she has played an important part in theological discussion and debate over gender roles in society throughout the postbiblical period (Pagels 1988). The origins of both the name and the figure have been the subject of wide-ranging scholarly debate.

A. The Name "Eve"

The woman in the garden of Eden story (Gen 2:4b–3:24) is given the name *ḥawwâ,* "Eve," in Gen 3:20. This verse sits awkwardly in the text and many scholars assume a different recension of the story is used here from that in Gen 2:23 where she is called *ʾiššâ,* "woman." Such a doublet could, however, arise from the oral tradition behind the narrative. The origin of the name *ḥawwâ* is uncertain. In the story the woman is called *ḥawwâ* because she is the "mother of all living *(ḥay)."* This suggests a derivation from the root *ḥyh,* "to live," but no immediate connection can be sustained. J's etymology is based solely on a wordplay. Note that the LXX translates *ḥawwâ* by *zōē,* "life," in 3:20. Evidence from Ugaritic and Phoenician suggest another ancient word "to live," *ḥwy* from which *ḥawwâ* could be derived. If this is the case, then the name itself is either borrowed or is an ancient traditional name.

The expression "mother of all living" has suggested to some a connection between Eve and various ANE mother goddesses. The Akkadian goddess Mami is called *bēlet kala ilī,* " mistress of all the gods," and *baniat awīlūti,* "creatress of humanity" (*Atrahasis* 1. 188–260). Ugaritic texts refer to Asherah as *qnyt.ʾilm,* "creatress of the gods," and *mšnqt.ʾilm,* "nurse of the gods," in her role as mother goddess. A Carthaginian devotional text (*KAI* 89) dated to the 3d or 2d century B.C.E. contains the word *ḥwt,* which could be related to Hebrew *ḥawwâ.* It begins *rbt ḥwt ʾlt mlkt. ḥwt* could be the name of a female deity or an epithet of a goddess, possibly Asherah or Tannit. These two divine names can be identified as referring to the one figure. Of all the goddesses, she is most frequently given the titles *rbt,* "lady," and *ʾlt,* "goddess." If *ḥwt* is derived from a word for "life" or "to live" it is a fitting epithet for the mother

goddess. These points suggest that the name given to the woman in Gen 3:20 could be a derivative of a title for the Canaanite mother goddess or at least an allusion to her.

Some scholars have pointed to the similarity of the name *ḥawwâ* to the Aramaic word *ḥewyā*, "serpent." In early Aramaic the word for "serpent" appears to be *ḥwh.* They have proposed that *ḥawwâ* was originally the name of an underworld goddess or that in an earlier version of Genesis 3 Eve and the serpent were identical. While this is conjectural, the possible connection of *ḥawwâ* to a word for "serpent" should not be overlooked. There is some tentative evidence suggesting a connection between the mother goddess Asherah/Tannit and serpents although the exact nature of the connection remains obscure. Both are strongly associated with fertility themes.

From this discussion it could be suggested that the name *ḥawwâ* in Gen 3:20 is meant to allude to the great goddess Asherah. The designation of Eve as the "mother of all living," the presence of the motif of fertility, and the associations with the serpent and sacred trees all have possible counterparts in mythic material in which Asherah is mentioned. If such an allusion is intended, then we should note that the circumstances of the Gen 2:4b–3:24 narrative are the exact reversal of what one might expect in a story about the mother goddess. Rather than productivity and fertility, the outcome in the story in Genesis is death, sterility, and hardship (Gen 3:14–19). Even the "mother of all living" is to suffer in childbirth. The interaction between Eve and the serpent, also a symbol of fertility, ultimately leads to death. The man's toil with the ground yields reward only at the price of pain and sweat. Thus Gen 2:4b–3:24 would seem to embrace a polemic against fertility themes of the Canaanite cult. This polemic, however, has been reworked by J so that now it forms part of the background of the story.

B. Theological Considerations

In Gen 2:20 it is stated that Eve is created to be an *ʿēzer kĕnegdô,* "a helper fit for him" (RSV). This expression has often been seen to indicate the subordination of Eve to Adam and hence generally of women to men in societal and family life. However, the word *ʿēzer,* "helper," does not imply subordination. It can be used to refer to a superior person or even to God, e.g., Ps 146:5. The phrase *ʿēzer kĕnegdô* is best understood as meaning "a companion corresponding to him." The fact that Eve is created second from one of the man's ribs and that she is tempted and submits first have also been used to argue for either the superiority of men over women or of women over men. The former position has been strongly supported historically in the traditions of Judaism (e.g., *Gen. Rab.* 18.2), Islam (Al-Baghawi, Mishkat al-Masabih), and Christianity. The only references to Eve in the NT, 2 Cor 11:3 and 1 Tim 2:11–15, both develop this line. The argument can be traced to the present day. The latter position, arguing for the superiority of women over men, has been voiced more strongly recently but it had its early proponents, e.g., in the Talmud (*Sanhedrin,* 39a). In either case the arguments depend more on the presuppositions of the interpreters than on what the text of Gen 2:4b–3:24 states explicitly. The text in its original form is concerned about the potential for intimacy in the divine-human relationship and in human relationships in light of the alienation that exists in the world. The subordination of Eve to her husband (Gen 3:16) clearly stands as one of the curses of a broken creation.

HOWARD N. WALLACE

EVERLASTING GOD. See NAMES OF GOD IN THE OT.

EVI (PERSON) [Heb *ʿĕwî* (עֵוִי)]. A king of the Midianites (Num 31:8; Josh 13:21). The root *ʿwy* means "to seek shelter, refuge" in Canaanite and Arabic, and produces the personal names *ʿwy* (Phoenician,

Safaitic, and ancient Syriac), *ʾwyʾbʿl* (Punic), *ʾwʾ* (Ammonite), the tribal name *ʾwym* (Sabaic), and the place names *ʾwm* (Sabaic, the main temple of Maʾrib) and *byt ʾwn* (Heb). The name is therefore well attested in Semitic (Knauf 1988: 89), and need not be explained by Anatolian formatives (Mendenhall 1973: 167).

Historically, the five Midianite kings in Numbers 31 are difficult to deal with. Whereas Albright (1970) assumed that the Midianite war described in this chapter antedates the domestication of the camel (an observation which would now lead into the 3d millennium B.C.; Knauf 1988: 9–10), it is preferable to derive the Midianite "kings" from a list of places forming an itinerary through N Arabia and S Transjordan in the Persian period (Knauf 1988: 166–67). For the localization of Evi, one of the natural strongholds in the Petra area (Baʿjah or Umm al-Biyârah) is suggested.

ERNST AXEL KNAUF

EVIL [Heb *raʿ* (רַע)*, rāʿâ* (רָעָה); Gk *ponēros* (πονηρος)*, ponēria* (πονηρια)*, kakos* (κακος)*, kakia* (κακια)]. The opposite of good and righteous.

A. The Old Testament

The concept of evil in the OT has both qualitative and moral categories. Qualitatively, evil is something bad in nature or condition, worthless, corrupt, displeasing, undesirable, or inadequate. Evil is misfortune, particularly injury or threat of injury to life or standing in society. Evil can describe people (Prov 11:21; Ezek 30:12), names or reputations (Deut 22:14, 19; Neh 6:13), temperament (1 Sam 25:3), deep displeasure in someone else's performance (Gen 21:11–12; 28:8), despair (Gen 44:34; Prov 15:15), the distress common to humankind in this life (Gen 47:9; Ps 90:15), the trouble of the age (Eccl 9:12; Jer 17:17–18; Amos 5:13), physical harm (Gen 26:28–29; 2 Sam 12:18), speech (Ps 34:13), and intentions (1 Sam 20:7), situations (Exod 5:19), and land (Num 13:19; 20:5), disease (Deut 7:15), or animals either useless to the cult (Lev 27:10, 12) or dangerous (Gen 37:20, 33; Lev 26:6; Ezek 34:25). God can protect the faithful person or nation from these evils of life (Ps 23:4—LXX 22:4; Jer 29:11).

Evil is also used in a moral and spiritual sense as the designation for immorality and unfaithfulness to the covenant. The origin of evil is the human heart (Prov 6:14; 21:10; Eccl 8:11). Evil describes idolatry and apostasy (Deut 4:25; 1 Kgs 11:6), disobedience to special commands of God (1 Sam 15:19), false prophecy (Deut 13:5), murder (2 Sam 12:9), disobedience to parents (Deut 21:20–21), false witness (Deut 19:18–19), adultery and fornication (Deut 22:21–24), stealing (Gen 44:4; Deut 24:7), the ethical walk (Jer 18:11; 23:22; 25:5), sin in general (Gen 13:13; Ps 51:4), and the inclination of the heart (Gen 6:5; 8:21; Jer 3:17; 7:24; 18:12). These sins are often described as defining good as evil and evil as good (Isa 5:20; Mal 2:17) or seeking evil rather than good (Amos 5:14–15; Mic 3:2). Evil is the opposite of the good and righteous (Gen 2:9; 3:5, 22; Prov 11:21; 12:13).

Evil also describes God's judgment of the individual or nation of Israel for unfaithfulness, particularly to the requirements of covenant and the law of Moses (Deut 31:17–18; Jer 6:19; 18:11). This evil can take the form of the curses of the covenant (Josh 23:15–16), annihilation of a dynasty (1 Kgs 14:10; 21:21, 29) or city (2 Kgs 21:12–13), invading armies (Jer 4:6), wild beasts (Ezek 5:17; 14:21), disease (Deut 28:35, 59), or the sending of an evil spirit (Judg 9:23; 1 Sam 16:14–15). God can also lead out of these evils (Jer 15:21) or, as an outgrowth of his mercy (Exod 32:14) or the repentance of the unfaithful (Jer 18:8; 26:3, 13, 19; Jonah 3:10; 4:2), change his mind about inflicting them. Humankind brings these evils upon itself (Deut 31:17–18; Isa 3:9) and plots them for others (Prov 14:22; Mic 2:1), but God can spare the intended victim (Jer 15:21).

While the nation of Israel was independent and flourishing, while the corporate body was doing well, evil was viewed as the retribution from God upon individuals for sin and breaking of covenant (Judg

2:11–15; 2 Sam 12:9–10; 1 Kgs 2:44). This evil served as a deterrent to pursuing further evil (Deut 19:20; Jer 36:3). The destruction of the nation by noncovenant nations, the divergence of the corporate and the individual emphases in Israel's religion (Jer 31:29–30; Ezek 18:2), the suffering of the righteous (Job 2:3; 30:26), and the prospering of the wicked (Prov 11:21; Eccl 7:15; Jer 12:1–4; Hab 1:2–4; Mal 3:13–15), all presented Israel with the theological dilemma of the preponderance of evil.

Within the confines of its own henotheism and later monotheism, Israel grappled with explaining the relationship of evil to its conception of God. It did not develop a metaphysical dualism in which evil could be explained as the work of demonic powers. Neither did it develop the concept of a capricious God to whom both good and evil could be ascribed. Rather it developed an ethical monotheism. Within this conception a major solution was to look for the justice of God in the eschatological future (Mal 4:1–3—LXX 3:19–21), i.e., to accept the mystery of evil by conceptualizing a creator God with greater freedom to work in ways and for purposes that transcend human understanding (Job 42:2–3).

B. The New Testament

In the NT evil is also used in both qualitative and moral senses. Qualitatively, disease (Rev 16:2), fruit (Matt 7:17–18), nonuse of talents (Matt 25:26), an unmerciful servant (Matt 18:32), misfortune (Matt 6:34; Luke 16:25; Acts 28:5), and the present age (Gal 1:4; Eph 5:16; 6:13) can be described as evil.

However, the moral sense predominates in the NT. The evil person is the opposite of the good and righteous person (Matt 5:45; 13:49; 22:10). Evil is the disobedience to God's law, the preaching of Jesus, and the message of the apostles. It can describe human beings (Phil 3:2; 2 Tim 3:13), particularly the Pharisees (Matt 12:34), a faithless generation (Matt 12:39; 16:4), and those deciding against Jesus (2 Thess 3:2; 2 Tim 3:13). It is rooted in the heart (Matt 12:34–35; Mark 7:21–23; Heb 3:12) or eyes (Matt 6:23 par) or the love of money (1 Tim 6:10). It describes the conscience (Heb 10:22), thoughts (Matt 15:19; Jas 2:4), deeds (John 3:19; Rom 7:19), speech (Jas 3:8; 3 John 10), and the works of the world (John 7:7). Evil is clearly incompatible with the new life in Christ (Rom 12:17, 21; Col 3:5; 1 Thess 5:15; 1 Pet 3:9, 11).

God does not tempt with evil (Jas 1:13) but rather rescues from it (2 Thess 3:3; 2 Tim 4:18). However, evil can be ascribed to the EVIL ONE, the Devil (John 17:15; Eph 6:16; 1 John 2:13–14; 5:18). He has the power to lead humankind into evil (Eph 4:27; 1 Tim 3:7; 2 Tim 2:26) but works only under the limitations imposed by God (John 12:31; Rev 12:9; 20:1–3). To some extent evil and theodicy have received an answer in the gospel of the redemption of humankind and nature by Jesus Christ. Christ has won a victory over the Devil (Heb 2:14–15; 1 John 3:8) and ushered in the kingdom of God. Christ's victory over evil will be consummated (1 Cor 15:24–26; Heb 10:12–13) and the Devil's reign ended (Rev 20:2–3, 10). See also *TDNT* 3:469–87; 6: 546–66; *NIDNTT* 1: 561–67.

DUANE F. WATSON

EVIL ONE, THE [Gk *ho ponēros* (ὁ πονηρος)]. A title for the Devil or Satan. There is no pre-Christian equivalent for this title being applied to the Devil. That the title does in fact refer to the Devil is made clear by Matt 13:19 *(ho ponēros)* = Mark 4:15 *(ho satanas)* = Luke 8:12 *(ho diablos).* The Evil One is a title for the Devil when it is a substantive formed by the definite article and the masculine nominative of the adjective *ponēros* (Matt 13:19; 1 John 2:13–14; 5:18).

It is uncertain whether the Evil One is a title for the Devil or an abstract concept of evil when the genitive *tou ponēros* occurs. The genitive could derive either from the masculine *ho ponēros* or the neuter *ton ponēron.* Although a genitive is used, a title is strongly indicated in John 17:15; Eph 6:16; and 1 John 3:12; 5:19. On analogy with John 8:44, 47, which speaks of the alternative of being of the Devil or of God and contrasts Abel and Cain, the reference in 1 John 3:12 is probably titular. Since *tou ponērou* in 1 John 5:19 is used in parallelism with *tou theou* and in conjunction with *to ponēros* in 5:18, it is also likely to be a title. The titular use of *to ponēros* in 1 John is a strong indication that *tou ponērou* in John 17:15 is used

similarly. On account of the context of spiritual warfare and the preceding specific reference to the Devil in 6:11, *tou ponērou* in Eph 6:16 should also be in this category.

Passages where a decision between *tou ponērou* as a title or an abstract concept is very difficult because the context lends little insight are Matt 5:37; 6:13; 13:38; 2 Thess 3:3. The references to evil in Matt 5:37 and 13:38 are considered to be conceptual, although the reference to the Devil in 13:39 makes this determination for 13:38 quite uncertain. Debate centers here upon Matt 6:13, the conclusion of the Lord's Prayer. The Eastern Church takes it as a title on analogy with Matt 13:19. The Western Church takes it as a neuter reference to evil of the present age and the last days, and this interpretation predominates in current scholarship. Whatever decision is reached on Matt 6:13 is usually reached on its close parallel, 2 Thess 3:3. For further discussion, see *TDNT* 6:558–62; *NIDNTT* 1: 566–67.

DUANE F. WATSON

EVIL-MERODACH (PERSON) [Heb *ʾĕwîl merōdak* (אֱוִיל מְרֹדַךְ)]. Third monarch of the Chaldean dynasty of Babylonia, mentioned in 2 Kgs 25:27 and Jer 52:31. The name in Akk reads *Amēl-Marduk*, "Man of Marduk." In the Gk and Lat the name reads *Ilumarodachus* and *Ulemadar* respectively. This monarch succeeded his father Nebuchadnezzar in October of 562 B.C. and reigned for two years. Unlike his successors Neriglissar and Nabonidus, nothing whatsoever is known of his activities prior to his becoming king. In addition, while a few vase fragments and about 100 contract tablets datable to his reign survive, no text revealing the details of any military campaign he may have conducted has as yet been discovered or published. According to the OT (2 Kgs 25:27–30), the important event of his reign was the release of Jehoiachin, king of Judah, who had been imprisoned by Nebuchadnezzar thirty-seven years earlier.

The later Gk and Lat sources, the rabbinic commentaries, and the Heb *Chronicle* of Jerachmeel provide us with most of our information concerning Evil-merodach's reign. Much of what these sources contain is legendary material. According to *Lev. Rab.* 18:2, high state officials took Evil-merodach and made him king in his father's place. Nebuchadnezzar subsequently threw his son into prison for life, holding him responsible for this act of infidelity. Evil-merodach thus refused the throne the second time it was offered and would only agree to accept it after Nebuchadnezzar's corpse was dragged from its resting place through the streets of Babylon. However, Jerome, in his *Commentary on Isaiah 14:19,* and Jerachmeel, in his *Chronicle,* assert that the leaders of the state would not allow him to become king and instead placed Nebuchadnezzar the Younger on the throne. According to Josephus' *Ant.* and II *Abot de R. Nat.,* Evil-merodach wished to release Jehoiachin from prison because he felt he had been held by his father without cause. After Nebuchadnezzar's body was removed from its resting place, Jehoiachin was immediately set free and given an allowance. The *Babylonica* of Berossus states that Evil-merodach's administration was "arbitrary and licentious," but this statement is completely contradicted by the opinion voiced in the *Bereshit Rabbah.* According to *Esth. Rab.,* Evil-merodach inherited an empty treasury because of Nebuchadnezzar's disposal of his kingdom's wealth before his death. Berossus comments that Evil-merodach's reign ended a short time after the release of Jehoiachin, when he fell victim to a plot and was assassinated by his successor, Neriglissar, "who was also his brother-in-law." Unfortunately, no cuneiform source provides confirmation of these assertions.

EVODIUS, HOMILY OF. See VIRGIN, ASSUMPTION OF THE.

EVRON (M.R. 160266). A prehistoric site near the Mediterranean coast N of Acco. Kibbutz Evron is on a sandstone ridge formed by the accumulation of alternating layers of sand and reddish loams. A few of the soils in the vicinity of Evron contain cultural remains of the Early Paleolithic. These sites, or find-spots, are known as Zinnat, Shikun, Pardes, and the Quarry. In 1949, M. Stekelis dug three test pits in Zinnat. The assemblages since collected in Zinnat and Pardes by kibbutz members were studied by Gilead

and A. Ronen. The Quarry site, discovered in 1969, was excavated by M. Prausnitz and A. Ronen in 1976–77, and again by Ronen in 1985. Shikun site was discovered in 1980 by kibbutz members and studied by A. Ronen. The chronological relationships between these sites is to be considered in light of the geological stratigraphy seen E of the Evron ridge, summarized as follows (from top to bottom):

1. Dark brown to black clay, about 2 m thick. Zinnat and Shikun sites, Upper Acheulian.
2. River pebbles and gravel varying in size, 0.5–2.0 m thick.
3. River clay with calcareous nodules, 2–4 m thick. Pardes find-spot.
4. Yellowish sandy clay layer, 1–2.5 m thick. Mainly at the base are the finds of the Quarry site.
5. Red loam, 1–1.5 m thick.
6. Sandstone, 2–3 m thick.
7. Red loam preserved only in a few thin lenses.
8. Sandstone, 2–3 m thick.
9. Miocene clay.

The sequence—the longest and most complete in the coastal plain of the E Mediterranean—covers the Lower and Middle Pleistocene. Layers 8–5 indicate fluctuations of the sea level which resulted in the alternate depositions of sand and soil. Layers 4–1 indicate a continental, riverine environment, which has attracted humans time and again.

A. Zinnat and Shikun

These are similar to each other, with hand axes of Upper Acheulian character, Levallois technique, side scrapers, and denticulates. Bones were not preserved. These assemblages range in date from ca. 80,000–250,000 years ago.

B. Pardes

Pardes has yielded a small number of artifacts attributable (although not found in excavation) to the lower part of layer 3. The hand axes are mostly large and ovaloid. The flake industry is too scanty to be indicative. Bone is not preserved.

C. The Quarry

The Quarry site is stratigraphically the most ancient human cultural occurrence in the coastal plain of Israel. The lithic assemblage contains small flake tools, not standardized to any particular form. There are borers, denticulates and notches, chopping tools and cores, as well as globular calcareous concretions (hammerstones?), all of small dimensions. Bones are well preserved, apparently due to the reduced environment. The animals consumed included the elephant, hippopotamus, boar, and deer. Several very large and coarsely made hand axes were found in the quarry refuse and seem to have originated in layer 4. They are very large (up to 22 cm long), have irregular edges, and were made with a small number of removals. In our excavation, however, no hand axe has turned up in layer 4. It is thus possible that they really belong to the base of the red loam of layer 3 (and hence are the equivalent of Pardes), or the hand axes may have been concentrated in a small area of layer 4. The age estimate for the lithic and faunal assemblage of the Evron Quarry site (layer 4) is between one half and one million years ago.

These Early Paleolithic sites appear to have been feeding sites, with tool kits assigned for cutting and for marrow extraction of large game animals which were hunted and/or scavenged. The animal bones show abundant cut marks and signs of hammering. All these sites were near a river, which had possibly formed large marshes as a result of the obstructing formation of the Evron ridge. No site shows evidence for the use of fire. Other isolated Early Paleolithic remains have been found in various localities on the E side of the Evron ridge, probably similar to the Evron sites.

EX VOTO. The Latin phrase *ex voto* expresses fulfillment of a vow to make an offering in consideration of some benefit conferred by a deity or extraordinary being. The gifts or dedications *(anathēmata)* that are made in fulfillment of such vows are called votive offerings and are distinguished

from stipulated sacrifices and financial obligations. (See PWSup 14: 964–73; Eitrem and Croon *OCD*, 1132–33; Wachsmuth, *KlPauly* 5: 1355–59; Latte 1960: 46–47.)

A basic feature of Mediterranean and Near Eastern culture is reciprocity. To confer benefits is the primary obligation of deities, heads of state, and all others who would aspire to a reputation for the highest excellence. Conversely, it is expected that the recipient of bounties will make appropriate acknowledgment. To hasten the process, a devotee may assure the deity that if a specific boon is granted the recipient will respond in the manner specified in what is termed the vow. The entire arrangement can be summed in the phrase *do ut des* (I am prepared to give in the hope that you will give).

Homer's epics are replete with the policy. Athene is offered gifts, now by Trojans, now by Greeks, if she will secure for her petitioners safety, victory, or renown (*Il.* 6.86–101, 305–10; 10.284–94; *Od.* 3.375–84). In *Od.* 16.181–85, Telemachos thinks that Odysseus is a deity and promises precious gifts in return for salutary intervention. Similarly, Eteokles, in Aeschylus' *Seven against Thebes* (264–87), pledges generous requital to the city's protecting deities for their help in the current crisis. Related promises are expressed on stone (Michel 1900: no. 21; *IGR* 1911: no. 1498).

Hope of deliverance from a variety of perils induced citizens in both the private and the public sectors to make vows that were honored in a variety of ways. Gold tripods were a typical commemorative gift by a city-state after a successful military campaign (Diod. Siculus 11.26.7). A statue of victory, such as the Nike of Samothrace, now in the Louvre, was a popular type of war dedication. The sacred precincts of Asclepius became repositories of gifts made by grateful recipients of restored sight and deliverance from a variety of other disabilities. The coasts of Hellas, both of the mainland and the islands, were dotted with shrines erected in gratitude for deliverance from perils of the sea.

During a heated battle between the Etruscans and Samites, the Roman consul Claudius Appius raised his hands to heaven and implored, "Bellona, grant me the victory this day, and a temple shall be yours" (Livy 10.19.17). The consul's spontaneity is in striking contrast to formulations of the Arval Brethren (*CIL* 1902: no. 32363, annotation of no. 2059), which reveal the practice in official Roman quarters to leave nothing to chance in negotiations with deities. Dates and details of petition and response find precise expression. Livy's discussion of criticism concerning C. Flaminius (Livy 22.1.5–7) and of the precautions taken by Publius Licinius (42.49) disclose the monumental importance of vows in Rome's national life. To be *damnatus voti* meant that one was obligated to honor a vow. To such religiosity must be ascribed many of the public spectacles and monuments underwritten by the Roman state. Numerous inscriptions attest how scrupulous people in the private sector were in the fulfillment of their vows (with either the phrase *ex voto posuit* or its synonym *votum solvit* (*ILS* 1892,1902: nos. 2194, 2218, 3014, 3549, 3562, 3964). In a playful mood, Horace reveals his piety by devoting his garments to the deity of the sea after having barely escaped love's shipwreck (*Odes* 1.5.12–16). In another poem, on the noxious charms of Barine (2.8.5–6), Horace sketches a violation of the popular understanding: Barine, the flirt, wantonly violates all canons of religious responsibility by making vows she does not intend to keep. With the air of a divine, Persius (*Satires* 2) preaches against hypocrisy in the making of vows, and Ovid (*Art of Love* 653–54) jocosely sums a world of thought on the subject:

> Bribes work with gods as well as with humanity.
> A share to Jove, and he will bless you, trust me.

Romans, impervious to Plato's earlier disclaimer of the concept (*Rep.* 3.390c), deviated little from the formulation used in Jacob's vow at Bethel (Gen 28:18–22; cf. Psalm 25). The OT portrays a strong sense of obligation, of which the most notorious example is the vow of Jephthah (Judg. 11; Hannah's vow had a happier ending, 1 Sam 1). Ps 66:13–20 offers an exemplary exhibit of the basic rationale in vows, with emphasis on the fact that God's end of the bargain has been kept, thus inviting the psalmist's praise and sacrifice (see also Pss 22:25; 50:14; 61:8; 65:1; 116, esp. vv 12–19; all rendered in the LXX with the formula *apodidōmi euchēn*). Sirach 18:21–22 warns against delaying payment of vows until one is at the point of death. Mal 1:14 pronounces a curse on one who tries to palm off a blemished sacrifice. The composer of Psalm 6 warns God that in Sheol there is no possibility of praise-filled remembrance, and the

Epistle of Jeremiah (v 35) states that false deities cannot exact unpaid vows. Prov 7:14 is a bantering application of Lev 7:11–14 by a seductive woman.

The absence from the NT of the formula *apodidōmi euchēn* is striking. Of a different order from *ex voto* performance in the nature of specific gifts are the obligation assumed by one who takes the vow of the Nazirite (Num 6; Acts 21:23–26) and the curse *(anathēma)* pronounced on oneself relative to a deed that is in progress or is to be performed (Mark 14:71; Acts 23:14).

EXACTOR OF TRIBUTE. See TAXES AND TAXATION.

EXECRATION AND EXECRATION TEXTS. The formal cursing of persons deemed undesirable by the Egyptian state, and lying outside direct Egyptian control, a practice attested from the Old Kingdom into the early New Kingdom. The rite involved either figuring the individual in a terra-cotta, stone, or wooden representation (whether inscribed or uninscribed), or writing his name on pottery vessels. The curse formula was undoubtedly then pronounced and the object broken (cf. the rite of "breaking the red pots"; Schott and Sethe 1928; Borchardt 1929). In the Old Kingdom nearly every major pyramid temple reveals fragments of statues of bound foreigners (Nubians or Asiatics), but only one lot of inscribed figurines has come to light. The majority of pertinent inscribed material comes from the Middle Kingdom and Second Intermediate Period (Posener 1987). The practice, however, was followed so widely in all periods that it clearly constituted a standing policy of the state, and no inference can therefore be drawn regarding the political or military weakness of Egypt simply from the presence of an Execration Text.

Among those cursed, native Egyptians are common, with Nubian chieftains and their tribes occupying premier position among foreigners. Three lots of texts, however, include sections dealing with W Asia: (1) the Berlin bowls acquired on the market; (2) the Mirgissa bowls from the Nubian fortress of the same name (Vercoutter 1963); and (3) the figurines from Saqqara, now in Cairo and Brussels (Posener 1940). Although the Berlin bowls were at first dated by Sethe to the 11th Dynasty, a close study of the paleography and orthography, as well as the discovery of the Mirgissa group, places them no earlier than the middle of the 12th Dynasty, and perhaps as late as the reigns of Amenemhet III and IV (Mazar 1968: 74f., n. 22; Thompson 1974: 108–113). The Mirgissa text mentions two Nubian chiefs already known from the Berlin bowls. Certain Kushite princes in the Brussels texts are named as sons of a chief who also appears in the Berlin corpus (Posener 1940: 34, 49), suggesting that the Brussels material dates about one or two generations after Berlin, i.e., to the first half of the 13th Dynasty (early 18th century B.C.).

The format of the texts is similar. The Berlin group names the chieftains of some 20 Asiatic places, often two or three names being associated with the same toponym. A comprehensive statement follows, cursing "all Asiatics of …" (several places, some reduplicated from the earlier section), and "their mighty men and their runners (?)" (see *ANET*, 328–29). Among the certain identifications are the land of Shutu, Rehob, ʿArqata, Ashkelon, Byblos, Uzu, Yarimuta, and perhaps Jerusalem. The Brussels texts mention some 62 place names with their chieftains, almost invariably one chieftain to a place. The execration concludes, in similar fashion to that attested on the Berlin bowls, with general entries for "tribes … and grandees," and "all the Asiatics of … (half a dozen places)." Many toponyms are instantly recognizable, including Ashkelon, Migdol, Shechem, Pella, Apheq, Achsaph, Rehob, Hazor Ayl (on), Siryon, Apum (= Damascus), Abel, Acco, ʿArqata, Shimʿon, Ekr (on), Laish, and Beth-shemesh. Both inland and coastal *towns* are mentioned in both texts, but the latter seem to predominate in the generalizing sections. *Regions* mentioned include Damascus and the Beqʿa, the NW Negeb, and S Transjordan. Certain regions, such as the Ephraimite hill country and large sections of Coele-Syria are conspicuous by their absence. The

sequence of names, especially in the Brussels texts, has suggested to some that there is a rational grouping along traveled routes (Yeivin 1959: 156–58).

The significance of this material for Palestinian archaeology and biblical scholarship lies in the light it can shed on the political and social structure of MB Palestine and the alleged age of the patriarchs (see esp. Ward 1961: 141–47; Van Seters 1966: 78–81; Thompson 1974: 98–117). In the sphere of archaeology it has been realized that they can contribute to the debate over the date of the sedentarization attested in the MB I (2000–1800 B.C.; Mazar 1968: 82). It has been argued that the Berlin texts reflect a societal stage in which individual districts were partitioned among a number of chieftains and their clans, thus arguably still in a nonsettled state, while the Brussels texts from ca. 50 years later reveal a situation in which individual toponyms, mostly identifiable with *town* names, are paired with a single princely name, and thus reflect a state of increasing urbanization. This interpretation, which had formerly achieved a certain degree of acceptance, is now widely challenged (Thompson 1974: 113–17; Weinstein 1975: 13); and thus the bearing of the Execration Texts on the social and political history of Palestine remains moot.

The personal names in both sets of texts conform to the W Semitic ("Amorite") onomasticon of the MB II period, devoid of names of clear Hurrian or Aryan derivation (Moran 1957; Goetze, 1958; *APNM*).

EXECUTIONER. See PUNISHMENTS AND CRIMES.

EXEGESIS. The process of careful, analytical study of biblical passages undertaken in order to produce useful interpretations of those passages. Ideally, exegesis involves the analysis of the biblical text in the language of its original or earliest available form, since any translation presents at least a slight barrier to precise definition of the intent of the passage's words. The passage involved may be of virtually any length, subject to the interest of the exegete. The goal of exegesis is to know neither less nor more than the information actually contained in the passage. Exegesis, in other words, places no premium on speculation or inventiveness; novelty in interpretation is not prized. In most circles, exegesis is also part of the theological enterprise, functioning as a basic means of achieving accuracy in interpreting the word of God.

_____

A. Introduction

To a considerable degree, the actual task of exegesis involves examining a passage as carefully as possible from as many angles as possible. In practice this means asking of the text all the questions whose answers might give insight into the text's meaning. For convenience, we may group the process of examination into twelve major steps, arranged in an order that lends itself to a logical progression through the entire exegesis process. The steps are interrelated and should not be viewed as independent stages guaranteeing adequate results when followed through once.

An exegesis article or paper (a selective presentation of the results of the process) may be organized in any of several formats, including the verse-by-verse or section-by-section "commentary" style, or according to groupings thought most important by the writer. The proportion of attention one must be prepared to give to any given part of the process may vary with the passage(s), since different passages demand different levels of concentration on issues. In other words, no two written exegeses will look exactly the same since no two passages are exactly the same.

B. Process

1. Text. A first step in virtually any exegesis is the establishment of the text. By this is meant first determining the length of the passage in terms of its logical beginning and ending point, which must be established with care lest an original author's meaning be distorted by beginning or ending the analysis in what is in fact a midpoint according to the original author's thought. Secondly, establishing the text requires determining to the best degree possible the original wording of the passage. Before the invention of the printing press, accidental miscopies readily accrued to the various manuscripts. Getting back to the original text, insofar as this is possible, involves examining all relevant evidence available and inducing from it the most likely original wording. This involves asking the basic question: "What original wording would best account for the subsequent history of the text?" Among the pieces of evidence employed in this task are the many ancient translations. In the case of the OT, these include the Septuagint (LXX, the Greek OT) and its successive revisions (such as that of Theodotion, Aquila, and Symmachus, as well as Origen's Hexapla), the Aramaic, the Syriac (Peshitta), the Latin (including the Vulgate), and early Hebrew sources such as the Dead Sea Scrolls. In the case of the NT, textual reconstruction relies largely on comparisons of Greek manuscripts. There are more of them and they are dated comparatively close to the presumed original, as compared to the Hebrew manuscripts of the OT. Manuscripts in such languages as Coptic, Latin, Syriac, Armenian, and Ethiopic are also consulted, though the manuscripts in these languages are not usually considered as important as those in Greek.

Many textual decisions cannot be made on the basis of a mechanistic comparison of ancient manuscripts, however. Textual criticism always involves the exegete's best judgment about what was likely to be the original wording, and this involves becoming so familiar with the book in which the passage is contained, and with its author, that one can reasonably rule out wordings that might seem to be suggested by scanty or faulty manuscript evidence, inconsistent with what the rest of the book or author's works contain. The text is first established tentatively, and reviewed as to its correctness during the remainder of the steps of the exegesis process.

2. Translation. Since the languages of the Bible are no longer spoken (modern Hebrew, Aramaic, and Greek differ considerably from their ancient counterparts), exegesis invariably involves translating the ancient text (once established) into the desired modern "receptor" language, i.e., the language of the exegete and his or her audience. One measure of the degree to which the exegete has correctly understood the passage is the degree to which he or she can translate it convincingly into a modern language. A so-called literal translation is not necessarily the goal, since literal translations provide wooden, word-for-word representations that do not reflect normal idiomatic speech in the receptor language. Instead, the

goal is a translation so natural and appropriate to the receptor language that the exegete can fairly say that the translated text conveys the same thing to the mind as does the original text.

There are many variables in this part of the process. Poetry can be difficult to translate satisfactorily since some of its impact is contained not in the meaning of its individual words, but in the beauty of how those words are chosen and put together. Poetry inevitably loses some of its effectiveness, therefore, in translation. Since virtually all exegetes rightly attach more importance to meaning than to form, that which is poetry in the original language is routinely—and necessarily—translated into what amounts to prose in the receptor language.

3. Historical Context. Investigating and identifying the historical context of a passage is a pivotal step in the exegesis process. Reconstructing this historical context helps provide the exegete with a potentially clearer sense of the meaning of the passage than would otherwise be possible, by providing some of the general knowledge that its original audience(s) relied upon to understand what was said and/or written. There are at least five substeps to this aspect of exegesis. (1) The historical background to the passage must be learned, including whatever can be known of historical events that preceded and in any way may explicate statements contained in the passage. (2) The foreground must also be investigated, so that anything that the passage led to or anticipated is not overlooked. (3) The social setting (in the ancient world) of the topics or assumptions in the passage needs analysis. (4) Any geographical contents or allusions must be explored, so that such specifics, if present in the mind of the writer, may be fully appreciated. (5) The attempt is made to identify as closely as possible the date of the passage's composition, so that its historical context may be fixed with relative precision and its relationship to other datable passages explored as needed.

4. Literary Context. This aspect of the exegesis process seeks to understand the implications of the position of a passage within a major division of a biblical book, and within the overall structure of the book itself. What does the passage immediately follow and precede? What does it depend upon that has already been said to the reader, and what does it tell the reader that subsequent passages will reflect in some way? Any passage in any biblical book is either part of a structured progression of information (as in one of the historical books) or a particular instance of a type of literary unit among similar or different types collected in a biblical book (as one psalm in the Psalter). The author or editor of any book has presumably used some sort of criterion for the arrangement of the material as now found (even if that criterion is simple randomness or convenience of grouping according to the order in which the materials came into his or her hand), and any passage can somehow be identified by its contribution to that arrangement and its influence upon it. Conversely, some of the meaning of any statement or passage is derived from its position within a larger document, since meaning is at least partly a function of context.

Included within the process of examining the literary context of a passage are four steps: (1) examination of the literary function (the manner in which it fills in, adds on, begins, completes, or balances the portion and/or book in which it occurs); (2) examination of the placement (how its location within the section, book, division, Testament, and Bible may reveal something about its style, type, purpose, literary integration, function, etc.); (3) analysis of the detail (the degree to which the passage is comprehensive, selective, shaped by a special perspective, etc.); (4) analysis of authorship (whether or not the human author or editor can be identified and thereby his or her meaning and purposes can be further determined by comparison to other material produced by the same or similar author(s) or editor(s). Examination of the authorship will also include observations about any special features of style, vocabulary, motif, theological perspective, and the like—whether or not the passage's human author can be known.

5. Form. There are many genres of literature, and any individual piece of literature will necessarily be characteristic of one (or more) of these genres. In the Bible eight major genres predominate: law, historical narrative, gospel (a unique type of historical narrative), illustrative narrative (e.g., parables and allegories), wisdom, prophecy, hymnody, and epistle. Along with these broad delineations of genre there are the two major stylistic determiners: whether the passage is prose or poetry (though some passages are

a mix thereof. Of the basic eight, there are scores of further subdivisions, somewhat subjectively described by scholars, whose distinguishing terminology for the individual forms is not standardized.

After one identifies the broad, general genre in which a passage is to be classified, it is then necessary to determine the specific literary form. For example, if the overall genre is that of a "record" it is necessary to specify which particular form of record is at hand (contract, letter, list, law, cultic ordinance, etc.). Within the form it may also be possible to identify a subtype. If the form is law, the subtype might be apodictic, or unconditional, law (as in the Decalogue), or casuistic law (the paradigmatic case law that predominates in the Pentateuch); a further subform might be criminal law as opposed to civil law; or law with a prescribed penalty as opposed to law without a specific penalty; etc. It is desirable to describe a form as specifically and narrowly as possible without making it one of a kind. A major benefit of form analysis is the opportunity to compare the specific instance under analysis with similar forms. This is lost if the form is defined to such an extent as to become unique. A form is identified by what it holds in common with other comparable passages; unique features, peculiar to the passage, may be present, but these should be noted as ad hoc rather than as characteristic.

Identification of form may lead to a suggestion of life setting. An "individual psalm of thanksgiving," the form of fifteen passages in the OT (mostly in the Psalter) was used by individuals to express their gratitude to God for deliverance from a misery or danger (judging inductively from all the information we have about such psalms). Thus, even when such a psalm is found without an indication of its purpose in the immediate context, we may still postulate the use to which it was put, simply because we can be reasonably confident that such psalms fit certain kinds of "life settings." Overemphasis on life settings is not justified, however. Virtually any form can be reused or adapted for new purposes and in new situations, i.e., secondary or "adapted" settings. For example, a psalm originally designed for worship at the Jerusalem temple in the days of the Israelite monarchy could be used to express joy in God by Christians imprisoned in a Macedonian jail in the Roman era (Acts 16:25).

It is necessary, finally, to analyze the completeness of the form in question, being alert to the possibility of partial or broken forms. A biblical writer need not provide all the features typically associated with a given form; to provide even a single key or characteristic feature of a form may be enough to clue the reader to that form. For example, the Gk verb *eucharistō,* "I thank," may be enough to alert the reader of a NT epistle that its author has begun the transition from the greeting section to the thanksgiving section characteristic of NT era letters. The presence of a vocabulary word like the Heb imperative *hôši*ʿ*ēnî,* "save me," may be enough to suggest to the reader that a psalm may be of the common individual lament type.

Form analysis cannot reliably be used to date passages or to evaluate their historicity. Its primary value is in allowing for comparison with similar forms and for identifying those features of meaning shared by all such forms and thus contained within the particular form in question. For example, it is a rather well-established interpretational rule that parables, with few exceptions, have a single pedagogic aim—in other words, they make a single point. It can then be assumed in the case of any given parable that there will be a single point that the parable intends the reader to grasp, rather than many meanings. Such a conclusion is inherent to the proper interpretation of parables, which share this feature common to their literary form.

6. Structure. Although it is often necessary to pay some attention to a passage's structure as part of the process of identifying its form, it is desirable that the structure should be analyzed carefully as a separate step in exegesis, since the structure of a unit of literature is invariably a guide to its logic. Five stages of analysis may be mentioned:

a. Outlining the passage. Simple as it may seem, outlining is a process that helps the exegete represent the major units of information in a passage. For an outline to be useful, it must be a natural outgrowth of the passage, and not an artificial imposition of order on it. Both quantitative (sheer volume of material) and qualitative (significance of the material) factors must be taken into consideration in constructing an outline that represents fairly the import of the various components of the passage. It is normal to outline a passage with three to five major divisions, simply because, as learning theorists have frequently pointed out, the human mind tends to organize material that way. However, there may be many minor divisions, in units as small as individual sentences, clauses, and phrases, which may prove upon analysis to

constitute internal structures important to the passage's meaning. An outline should be as detailed as possible without becoming forced or artificial. Conclusions about overall structure can then be drawn.

b. Pattern analysis. Any passage will be made up of meaningful thought patterns, which may be identified as to their key features (e.g., transitions, resumptions, central or pivotal terms, parallelisms, chiasms, *inclusios,* unique forms of phrase, and other such repetitious or progressive patterns). By design, poetry contains more striking structural patterns, especially repetition, than does prose. It is especially important to identify any structural patterns that are either unexpected or unique in the passage. All patterns, however, must be evaluated and the results interpreted for purposes of further refining one's understanding of the meaning of the passage.

c. Analysis of structure according to descending units of size. It is normally helpful to move from largest to smallest units of structure (from passage to paragraph to sentence/verse to clause to phrase to term to word to sound) and where possible to identify how major or minor a given pattern seems to be in the passage.

d. Minor patterns must be evaluated as to intentionality. A pattern may be accidental rather than purposeful (e.g., the repetition of certain vowel sounds in close proximity to one another, or the repetition of a verbal root in two successive verses) and thus have no intended significance for the meaning of the passage. Major patterns are so obvious that it is hard to doubt that they were intended by the ancient writer/speaker and easily recognized by his or her audience. Minor patterns may be more subjective. One must be careful not to assume that a pattern visible on the printed page of a modern Hebrew or Greek Bible after lengthy analysis would have been noticeable on the page of an ancient manuscript or to the original hearers of a portion of Scripture. Naturally, patterns evident only in translations from the original are irrelevant to accurate exegesis.

e. Poetic structural patterns must be analyzed according to the canons of poetry. This is a special task in itself, yet absolutely necessary in the portions of the Bible that are written in poetry (almost one third of the OT; small portions of the NT). The exegete analyzing poetry must identify the parallelism (couplets, triplets, and occasionally quatrains), the scansion (the metrical pattern or cadence of the poetry), rhyme, assonance, acrostic or chiastic patterns, and metrical formulas (stock phrases employed to meet the demands of metrical patterns in given contexts), and must evaluate the interrelationship of these to the meaning of the passage. For example, Ps 19:1 ("The heavens declare the glory of God/ And the earth shows his handiwork") does not make two different statements; i.e., that God's glory is seen in the sky whereas his handiwork is seen in the earth. Rather, this synonymous parallelism, according to well-attested canons of Hebrew poetry, makes a single essential point, which may be paraphrased as: "The heavens and earth demonstrate God's glorious handiwork." The type of parallelism, in other words, is a factor in the analysis of the meaning, which is the goal of exegesis. Such linguistic devices as epiphora (repetition of final sounds), anaphora (repetition of initial sounds), assonance (repetition or juxtaposition of similar sounds), paronomoasia (play on words), figure etymologica (plays on word roots, often involving names), and other literary devices must be identified, and their use within the passage evaluated so that these factors will be neither ignored nor overemphasized as to their contribution to the meaning.

7. Grammar. Since grammar is the logical substructure of language, a correct understanding of grammar is essential to the correct understanding of the logic of statements made in a passage. The exegete must analyze the grammar of the passage under review, in the original, to determine if any grammatical ambiguities or uncertainties exist. It may be the case that a part of the passage is not certain as to its meaning because the interpretation of the grammar is difficult or debatable. Certain kinds of grammatical features are often important clues to meaning, including ellipsis, asyndeton, prostaxis, parataxis, anacolouthon, aposeopesis, and so forth.

Orthographic and morphological analysis can provide important grammatical indices of meaning and sometimes even point toward the date of a passage. Orthography is normally more relevant to Hebrew exegesis than to Greek, since the OT was produced over a much longer period of time, during which Hebrew spelling habits evolved in a discernible manner. As a result, unusual orthographies may sometimes represent genuinely ancient forms preserved by tradition, or even by accident, through

centuries of hand copying of the text. Since Hebrew spelling was partly reflective of dialect, it can even be the case that orthography gives clues as to geographical origin, as in the paronomasia of Amos 8:1–3, whose play between Heb *qyṣ,* "harvest," and *qṣ,* "end," would have been most effective in N Israel, where both words were pronounced *qēṣ* in Amos' day, as opposed to the S (Judah) where the word for harvest was pronounced *qayiṣ* and the word for end pronounced *qēṣ*. Commentators with insufficient knowledge of the grammar of the Bible's original languages may commit a variety of errors, including mistranslation and faulty analysis of logic. Those unaware of the history of pronunciation of Hebrew, for example, sometimes infer the presence of rhyme on the basis of the medieval Masoretic vocalizations when the original pronunciations would have been quite different. Those unfamiliar with the special rules of grammar that apply to Hebrew poetry as opposed to those for prose sometimes misunderstand even the tenses of the verbs in poetic contexts. In NT Greek, likewise, failure to appreciate simple syntactical uses of common words can cause distortions in comprehension, as in the somewhat confusing translation of John 3:16, "For God so loved the world …," better translated "God thus loved the world …" It is highly unlikely that Gk *houtos,* "so," in this context could mean "so" in the usually understood sense of "so much" but highly likely that it means "thus" in the sense of "in this manner" (referring to the manner of God's love as described in John 3:14–15).

8. Lexical Analysis. A correct understanding of the meaning of the words and terms of a passage is essential to proper exegesis. It is necessary, first, to attempt to identify for the audience of the exegesis any words or terms whose meanings might not be obvious. Normally one works in descending order from entire clauses, where applicable, to individual words or even parts of words in seeking to provide precise definitions for the terminology. Terms such as proper nouns almost always deserve attention in a full exegesis. Naturally, it is the terminology of the original language that one is after—analyzing words in translation is of limited value.

Eventually it is necessary to attempt to identify the key wordings of the passage—those that are somehow essential or pivotal, or else sufficiently opaque at first reading as to demand exploration. The number of difficult or pivotal words in a passage cannot be predicted in advance; it will be a function of the passage's own uniqueness.

The most important words must be studied carefully, via a process widely known as "word study," by which all the potential meanings of a word or term are considered with the goal of determining which of them applies in the passage at hand. Additionally, any special semantic features must be identified and analyzed as to their meaning for the interpretation of the passage. Such features could include irony, anaphora, epiphora, paronomasia, metonymy, synecdoche, hendiadys, formulae, loan words, and etymological oddities.

The science of semantics, which governs lexical analysis, demands careful effort on the part of the exegete. Naive approaches to defining words are still widespread in the world of biblical studies. The exegete must strive to avoid such common faults as illegitimate totality transfer (thinking that all or any of the potential meanings of a word apply to that word in any passage where it occurs), excessive reliance on etymology (thinking that the original or "root" meaning of a word stays with that word and is part of its meaning in every place it is used), and extracontextualism (finding a meaning for the given term in some usage far removed in time, circumstance, or ethos from the passage at hand and assuming that such a meaning "fits" the term's use in the passage). In all lexical study, it is imperative that the meaning in the present context be given precedence over all other considerations. The fact that a word may be used 99 percent of the time it is found in ancient writings to mean one thing is essentially irrelevant if in the context of the biblical passage under study it is used to mean something else. Any author may choose to use even a common word in an unusual way. Thus the final question must always be "How is it used here?" rather than "How does its use elsewhere tell us what it means here?" The latter question is not always entirely useless; it is, however, always a secondary question in lexical analysis to the question of meaning in the immediate context.

9. Biblical Context. By this point in the exegesis process, the exegete must draw together enough of the information provided by the results of the previous steps to begin to focus on the passage as a whole in

terms of its overall "message." To be sure, this is a subjective enterprise to some degree, but it is essential in light of the fact that in any passage the meaning of the whole is different from a mere compilation of findings made about the individual parts. One must move from paying primary attention to the individual features to treating the passage as an entity. How this entity fits into the broader body of truth contained in the Bible as a whole now becomes the focus. The exegete must keep in mind at this stage any essential characteristics, clear implications, or other central observations made as a result of the stages of the exegesis process pursued thus far.

It is necessary now to analyze the use or reuse of the passage elsewhere in Scripture if it or any part of it is quoted or alluded to at another place. How and why the passage is used elsewhere may yield clues as to its meaning or value, and at least how it may have been interpreted within a time and culture much closer to its original composition than our own. Occasionally, an awareness of special circumstances under which it is quoted or alluded to may aid in its interpretation.

Even if a passage is not quoted or alluded to elsewhere in the Bible, one must still analyze its relation to the rest of Scripture, by determining how the passage functions dogmatically in the section, book division, Testament, and Bible (usually in that order) of which it is a part. Here the exegete must ask how the passage or any of its elements compares to other Scriptures that address or relate to the same sorts of issues. In other words, one asks how the passage is similar or dissimilar to its immediate and broader context. This is, of course, a large question, but it must nevertheless be explored, based on one's general knowledge of the content of the Bible.

Finally, the passage's import for understanding other parts of the Bible must be evaluated. The exegete must try to determine if the meaning of any other passage in part hinges on this passage, or if other elements in Scripture help make this passage comprehensible. Interrelationships or dependencies in meaning may well reach across literary or historical categories. It is necessary to determine whether or not the passage deals with issues that are in fact dealt with in the same way, or in a contrasting way, elsewhere in the Bible. An important question to ask in conjunction with this step of the exegesis process is whether or not there is any part of the message of the Bible that would be lost or rendered less complete by the absence of this passage. In effect, answering that question tells us what the passage actually contributes to the Bible.

10. Theology. There is a natural continuity from biblical context to theology. Theology is here defined as the systematic study of revealed truth. The exegete will properly be concerned to determine how the passage being studied fits within the whole corpus of revelation, asking to which covenant the passage is directed, its limitations with regard to the progression of covenants in the Bible, the extent of its continuing relevance as an indicator of God's relationship to his creation, or as an indication of God's character, standards, immanence, transcendence, etc. Also, it is necessary to explore the way that the passage might or might not be related to broader theological concerns, and the general theological categories to which the passage contributes (e.g., theology proper, anthropology, Christology, pneumatology, harmatiology, soteriology, ecclesiology, eschatology, etc.). The nature of this contribution (via overt vocabulary, general subject matter, allusion, etc.) must be ascertained. An overdependence upon the vocabulary of the passage must be avoided here, since passages do not always contain terms that by themselves identify the meaning. That is to say, words are not the same as concepts; a passage that illustrates the love of God need not itself mention either of the words "love" or "God."

Beyond the general topics of doctrine that the passage raises or contributes to, it is necessary to identify specific issues (e.g., the problems, blessings, concerns, confidences, ethics, etc.) about which the passage has something to say. If the passage raises complications for certain parts of the theological agenda while clarifying others, this must be evaluated as well.

The theological contribution of the passage must be established as accurately as possible. To what extent does the passage contribute to the solution of any theological issues and how? How major or minor is the passage's contribution, and in what way does the passage conform to the entire system of revealed truth? To what extent is the passage theologically obscure or insoluble? The exegete must be careful in this process not to force the passage into a theological mold; any passage of Scripture has some

contribution to make to theology; but some are much more obviously identified as to their theological orientation than others.

11. Secondary Literature. By this stage, the exegete will of necessity have consulted many kinds of books and articles, such as grammars, commentaries, atlases, lexicons, etc. It is important, however, not to limit use of the secondary literature to such ad hoc consultations. A systematic survey of the secondary literature on or directly related to the passage is desirable. Investigating what others have written on the passage is necessary, both to supplement what one may have already concluded, and also to correct anything that a reading of the secondary literature might demonstrate to be wrong.

A convincing exegesis should establish its conclusions both in concert with conclusions reached by some scholars and against conclusions reached by others. At this stage in the process the exegete must revise tentative conclusions reached earlier, if comparison to the work of others demonstrates the need for better analysis of the passage. Making additions and corrections to one's work is a normal part of the process. It is especially valuable to analyze the relative weight that other scholars have given to the various components of the passage. The exegete must attempt to decide if he or she has in fact understood the passage well enough to have weighed the import of the various contents properly relative to one another, and has weighed the importance of the passage's features in a manner that best portrays its meaning.

It is of course the case that passages on which a large amount of scholarship has been published will be somewhat easier to review in this way than passages which have attracted relatively little attention from the scholarly community. Some passages have been the subject of scholarly study only in commentaries, and that not thoroughly. Others have been subjects of investigation in journal articles only with regard to limited aspects of the exegesis process (e.g., the text of the passage, or difficult words therein, but not the full range of exegetical investigation). Nevertheless, the exegete must review the literature as thoroughly as possible and be informed accordingly.

12. Application. There is no disagreement among scholars on the purpose of exegesis: to determine the meaning of a passage. However, some exegetes hold that the goal of exegesis is merely the determination of the meaning of a passage to its *original* audience (what the passage once meant), rather than the determination as well of what the passage says to a modern reader who desires to understand its import for his or her life at the present (what the passage means now). Nonetheless, the vast majority of people who study the Bible do so not as an intellectual exercise but as a spiritual one: they are looking for guidance relative to their faith and practice. Pretending that exegesis can be kept more "neutral" or "objective" by avoiding the question of current relevance of a biblical passage is thus a curtailing of activity just before the desired outcome—from the point of view of most readers—is achieved.

Hermeneutics, the science of interpretation, attempts to bridge barriers that would prevent a modern understanding of a biblical text. The standards of this science are variously defined, but important to an accurate interpretation of the passage is a basic hermeneutical rule: a passage cannot mean now what it could not originally have meant. That is, there is no valid modern application of a passage that was not also a potentially valid application of the passage for its original audience. Some applications appropriate to their original audiences may now no longer be valid—for example, if the application was in part directed strictly toward some person or group or situation no longer in existence (e.g., 2 Tim 2:21). On the other hand, the extent to which a passage may have applied to its original audience may not be identical to the extent (greater or lesser) of its application to us (e.g., Exod 27:1–8). It may be noted that the exegete, the person who has developed expertise in the passage, is in the best position to recommend its proper application, as opposed to someone who has not been involved in the process prior to attempting to determine how the passage might apply.

There are seven types of clarification necessary if an application is to be accurate. They are:

(1) Clarification of comparable particulars. Here the exegete identifies those factors, issues, situations, life contexts, etc., that are still sufficiently analogous to that which prevailed at the time of the original composition of the passage as to constitute "comparable" particulars. Some things have changed appreciably from ancient times to modern; some have not. Where the situation of the modern reader is in

essence comparable to the situation of the ancient reader as regards issues addressed in the passage, the modern reader will profit from the same essential application of the passage that the ancient reader would have properly made.

(2) Clarification of the nature of the application. Though the distinction is sometimes artificial, it is useful to ask whether a passage informs its readers or directs them. A passage containing or characterized by imperative, instruction, demand, command, etc., is a passage which in whole or in part may be said to direct the reader. A passage which describes, narrates, praises, etc., may be said to inform. Many passages, of course, do both, and the extent to which this is the case is an important feature of the application of the passage.

(3) Clarification of the areas of application. Here it is faith or action that the exegete is interested in. While these two elements should actually go together in the life of a believer, they are distinct entities and a given passage may concentrate on one more than the other. The extent to which this is observed to be so is a factor in the application process.

(4) Clarification of the audience. At this point the exegete must determine to whom the passage is directed. A delineation must be made as to whether the passage is aimed at personal or corporate application. Is it directed to a person or a group? What sort of person? What sort of group?

(5) Clarification of categories. The actual subject matter of the application must be identified as precisely as possible. A passage about personal piety is quite different from a passage about national deliverance. Location of the subject matter within the various realms of life (social, economic, religious, familiar, financial, etc.) is an appropriate step in specifying the application.

(6) Clarification of the time focus. A passage's focus may be past, present, or future, or a combination of these. Some passages call for an appreciation of what has occurred. Some call for a response to what is occurring. Some call for a preparedness for what will occur on the basis of what has occurred.

(7) Clarification of the limits. An accurate understanding of any piece of literature may require not only a description of what it says, but also some analysis of what it does not say. It may well be necessary, in other words, to obviate any application that a well-intentioned reader might think at first glance is appropriate to the passage, but which in fact the exegete can determine is not. Applications of any passage should be limited as carefully as possible.

Two of the most common tendencies of misapplication are moralizing from narratives and universal personalizing of ad hoc circumstances. Narratives tell what happened and are not designed to provide hidden ethical norms. Nearly all Bible characters do both good and bad things; following their example or learning from the "moral" of the stories about them is risky if not carefully controlled. With regard to universal personalizing, the mentality behind the words "we all have our" is often characteristic of inappropriate reasoning from a single given event mentioned in the Bible to a common "personal" application, as if the reason for the passage's existence is that the same sort of thing mentioned in the passage somehow happens to everyone. Applying the story of Jesus' calming a storm (Mark 4:35–41 and parallels) by averring that "we all have our storms in life …" is an example of the sort of extremely common but erroneous application against which the exegete must set limits.

DOUGLAS STUART

EXEGESIS ON THE SOUL (NHC II,*6*). A devout gnosticizing early Christian exhortation to otherworldliness composed of narrative, Scripture, and paraenesis. No trace of the presumed Greek original remains except the Coptic translation (Sahidic dialect) on pp. 127–37 of Codex II from the cache of late 4th-century copies of earlier translations found in 1945 at Nag Hammadi in Upper Egypt. Based on

its Christian piety (Moon 1983), use of the Bible (Scopello 1985), and affinities with the Valentinian Sophia myth and Alexandrian thought (Sevrin 1983), hypotheses on its origins have ranged from the 2d to 4th centuries in Alexandria.

The narrative (127, 22–129, 5; 131, 13–132, 10.13–15.18–27; 133,10–11.14–15; 133,31–134,3.8–11.25–28) runs as follows. Originally the soul was "alone with the Father … virgin and androgynous in form." The narrative begins "when she fell down into a body and came to this life." Here in this world the life of the soul—personified as a woman, Psyche (the Greek word for soul, feminine gender)—is a sad story: she was raped, abused by one and then another and by still others, deceived, and cast aside, left abandoned with her deformed children. Under compulsion, deceit, and the shame of complicity, she seemed trapped with no escape, but "she perceives the straits she is in" (131,17) and did the proper thing (in paraenetic jargon: "it is fitting"): she sighed and repented, called on the father for deliverance, and was heard and rescued. The father sent from heaven "her man … her brother, the first-born … the bridegroom" (132,7–9). She bathed, prepared for the wedding, perfumed the bridal chamber, and waited for the bridegroom—anxiously, "for she did not know what he looked like; she no longer remembers since the time she fell from her Father's house" (132,19–21). But she did recognize him; she "enjoyed her beloved, and [he also] loved her. And when she had intercourse with him, she got from him the seed that is the life-giving Spirit, so that by him she bears good children …" (133,33–134,3). In this union the soul "received the divine nature from the Father for her rejuvenation, so that she might be restored to the place where originally she had been" (134,8–11).

From the start of the story sexual abuse is the myth's linguistic imagery, but the sense conveyed in the rest of the narrative fixes not on the sexual violation but on sexuality itself. Before "she fell down into a body and came to this life," Psyche "was virgin and androgynous" (hendiadys: virginity [purity] = nonsexual androgyne). In her prayer the wrong she confessed was "I abandoned my house and fled from my maiden's quarters" (128,36–129,1). The afflictions she suffered were not the real defilement but its consequence: "many are the afflictions that have come upon her because she abandoned her house" (129,4–5). The rescue was accomplished by sending from heaven her mate (132,7–10), with whom she was reunited in marriage, thereby reconstituting the asexual androgyne. "So the cleansing of the soul is to regain the [newness] of her former nature …" (131,34–132,1). The narrative makes clear that the soul's fall into bodily existence (abandoning her house) was wrong, but it offers no explanation. That is added in a gloss on Genesis 2: "the woman led astray the man who is her brother" (133,4–9). In structure as well as in substance, the gloss is of central importance; it stands where the several parts of *Exeg. Soul* are tied together, within a complicated composition of didactic instruction and interpretation of Scripture (132,27–133,31) which is placed around the recognition scene (133,10–15).

Scripture is first employed, interrupting the narrative at the soul's prayer of penitence and petition, in a lengthy exegetical composition entitled "On the prostitution of the soul" (129,5–131,13: the image of the unfaithful wife from Jeremiah 3, Hosea 2, and Ezekiel 16 is applied by the Holy Spirit to the prostitution of the soul and interpreted as the soul's defilement by "the domain of the flesh and the perceptible realm and the affairs of the earth"; Paul's command not to associate with prostitutes [1 Corinthians 5,9] is taken as a summons to struggle against evil spiritual powers).

After the story is told, the hortatory section (135,4ff.) twice says what is proper behavior ("It is fitting" 135,4–15; 136,16–27)—sighing, weeping, hating ourselves and this place of deception, repenting with sincerity—and offers assurance that the father hears the penitent. Chains of Scripture (136,25–137,11; 137,11–22) support both points. In the second instance the Scripture quotations also summarize the whole theme of repentance and deliverance, both in terms of narrative. One is from Homer's *Odyssey* (Helen and Odysseus are figures of the soul's perilous journey through this world to her true home) and the other is from Israel's exodus out of Egypt (to prooftext the groveling which is *de rigueur* in *Exeg. Soul* 's piety: "Certainly Israel would not have been visited in the first place, to be brought out of the land of Egypt … if it had not sighed to God and wept …"). There are also single texts from Scripture: at the end of the narrative didactic definitions are coupled with quotations (134,4–5.11–25.29–135,4).

Thus it appears the quotations, like the exhortation, were added to the story and so are not the narrative's source, as some have argued, but sanction its interpretation. The quotations interrupt the story and help give shape to the entire composition: interruption at the exegetical composition, shaping at the end where the whole is recapitulated in terms of the *Odyssey* and the Exodus, and both interruption and shaping at the point where the knots are tied, at the recognition scene where the myth is tied to the Genesis creation account.

Exeg. Soul belongs to no single literary genre. It presents topics discussed in philosophical school treatises on the soul from the 2d century C.E.—the nature of the soul, her incarnation, her lot in this life, and eschatology (Festugière 1953). It exhibits a Platonic outline (Plotinus, *Enn.* 6.9.9) found also in Hermetic and pagan gnostic systems. It has points of similarity with Hippolytus' discussion of the Naasene gnostics (*Elenchos* V, 6–7), with what may be a pre-Valentinian form of the Sophia myth (Jonas 1958) found in *The Apocryphon of John* (NHC II,1 and elsewhere), and with other Nag Hammadi codices, such as *Authentic Teaching* (NHC VI,*3:* the spiritual soul, thrown into a body, becomes involved in this life, forgets her origins, then turns against this world, and at her marriage receives from the bridegroom the word which provides her with the true and saving knowledge of her origins) and *The Gospel of Philip* (NHC II,*3:* connects salvation and the bridal chamber). But *Exeg. Soul* is not philosophical argument or pure myth or even novella, despite similarities with the Hellenistic romances of risk and rescue.

Exeg. Soul is of interest as an example in Hellenistic Christianity of a Platonizing doctrine of the soul whose dualism was pessimistic enough to turn it gnostic (Sevrin 1983), together with narrative initiatives from the Hellenistic romances, and biblical and Homeric scriptures, all mixed into an exhortation against attachment to this life, which is characterized by suffering, affliction, distress, defilement and by fitting affective clichés (sigh and repent, weep, mourn). It interests some researchers because it may contain a simple—and hence possibly an early—version of the myth of the soul's fall into a body, which is her defilement, and her rescue, i.e., ascent back to the heavenly father.

———

A. Title

The common English title Exodus is derived from the Vg *[Liber] Exodus,* which received it from the OL. This, in turn, was inherited from the Gk *exodos,* abbreviated from a fuller *exodos aigyptou,* "The Departure from Egypt." This name, descriptive of the main theme of the book, reflects an ancient Hebrew title current among the Jews of Palestine and Alexandria: *sēper yĕṣî᾽āt miṣrayim,* "The Book of the Departure from Egypt." This title is still preserved in the 10th-century C.E. Ben-Asher MT (Baer and Strack 1879: 57). The Syriac title *mapqanā᾽* is similarly dependent on that tradition.

The Hebrew name was *wĕ᾽ēllê šĕmôt,* "And these (are) the names (of)" (Exod 1:1), after the opening words, popularly shortened to *šĕmôt.* This title was used by Origen (3d century C.E.) and by Eusebius (4th century) in his *Ecclesiastical History* (6.25), transcribed in Greek as *Oualesmōth* as well as in Latin Bibles as *Hebraica veelle semoth.* It is found in *Gen. Rab.* 64.

One other name is *ḥōmeš šēnî,* "the second fifth" (of the Pentateuch) (*Soṭa* 36b).

B. Masoretic Internal Divisions

The present division of the books of the Hebrew Bible into chapters is a late innovation. It is Christian in origin and was transferred from the Latin Bible into Hebrew manuscripts by R. Salomon b. Ishmael ca. 1330 C.E. According to this system, Exodus is divided into 40 chapters. The traditional Masoretic divisions only know of lectionary pericopes (sections for reading in synagogue service). The old Palestinian practice of completing the reading of the Torah in three or three and a half years separated Exodus into 29 or 33 weekly sabbath readings *(sĕdārîm),* while the annual system of Babylon that ultimately became universal in Jewish communities features 11 such pericopes.

According to the Masoretic note at the end of several codices, the Hebrew text of Exodus contains 1209 verses, 16,713 words, and 33,539 letters.

C. Place within the Torah

The book of Exodus is part of a larger literary unit known as the Torah or Pentateuch. As such, its opening section and subject matter have many points of contact with the preceding book of Genesis, and its final pericope constitutes a transition to the following books of Leviticus and Numbers. The links with Genesis are discernible in the initial verses. Verse 1 cites Gen 46:1, and v 5 is dependent on Gen 46:26–27. The list of tribes in Exod 1:2–4 is drawn from Gen 35:23–26, because that chapter (vv 11–12) contains the divine promises to Jacob:

> Be fertile and increase:
> A nation, yea an assembly of nations,
> Shall descend from you …
> The land that I assigned to Abraham and Isaac
> And to your offspring to come
> Will I assign the land.

Exod 1:7 tacitly affirms that the blessing of fertility has been realized; the fulfillment of the promise of national territory is about to be set in motion. In addition, the references to Joseph in 1:5–6 presuppose a knowledge of his identity and activities (cf. also 3:16 and 13:19 with Gen 50:24–25). Still other instances of dependency on the Genesis narratives lie in the repeated invocation of the divine promises to the three patriarchs (Exod 2:24; 6:3–4, 8; 32:13; 33:1; cf. Gen 12:1–3; 15:5, 7, 18; 17:2; 28:13–14; 46:3; Fishbane 1979: 63–64).

The closing chapters of Exodus that recount the construction and dedication of the tabernacle in the wilderness provide the background and rationale for the main theme of the books of Leviticus and Numbers, which is the ordering of the cultic institutions and religious life of Israel.

D. Integrity and Chronological Scope

Notwithstanding these obvious connections with the preceding and following books of the Torah, Exodus possesses an integrity of its own. It is marked off by a prologue and epilogue (1:1–7; 40:36–38), the former registering the migration of the Israelites to Egypt from Canaan, the latter recording the journeyings of the people on their way to Canaan from Egypt. Whereas Genesis concerns itself with the lives of individuals, the second book of the Torah relates to the fortunes of the people as a whole. The phrase "people of Israel" appears here for the first time (Exod 1:9; cf. 3:7). In fact, Exodus may rightly be looked upon as the seminal book of the Hebrew Scriptures in that it features the pivotal events of Israel's history and the fundamental institutions of its culture and religion.

The latest event mentioned in the narrative is the erection of the tabernacle in the wilderness on the new moon of the first month of the second year following the departure from Egypt (Exod 40:1, 17). The other end of the chronological spectrum remains unclear. This is due to the book's silence about the interval between the death of Joseph and the accession of the tyrannical pharaoh, and about the duration of the slavery. On these points there are divergent traditions. A comprehensive figure of 430 years is given in MT Exod 12:40–41, but LXX and Sam. Pent. include in this number also the length of stay in Canaan. According to Gen 15:13, the predetermined period of slavery was to be 400 years, which is said to cover four generations (Gen 15:16). This last tradition coordinates with the genealogy of Moses, who was the great-grandson of Levi, son of Jacob (Exod 6:1, 16, 18, 20) and more or less agrees with the notice that Joseph's great-grandson Jair, together with his sons, participated in Joshua's wars of conquest and the settlement of Canaan (Gen 50:23; Num 32:39–41; Deut 3:14; Josh 13:1; 17:1). The genealogies, therefore, leave room for no more than about a century or so for the entire Egyptian episode.

Moses himself must have been born, of course, after the onset of the Egyptian oppression, and he was eighty years of age at the time of the Exodus (Exod 2:1; 7:7; Deut 34:7). This means that the enslavement of Israel lasted that long at least. On the other hand, it would have required many more generations than two or three for a mere seventy souls and their families to have proliferated to the extent of being regarded as a serious threat to the security of Egypt (Exod 1:5, 7, 9–10). At any rate, 19:1 and 40:17 show that the bulk of the book encompasses a period of just about one year.

E. Textual Traditions

Four textual traditions of Exodus can be distinguished. These are the received Hebrew text (MT), the Samaritan Pentateuch, the LXX, and now the tradition represented by 4QpaleoExod^{M}.

The Hebrew behind the Greek Exodus seems to have differed from MT more than the other books of the Pentateuch. It also differs from it in arrangement of contents in two main respects: (1) within the Decalog (chap. 20), the order of the commandments in Codex Vaticanus (B) is 7, 8, and 6; (2) while it closely corresponds to MT in chaps. 25–31, there are considerable differences in the parallel account in chaps. 35–40. The section dealing with the ornaments and garments of the priesthood (39:2–31 [MT]), which in MT follows the description of the structure of the tabernacle and its furnishings, is shifted in LXX to head the entire section (36:9–40 [LXX]) within the subsections of that pericope (Swete 1902: 231–36).

The Samaritan text is characterized by a number of major expansions, conflate readings, and interpolations. Thus Exod 18:24 is supplemented by Deut 1:9–18, the tenth commandment in Exod 20:17 has been augmented by citations from Deut 11:29 and 27:2–7, Exod 20:19 has been enlarged by Deut 5:24–27, and Exod 20:22 by excerpts from Deut 5:28–31.

What seems to be the forerunner of this text-type is 4QpaleoExod^{M} from Qumran, which has survived in varying states of preservation. It contains Exod 6:25 to chap. 37. While not identical to the Sam. Pent., it, too, features repetitions, especially in the plague narratives, and also has passages interpolated from Deuteronomy. Another peculiarity is the placing of Exod 30:1–10 in chap. 26. This text displays numerous textual variants from MT, many of them corresponding to the Greek and Samaritan. On the whole, though, it is very close to MT (see Sanderson 1986).

A total of fifteen Hebrew scrolls of Exodus, all fragmentary, were uncovered at Qumran. Thirteen were found in cave 4; two of them are written in the Paleo-Hebrew script. Other fragments were found in cave 1, which feature Exod 16:12–16; 19:24–20:1; 20:25–21:1; 21:4–5, and in the "small caves," that is, in cave 2 that held Exod 1:11–14; 7:1–4; 9:27–29; 11:3–7; 12:32–41; 21:18–20(?); 26:11–13; 30:21 (?); 32:32–34 and another group containing Exod 4:31; 12:26–27 (?); 18:21–22; 21:27–22:2; 22:15–19; 27:17–19; 31:16–17; 19:9; and 34:10; and a third represented by 5:3–5. In cave 7 were found Exod 28:4–6 and v 7 in Greek translation. In addition, fragments of Hebrew Exod 4:28–31; 5:3; and 6:5–11 were preserved at Murabba‘ât.

F. Contents

The book is devoted to the events leading up to the Exodus, the circumstances of the Exodus itself, and the experiences in the wilderness that include the covenant at Sinai, the corpus of legislation, and the construction of the tabernacle.

A detailed analysis of the contents demonstrates the varied nature of the material, which may be subsumed under four rubrics as follows:

1. Israel in Egypt (1:1–12:36)
2. Exodus Events (12:37–15:21)
3. Wilderness Wanderings (15:22–18:27)
4. Sinai Experiences (19:1–40:30)

1. Israel in Egypt. a. Prologue (1:1–7). An abbreviated recapitulation of Gen 46:1–27; the roster of Jacob's sons, the heads of families, who accompanied their father in the migration to Egypt; together with their households, they number seventy souls in all, including Joseph, who was already there; that entire immigrant generation dies out; the Israelite population increases phenomenally.

b. Oppression (1:18–20). A new king arises in Egypt; unmindful of the benefactions that Joseph had bestowed on the land, he perceives the proliferation of the Israelites to be a threat to national security; in order to curb their natural increase he conscripts the people for forced labor on state projects; when this tactic fails to achieve its goal, more severe measures are taken; the range of tasks imposed on the Israelites is greatly expanded; the midwives are ordered to murder all Israelite males at birth; they disregard the decree, whereupon the pharaoh directs that all newborn males are to be thrown into the Nile.

c. Birth of Moses (2:1–10). A baby is born to a levitical family and is kept in hiding for three months; when concealment is no longer feasible, the mother places him in a waterproofed basket among the reeds on the bank of the river, and stations his sister to keep watch from a distance; a daughter of the pharaoh comes down, espies the basket and, recognizing the baby to be a Hebrew, takes pity on him; at that moment, the sister approaches and offers to bring a Hebrew wet nurse; unaware, the princess hires the mother of the child, who brings him to the palace when he is sufficiently grown; the princess names him Moses.

d. Moses' Early Life (2:11–22). Moses kills an Egyptian who is beating a Hebrew, "one of his kinsmen," and hides the body in the sand; he tries to intervene in a fight between two Hebrews and is rebuked by the offender with a reference to that killing; realizing that his act is no longer secret, and that he is now under sentence of death, Moses flees to the land of Midian; there he saves the shepherdess daughters of the local priest from abuse by the male shepherds; he settles down with Jethro the priest and marries Zipporah, one of his daughters; a son named Gershom is born to the couple.

e. Conditions in Egypt (2:23–25). The narrative now returns to conditions in Egypt and notes that the king has died but that the Israelites have gained no relief from their burdens; the time has arrived for God to respond to the outcry of the oppressed.

f. Call of Moses (3:1–4:17). Moses, in the wilderness, drives his flock in the vicinity of Horeb, "the mountain of God"; there he witnesses a bush on fire yet remaining unconsumed; his curiosity aroused, he approaches the scene, only to hear a voice ordering him to come no closer and to remove his sandals because he is standing on holy ground; the voice then identifies himself as that of the God of his ancestors, the three patriarchs of Israel; Moses is told that God is about to deliver his people from Egypt and to bring them into the promised land; Moses himself is to be chosen the instrument for this purpose; a long dialogue between God and Moses ensues in which Moses protests his unworthiness and God repeatedly reassures him; a noteworthy feature is that Moses asks for the name of God that the people would recognize; in response he is told, *ʾehyê ʾăšer ʾehyê* (3:14), a phrase whose vagueness has provoked centuries of commentary. Moses is then given the charge to negotiate with the pharaoh for the Israelites to be allowed to undertake a three-day journey into the wilderness in order to worship their God; at the same time, he is forewarned that the monarch will refuse unless coerced into agreeing; God will therefore strike Egypt with various punishments, after which the pharaoh's obstinacy will be broken; the Egyptians will even shower gifts on the departing Israelites.

Moses still hesitates, fearing rejection by his own people; God then teaches him three signs to perform before them so as to ensure his credibility; Moses continues to demur, pleading lack of persuasive eloquence, an excuse dismissed by God, who points out that it is God alone who endows human beings with the faculty of speech. Moses makes one last desperate plea that someone else be chosen to liberate Israel, but he is rebuffed; his brother Aaron is appointed to act as his spokesman to relay God's message to the people and to the pharaoh.

g. Return to Egypt (4:18–31). Moses returns to his father-in-law, receives permission to leave, takes his wife and sons, and sets out on the journey back to Egypt; he receives a divine message for the king that, should he refuse to let Israel, God's "firstborn son," leave, he will be punished with the death of his own firstborn son. The narrative is here interrupted by a truncated story about a mysterious incident that occurs on the way at a night encampment. Moses or his son (the text is not clear) suddenly becomes desperately ill. Zipporah perceives the cause to be neglect of the act of circumcision; taking a flint knife, she personally performs the ritual on her son and thereby averts the danger. Continuing the journey, Moses meets up with his brother Aaron and gives him a full report of all that transpired. The two then assemble the elders of Israel, deliver the divine message, perform the validating wonders, and are accepted by the people.

h. Audience with the Pharaoh (5:1–6:1). Moses and Aaron have an audience with the pharaoh, who not only summarily rejects their request but even intensifies the burdens placed on the people. The overseers of the laborers remonstrate with the king but to no avail; as they leave the pharaoh's presence, they meet Moses and Aaron and bitterly accuse them of aggravating their unhappy situation; Moses, in turn, protests to God that his own mission has failed, at which the Lord reassures him of eventual fulfillment.

i. Recommissioning of Moses (6:2–13). Moses receives a message from the Lord that he has revealed himself to the patriarchs of Israel by the name El Shaddai but has not made himself known to them by his name YHWH. In this capacity he will fulfill the covenant he made with them to give them the land of Canaan. Moses is bidden to bring the people the tidings of redemption and of the forging of a special relationship with God; Moses does so but, demoralized by their sufferings, they do not respond, and Moses once again questions his ability to influence the pharaoh.

j. Genealogy (6:14–30). The narrative is again interrupted by a genealogy of the clan heads of the tribes of Reuben, Simeon, and Levi; the last-mentioned is given in greatest detail, leading up to Moses and Aaron; a brief recapitulation of their function and mission concludes the unit and serves to resume the sequence of the narrative.

k. Another Recapitulation (7:1–7). The charge of Moses with Aaron as his spokesman is repeated as well as the pronouncement that God will harden Pharaoh's heart, but that the Egyptians will let Israel go free after experiencing extraordinary chastisements.

l. Sign before the Pharaoh (7:8–13). Moses and Aaron perform a marvel in the presence of the court; Aaron's rod turns into a serpent; this feat is duplicated by the Egyptian magicians, but Aaron's rod swallows theirs; the pharaoh remains unmoved.

m. Plagues (7:14–11:10). The promised chastisements arrive in the form of a concentrated series of disasters. The first nine plagues are a blood-red and foul Nile (7:14–24), an abundance of frogs (7:25–8:11), a heavy infestation of lice (8:12–15), swarms of insects (8:16–28), pestilential diseases that strike the livestock (9:1–7), boils that erupt on man and beast (9:8–12), destructive hail that lashes the land (9:13–35), swarms of locusts (10:1–20), and thick darkness for three days (10:21–23). The pharaoh remains defiant; the final and climactic slaying of the firstborn is foretold.

n. Passover Regulations (12:1–28). The month of spring as the New Year; preparations for the Exodus; the setting aside of the lamb; rules for preparing and eating it; the annual commemoration of the Passover; the eating of unleavened bread; rules for slaughtering the paschal lamb; future celebration of the Exodus.

o. Tenth Plague (12:29–36). The firstborn of the Egyptians, man and beast are slain. The pharaoh summons Moses and Aaron; the Israelites are allowed to leave; the Egyptians are despoiled.

2. Exodus Events. a. First Stage (12:37–13:16). The Israelites march from Raamses to Succoth; about 600,000 adult males, aside from women and children, depart. A "mixed multitude," apparently a motley group of non-Israelites, accompany them. An aspect of the law of the Passover offering is defined; the sacrality of the firstborn is affirmed; the festival of unleavened bread is instituted. The law of the redemption of the firstborn of man and beast is announced.

b. Second Stage (13:17–14:31). The indirect route from Egypt to Canaan is deliberately chosen; the bones of Joseph are carried out by Moses; the journey from Succoth to Etham; a pillar of cloud and fire accompany the people; the Egyptians come in pursuit of fleeing Israelites; the safe crossing of the sea by Israel and the drowning of the entire Egyptian force.

c. Song of Triumph (15:1–21). Moses leads the people in a song of praise to God; Miriam leads the women in a song with dance and timbrels.

3. Wilderness Wanderings. a. Shortage of Water (15:22–27). Three days' trek into the wilderness of Shur, the people are without a supply of water; on arrival at Marah, the waters are found to be bitter. The people complain; Moses intercedes with God, and the waters are miraculously cured. The people journey to Elim, where there are twelve springs and seventy palm trees.

b. Manna and Quails (16:1–36). The trek from Elim to the Wilderness of Zin, the people arriving exactly one month after the Exodus. The people suffer hunger and clamor against Moses' leadership. They are providentially supplied with manna and quails. The sabbath law is explicated in relation to the manna.

c. Shortage of Water at Rephidim (17:1–7). The trek to Rephidim, where water is scarce, leads to near rebellion against Moses, whom God instructs to strike a rock. Water gushes forth; the site is named Massah and Meribah.

d. War with Amalek (17:8–16). Israel is suddenly attacked by the tribe of Amalekites. Moses appoints Joshua to lead the Israelite forces and he drives off the enemy. Moses stations himself on a hill overlooking the scene of battle; Israel prevails when he holds his hands aloft; Aaron and Hur support his hands. The Lord orders Moses to inscribe in a document that he would continually wage war against Amalek. Moses builds an altar at the site.

e. Jethro and the Founding of the Judiciary (18:1–27). Jethro visits the Israelite camp and receives a full report of recent events. He expresses consternation at Moses acting as sole magistrate, and advises on the establishment of a standing judiciary, which Moses follows.

4. Sinai Experiences. a. Preparations for the Theophany (19:1–25). On the third new moon following the Exodus the people enter the wilderness of Sinai and encamp "facing the mountain"; preparations are made for a communal theophany; the people station themselves at the foot of the mount on the third day.

b. Theophany (20:1–21 [18]). God promulgates the Decalog. The people are seized with awe and fear, and ask Moses to mediate the revelation.

c. Laws Regulating Forms of Worship (20:22[19]–26[23]).

d. Book of the Covenant (21:1–23:33). A complex of laws, civil and criminal, moral and ritual; the judicial laws (21:2–22:17) are overwhelmingly formulated in casuistic style, the moral and ritual (22:18–23:33) are mostly expressed apodictically.

The following are the legal topics: 21:2–11, slavery; vv 12–17, capital offenses; vv 18–27, bodily injuries; vv 28–32, homicidal beasts; vv 33–36, damage to property; 21:37 (—Eng 22:1) to 22:3 (—Eng 22:4), theft of livestock; 22:4–5 (—Eng 22:5–6), damage to crops; vv 6–14 (—Eng 7–15), laws of bailment; vv 15–16 (—Eng 16–17), law of seduction; 22:17 (—Eng 22:18), prohibition of sorcery; v 18 (—Eng 19), bestiality; v 19 (—Eng 20), apostasy; 22:20–26 (—Eng 22:21–27), concern for the disadvantaged of society; 22:27–30 (—Eng 22:28–31), duties to God; 23:1–3, judicial procedure; vv 4–5 restoration of lost property; vv 6–9, impartial justice; vv 10–11, seventh year fallow; v 12, sabbath law; v 13, obedience to God; denial of other gods; vv 14–19, sacred seasons; vv 20–33, hortatory epilogue.

e. Ratification of the Covenant (24:1–18). The covenant is affirmed by popular acclamation and is committed to writing. Sacrificial rituals are ordained, with ceremonial sprinkling of the blood of the animal. A public reading of the document. Moses ascends the mountain to receive the two tablets of stone.

f. Instructions for the Tabernacle (25:1–31:18). Detailed instructions for the fabrication and equipment of the tabernacle, for the manufacturing of the priestly vestments, and for the consecration of the priests.

g. Golden Calf (32:1–34:35). The absence of Moses on the mount causes the people to insist on fashioning a "god," so Aaron makes a golden calf. The covenant has been violated; Moses descends the mountain and smashes the tablets; a slaughter of the guilty ensues. The divine presence in the camp of Israel is endangered. Moses acts as mediator for Israel with God. The covenant is renewed. God warns against the incursion of alien cults into the religion of Israel. A religious calendar is prescribed.

h. Erection of the Tabernacle (35:1–40:34). The detailed directions for the construction of the tabernacle are carefully executed; the divine spirit envelops the completed structure.

i. Epilogue (40:36–38). Israel's movements toward the promised land are directed and timed by the protecting and sanctifying emblem of the divine presence in the midst of the people.

G. Nature of the Material

The book of Exodus can hardly be treated as historiography in the usual sense of the term, for its narrative is characterized by a paucity of historical detail. As noted above, some essential chronological data are lacking. In addition, no pharaoh is designated by name (contrast, e.g., 1 Kgs 11:40; 2 Kgs 23:29), and nothing is related about the upbringing and education of Moses or about the structure of Israelite society in Egypt and the inner life of the community. Although Israel is said to be organized as a confederation of twelve tribes, the histories of the individual tribes have been entirely ignored. In regard to the year's wanderings in the wilderness, only a few highlights are mentioned, and apart from the theophany and Covenant Code and God's benevolent provisioning of his people, they conform to a pattern of Israel's disobedience and rebellion against God. It is clear that the book presupposes a high degree of selectivity, with its focus on theological interpretation and didactic exposition. It is also evident that within these restricted parameters there is a tendency to preserve as many traditions as possible.

The material itself reveals a veritable kaleidoscope of topics and literary genres. The following constitutive elements are discernible: saga (e.g., the birth story of Moses, 2:1–10); fragmented tales that presuppose more extensive knowledge than is recounted (e.g., Zipporah's circumcision of her son in 4:24–26; the mention of Joshua and Hur without further identification in 17:9, 10); episodes that bear a richly poetic flavor (e.g., the theophanies in chaps. 19; 33:19–23); items that possess distinctly poetic form and phraseology (e.g., 3:15; 9:29; 17:16; 19:3,4); hymns (e.g., 15:1–21); paraenetic discourse (e.g., 15:26; 19:3–6), and its related exhortatory promises and threats (e.g., 23:20–33); a corpus of judicial, moral, and ceremonial law (21:1–23:19); itinerary notices (12:37; 13:20; 14:2; 15:22–23, 27; 16:1; 17:1; 19:1–2); genealogical information (1:1–5; 6:14–27); lists (25:1–31:11; 35:4–40:33); a census (30:13–16); chronological notices (7:7; 12:40–41; 19:1; 40:2, 7); ritual, cultic, and ceremonial laws such as circumcision (4:24–26; 12:44, 48–49); the Sabbath (16:5, 22–30; 20:8–11; 23:12: 31:12–17; 34:21: 35:1–

3); the festivals (chap. 12 passim; 13:6–7; 23:14–17; 34:18, 22–25); the consecration and redemption of the firstborn (13:2, 11–15; 22:28–29; 34:19–20); the disposal of the firstfruits (22:28; 23:19; 34:26); and a dietary law (23:19; 34:26).

Irrespective of the great variety of literary types and topics, the work is presented as one long, continuous narrative. It is the sequential narrative mold that imparts a unified quality to the book as it has come down to us. All the varied material is woven into the narrative and becomes an integral part of it. Thus, the laws relating to the paschal lamb, the future annual celebration of the Passover festival, and the redemption of the firstborn are all expounded within the context of the tenth plague (chap. 12; 13:16). The sabbath law is laid out in relation to the story of the manna (chap. 16). The Decalog and the corpus of laws appear in connection with the arrival of the people at Mt. Sinai. They are presented against a background of preparations for a theophany and treated as the product of that theophany, which is depicted as taking place amidst upheavals of nature, themselves described in highly figurative and poetic language (chaps. 19–20). Even the construction of the tabernacle in all its elaborate technical details is narrativized and becomes an extension of the Sinai pericope (chaps. 25–31; 35–40).

H. Composition

Modern critical research in the book of Exodus cannot be separated from the investigation of the Pentateuch as a whole (see also TORAH). At the same time the distinctive characteristics of Exodus warrant attention to certain issues peculiar to it.

The diverse literary genres and topics, the apparent doublets, inconsistencies, redundancies, and interpolations, as well as seeming differences in ideological and theological outlook, have inevitably raised questions about the history and growth of this text until it reached its final form.

Scholarly energies have concentrated on the prehistory of the materials, that is, on the identification and isolation of the original building blocks of tradition, on the reconstruction of the setting in the life of Israel that would have generated and preserved the major motifs and themes, on the delineation of the complex process by which the units of tradition have been fused into a coherent whole, and on consideration of the literary artistry that has shaped the work into its final form.

The classical documentary hypothesis originally claimed to identify three distinct narrative strands: J, E, and P, based upon the same distinguishing criteria as were applied to the book of Genesis. While there was no unanimity regarding the precise extent of these documents or their characteristics, and especially concerning the separation of the E source from J, a broad consensus nevertheless emerged in respect of the existence of three basic sources. In addition, Driver (1913: 99ff.; 1918:xvii–xviii) pointed to several passages in Exodus which approximate in style and tone to D. While he admitted that some of these may be explained by assuming D's use of JE, he claimed that a considerable number of phrases and expressions could only have entered the book under the influence of D.

The classical documentary hypothesis has undergone much modification through attempts to subdivide the sources and discover new ones. R. Smend (1912) claimed that J was itself a composite of two originally independent sources which he designated J^1 and J^2. C. A. Simpson (1948) regarded J^1 as preserving the traditions of the southern tribes and as having been written ca. 1000 B.C.E. To this source were added traditions of the Joseph tribes ca. 900 B.C.E. to form J^2. Around 700 B.C.E., E reworked this source from a northern viewpoint. Both Volz and Rudolph (1933) had earlier concluded that E was not an independent narrative source and that the material usually designated E comprised a number of individual traditions that were incorporated into J. Rudolph (1938), however, did not agree that P was of the same character.

Several scholars have attempted to isolate hitherto undetected sources. Morgenstern (1927) claimed to have identified Exod 4:24–26 and chaps. 18 and 33–34 as the remnants of a Kenite source (K) which was, to him, the oldest document in the Hexateuch. This had contained a narrative of the relationship between Moses and the Kenites.

Otto Eissfeldt (1922; 1965) also argued for the presence of an additional narrative source to be carved out of J, which he designated L ("lay"). Written between 950 B.C.E. and 850 B.C.E., it is said to be characterized by a lack of concern for cultic matters, a general primitiveness, and a commitment to the

nomadic way of life and to the ideal of the unity of Israel. Fragments of this source were thought to be identifiable in chaps. 1–2; 3:21–22; 4:1–9, 19–26, 30b–31a; 7:15b, 17^{6}, 20; 12:21–27, 33–39; 13:3–16, 20; chap. 14; 15:20–27; chap. 16; 17:1a, 8–16; 19:2–25; 24:1–2, 9–11, 13a, 14–15a; 32:17, 18, 25–29; 33:3b–4; 34:10–13. In contrast, the rest of J was compiled sometime between 900 and 721 B.C.E.

This theory was modified by G. Fohrer (1968), who, for chaps. 1–15, preferred the designation N (nomadic) in place of L and dated the source to ca. 800 B.C.E., regarding it as a critical reaction to urbanism on the part of a southern Judean writer.

M. Noth (*HPT*, 38–45) postulated the existence of a *Grundlage* (G) or an original document on which both J and E drew. This is said to explain the overlapping material in those documents as well as how variations developed in the course of time. Cross (*CMHE*) postulates an originally oral epic cycle of traditions deriving from the period of the judges, of which both J and E are variant forms. He does not regard P as being an independent narrative but rather the final redaction of the older material which was completed in the 6th century B.C.E. toward the end of the Babylonian exile. This priestly reworking was responsible for the superscriptions, date formulas, itineraries, genealogies, and the priestly legislation.

Rolf Rendtorff (1977) similarly denies the existence of a continuous Priestly narrative source. He goes further in also arguing against an independent, extensive J source, claiming that the various major complexes of tradition developed in isolation from one another in small units. P and J reworked the separate blocks of material. The final redactor, not the Yahwist, was responsible for conjoining the narrative cycles.

The search for the setting in life that inspired and preserved the basic themes of the book of Exodus led von Rad *(PHOE*) and Noth *(HPT*) to look to the dominant role of the cult for an answer. The former maintained that the origin of the material is to be sought in historical creedal confessions that were recited by the worshippers at cult centers on sacred occasions. Deut 25:5–9 provides the model for this practice. Other examples are Deut 6:20–24 and Josh 24:2b–13. These credos embodied three basic themes: the deliverance from Egypt, the conquest of and settlement in the land, and the divine promises to the patriarchs. These historical confessions of faith were recited on the celebration of the Feast of Weeks at Gilgal, Israel's earliest religious center in Canaan (cf. Josh 5:9–10). Since none of the above-cited credos refers to the revelation at Sinai, von Rad concluded that the Sinai covenant theme was originally independent of the confessional complex and originated as a cult legend celebrated on the Feast of Booths, an ancient covenant renewal festival held at the sanctuary at Shechem. This site was an important religious and political center for the tribes of Israel (cf. Josh 24:1). Von Rad further postulated that these credos were originally associated with distinct tribal groups. It was the Yahwist (J) who fused the complexes of tradition, incorporated into them other independent traditions, and furnished them with theological elaborations. He thereby created a continuous narrative which is a theological presentation of Israel's self-understanding.

M. Noth has similarly placed the formation of the traditions and their elaboration in a cultic context. He isolated five discrete and originally independent themes that became central to the faith of Israel: divine promises to the patriarchs, guidance out of Egypt, guidance in the wilderness, revelation at Sinai, and guidance into the arable land of Canaan. The Exodus theme was originally confined to only some of the tribes. It gradually received ever wider circulation until it formed the nucleus of the faith of all Israel. The traditions about Moses were thought by Noth to have been later, secondary themes. In the course of time the themes were supplemented and expanded to be combined in the period of the judges. Whereas their origin was cultic, the impetus for their fusion was primarily political rather than theological. The amphictyonic twelve-tribe confederation meeting on cultic occasions at the central sanctuary provided the stimulus for the merging of the separate traditions that now became the possession of all Israel. This material in its content and arrangement formed the *Grundlage* (G), the common source on which J and E drew. A redactor drew upon E to augment J and this revised document was incorporated into the separate P narrative source.

The foundations of the von Rad-Noth hypothesis have been largely undermined. Powerful arguments against the very existence of the institution of creedal confession have been adduced, and even those who

do not discount it entirely deny its antiquity. Further, the reality of the amphictyony itself has been seriously questioned (*IJH*, 304–8).

A completely different approach to the issues of the composition of Exodus has been pursued by B. S. Childs. To him, not the prehistory of the individual component traditions but the final shape of the book is the decisive factor in its interpretation and theological importance. This is so because there is a continual, dynamic interrelationship between the Scripture and the community of faith and practice that acknowledged the divine authority behind the traditions. The structure of the book is shaped by the role played by this "canonical" literature in the life of that community (*Exodus* OTL; *IOTS*).

I. Literary Aspects

Whatever the literary prehistory of Exodus, the book in its final form amply attests to thoughtful design and the deliberate use of narrative art.

The birth story of Moses, for instance, illustrates the point. The pharaoh decrees the destruction of Israel by drowning, but by an ironic reversal of fate it is the Egyptian oppressors who meet disaster by drowning. The reeds (Heb *sûp*) secure and thus save the basket of the infant Moses, and it is the Sea of Reeds (?) (Heb *yām sûp*) that dooms the Egyptians. The daughter of the pharaoh unwittingly rescues the one who will liberate those oppressed by the pharaohs. Without realizing it, she actually pays the infant's mother to nurse her own son. Finally, the princess bestows the name Moses on the baby and it turns out that this can be interpreted to mean in Hebrew ("He who draws out (from the water)." That is, she unwittingly gives him a name that foreshadows his destiny.

The pericope of the ten plagues is set forth in the form of an impressive literary structure. There are three series of three calamities each, with the climactic tenth alone having no grounding in natural phenomena and therefore being wrought by God himself. The first two plagues in each series are forewarned, the third not. Moses is bidden to confront the pharaoh "in the morning" in the first of each series, but there is no time indication in the case of the other two. The instruction given to Moses in the first of each series begins with "Station yourself …" and in the second of each it is, "Go to Pharaoh," while the third is consistently without any such instruction. The entire first series is brought about through the agency of Aaron, the entire third series through the instrumentality of Moses (*EncJud* 13: 606–7; Sarna 1986: 75–77).

Apart from the structural symmetry of the plagues narrative, there is additional evidence of studied literary design in the presentation of the motif of the hardening of Pharaoh's heart. Between chaps. 4 and 14 this occurs exactly twenty times and the cause is equally divided between God and the pharaoh. Ten times the king's obstinacy is declared to be self-willed (Exod 7:13, 14, 22; 8:11, 15, 28; 9:7, 34, 35; 13:5) and ten times it is said to be the product of divine intent (Exod 4:21; 7:3; 9:12; 10:1, 20, 27; 11:10; 14:4, 8, 17).

Another numerical feature, to which Cassuto (1967) has drawn attention is the sevenfold repetition of certain key words for emphasis. This is so of the "midwife, midwives" *měyalledet/měyallědôt* (Exod 1:15–21), the "child" *(hā-yeled)* Moses (2:1–10) and the stem *lbn* (verb and noun), in connection with the brick making (5:7–19). In the first story in the first series of three plague stories, the key term *yĕōr (îm),* "river Nile," is repeated fourteen times (7:14–25), in the first of the second series of three, *ʿārōb,* "swarms of flies," appears seven times (8:16–28—Eng8:20–32), and in the first of the third series *barad,* "hail," is repeated fourteen times (9:18–35; RSV adds an extra "hail" in v 25 for clarity). In addition, there is a sevenfold mention of *ʾarbeh,* "locusts," in the eighth plague (10:1–20). The instructions for eating the paschal lamb (12:1–13) and those enjoining the eating of unleavened bread and prohibiting the eating of leaven (12:15–20) both feature the verb *ʾkl,* "eat," seven times. In addition, there are seven different expressions of redemption in the account of the recommissioning of Moses (6:6–8), and the commandment ordaining the weekly seven-day rest lists seven categories of God's creatures who are to benefit from it (20:10).

Another device is the deliberate chronological displacement of an episode. Such is the case with the account of the visit of Jethro to the camp of Israel (chap. 18). This must have occurred after the revelation at Sinai (not before it, as its present position implies [Ibn Ezra *Exodus* 18: 1; Cassuto 1967: 211]). The

evidence for this is that 18:15 has the people already encamped at "the mountain of God," whereas their arrival there is not recorded until 19:1–2; the burnt offerings (18:20) presuppose the existence of an altar of sacrifice at Sinai, which must be either that mentioned in 24:4 or that of the tabernacle; reference to "the laws and teachings of God" (18:16, 20) is more appropriate following the theophany than before it; the report about the organization of the judiciary in Deut 1:9–17 is immediately followed by the notice of the people's departure from Horeb, implying that the former took place toward the end of the sojourn at Sinai; this is consonant with Num 11:11, 29–32 which testifies to Jethro's presence in the camp in "the second month of the second year after the Exodus," so that the report of Exod 18:27 registering Jethro's departure must be dated after the theophany. The chronological disorder may be explained by the fact that the two distinct but interrelated units that make up chap. 18, vv 1–12 and 13–26, respectively, connect with the themes of the preceding and succeeding narratives. The first contrasts the friendliness of the Midianites/Kenites toward Israel with the treacherous behavior of the Amalekites. This is made explicit in 1 Sam 15:1–6. The second theme provides a transition to the next pericope, the giving of the law.

Another type of seeming disorder is the intersection of the account of the erection of the tabernacle by the episode of the golden calf (32:1–34:35). The anomaly functions as a kind of theological commentary on the incident. The tabernacle with the ark of the covenant as its focal point was meant to be an active extension of the Sinaitic experience into the wilderness wanderings. The golden calf resulted from a popular demand for a material representation of the continued presence of God in the camp of Israel in the wake of Moses' prolonged absence (32:1); a single motivation inspired both the tabernacle and the golden calf. The present arrangement of the two themes draws attention to this and points up the verdict that the first was a legitimate expression of spiritual yearning, the second was wholly incompatible with Israelite montheism (Sarna 1986: 215–20).

J. Historicity

The issues involved in determining the literary composition of the book of Exodus, and the variety of theories that they have generated, raise questions as to the reliability of the narrative as a witness to the historicity of the events described. It should be stressed that neither the theocentric nature of the biblical presentation nor the hypothetical lateness of the sources used would necessarily preclude the possibility that they may rest on a sound historical foundation. This is so even though there is a complete absence of any external written documents testifying to Israel's presence and subjugation in Egypt, to her migration from that land, or to her conquest of Canaan and her settlement there. In this situation, archaeological excavation in Israel and neighboring countries would appear to offer the most favorable prospects for resolving the issue. However, both the interpretation of the data and their correlation with the biblical sources have been matters of much scholarly disagreement.

Assuming an Exodus date around the middle of the 13th century B.C.E. (the most widely held date), it is to be noted that the time around 1200 B.C.E. would provide favorable political, social, and material conditions for the appearance of Israel in Canaan. A marked deterioration in LB Age culture is discernible. Successive campaigns by Egyptian kings into Canaan and Syria had greatly weakened the military strength of the region, and Egyptian rule had drained Canaan's resources. The decline of Egyptian authority following the death of Merneptah, internal political fragmentation, and economic instability all contributed to the deterioration. A considerable decrease in the number of settlements in the N part of the mountainous region is apparent, while several towns and cities were violently destroyed, the sites of which were either abandoned or sparsely reoccupied at a lower level of material culture. In contrast, in the early Iron Age, a huge increase in settlements in the central highlands can be attested, an area hitherto very sparsely populated. This new development was facilitated by the increased use of iron tools, by the use of terracing, and by the introduction of lined water cisterns. In the main, the new settlements were unfortified and were grouped together in clusters. The old characteristic city-state system was abandoned, and in the earlier phases of settlement the collared-rim jar and a certain type of four-room house were innovated. What is uncertain is whether or not the transition from LB to early Iron I culture, with all its radical changes, involved cultural discontinuity, and whether or not it was an Israelite invasion from without that was responsible.

The assumption that such was the case is not unreasonable, but it does entail a number of disparities between the biblical record and the archaeological evidence. The cities of Jericho (Joshua 6), Ai (chaps. 7–8), Arad (Num 21:1; 33:40; Josh 12:14), and Hormah (ibid.), all said to have been destroyed in Joshua's invasion, were found to have been unoccupied in the LB. On the other hand, several of the cities found to have been violently destroyed in this general period are listed in Judg 1:27–36 among those not having been captured by the Israelites: Megiddo, Beth-shean, Gezer, and Beth-shemesh. Only Lachish and Hazor were found to have been laid in ruins around 1200 B.C.E. (cf. Joshua 10–11).

The interpretation of the archaeological data has been complicated by the diverse scholarly perceptions of the nature and origin of the Israelite presence in Canaan.

The school of Alt and Noth, ignoring the account of the conquest in Joshua, has argued against a unified Israelite military invasion of the country and in favor of a gradual, largely peaceful infiltration of individual nomadic tribes from outside Canaan into the sparsely populated central hill country. These settled down on the land and eventually organized into a confederation of tribes.

G. E. Mendenhall (1962; 1973) has postulated that toward the close of the LB a sociopolitical peasant uprising against the city-states took place inside Canaan. This was joined by a group of liberated slaves who fled Egypt, led by Moses. This hypothesis has been elaborated by N. K. Gottwald (1979), who sees the origins of Israel in the commingling of a heterogeneous collection of disaffected social elements inside Canaan. These groups rebelled against the entire existing sociopolitical and religious feudal system, gradually retribalized, and developed a new social order along egalitarian lines based on a covenant relationship with YHWH.

None of these theories leaves much room for accommodating the biblical account to history, although a kernel of factuality is conceded. Even this is flatly dismissed by Lemche (1985). Convinced of the late composition of Exodus and of the worthlessness of its traditions for historical research, as well as the original independence of the Sinai pericope, he believes the biblical account of Israel's pre-Davidic history to be entirely fictional and to be of use only for revealing Israel's self-understanding of its past half a millennium after the founding of the monarchy. Basing himself on a specific interpretation of the archaeological data, he argues that as a result of the disintegration of Canaanite culture and the serious crisis that beset the city-states from the 14th century down, exacerbated by the arrival of groups of the Sea Peoples, there occurred a substantial thinning out of the plains and valleys of Canaan and a movement of population eastward to the mountainous regions where an agrarian culture developed ca. 1200 B.C.E. Israel as a nation is said to have first emerged in this area. There was no discontinuity. The ethical aspect of Israelite religion really evolved from the ethical side of Canaanite culture. Lemche asserts that the notion of a covenant played no role in the religious life of Israel before the 6th century B.C.E.

Hardly decisive, though worthy of note, is the fact that the Exodus narratives do contain undeniable Egyptian coloration. The evidence may be summarized as follows:

(1) The descent of the Israelite shepherds into Egypt in the days of Joseph in order to escape famine finds an analogy in Papyrus Anastasi VI, in which a frontier official reports on the passage of Edomite bedouin tribes from Asia into the delta of Egypt "to keep them and their cattle alive" (*ANET*, 259).

(2) The title "pharaoh," uniformly used for the king of Egypt, points to the development that took place during the late 18th Dynasty when the term, meaning "The Great House" and originally applied to the royal palace, came to be employed as a metonymy for the reigning monarch.

(3) The conscription of Israelites for work on state projects (Exod 1:11) correlates with the tradition preserved by Diodorus Siculus (1.56) that Rameses II preferred to conscript foreigners rather than Egyptians for his vast building program.

(4) The Israelites are said to have built the cities of Pithom and Raamses (Exod 1:11). The first is the Egyptian *P (r) ʾItm,* "House of (the god) Atum," and the second is *P (r) Rʿmss,* "House of Rameses," built by Rameses II in the eastern delta of the Nile. Egyptian texts extol the beauty and glory of this city (*ANET*, 470–71; cf. Gen 47:5–6, 11).

(5) The Israelites were also subjected to hard work in the fields (Exod 1:14). The Egyptian text known as the "Satire on the Trades" emphasizes the harsh conditions under which agricultural laborers worked (*ANET*, 433; *AEL* 1: 187–88; 2: 170).

(6) The making of bricks proved to be an especially onerous imposition on the Israelites (Exod 1:14; 5:7–8, 13–14). Alluvial mud supplied by the river Nile and shaped into bricks was the common building material in Egypt, other than for monumental architecture. Ordinary private dwellings as well as administrative buildings were mainly constructed of bricks, and the walls that encircled towns were of brick and often reached a height of about 60 feet. It is estimated that the pyramids of Sesostris III at Dahshur required about 24.5 million bricks. The massive building program of Rameses II would have necessitated the manufacture of enormous quantities of bricks (Spencer 1979). Surviving records from the time of this pharaoh describe how a quota of 2000 bricks was assigned to each of a gang of forty men and how that target was rarely reached (Kitchen 1976). The aforementioned "Satire on the Trades" describes the hardships endured by the brickmaker (*ANET*, 433).

(7) The midwives play a prominent role in the early phase of the oppression (Exod 1:15–21). The craft was evidently held in high esteem in Egypt, for in one Egyptian tale it was practiced by three goddesses (*AEL* 1: 220). The name Shiphrah held by one of the Hebrew midwives has turned up as belonging to an Asiatic woman in a list of slaves attached to an Egyptian household (Albright 1954: 229, no. 233).

(8) Mention of the birth stool (Heb *ʾobnāyîm* [Exod 1:16]) appears to be connected with the Egyptian custom of women experiencing parturition in a crouching or sitting position. The Egyptian hieroglyph for birth is a kneeling woman, and one text explicitly refers to "sitting on bricks like a woman in labor" (*ANET*, 381).

(9) The story of the birth of Moses and his exposure in the Nile (Exod 2:1–10) reflects the widespread motif of the abandoned hero, known from the ANE and the classical world. A local Egyptian analogy exists in the story of the concealment of Horus from Seth.

(10) The name Moses (Exod 2:10) is of Egyptian origin and appears as a frequent element in proper names, usually with the addition of a divine element (cf. Ahmose, Ramose, Ptahmose, Thutmose), and sometimes without it (*EHI*, 329).

(11) Although not explicitly stated, it may be inferred from Exod 2:10 that Moses grew up and was educated in Egyptian court circles. Evidence exists for the presence of foreign students, especially Semites, in the royal schools in the Ramesside period.

(12) The promised land is described for the first time as "a land flowing with milk and honey" (Exod 3:8). This matches the description of the land found in the Egyptian tale of Sinuhe (*ANET*, 18–23), and the Annals of Thutmose III (*ANET*, 237–38; Fensham 1966).

(13) The request of Moses to allow the Israelites a three-day release from their corvée labors in order to celebrate a religious festival (Exod 3:18; 5:1–3; 8:22–25) follows established precedent as attested by extant records kept by supervisors of labor gangs (Erman 1971: 124; Kitchen 1975: 156–57).

(14) The exceptional role of wonder-working in the early Exodus narratives (Exod 4:2–5, 6–9; 7:8–12, 22; 8:3, 14–15) must be viewed in the light of the extraordinary place of magic as an essential part of daily life at all levels of Egyptian society. The feat of turning a rod into a snake finds analogy in the popular tale "King Cheops (Khufu) and the Magicians" (Erman 1966: 36–38). As a matter of fact, the snake as stiff as a rod is still practiced in Egypt and has been well documented in modern times (Mannix 1960: 32). The specific selection of this trick in order to impress both the Israelites and the pharaoh and his court may have been conditioned by the ceremonial insignia of Egyptian monarchs. The rod, or scepter, was emblematic of royalty, power, and authority, and the uraeus, or stylized representation of the sacred cobra, was worn on the forehead by the pharaohs as a symbol of imperial authority.

(15) The turning of water into blood (Exod 4:9; 7:17–22) is mentioned in Egyptian compositions. "The Admonitions of an Egyptian Sage" (*ANET*, 441), and the story of "Setne Khamwas and Si-osire" (*AEL* 3: 148) both refer to it.

(16) The ninth plague, darkness (Exod 10:21–23), may be compared with mention of a similar phenomenon in the "Prophecies of Neferti" (*ANET*, 445).

(17) Finally, the ten plagues are described as "judgments on the gods of Egypt" (Exod 12:12; cf. Num 33:4; Jer 46:25), a verdict early interpreted to mean that they were a mockery of Egyptian paganism 12:23–27; 16:1–14; cf. Exod 10:2; *Jub.* 48:5). Some of the plagues can be so explained if taken in a context of Egyptian religious beliefs. The Nile, the vital artery of the land, was personified as the god Hapi, and its annual inundation was regarded as a manifestation of Osiris. The first two plagues centered on the river and could certainly have been understood by the Egyptians as nullifying the powers of these two deities. The plague of frogs could well have been taken as mocking the frog goddess Heqt, who was fancied as assisting women in labor and who was the consort of Khnum, the one who fashioned human beings out of clay. The plague of darkness represented the defeat of the sun god Re, symbol of cosmic order. To the Egyptian mind, it would have evoked the powerful cosmogonic myth in which the monster Apophis, symbolic of darkness and the embodiment of all that is terrible, daily vied for victory over Re.

The cumulative effect of the above data is to demonstrate the narrator's familiarity with Egyptian culture. It does not of itself prove the authenticity of the stories as being actual reflections of a historic circumstance. It does, however, accentuate an unanswered problem that besets the above-cited hypotheses that deny those narratives any objective reality, namely, how and why the Egyptian episode came to be invented, if such was the case. The failure to deal adequately with the issue is particularly acute in light of the Genesis traditions that locate the origins of Abraham neither in Egypt nor in Canaan but in Mesopotamia, and that are consistent in describing the continued associations of all the patriarchs with that region. Moreover, this tradition is also emphasized in the biblical "credos" of Deut 26:5 and Josh 24:2. Another weakness of the radical theories is their lack of convincing explanation for what would be the gratuitous invention and successful transmission century after century of such an inglorious and embarrassing tradition as the slavery in Egypt. Even more perplexing would be how to account for the fact that the Exodus theme managed to leave an indelible impress on the national consciousness to the extent that it became paramount in the religion of Israel, shaped all its basic institutions, and dominated its conception of God. One would also have to explain how a literary fabrication would be repeatedly cited and celebrated in the variegated historical, prophetic, and psalmodic literature (Judg 6:8–9, 13; 1 Sam 12:6, 8; 1 Kgs 8:16, 51; Dan 9:15; Neh 9:9ff.; 2 Chr 7:22; Isa 10:24, 26; 11:15; 51:9–11; 52:4; Jer 2:2, 6–7; 7:21–24; 11:1–8; 34:13; Ezek 20:5–29; Hos 8:13; 9:3; 11:1; 12:14; Amos 9:7; Hag 2:5). Finally, without the cohesive force provided by a shared experience in Egypt and the belief in the covenant between God and Israel, what were the forces at work in welding heterogeneous population groups into a unified nation under central authority, contrary to the entire past historical experience of Canaan?

K. Religion of Exodus

The Exodus theme is referred to in the Hebrew Scriptures in one form or another approximately one hundred and twenty times, apart from the primary narrative. This remarkable statistic bears unequivocal testimony to its centrality in the religion of Israel. From this preeminence flow certain consequential conceptions of God, of the relationship between God and Israel, of history, and of the proper ordering of human associations.

The Exodus negates any notion of an otiose deity and asserts the reality of a God who is intimately involved in the life of the world. He is the God of history in the sense that the coming into being of the people of Israel, their enslavement in Egypt, their liberation, and the events connected therewith, are not fortuitous or the result of human endeavors, but the unfolding of the divine plan of history (cf. Gen 15:13–14). The breaking of Egyptian resistance establishes God's absolute hegemony over history. History is the arena of divine activity and is thus endowed with meaning.

A major consequence of this is that the religion of Israel became embedded in a historical matrix. Its major institutions, its religious calendar, its rituals and observances, have all been reinterpreted in terms of the Exodus and emptied of any theological association with the rhythm of nature and the life of the soil (Exod 23:14–15; Lev 23:42–43; Deut 5:15; 16:1–12). Even the dietary laws are given the rationale of the Exodus (Lev 11:45).

God's role as liberator of the enslaved, and his repeated and benevolent provisioning of his people in the wilderness, notwithstanding their fractious ingratitude (Exod 15:22–27; 16; 17:1–7), become the

paradigms for Israel's code of interpersonal relations. That is to say, the Exodus becomes the source of ethical teaching and the wellspring of moral action. God's actions on behalf of Israel must evoke corresponding human concern for the unfortunates of society (Exod 22:20; 23:9; Lev 19:33–34; Deut 5:13–15; 10:17–19; 15:12–15; 23:8; 24:20–22).

Axiomatic if unexplicated is the idea that knowledge of God's qualities and of his demands on Israel can be acquired only insofar as God takes the initiative in revealing them. Two clear statements of Israel's understanding of the divine personality are to be found in Exodus:

> I the Lord your God am an impassioned God, visiting the guilt of the parents upon the children, upon the third and fourth generations of those who reject me, but showing kindness to the thousandth generation of those who love me and keep my commandments. (Exod 20:5–6.)
>
> The Lord! A God compassionate and gracious, slow to anger, abounding in kindness and faithfulness, extending kindness to the thousandth generation, forgiving iniquity, transgression and sin; yet he does not remit all punishment but visits the iniquity of parents upon children and children's children, upon the third and fourth generations. (Exod 34:6–7.)

These descriptions are presented as God's self-revelation, not as the product of speculation or experience. The same idea that, to know God, man must depend on God's self-disclosure is implicit in Moses' request, "Let me know your ways" (Exod 33:13), and it is inherent in the obligations of the covenant set forth in the Decalog, which is portrayed as being the content of a great national theophany. It governs Israel's understanding of law. All the legislative complexes of the Pentateuch are formulated as a series of divine commands to Israel, albeit mediated by Moses.

The most important contribution of Exodus to the religion of Israel is the idea of the covenant itself, not as a figure of speech but as an actual legal circumstance that henceforth governs the relationship between God and Israel. Foretold in Gen 17:7–8, the covenant is recalled in Exod 2:24 and in Exod 6:4–5. The second is associated with the first instance of the covenant formulation that is frequently repeated with variation in the Torah and the Prophets: "I will take you to be my people, and I will be your God" (Exod 6:7; cf. Lev 26:12; Deut 26:17–18; 29:12; 2 Sam 7:24; Jer 7:23; 11:4; 24:7; 30:22, 25; 31:32; Ezek 11:20; 14:11; 36:28; 37:23). The great theophany at Sinai consummates the establishment of this covenant (Exodus 19–20, 24). Thereafter, covenant consciousness suffuses all subsequent developments in Israel's history, which is portrayed as being conditioned by the degree of fidelity or disloyalty to that special relationship with God and all that it entails.

The institution of the Sabbath occupies a significant place in Exodus, exceeding in mention all other sacred times (16:5; 22:30; 20:8–11; 31:12–18; 35:1–3), even though it is connected with creation rather than with the Exodus (20:11; 31:17; cf. Deut 5:15).

Lastly, as Y. Kaufmann has pointed out (*KRI*, 223–42), three fundamental characteristics of biblical religion first appear in Exodus: YHWH as the predominant personal name of the God of Israel (Exod 3:14–15; 6:2); the war against paganism, which finds no mention in Genesis, but which is implicit in the Exodus narratives (5:2; 12:12) and is explicit in the laws (20:3–5; 22:19; 23:24:25, 32–33; 34:11–17); and the institution of apostolic prophecy as first represented by Moses in his mission to both the pharaoh and to Israel.

NAHUM M. SARNA

EXODUS, THE. "Exodus" is simply the Latin form of the Gk term *exodos,* for an exit or "going out"—even today, each passenger who steps out of a Greek motor bus exits from a door marked *exodos.* Regarding the OT, the word applies above all else to the clans of Israel leaving Egypt, to settle back in Canaan whence their ancestors had earlier come. The significance of this particular "going out" derives from two elements in the biblical tradition. It was an escape *from* foreign oppression, and it led *to* the formation of an incipient nation. As the OT writers themselves viewed it, it was a deliverance effected by the power of the Israelites' deity (YHWH, "the LORD" of Eng versions), in accord with whose promises

to their ancestors they were to enter and occupy Canaan. Between these two termini (leaving Egypt; reaching Canaan), biblical tradition has an intermediate phase—the travels and sojourn of the Israelites in the Sinai peninsula and environs. This includes (1) the high point of the giving of the law and covenant and instituting of worship at a portable shrine ("the tabernacle") (see SINAI, MOUNT), and (2) the discipline for disobeying the deity of languishing long years in the wilderness before entering Canaan (see WILDERNESS WANDERINGS).

A. Sources

1. Exodus 1–19. The existing book of Exodus hinges at chap. 19. Thus, Exodus 1–19 takes the reader from a point after the death of Joseph through a period in which the Hebrew family grew into a group of clans. Then follows the stirring narrative of Egyptian oppression, the origins of Moses, Israel's future leader, and then the contest with the pharaoh of Egypt, culminating in the Hebrews leaving Egypt through the shifting water bed of the Reed Sea (where their pursuers were swamped), and on into Sinai. Thereafter, Exodus 20–40 presents the making of the covenant between the people and their soveriegn deity, and of the portable shrine that was to be the practical focus of worship of their God in the life of these clans, incipient Israel.

If one were to grant a historical basis for this series of events (see D and E below), then in principle what we now find in the book of Exodus would derive in some measure from earliest Israel's experience of those events. The extent to which the existing book of Exodus may be held to mirror those possible events closely and accurately, or else distantly with later elaboration, is still a question of mere opinion, not of formal proof. For this reason, it is useful and necessary to compare the data in the biblical text with external data from the Egyptian and Near Eastern world in which the whole OT is set. Following 19th-century biblical scholarship, it is still commonplace to divide up the existing narratives, etc., among purely theoretical "documents" (denoted by such sigla as J, E, P, D) variously dated across the 9th–5th centuries B.C. However, if honesty is to be maintained, it should be stated plainly that (in the words of no less a literary critic than Eissfeldt 1965: 240) "the whole of Pentateuchal criticism is a hypothesis …" and not a proven fact. No manuscript evidence of any of these theoretical "source documents" has been found (not even among the Dead Sea Scrolls). External evidence (see D and E below) suggests that the biblical traditions contain much that predates the 9th century B.C., and hence originated and was transmitted long before such documents were composed (if they ever were). For fundamental errors in, and criticism of, these literary methods, see Kitchen 1966: 112–29, whose arguments were opposed by Tigay 1985a: 3ff.; 1985b: 152ff. (though unsuccessfully). Recently a detailed assessment of methodological problems in the "Documentary Hypothesis" has been provided by Whybray 1987: 43–113.

2. Later Biblical Allusions to the Exodus, and Their Significance. Such allusions back to the Exodus-event are relatively numerous across the varied span of OT writings. For the reader's convenience, they can be usefully grouped by function and in broad biblical sequences.

a. The basic historical reason why Israel should accept and obey YHWH's covenant. In the introduction to the Ten Commandments, both at Sinai and in Moab (Exod 2:20; Deut 5:6), he is their deliverer from slavery in accord with ancient promise (cf. Gen 15:13–14; 48:21; 50:24–25, for what was envisaged). Reminders of Israel's covenant indebtedness to their deliverer from Egypt then recur in the settlement narratives (Jos 24:5–7, 17, covenant renewal at Shechem; cf. Judg 2:1–3, 12; 6:7–10, 13; 1 Sam 10:18–19), under Solomon (1 Kgs 8:51, 53; 9:9 = 2 Chr 7:22), then during the Divided Monarchy, Babylonian exile, and later (cf. Hos 12:9–10, 13; 13:4; Amos 2:10–11; 3:1–2; 9:7, in terms of judgment; Mic 6:3–4; Jer 2:6–7; 7:22–26; 11:3–5, 7; 32:20–23; 34:13). The editor of Kings (2 Kgs 17:7, 36), then others (Ezek 20:5–10; Dan 9:15; Neh 9:9–12) follow out this line. It also appears in the Psalms (78; 80:8; 81:6–7; 105:34–39; 106; 136: 10–16).

b. A motivating reason for the Israelites' proper treatment of each other and of strangers, as pointed out by Sarna (1986: 3–5), and at feasts. See Exod 22:21; 23:9; 23:15 (also 34:18); 29:44–46. Likewise in Lev 11:1–45; 18:3; 19:33–34, 36; 22:32–33 (cf. 25:54–55); 23:42–43; 25:36–38, 42; 26:13, 45. Fleetingly, we have only Num 15:40–41 in that book. Contrast Deuteronomy—in the prologue (4:20, 34, 37), as a basis for gratitude (a., above); and motivation, 6:12, 21–23; 7:8; 11:3–4; 13:5, 10; 16:1 (feast), 12; 20:1; 24:18, 22; 26:6–10; 29:22–26. This theme thus extends across all aspects of the Law.

c. Knowledge of the Exodus-event as showing the sovereignty of the God of Israel is credited by the Hebrew writers to people in Canaan in Joshua's time (Jos 2:10; 9:9), and to Transjordanians under the judges (Judg 11:13). Cf. also the Balaam episode, Num 22:5, 11; 23:22; 24:8.

d. With the passing of time, the Exodus-event was used as an initial dateline (though *not* necessarily numerically) for the Israelites' history—much as the Egyptians would remark that something or other had never been seen "since the founding of the land" or "since the time of the god," in their case. Such "dateline" references occur during the settlement (Judg 19:30—a deed, its like never seen since Israel left Egypt; the beginning of Eli's priestly line, 1 Sam 2:27; the time span of Israel's disobedience, 1 Sam 8:8; and the starting point of Samuel's historical review, 1 Sam 12:6–8). This usage is found associated with the times of David (2 Sam 7:6, 23–24 = 1 Chr 17:5, 21–22), Solomon (1 Kgs 6:1, 480th year; 1 Kgs 8:16 = 2 Chr 6:5), and Manasseh (2 Kgs 21:15). Cf. Jer 16:14–15; 23:7–8; 32:20.

e. Allusions to the period of the Exodus occur as a basis for comparison for later events, such as under Saul (1 Sam 15:6; cf. usage in Isa 11:16 and Mic 7:15); and simply as a long past event, as with Solomon (1 Kgs 8:9 = 2 Chr 5:10; 1 Kgs 8:21 = 2 Chr 6:11), Hosea (2:15; 11:1), Haggai (2:5), and the Psalms (114; 135:8, 9).

Thus, throughout early Hebrew history, from the settlement in Canaan (and probably even from Sinai), down to the Babylonian exile and beyond, we find a good number of allusions to the exodus-event, from several viewpoints, regardless of what analysis of the texts may be used. These vantage points include the basic reason for Israel's gratitude and obedience to their deliverer-deity, as good reason for caring for others too easily oppressed, as a basic dateline for commenting on subsequent events, as a point of comparison for significant events to come, and simply as past history. Within the biblical tradition, few other events enjoyed anything like the prominence accorded so pervasively in the work of so many writers, or were deemed of such basic importance for Israel's history.

B. Modern Opinions about the Exodus-event

Until well into the 19th century A.D., the prevailing judgment was that the narratives in Exodus 1–19 should be regarded as essentially historical. However, influenced not by any fresh facts but by alien philosophical presuppositions brought in from outside, 19th-century biblical studies tended to reject the overall scheme of history and religious development of early Israel as found in the pages of our existing Bible. Adoption of such philosophically slanted, theoretical schemes has led to widely differing modern estimates of the historicity (from total to zero) of the exodus-event and of the narratives that recount it.

Thus, about a century ago, in his famous article "Israel" in the *Encyclopaedia Britannica,* and subsequently reprinted with his pivotal work, the *Prolegomena* (*WPHI,* 429–30), Wellhausen clearly envisaged the entry into Egypt of a group of Hebrew shepherds and goatherds, eventually enslaved in Egyptian public works in Goshen. Later, at a time of plagues in Egypt, this modest community took secret flight, crossed wind-driven shallow waters (led by Moses), battling with Egyptian chariotry that failed to hold them and were swept off by returning waters. Thus the great architect of conventional literary criticism certainly held to a definite (if limited) Exodus led by Moses.

For several decades opinions have varied around this basis. Bright (*BHI,* 119) considered that "there can really be little doubt that ancestors of Israel had been slaves in Egypt and had escaped in some marvelous way." B. W. Anderson (1978: 43–45) implicitly accepts the reality of an Egyptian oppression and Hebrew exodus: "it is clear that the biblical narratives reflect the sober realities of the political situation. But these realities were interpreted through the eyes of Israelite faith … Only the Hebrews who stood in the circle of Moses experienced the depth of historical meaning that led to the remembering … of these historical traditions." By 1982, D. B. Redford viewed the Exodus narratives as "a post-exilic composition," but regarded as unassailable the following four points: (1) An early and strong reminiscence of pastoralists entering Egypt, one Jacob being an ancestral figure; (2) these incomers multiplied and briefly became "exceedingly influential in Egypt"; (3) then strong antipathy arose between the local Egyptians and these Asiatics; so that (4) the latter withdrew to "the Levantine littoral whence they had emerged" (Redford in Rainey 1987: 150). Subsequently, in 1988, Garbini averred that "it is quite probable that Semitic people first settled in Egypt and then left it, but in this case, it is absolutely impossible to verify the event" (Garbini 1988: 15). More scathing still is Lemche (1988: 109): "the traditions about … the exodus of the Israelites are legendary and epic in nature … There is no real reason even to attempt to find a historical background for the events of the Exodus … There was no massive emigration from Egypt under the eighteenth dynasty or later in the form described in the Old Testament." However, a very different judgment is expressed by Sarna (in Shanks 1988: 52): "Are the Israelite slavery, liberation and conquest as described in the Bible 'proven' in a scientific sense? They are definitely not. Does the assumption of their general historicity provide the most reasonable explanation to account for and accommodate the most facts despite the puzzling complexity of the literary sources? It certainly is."

Opinions in the abstract can settle nothing. Scientifically, the only feasible approach is to compare the content of the Exodus narratives with the available background material from the Egyptian and ANE cultural environment, to see what indications (if any) emerge. Before so doing (D, E, below), the approximate date and location of any "exodus" must be considered.

C. The Exodus: Time and Place

1. Date. Much disputed for a century or more, a satisfactory solution depends (1) on having fuller information than we currently possess, and (2) on using correctly such data as we do have. The first condition is beyond reach currently, but the second is feasible. No final date can be offered, but some limits can be set.

The "lazy man's solution" is simply to cite the 480 years ostensibly given in 1 Kgs 6:1 from the Exodus to the 4th year of Solomon (ca. 966 B.C.) and so to set the Exodus at ca. 1446 B.C. However, this too simple solution is ruled out by the combined weight of all the other biblical data plus additional information from external data. So the interval from the Exodus comes out not at 480 years but as over 553 years (by three unknown amounts), if we trouble to go carefully through all the known biblical figures for this period. It is evident that the 480 years cannot cover fully the 553 + X years. At best, it could be a selection from them, or else it is a schematic figure (12 × 40 years, or similar). But again, on other evidence to be considered, a date of ca. 1519 B.C. (966+553) and earlier is even less realistic for the Exodus. In Exod 1:11, the Hebrews are building Raamses, whence also they are said to have set out on the Exodus (Exod 12:37); the "land of Rameses" (Gen 47:11) is a reflex of the same name and place. This place is Pi-Ramesse, the east-delta city built by Rameses II (1279–1213 B.C.) (see C.2 below). Thus, the end of the oppression and the start of the Exodus could not precede the accession of this king at the earliest, i.e., not before 1279 B.C. on our present knowledge of Egyptian chronology. That is only a little

more than 300 years before Solomon, not 480 or 553. In ANE terms, the solution is quite straightforward. There were most probably considerable overlaps between contemporary groups of judges in Israel during the settlement period; hence, the 553 + X years totals up all the years of such people, years which in reality were partly overlapping and fitted inside the absolute period of 300 years or so. This early Israelite "intermediate period" between Joshua and the United Monarchy (Saul to Solomon) would in this respect have been exactly like such periods elsewhere in the biblical world. In Egypt, the dynasties of the Second Intermediate Period add up globally to well over 500 years; yet we know that these selfsame 13th–17th Dynasties all fit within a period of not more than about 230 years (in fact, within either 1786–1550 B.C. or 1759–1530 B.C.). Similarly, one might add up the dynasties (Isin, Larsa, etc.) in the Old Babylonian period between the fall of the Ur III Dynasty and the triumph of Hammurapi of Babylon to some 500 years; but they, too, must fit into the approximately 250 years that the interval really covers.

From Egyptian data, a bottom date for the Exodus can also be set. In his 5th year, 1209 B.C., Merneptah (Rameses II's successor) mentions four entities recently subdued in Canaan: Ascalon, Gezer, Yenoam, and Israel; by the hieroglyphic determinatives, clearly three territorial city-states and a people, respectively. The disposition of related reliefs at Karnak would confirm (in conjunction with the "Israel Stela") the location of earliest Israel in that area later known as Ephraim and (W) Manasseh, (see Yurco 1986, which supersedes all previous treatments). Hence, the Exodus, the sojourn in the wilderness, and the entry into Canaan can reasonably be limited to within ca. 1279–1209 B.C., a maximum of 70 years; or if within about 1260–1220 B.C., very nearly 300 years before the 4th year of Solomon (966 B.C.). The other biblical (genealogical) data cluster around this general figure. Thus, we have roughly 300 years/10 generations of high priests down to Zadok (1 Chr 6:3–8). The genealogy of David (5 generations, Ruth 4:18–22) is clearly too short, and is probably "telescoped," i.e., some links are omitted.

Archaeological evidence (though imperfect and unsatisfactory) is not incompatible with these findings. Rameses II invaded Moab, probably sometime within 1275–1260 B.C., including Dibon (Kitchen 1964, for the firsthand data; denial of this by Cross 1988: 58–59, n. 41, is based upon ignorance of the facts and upon errors by Ahituv). Clearly, the Hebrews would have come that way after such an event—"Israel" does not feature among Levantine place names under Rameses II as it did under Merneptah. In Canaan, the drastic destruction of Hazor (level 13) in the later 13th century B.C. (despite misconceptions to the contrary) may well reflect Joshua's exploit. Ai remains an enigma on any view; at Jericho, nearly half a millennium of erosion has long since removed virtually all pertinent evidence. Lachish level 7 fell at this time, but neither its fall nor even level 6 need be credited to the Israelites. (It should not need to be remarked that killing petty kinglets in battle, Josh 12:9–24, is a far cry from demolishing cities.) However all this may be, recent surveys and excavations do seem to indicate clearly that following 1200 B.C. there was a new intensity of settlement (farms, hamlets, villages) in Canaan, particularly and first in the N part that became Ephraim/W Manasseh (see *AIS* 1988). This sudden rise in population could not come from simply nowhere; and the entry of new groups, such as the Israelite clans (ultimately from Egypt) remains by far the most sensible explanation. (However, for an outline of various proposals, and Finkelstein's most recent assessment of the data, see *AIS*, 336–56.)

Returning to the documentary evidence, it must be emphasized that the formulation of the Sinai/Moab covenant (Exodus-Leviticus; Deuteronomy) in its basic framework belongs squarely within the period 1380–1200 B.C. (Kitchen 1989). This excludes an early date for the Exodus/lawgiving (e.g., 1440 B.C.), as Moses could not have used this format over 60 years before it had been invented; nor can the basic covenant be dated any later than the start of the 12th century at latest on analogous grounds. The Habiru of the Amarna Letters are a false trail; as was remarked long ago, the biblical Hebrews may have been Habiru, but not all Habiru are biblical Hebrews. So, in summary, the likeliest date for an exodus of Hebrews from Egypt would at present fall within the middle part of the 13th century B.C.

2. Location and Route. The starting point of the Exodus is given as Rameses (Gen 47:11; Exod 12:37; Num 33:3, 5), alternately Raamses (Exod 1:11), in the E delta, it being also the scene of the Hebrew labors at brickmaking (Exod 1:11; 12:37; Num 33:3, 5). Within reach of Raamses, they labored also at Pithom (Exod 1:11). But when the Hebrews traveled out from Rameses, we hear no more of Pithom, but

of Succoth as first stop (Exod 12:37; Num 33:5) on the way E (clearly, Pithom had been bypassed, not being on their direct route). When they first entered the E delta from Canaan, the patriarchal clan had been located in a district named Goshen (Gen 46:28), which the later editor of the Exodus period identified as "the land of Rameses" (Gen 47:11).

Scrutiny of the total available Egyptian sources (Gardiner 1918; supplemented by Kitchen 1990) reveals scores of mentions of places called "Rameses." The vast majority of these refer to Rameses II, a very few to Rameses III, and none to any other Rameses. A handful of these mentions in fact relate to places totally irrelevant to the Exodus—a Rameses settlement over a thousand miles up the Nile in Nubia, and a couple of forts on the West, Libyan margins of the delta. In the E delta, just two such places are definitely attested. One is a fort at the W end of the chain of forts that ran along the N coast of Sinai from Egypt to Canaan: "The Dwelling of the Lion" under Sethos I, renamed "The Dwelling of Rameses" by Rameses II. Recent excavation at Tell Haboua has revealed a massive Ramesside fortress (up to 1000 m^2), built over a Middle Kingdom/Hyksos settlement (Abd el-Maqsoud 1988; personal information; Abd el-Maqsoud 1983, and especially 1987). This may well be the site of "The Dwelling."

However, the vast mass of references under Rameses II to Rameses III relate to a major delta capital city, built by Rameses II around the summer palace of his father Sethos I as nucleus, and on the N of the old town of Avaris, used by the Hyksos, but of no importance until the reign of Haremhab, the immediate predecessor of the Ramesside kings. The location of Pi-Ramesse, "Domain of Rameses," the clear original of Hebrew Rameses, was long disputed. Pelusium did not fit; Tanis proved to be an illusion, because all the Ramesside monuments found there (many from Pi-Ramesse) were in fact reused materials, brought from elsewhere by later kings to build the temple of Amun of Tanis in the 21st–22d Dynasties. But a growing series of important finds in the immediate area of Khata'ana-Qantir-Tell-Dab'a by Hamza, Habachi, Adam, Bietak, and Pusch have produced results that correspond remarkably well with the literary and inscriptional sources on Pi-Ramesse, as well as Avaris. See, conveniently, Bietak 1981, and for fuller detail Bietak 1975. It should be noted that the New Kingdom history of Avaris/Pi-Ramesse does not currently precede the reign of Haremhab (ca. 1320 B.C.), and that its main period runs from Rameses II to Rameses VI (ca. 1279–1140 B.C.), after which it rapidly fell into disuse and decay. Biblical mentions of Raamses therefore belong to the late 2d millennium B.C., after which the city and the name fell into total oblivion, being attested in 4th/3d century inscriptions for "shadow-cults" of Amun, hidden away within late Egyptian sanctuaries, at a period when later Jewish tradition proved incapable of accurately locating this city (and others); see Bietak in Rainey 1987, and *LÄ* 5: 128–46.

Succoth is a name widely agreed to be derived from Eg *ṯkw*, Tjeku. The Eg literary sources of the 13th century B.C. clearly show that Tjeku was the name for an area that contained a settlement (also called Tjeku), two forts or keeps, and pools. Statuary found at Tell el-Maskhuta and a stela of Ptolemy II show clearly that Tjeku (and therefore Succoth) should be located at Tell el-Maskhuta in Wadi Tumilat, approximately 22 miles from Pi-Ramesse to its NW.

Pithom (Exod 1:11) is clearly bypassed, and therefore should be sought either N of Pi-Ramesse (where no appropriate site is known), or else somewhere S of Pi-Ramesse and W of Succoth. This option would bring us to Tell er-Retaba, 9 Roman miles W of Succoth/Tjeku. At this W site was a Ramesside cult and temple of the god Atum, who gave his name to Pithom (Pi- (A)tum, "Domain of Atum"); cf. Bietak in Rainey 1987: 168–69; the views of D. B. Redford ("Pithom" in *LÄ* 4: 1054–58) are totally mistaken; cf. Kitchen 1990, besides Bietak. Tell er-Retaba has appropriate Ramesside remains, but nothing much earlier.

Unfortunately, almost nothing at all can be clearly identified among the other place names on the Exodus itinerary. That applies to Etham, certainly not an Eg *Khetem*, "fort," but evidently somewhere near the Bitter Lakes. Here, on the edge of the wilderness, the Hebrews had to turn aside and camp between Migdol, Pi-Hahiroth, and "the sea," before escaping past the wind-driven waters (Exod 14:2, 16–22; Num 33:6–8). The Hebrews would appear to have first turned N, then E by the waters, before finally going off SE into Sinai, and well away from the forbidden "Way of the Philistines" (Exod 13:17), with its chain of Egyptian forts (on which, cf. Oren and T. Dothan in Rainey 1987). Despite occasional

suggestions to the contrary (e.g., Batto 1983, 1984), the so-called "Red Sea" of Exod 10:19–15:22 is best rendered "Sea of Reeds," as part of the Bitter Lakes, the word *ṣup*, "reeds," being clearly derived from Eg *twf*, tjuf. (See also RED SEA.) Migdol is merely a common West Semitic word for a fort or watchtower, and this one cannot therefore be located. Baal-zephon may possibly be the later Tahpanhes/Daphnai at Tell Defenneh, where both Ramesside and later remains have been found. Pi-Hahiroth is unknown, but could be the Eg Pa-hir waters/canal in the Bitter Lakes area (note the form Ha-hiroth in Num 33:8); see details in Kitchen 1975: 428–32.

Once away from Egypt, three routes E confronted the Hebrews. The N one (N Sinai coast) was excluded (Kitchen 1975). The central one across the barren, waterless limestone shield of central Sinai was impracticable (see Bietak in Rainey 1987: 170), and does not fit the conditions given and presupposed in the biblical text. Only the S route, toward the area of Mts. Serbal, Musa, etc., and then NE toward Kadesh-barnea, in any way fits the circumstances (see D below).

D. The Ancient Cultural Context

1. The Phenomenon of an "Exodus." While biblical writers view Israel's exodus from Egypt as uniquely important in their faith and history, they recognized that other peoples too might exit from one land into another. Amos (9:7) recalls three: Israel from Egypt, the Philistines from Caphtor, and the Arameans from Kir. Little can be said about Kir, but the Philistines certainly entered Canaan (with other Sea Peoples) from across the Aegean; their distinctive pottery is of Aegean inspiration ("sub-Mycenaean").

Like Israel escaping from oppressive Egyptian rule, so in Anatolia in the 15th century B.C., some 14 "lands" and population groups rebelled against the Hittite king and transferred themselves to the land of Isuwa. However, his successor invaded Isuwa and brought these unfortunates back to heel (see Weidner 1923: 5/7). In the 18th century B.C. tribal groups subject to the king of Mari sometimes tried to escape royal control by emigration (see Matthews 1978: 157–58).

2. Conditions on the Eve of the Exodus. a. Labor in the brickfields. There the Hebrews saw hard service "with clay mortar and with bricks, all service in the field … with hardship" (Exod 1:14), for the Egyptians "had set over them directors of forced labor, to afflict them with their burdens" (Exod 1:11). More precisely (Exod 5:6–21), we find Egyptian taskmasters supervising gangs of Hebrews led by their own foremen or "officers." This two-tier control by supervisors and gang leaders is well attested in New Kingdom Egypt and earlier (Kitchen 1976: 138, 140–46). The well-known scene of brickmaking in the tomb chapel of the vizier Rekhmire (ca. 1450 B.C.) shows a mixed-race group of laborers (Canaanites, Nubians, Egyptians) making bricks under the eye of Egyptian overseers armed with slim batons, with (apparently) 10 men per overseer. A leather scroll in the Louvre, of Year 5 of Rameses II (ca. 1275 B.C.), lists a series of 40 "stablemasters," or junior taskmasters, each given a production target of 2000 bricks for his gang (other related documents exist; for references see Kitchen 1976).

The Egyptians readily employed foreign captives on building projects during this general period. We find Apiru dragging stone for a temple of Rameses II at Memphis (Caminos 1954: 491), while in Nubia the viceroy Setau rounded up oasis-dwelling Libyans to build the temple of Rameses II at Wadi es-Sebua (Kitchen 1982: 138). The imposition of work quotas (Exod 5:8, 13–14) as in the Louvre scroll just mentioned recurs in the papyri: "Total, 12 building-jobs; … people … are making their quota of bricks daily" (see Caminos 1954: 106). For seeking a religious holiday (cf. below), the Hebrews were punished by having to find their own straw to use in the brick clay, while maintaining production (Exod 5:6–16). The use of straw this way recurs in the papyri. One official laments, "There are no men to make bricks, and no straw hereabouts" (see Caminos 1954: 188). Chaff or straw mixed with the clay provided stronger bricks that kept their shape in drying, a practice still in use (Nims 1950: 24–28). There are chemical reasons behind the phenomenon (Lucas 1962: 48–50). As later biblical references make clear, *ʿārê-hammiskĕnôt,* "cities of storage," contained storage magazines for food products (2 Chr 32:28; cf. 1 Kgs 9:19, supply depots for the military). This would agree with the presence in Pi-Ramesse and elsewhere of military barracks, storage magazines, housing, etc., all of mud brick.

Pharaoh's wrath at Moses' request for time off work (Exodus 5) for the Hebrews to go and worship their God in the desert is no surprise. In the 13th/12th centuries B.C., we have numerous work-attendance documents that detail the absenteeism of the royal workmen in W Thebes. The reasons for absence are fascinating: burying a deceased relative, brewing beer with the boss, or away worshipping one's god (cf. translation of OBM 5634, Kitchen 1982: 196–97; others are cited, Kitchen 1966: 157). The two principal Hebrew midwives, Shiprah and Puah (Exod 1:15), bear genuine West Semitic names (not artificial), attested in earlier Egypt (as loanword) and Ugarit.

b. Role of Moses—Semites in Egyptian society. If indeed Moses was brought up at the Egyptian court in the E delta, he would have had plenty of other West-Semitic-speaking colleagues to chat with. Youths from Canaan ("Khor") as well as Nubia served as court attendants and fan bearers (Caminos 1954: 117, 200–1), and many cupbearers or butlers are attested at court during the 15th–12th centuries B.C. (for references see Kitchen in Douglas 1980: 1.423; 2.1026–27). An Egyptian official might boast of his knowledge of Canaanite, rattling off pet phrases (*ANET,* 477 and n. 41). The words *ʾamht, sqt,* "maidens," "strife" (?), are written in early Canaanite script on a potsherd from the Queens' Valley in distant Thebes (*ʾamht,* Albright 1948: 12, n. 33). Under Sethos II, we have mention of foreign children coming into the harem to be given training (Sauneron and Yoyotte 1950: 67–70). The story of Moses being left (and found) in the basket amid the bulrushes (Exod 2:1–10) has often been compared with the tale of Sargon of Agade cast away as a foundling. However, the differences are considerable, as clearly pointed out by Sarna (1986: 29–31). As for royal dealings with West Semites, one son of Rameses II married the daughter of a Canaanite ship's captain, a man called Ben-Anath (Kitchen 1982: 111–12, 253), and upon his eldest daughter (by Queen Istnofret), Rameses II bestowed the good Semitic name Bint-Anath. Thus the position of West Semitic personnel brought up and educated at the Egyptian court (with all that this implies) is nothing extraordinary, and a Moses would simply be one among many such people.

c. Magic and plagues. Israel's deliverance from Egypt was the sequel to a series of severe plagues upon Egypt, to break the stubbornness of her king. It began with a contest in arcane skill between Moses and Aaron and Egypt's learned magicians, in which the latter were outclassed (Exod 7:11, 22; 8:7, 18). Rods turned into serpents are reminiscent of a trick known in modern times. If pressure is applied to its neck muscles, the Egyptian cobra can be made immobile (cataleptic) after having been charmed and seized by the neck (Keimer 1947: 16–17 with figs. 14–21).

Written in straight prose, the Exodus account has a sequence of ten plagues (Exod 7:14–12:30), in contrast to the seven plagues alluded to in Pss 78:42–51; 105:28–36. However, besides being later in date, the accounts in the Psalms are generalized and poetic; thus, Exodus should be treated as our primary source. This is comparable with other ANE multiple accounts; e.g., when studying the wars of Thutmose III, we go first to the prosaic Annals at Karnak, and only secondarily to that king's anthological and poetic stelae. In the Exodus narrative, the sequence of the first nine plagues can be shown to be significant, rooted in observable natural phenomena, leading on from one to another. It is the severity of the Exodus plagues and their timing that distinguish them, not their physical nature. The sequence included the river Nile turning into "blood," swarms of frogs, then of mosquitoes; masses of flies, cattle pest, and blains on man and beast; storms (hail, thunder), locusts, and thick darkness, the *khamsin* dust clouds, and the narrative of these—to make sense—has to be taken as a unitary whole (Hort 1957–58, with additional observations by Sarna 1986: 68–73). The tenth plague, the death of the firstborn of Egypt, remains in the realm of miracle. As Sarna notes (77–78), these events are presented in a well-articulated literary format—three series of three plagues each, with the tenth as a climax. To some degree, individual plagues would negate the power or repute of particular Egyptian deities: e.g., the Nile as Hapi, the sun as Re, and so on (Sarna 1986: 79).

3. The Exodus-event Itself. a. Preliminaries. Much ink has been spilled over the supposed origins of the Passover rite (Exod 12:1–28)—for example, deriving its usages from spring rites of nomadic origin (Sarna 1986: 85–89). The sober fact remains that *no* extrabiblical original or relevant background for the Passover celebration has so far been discovered; all suggestions about origins are guesswork at present. However, it is by no means unknown in the biblical world for a group of people and their leader to

perform religious rites before embarking on a major expedition, whether of peace or war. In Egypt, propitiatory offerings to the gods preceded the dispatch of expeditions to far distant Punt, both in the 11th Dynasty, ca. 2000 B.C. (*ARE,* 1.210 § 432), and in the 18th Dynasty, ca. 1470 B.C. (*ARE,* 2.104/106 § 252, with 106 note *a*). Ca. 1390 B.C., Thutmose IV offered oblations to Amon in Karnak before warring in Nubia (*ARE,* 2.328 § 827), while Rameses III (ca. 1180 B.C.) was commissioned in Amon's temple before his first Libyan war (Edgerton and Wilson 1936: 4–5). In the Levant, in the Keret tale from Ugarit (14th/13th centuries B.C.), King Keret is enjoined to celebrate offering rites before marching off to Udum to secure his new bride (Gordon 1949: 68–69; *ANET,* 143b; or Gibson 1978: 83–84). None of these is a Passover, but they all exhibit the same principle of a solemn ritual before a great undertaking.

According to the narrative (Exod 11:2–3; 12:35–36), the Egyptians of Rameses and environs gladly gave the departing Israelites whatever they cared to ask for, so long as they cleared out of Egypt—"or else we'll all be dead men" (Exod 12:33). The Egyptians' basic attitude was one of "buying off" the wrath of an offended deity (YHWH of Israel in this case). Sometimes, convinced of a deity's anger against him, an Egyptian would vow a gift or offerings, praying for deliverance or healing. In the mid-13th century B.C., the draftsman Nebre vowed a stela for his son's healing (*ANET,* 381), while the sculptor Qen (while seeking forgiveness) recommended that anyone encountering his stela to the goddess Mertseger-Rennutet should offer her a jug of beer on the 20th day of the 5th month, and so guard against her (Clère 1975: 72–77, esp. 76–77). Others promised to witness to a deity's might (Sadek 1987: 238, 239).

b. Numbers. The 430 years since the patriarchs (Exod 12:40–41) if added to a possible Exodus date of ca. 1260–1250 B.C., would put the Hebrew entry into Egypt with Jacob and Joseph at about 1690–1680 B.C., the period just preceding the Hyksos takeover in Egypt (which a Joseph could have lived to see). The patriarchal epoch would then broadly come within about 1900–1650 B.C. Despite much uncritical endorsement of the positions of Thompson (1974) and Van Seters (1975), many of whose arguments are badly flawed, there is good evidence for a specific and distinct such epoch within these general dates (Kitchen 1977: 56–74 with references 142–46). Therefore the 430 years is likely to have been a continuous era (like the Ramesside era of 400 Years of Seth-Nubti), and not added up from overlapping years or schematically obtained, as may be the case with the 480 years of 1 Kgs 6:1.

A statistic of a very different kind is that found in Exod 12:37, where the usual rendering is "600,000 (men) on foot," plus family members. While across the centuries one small clan could reproduce to very considerable numbers, yet the implied scope of 2 million or more total persons has prompted scholars to query this "600,000" translation, as other meanings and uses of *ʾelep* besides "1000" are well attested. Various previous suggestions (from Petrie to Malamat) have been reviewed but found wanting by Sarna (1986: 99). However, a far more thorough and comprehensive study of all biblical "large numbers" by J. W. Wenham (1967: 27–32, in particular) deserves careful consideration. His results would suggest an exodus of perhaps 72,000 overall. His work would indicate about 40,000 able-bodied in Israel in the early settlement (Iron I) period, both E and W of the Jordan. This begins to approach recent estimates of 30,000 to 50,000 people who settled in W Palestine in this period (*AIS,* 330–35).

A much more limited Exodus statistic (14:7) is the squadron of reputedly 600 chariots that Pharaoh sent in pursuit of Israel. It is not impossible when compared with other figures available: supposedly 2500 Hittite chariots at the Battle of Kadesh (1275 B.C.), or in the 15th century B.C. Thutmose III of Egypt capturing 924 Canaanite chariots on one campaign, while Amenophis II took 730 and 1032 such chariots on two further campaigns; 400 years after the Exodus, Ahab of Israel could muster 2000 chariots, according to Assyrian sources (*ANET,* 279). Therefore, the pharaoh's 600 chariots in Exodus represent a strong but moderate force.

c. Progress. The initial segment of the Exodus route from Rameses to Succoth was about 22 miles (36 km) at most; if the Hebrews lived on the S of Pi-Ramesse, they would have traveled slightly less. This is compatible with the day's journey over precisely the same ground by slaves fleeing in the reign of Sethos II (Caminos 1954: 255, or *ANET,* 259), or with the 15 miles per day commonly covered by advancing armies (Murnane 1985: Appendix 2) in less of a hurry than those slaves or the Israelites.

The passing of the "Sea of Reeds" was enabled by "a strong east wind" (Exod 14:21), until the returning waters swamped the Egyptian chariots. The lakes of the delta have witnessed such phenomena in much more recent times, as the engineer Aly Bey Shafei discovered when his automobile got stuck in the returning waters while crossing such a lake bed (Shafei 1946: 278, 282, figs. 10, 11).

Safely clear of their pursuers, the Israelites could pause to raise the Song of the Sea (Exodus 15). This splendid poem belongs to the class of triumphal poems particularly well attested during ca. 1500–1150 B.C., especially in Egypt (*ANET*, 373–78; also Gaballa and Kitchen 1969), but also in Assyria with Tukulti-Ninurta I, not to mention the Song of Deborah in Judges 5.

It is sometimes remarked that we have no Egyptian record of an Exodus such as the OT narrates (however interpreted). But several pertinent factors must be borne in mind. Military mishaps (like the loss of a large chariot squadron) are never the subject of triumphal temple inscriptions—Egyptian theology could only be sustained by successes, not failures. The flight of even a large body of slaves would only have been recorded in administrative daybooks and journals, like that excerpted in Sethos II's reign about the flight of two slaves, but over 99 percent of such records for the delta have long since totally perished. A handful of wine-jar labels under Rameses II is all we possess, and they only give vintage dates!

4. Off into Sinai. The natural conditions prevalent in Sinai help to determine the route of the Exodus beyond Egypt (see above, sec. C.2 against N and central routes in Sinai). The natural phenomena concerned clearly favor a S route (Beit-Arieh 1988, and for more detail Kitchen in Douglas 1980: 3.1644–45). Initial campsites such as Marah and Elim may have been at springs and oases like Ain Hawarah and Wadi Gharandel. If it means "smeltery" (Wright 1957: 64), Dophkah may reflect some copper-mining site, which would bring us (if not to the Egyptian sites of Wadi el-Maghara or Serabit el-Khadim) to the metalliferous sandstone region of S Sinai. Areas like Wadis Feiran and Refayid could relate to such stopping places as Rephidim, but not with any certainty.

The Israelites twice encountered flights of quail, once each at the Gulfs of Suez (Exod 16:13) and of Aqaba (Num 11:31), these creatures arriving in the evening. These are precisely the areas and time of day overflown by migrating quail in the spring, the season applicable to these two biblical references. For this phenomenon, see Lucas 1938: 58–63, 81 (but overstressing Aqaba in relation to Suez). This, again, reflects the S route; on the N route, quail migration is experienced in the autumn in the mornings, not spring in the evenings. For manna, see Sarna 1986: 116–18.

A further natural feature encountered by the Israelites in the Arabah rift valley probably underlies the dramatic end of the rebellious Korah, Dathan, and Abiram, who were swallowed up by the ground (Num 16:31–34) and struck by "fire from the Lord" (Num 16:35). The rebels appear to have encamped on a mud flat (*kewir*), capped by a triple layer of hard clay, salt, and semisolid mud that covered a deep mud bog, of a kind attested in the Arabah. The change of atmosphere brought by a storm led to the sudden breakup of the upper crust, so that the lightning-struck rebels simply disappeared into the engulfing mud below (Hort 1959: 2–26, esp. 19–26). Given the multiple indications favoring a S route, the mountain of the lawgiving should also be located somewhere in S Sinai—whether at Serbal, Gebel Musa, or another peak, we cannot securely know.

5. Egyptian Influence Accompanies the Hebrews to Sinai. a. Longing for Egypt's "fleshpots." More than once, the Hebrews are portrayed as longing for the wealth of food in Egypt (Exod 16:3; Num 11:4–5). They missed "pots of meat," "the fish we ate," the cucumbers, melons, leeks, onions, and garlic. This list echoes the scribal praises of the rich provisions of 13th-century Pi-Ramesse so lyrically described in the Miscellanies (Caminos 1954: 74; see also in part 117, 199–200 and parallels)—fishes, birds, fat cattle for meat, cucumbers, leeks, carobs (or melons?), and much more.

b. The tabernacle. Fashioned of gilded wooden frames socketed together and covered with curtains, this structure (we now know) was based directly on long-established Egyptian technology. Precisely these techniques appear with the bedroom suite of Queen Hetepheres ca. 2500 B.C. (Smith 1958: pls. 30A, 34). Similar "tabernacles" appear in tomb paintings as sacred embalming booths in ca. 1800 B.C. Although of different construction, the great tomb shrines of Tutankhamen (ca. 1330 B.C.) were dismountable structures of gold-sheeted wood. Beyond Egypt, near Sinai itself, a curtained and wood-framed

tabernacular structure (but fixed to a stone base) was used for worship at Midianite Timna (Rothenberg 1972: 152, fig. 44) in the 12th century B.C. Thus, we find the tabernacle of Exodus 26 and 36 is not some fantasy dreamed up in the Babylonian Exile or a retrojection of the Solomonic temple, but derives directly from Egyptian Bronze Age techniques unknown to any denizen of the Euphrates six centuries later.

c. Tabernacle trappings. This modest shrine (barely 15 feet by 45 feet within its precinct) was to occupy the center of a rectangular camp of the Hebrew tribal groups (Numbers 2). This compares directly with the war tent of Rameses II within its shield-palisaded rectangular camp (for picture, see Kitchen 1982: 55, fig. 18; see also Cross 1947: 55 and n. 17, following Gressmann; and Kitchen 1960: 11). In later epochs things changed; Assyrian camps of this kind were round, not rectangular (for picture, see Saggs 1984: pl. 21A).

The customary Hebrew trumpet was the ram's horn *shofar*. But two long silver trumpets (Num 10:1–7) were specified for tabernacle feasts and to signal the tribes to move onward. The tomb of Tutankhamen (ca. 1330 B.C.) contained a gilded copper or bronze trumpet and a silver trumpet of identical type (see Edwards 1972: item 45). To transport the dismantled tabernacle, the Israelites had ox wagons (Num 7:3)—the term used, *ʿăgālâ,* is that also used for just such desert ox wagons under Rameses IV ca. 1140 B.C. for wilderness transport, but with six spans each of oxen, not just one (*ARE,* 4.227 § 467).

The ark of the covenant was a gilded box carried upon removable gilded poles (Exod 37:1–4). This is a specifically Egyptian usage, as is readily seen from a splendid box on such poles from Tutankhamen's tomb (Millard 1985: 73; for details, see Edwards 1972: item 14). Egyptian sacred barque shrines were also carried on such poles by priests in procession.

d. Cultic organization. The twofold division into priests and cult assistants (Levites) was also familiar to the biblical world in the 13th century B.C. and long before. In Egypt one may distinguish between the "lay priests" (*wab,* "pure ones") caring for the mundane duties of the daily cult, and the higher clergy (1st to 4th prophets; "god's fathers") who conducted the innermost rites of the sanctuary (Sauneron 1960: 56, 60–63, 70–72). Even closer in some respects was Hittite usage in having external keepers and internal temple staff (Milgrom 1970). Therefore, in this, Hebrew usage conforms to the 2d millennium B.C.

E. Evaluation

How, then, shall we regard the Exodus? The foregoing survey indicates the nature of the available background. None of it can prove that the Exodus took place, or as narrated. But it does carry some clear indications. The Egyptian elements suggest a direct knowledge of how Egyptian labor functioned; the magical practices and the plagues are closely tied to specially Egyptian conditions, not readily inventable in exilic Babylon. The Exodus route via Pi-Ramesse and Succoth fits the 13th century B.C., not later centuries. The status of Moses particularly well fits cosmopolitan New Kingdom Egypt in a way unlikely some centuries later. A variety of "cultural baggage" can be found even at Sinai: the very techniques of the tabernacle's structure, its silver trumpets, the portable ark, use of desert oxcarts, etc., all point back directly and immediately to Egypt, and to the late 2d millennium B.C. (as does the form of the Sinai/Moab covenant).

The lack of any explicit Egyptian mention of an Exodus is of no historical import, given its unfavorable role in Egypt, and the near total loss of all relevant records in any case. Various factors favor a S route through Sinai. The sudden increase in settlement in 12th-century Canaan is best explained by an influx of new people (not needfully a military conquest, even if one or two towns fell). The initial mention of Israel on the stela of Merneptah in 1209 B.C. may tell us who many of these new people were. That they had ultimately come from Egypt is not proven but (in light of the long and pervasive biblical tradition and good comparative data) it is by far the most logical and sensible solution.

EZBAI (PERSON) [Heb *ʾezbāy* (אֶזְבָּי)]. Father of Naarai in 1 Chr 11:37 in the list of David's warriors.

In the parallel in 2 Sam 23:35, this warrior is called Paarai the Arbite. See NAARAI. There may be a textual confusion between *nʿry bn ʾzby* (1 Chr 11:37) and *pʿry hʾrby* (2 Sam 23:35). If this is so, then the name would be a gentilic, the Arbite, rather than a personal name. It is possible that it refers to Arab, a city in the mountain regions of Judah (Josh 15:52). In that case, *bn,* "son of," would be an insertion in the text, or possibly a corruption of the initial *he* in *hʾrby* (Rothstein *Chronik* KAT, 218). The various forms found in Gk mss (*azōbai, asbi, asbaēl*) suggest, however, that the LXX knew no form other than *ʾzby,* so if there was any textual corruption it must have taken place very early. It is impossible to determine with any certainty what the original form was (Kittel 1895: 64). See DAVID'S CHAMPIONS.

EZBON (PERSON) [Heb *ʾeṣbôn* (אֶצְבוֹן)]. The name of two men in the OT.

1. Fourth in a list of seven sons of Gad, according to one Gadite genealogy (Gen 46:16). According to the Gadite genealogy of Num 26:15–18, Ozni (Heb *ʾoznî*) takes the place of Ezbon, while the other six sons of Gad are maintained in identical order with Gen 46:16. A better reading, with the Syr and Sam. Pent., is *ʾĕsbʿōn.*

2. A grandson of Benjamin, first listed among five sons of Bela, according to the shorter Benjaminite genealogy given by the Chronicler (1 Chr 7:7). These five sons of Bela are designated "heads of fathers' houses, mighty warriors." This shorter Benjaminite genealogy (1 Chr 7:6–12) has been thought by some scholars to be mistakenly attributed to Benjamin. Guthrie (*IDB* 2: 203) suggests that the list more likely belongs to Zebulun, a suggestion made on the basis that 1 Chronicles 8 gives a longer and quite different genealogy of Benjamin, while Zebulun is lacking in the genealogies offered by the Chronicler. Williamson (*Chronicles* NCBC, 77) calls attention to this and other features of the shorter list which have caused some scholars to view it as a corrupt genealogy of Zebulun, but he concludes that the names are probable in a Benjaminite context, and that the textual emendations proposed by those who wish to attach the list to Zebulun are "too violent to inspire confidence." Myers (*1 Chronicles* AB, 53, 59) likewise sees no reason to detach the shorter genealogy from Benjamin, stating that it is found in its "proper place" in the Chronicler's arrangement of tribal genealogies.
SIEGFRIED S. JOHNSON

EZEKIEL THE TRAGEDIAN. In the middle of the 2d century B.C.E. a Jewish playwright, Ezekiel, wrote a drama on the Ezodus, *Exagōgē,* probably in Alexandria (Fraser 1972, 1: 707). If Clement of Alexandria's remark (*Strom.* 1.23.155) that he was a writer of tragedies (plur.) is to be trusted, Ezekiel wrote other plays as well, but only fragments from the *Exagōgē* have been preserved, altogether 269 iambic trimeters. The preservation of these fragments is due to the quotations by both Alexander Polyhistor (who quoted extensively from Ezekiel in his *Peri Ioudaiōn,* written about the middle of the 1st century B.C.E.) and Eusebius of Caesarea (who plundered Alexander's work in his *Praeparatio Evangelica*). Some fragments are also quoted by Clement of Alexandria and Eustathius of Antioch.

The remains of this play are important in at least three respects. First, since almost all of the extensive Greek dramatic literature of the Hellenistic period has been lost and the *Exagōgē* is the only play with considerable portions still extant, it is a valuable source for the study of postclassical drama (showing, for instance, that the unity of time and place that had been maintained by and large in classical drama had been almost completely dropped; Snell 1971a). Second, it is the earliest Jewish play known to us and the only one preserved from antiquity. As such, the drama is a fascinating specimen of what could be achieved when a Hellenized Jew molded biblical material into Greek dramatic forms (Wieneke 1931). Third, although the author primarily followed the LXX version of Exodus, his deviations from it represent an interesting witness to early postbiblical haggadah (Jacobson 1983). He is also the author of the earliest passage containing the idea of an originally human but now divine viceregent or plenipotentiary of God, a concept that was to play a more important role in later esoteric Jewish and Christian circles (van der Horst 1982; 1983; 1984).

As far as we can reconstruct the play, the outline is as follows. In the first scene (vv 1–65) Moses summarizes in a long monologue the events recorded in Exodus 1–2. This is followed by the encounter with Jethro's daughters (with several postbiblical developments, e.g., that Zipporah is identical to the Ethiopian wife of Moses in Num 12:1; see vv 60–62). The second scene (vv 66–89) contains, besides a short dialogue between Zipporah and a certain Chum, another nonbiblical scene, namely a report by Moses about a strange dream or vision he had in which he saw God enthroned on the summit of Mt. Sinai. God beckons him, hands over his regalia to Moses, descends from his throne, and orders Moses to sit upon it, whereupon all heavenly powers prostrate before him. Moses has been given all power in heaven and on earth (cf. Matt 28:18). The third scene (vv 90–174) describes how God commands Moses from the burning bush to lead his people out of Egypt (Exodus 3) and how he removes Moses' doubts by performing the miracles with the rod and the leprous hand (Exodus 4). Subsequently, in a long monologue God enumerates the ten plagues that he will bring upon Egypt (Exodus 7–11; these plagues could, of course, not be put onstage) and gives the rules for the institution of Passover (Exod 12:1–20). In a fourth scene (vv 175–192) Moses repeats these rules before the elders of the people (Exod 12:21–28, with the significant omission of the obligatory circumcision of all participants; a concession to his pagan audience?).

In the fifth scene (vv 193–242) an Egyptian messenger gives an eyewitness account of the complete destruction of the Egyptian army in the Red Sea (Exodus 14, with significant haggadic details, on which see Jacobson 1983: 136–52), which is a striking parallel to Aeschylus' *Persians* where the crushing defeat of the Persian army is reported to the Persian queen, another well-known device for realizing dramatic scenes which were impossible to stage. In the sixth scene (vv 243–269) scouts report to Moses that they have found a paradisiacal place for the encampment (namely Elim, Exod 15:27) and describe at length a marvelous and gigantic bird that they have seen there. Undoubtedly the bird is a phoenix, whose appearance is always a symbol of the inauguration of a new era in history (or salvation history; see van der Horst 1982: 111–12; Jacobson 1983: 157–64). There must have been more acts in the play than the scenes enumerated, especially in view of the great time gap between vv 192 and 193 (scenes 4 and 5), but we do not know how many.

This synthesis of biblical story, postbiblical haggadah, and Greek literary procedures makes the *Exagōgē* into one of the most typical products of Jewish Hellenism. See also *OTP* 2: 803–19.

PIETER W. VAN DER HORST

EZEKIEL, APOCRYPHON OF. The title given to five fragmentary texts which are not found in the canonical Ezekiel (either in the MT or LXX), but which are explicitly attributed to Ezekiel by a number of early Church Fathers. The title itself is drawn from the Epiphanian introduction to the longest fragment: "And also, so that I might not pass over in silence the things mentioned about the resurrection by Ezekiel the prophet *in his own apocryphon*" (*Panarion* 64.70).

The five fragments share themes of repentance, eschatological judgment, and resurrection, but only the fragment preserved by Epiphanius is substantial enough to warrant summary. Epiphanius relates a story of a king who has everyone in his kingdom drafted into the army except for a lame man and a blind man. Shortly thereafter the king prepares a wedding feast for his son (cf. Matt 22:2; Luke 14:16) and invites all those whom he had drafted, snubbing the two crippled men. The two men then plot against the king to despoil his garden, but they quickly realize that they will not be able to carry out the deed until they figure out how to overcome their individual handicaps. Finally they hit upon the solution that the lame man should ride upon the shoulders of the blind man, and together they enter the king's garden. After the wedding feast has broken up, the partygoers notice that the king's garden has been destroyed and they report this fact to the king. The king approaches the blind man and the lame man and questions each one individually about the destruction. Each of the men appeals to his infirmity and claims that he could not have entered the king's garden. After a brief moment the king realizes what must have taken place. He places the lame man on the shoulders of the blind man and examines them together under the lash. The two men then begin to convict one another. The story concludes with the following moral: "In the same way the body is connected to the soul and the soul to the body, to convict (them) of (their) common deeds. And the judgment becomes final for both body and soul, for the works they have done whether good or evil."

Slightly variant versions of the same tale also appear in the rabbinic literature (cf. *b. Sanh.* 91ab; *Lev. Rab.* 4:5; *Mekhilta* of Rabbi Ishmael on Exod 15:1; *Mekhilta* of Rabbi Simeon ben Yochai on Exod 15:1; and Midrash *Tanḥuma* on Lev 4:1), but none are attributed to Ezekiel.

The second fragment is a call to repentance (highly reminiscent of Isa 1:18) in which God promises his people: "If … you turn back to me with a whole heart and say, 'Father,' I will heed you as a holy people." This quotation is preserved in Clement of Rome (*1 Clem.* 8.3), Clement of Alexandria (*Paed.* 1.10), and the Coptic *Exegesis on the Soul* from Nag Hammadi (135,30–136,4). Of the three, only Clement of Alexandria explicitly attributes the quotation to Ezekiel, but Clement of Rome implies that he is quoting from an Ezekielic source.

Perhaps the most enigmatic of the quotations, fragment three, is found almost exclusively in the arguments against heretical views on the virgin birth by the Church Fathers. The quoted apocryphal phrase refers to a heifer that is said to have given birth and not given birth, although it should be noted that a shorter form of the saying makes no mention of a heifer and instead simply refers to an unidentified "she." This shorter form is cited by the *Acts of Peter* (chap. 24), Clement of Alexandria (*Str.* 7.16.19), and Tertullian (attributed to the "Academics"; *De Carne Christi* 23). Within the same chapter, Tertullian also

cites the longer form and attributes the saying to Ezekiel (for the longer form, cf. also Epiphanius, *Panarion* 30.30; Pseudo-Gregory of Nyssa, *Testimonia Adversus Iudaeos* 3).

The fourth fragment is preserved with varying ascriptions in a wide variety of sources. The earliest citation is by Justin Martyr, who attributes the saying to Jesus: "In whatsoever things I overtake you, in these also I will judge" (*Dial.* 47.5). Two later witnesses, Cyprian (*De Mortalitate* 17) and the *Liber Graduum,* also quote the saying as a teaching of Jesus. All the rest of the citations, which extend from the 2d to the 15th centuries, either attribute the saying to God (Clement of Alexandria, *Q.d.s.* 40.2), to God as he speaks through the prophets (Pseudo-Athanasius, *Quaestio ad Antiochum* 36), or to Ezekiel (Evagrius, *Vita Antonii;* John Climacus, *Scala Paradisi* 7).

The fifth fragment speaks of God as shepherd feeding his flock (Israel) on the holy mountain, remaining as near to them as the garment on their skin, and protecting them from harm (cf. Ezek 34:11–16). It is especially important for the study of the *Apocryphon* because it has been identified among the Chester Beatty papyri (4th century C.E.) by means of comparison with a quotation attributed to Ezekiel by Clement of Alexandria (*Paed.* 1.9; cf. Bonner 1940). Clement intersperses his quotation with hortatory remarks which are clearly not part of his source; the papyrus parallel does not include any of the asides by Clement, but instead follows the uninterrupted citation. It is clear, therefore, that the papyrus does not represent a copy of *Paedagogus,* but a copy of the Ezekielic source cited by Clement. Additional citations of portions of this fragment can be found in Origen's Homily on Jeremiah (18:9) and in the Manichaean Psalmbook (Psalm 239).

Though the *Apocryphon of Ezekiel* has sometimes led a shadowy existence, it seems clear that the discovery and identification of the Chester Beatty material, along with the explicit introduction by Epiphanius, the citation of four of the five fragments by Clement of Alexandria, and the listing of such a work in the Stichometry of Nicephorus (cf. also the synopsis of Pseudo-Athanasius), provides strong evidence for the existence of an apocryphal work attributed to the prophet Ezekiel. The meager extent of the preserved fragments makes judgments about the *Apocryphon* as a whole difficult. Although preserved for the most part in early Christian texts and reflecting popular early Christian themes, the citations also share significant thematic parallels with the Jewish literature of the Second Temple period; as such, a determination of the character of the *Apocryphon* as a whole is problematic, although, on the basis of the appearance of the story of the lame man and the blind man in both Epiphanius and the rabbinic literature, one would be inclined toward a Jewish origin. The *Apocryphon* must date from no later than 90 C.E. because of the citation by Clement of Rome, but an earliest possible date cannot be determined with any precision. The most likely options for original language are Hebrew and Greek with a slight preference to be given to Hebrew.

EZEKIEL, BOOK OF. The prophet Ezekiel lived during the Babylonian Exile and was active as a prophet from 593 B.C.E. to at least 571. He lived as an exile himself and, according to the label of the book that goes by his name (1:1–2), did all his preaching in Babylonia, probably in the Jewish settlement of Tel-abib on the Kebar canal near the ancient city of Nippur (3:15). According to the information in the label, he was the son of the priest Buzi (1:3), and his name is proper Hebrew, *yĕḥezqʿēl,* meaning "God strengthens (this child)" or possibly, "May God strengthen (this person)." The name, however, is found

only once elsewhere in the Hebrew Bible, at 1 Chron 24:16, where also it designates a priest, who probably lived in the century immediately after Ezekiel's own lifetime. It is likely that Ezekiel was among the first group of Jerusalemite citizens deported to Babylon when Nebuchadrezzar conquered the city for the first time in 598 B.C.E. (2 Kgs 24:10–17). Because he was of a priestly family, he probably had a good education, especially in the Law, and his father may even have had some influence in Jerusalem. Ezekiel was married (24:18), but little else is known about him personally except what can be gleaned from hints in the collection of his prophecies. Legend says that he is buried in a tomb at al-Kifl, near the modern town of Ḥilla in Iraq, not far from the site of ancient Babylon. It has been a Jewish shrine of some note.

———

A. Major Divisions of the Book

Ezekiel's prophecies, together with various additional materials, were gathered into a book under his name. It joins the books of Isaiah and Jeremiah among the major prophets in the Hebrew canon of Scripture. The book now stands at the end of this series in its proper chronological order, but the Talmud (*B. Bat.* 14b) records that the original order was Jeremiah, Ezekiel, Isaiah. Isaiah had been put last so that the message of the major prophets would end with a book full of hope. The change away from this took place in the early Middle Ages. In English Bibles, the book of Lamentations has been inserted between Jeremiah and Ezekiel, after the practice of the LXX.

The book itself is one of the most highly structured among those of the prophets. It is clearly divided into three major sections that reflect different aspects of Ezekiel's ministry. Chaps. 1–24 contain oracles of judgment against Israel; chaps. 25–32 contain oracles delivered against foreign powers; and chaps. 33–48 contain oracles of salvation on behalf of Israel. In intention, the foreign oracles of 25–32 can be included with 33–48 as words of hope, thus creating two equal halves. While there may be individual units within each of these sections that more naturally belong to one of the other sections, the pattern has been organized for a definite purpose: to show that the prophet preached warning and judgment to the

Judeans up until the final catastrophe of 586 B.C.E. when the city fell completely to the Babylonians; and that he preached hope and promise of restoration after that date.

Indeed the contrast between the first part of the book, chaps. 1–24, and the second half, chaps. 25–48, is so pronounced that the ancient historian Josephus reported that Ezekiel left behind "two books," not just one (*Ant* 10.79). This view, however, distorts the internal connection between the parts of the book. As it stands, the program of restoration in the second half dominates the order of the whole. The oracles of judgment help Israel understand why God let the city of Jerusalem fall and the old kingdom end for good; the oracles directed to pagan nations serve as a prelude to the establishment of a new kingdom of Israel by announcing punishment on all who oppress God's people; and the oracles of consolation focus on the new order that God will establish for Israel. This last section has two major movements: (1) a promise of a new exodus and conquest of the land in chaps. 33–39; and (2) a new division of the land and rebuilding of the holy city in chaps. 40–48. In this program, Ezekiel reflects the archetypal pattern found in the foundational book of the conquest story, Joshua.

7. The War against Gog of Magog
a. Gog's attack on God's people 38:1–23
b. The divine victory 39:1–29
B. The New Temple and the New Cult
1. The description of the new temple
a. The outside of the grounds 40:1–47
b. The inside of the temple 40:48–42:20
c. The vision of the divine return 43:1–12
2. The regulation of the cult
a. The altar of sacrifice 43:13–27
b. The priestly ministers 44:1–31
c. The division of the land 45:1–17
d. The regulations of the feasts 45:18–46:24
3. The river coming from the temple 47:1–12
4. The boundaries of the new land
a. National boundaries 47:13–23
b. Portions for each tribe 48:1–29
c. The new Jerusalem 48:30–35

C. Literary Structures of Organization

Although the book is divided quite explicitly by means of the distinct contents of each major section, several literary devices are also employed to create a forward movement in the flow of the book. These structural keys were added anciently in the editing process to give a sequential focus that links the judgment oracles to the words of hope as the natural fulfillment of God's purpose all along.

One means is the reuse of the commissioning scene of the prophet to his mission in both chaps. 3 and 33. Both passages employ the same language of the prophet as watchman over Israel, who is held personally responsible to announce the word whether anyone heeds it or not. Both passages also play on the theme of the prophet's dumbness. In chap. 3 God appoints him to the role of warning the people, and then declares Ezekiel will be dumb until the day the city of Jerusalem falls. In chap. 33 the announcement of the city's fall arrives in Babylon and he is released from his dumbness and commanded to speak. It is often argued that the original use of this commission to be a watchman belongs to chap. 33 and its mission of promise, but the watchman theme in other prophetic books is usually associated with words of

warning (Hab 2:6; Jer 6:17; Hos 9:8; cf. Ps 127:1). Only in Isa 21:6 does the watchman look for salvation to come. It seems more natural to assume the watchman motif belongs to Ezekiel's initial call to proclaim judgment and was reinterpreted by the prophet himself after the fall of Jerusalem to apply also to words of salvation. In any case, the device of repeating it before both major divisions in his ministry serves the function of equating the two as different aspects of the same charge from God. This linking purpose is confirmed by the addition of the note in 24:25–27, which predicts at the very end of the oracles of judgment that Ezekiel will soon hear the bad news of Jerusalem's fall and be freed from his speechless state. This note suggests a gap of time will occur and serves as an editorial means of creating space to insert the bloc of oracles against foreign powers at this point.

A second major structuring device for the book as a whole is made up of the series of visions of the divine presence that overwhelm the prophet. The first and most elaborate description of the vision occurs in chap. 1, when Ezekiel is among the exiles in Babylonia and sees God's royal throne come down there. This heads the book and is intended perhaps as a sign of God's presence with those in exile and an assurance that they have not been abandoned, no matter what happens in the days to come. The second vision takes up chaps. 8–11 and involves a formal indictment of Jerusalem for its abominations, especially in the temple precincts, with the consequent departure of the divine presence from the temple and the city. This becomes a sign of the rejection of Jerusalem and its condemnation by God. The third vision of the divine presence stands in chap. 43 and marks the return of God to the newly restored temple precincts to take up residence once again.

D. Dates in Ezekiel

The third and most prominent of these structural means is a calculated series of dates which head selected oracles throughout the book. These dates fall into two major types. One is a series of seven dates that head oracles against foreign nations in chaps. 25–32. They are tied to specific political actions on the part of enemy nations which Ezekiel denounced at the time. Six of these head oracles against Egypt. They are almost certainly reliable.

The second series of dates heads major moments in the prophet's preaching career and serves to show that the message he delivered was step by step in line with God's plan as it moved inexorably through judgment, disaster, and then restoration. These also form a series of seven, a favorite number in Ezekiel to show completion and fullness: 1:2–3 and 3:16 mark the prophet's inaugural call; 8:1 indicates the time of the vision of the divine glory in Jerusalem; 20:1 is more problematical but may be tied to the beginnings of rebellion under Zedekiah; 24:1 marks the beginning of the siege of Jerusalem by the Babylonians; 33:21 notes the arrival of the news of the fall and the start of Ezekiel's ministry of promise; 40:1 signals the final vision of the new Jerusalem and its temple. Each date is later than the preceding one in this series, so that their placement gives a strong chronological ordering to the whole book.

One other date occurs, in the first line of the book. It states that Ezekiel had visions of God in the thirtieth year. Since the next line (1:2) says that the throne vision in Babylon took place in the fifth year of King Jehoiachin's captivity, it must be decided whether the initial date is a duplicate of that event from another perspective, or whether it marks a time when all of Ezekiel's words were written down many years later. If it does duplicate the date of 1:2, then it signifies either that the prophet was thirty years old at the time (born therefore in 623–622 B.C.E.), or that it had been thirty years since some important event, perhaps the finding of the lawbook in the temple by Josiah's reformers in 622 (2 Kgs 22:8). If it marks a general date for the composition of the book, it could be also understood in a number of ways: it could refer to 568, thirty years from King Jehoiachin's exile; or to 563, thirty years from Ezekiel's call; or to an uncertain year which marked the thirtieth year of the current Jubilee period (cf. Leviticus 25). It is probable that the dates in 1:1 and 1:2 refer to the same event because both name the Kebar canal. All subsequent references to Ezekiel's initial vision also include mention of the same canal (thus see 3:23; 10:15, 22; 43:3). The following chart illustrates the placing of the fifteen dates:

Ezek 1:1	year 30, month 4, day 5	July 593 (or 568)
Ezek 1:2	year 5, month?, day 5	July 593

Ezek 3:16	year 5, month?, day 5	July 593
Ezek 8:1	year 6, month 6, day 5	Aug–Sept 593
Ezek 20:1	year 7, month 5, day 10	July–Aug 591
Ezek 24:1	year 9, month 10, day 10	January 588
Ezek 26:1	year 11, month?, day 1	Mar to Mar 587–586
Ezek 29:1	year 10, month 10, day 12	January 587
Ezek 29:17	year 27, month 1, day 1	Mar–April 571
Ezek 30:20	year 11, month 1, day 7	Mar–April 587
Ezek 31:1	year 11, month 3, day 1	May–June 587
Ezek 32:1	year 12, month 12, day 1	Feb–March 585
Ezek 32:17	year 12, month 12, day 15	Feb–March585
Ezek 33:21	year 12, month 10, day 5	Dec 586–Jan 585
Ezek 41:1	year 25, month 1, day 10	Mar–April 573

The latest date in the book is found in the oracle against Egypt in 29:17. It seems to be an updated revision of the oracle in 26:7–14 that predicted Nebuchadrezzar would take Tyre. Since that did not happen, Ezekiel received a new word at a late date that the Babylonians could have Egypt instead. Otherwise, each of the two series of seven keeps a chronological order within itself.

E. Historical Background

Ezekiel lived through the greatest crisis in ancient Israel's history: the final destruction of Judah and its capital, Jerusalem; the loss of independence in the promised land, exile of all the leading citizens to Babylonia; and the tearing down of the temple and removal of the House of David from kingship (2 Kings 25; Jeremiah 39–41, 52; Lamentations 1–5; 2 Chronicles 36). It was a double tragedy, for each of the losses just listed had both political and theological ramifications for the people, and not only were their physical lives disrupted but their faith was shaken as well.

Since the middle of the 8th century B.C.E., events in Palestine had been determined by the policies of Assyria, the world power of the day. The N kingdom had come under Assyrian domination by the middle of the 9th century and was treated as a vassal state. Rebellion led to its fall in 722 B.C.E., and its territory had been made into a full Assyrian province. The wars surrounding this traumatic loss had brought the S kingdom of Judah into the Assyrian orbit as well (cf. Isaiah 6–8). Its king, Hezekiah, had tried to revolt in 705–701, but failed; and although Judah was not wiped out completely, its next king, Manasseh, remained a faithful servant of Assyria throughout his long reign (2 Kings 18–21).

Manasseh's grandson, Josiah, came to the throne in 640 as an eight-year-old boy. When he came of age to rule in 628, he began a religious reform as well as a political effort to retake the N territories (2 Chronicles 34). The Assyrian empire had become seriously weakened after the death of its last strong king, Assurbanipal, and the Babylonians were building a new empire at its expense. Josiah was succeeding in both his religious and political goals until a foolish attempt to intervene against an Egyptian army going to the aid of Assyria led to his premature death in battle in 609 B.C.E. His son and successor Jehoiakim ended any further religious reform.

In 605 a victory over Egypt brought the Babylonians to power over Judah. Jehoiakim pledged loyalty to Babylon but was soon attempting to rebel and win back Judah's independence. The prophet Jeremiah's ministry was largely carried out in opposition to this political opportunism of Jehoiakim. Jeremiah called for loyalty to the covenant with God and to the covenant treaty with Babylon; he warned that the God of Israel would not stand by a pledge to defend the people if they continued to rebel. Jeremiah's words were only too accurate, and in 598 a Babylonian army sacked the city of Jerusalem and led most of its educated and gifted citizens into exile (2 Kgs 24:1–7). Jehoiakim died during the siege, and the Babylonians took his young son Jehoiachin with them as a captured pledge so that further rebellion would not occur. In his place they named his uncle Zedekiah to rule as regent (2 Kgs 24:8–20). But he, too, in the following years

began plotting to be free, and in a second prolonged attack of three years (588–586), Nebuchadrezzar's army leveled the cities of Judah and finally burned Jerusalem to the ground, taking away whatever remained of value and exiling the rest of its leading citizens in the summer of 586 (see 2 Kings 25; Jeremiah 52). Jeremiah survived this period of horror but disappeared soon after being forcibly taken to Egypt in 583 or so (see Jeremiah 37–45).

F. Ezekiel's Ministry

Ezekiel and his family were undoubtedly among the 8000 exiles taken to Babylon after the siege of Jerusalem in 598 (2 Kgs 24:16). How old he was at the time of his call in 593 is uncertain, but he may have been about thirty (if the date in 1:1 indicates the prophet's age). Judging from the contents of the oracles in the book, most of his ministry took place from 593 to 585, during the reign of Zedekiah and through the first days of total devastation. However, an isolated oracle at 29:17 is dated as late as 571, so he may have produced most of his oracles of hope in the decade or so after 585. The book is dated in 1:1 according to the ruling years of Jehoiachin rather than of Zedekiah, suggesting that Ezekiel may have held out hope that the imprisoned king would one day return to rule. The discovery of a Babylonian tablet listing provisions for the support of Jehoiachin as a state prisoner (*ANET,* 308) confirmed what 2 Kgs 25:27–30 already hinted, namely that even the Babylonians considered Zedekiah to be only the regent for the rightful king whom they held.

Ezekiel followed his older contemporary Jeremiah in steadfastly opposing the plans of Zedekiah and his advisers to rebel against Babylon (cf. 12:1–15; 17:1–22; 21:18–32). Although there is never mention of Jeremiah in the book of Ezekiel, there is much similarity of language and viewpoint, indicating Ezekiel's deep debt to Jeremiah's views. Jeremiah was often consulted by the kings and their advisers, and so became politically prominent. Ezekiel, on the other hand, lived only in exile and never dealt with a king. But several times it is noted that the elders of the people came to consult with him (8:1; 14:1–3; 20:1; 33:30–31). These probably represented the governing body of the exilic settlements and thereby provided Ezekiel with a political platform. Since some communication with the homeland seemed to exist (cf. Jeremiah 29; Ezek 33:21), Ezekiel could easily have directed his message to both exiles and those still in Judah, especially in the period of Zedekiah's reign. But the prophet's situation in exile pushed his concern beyond simply demanding loyalty to Babylon as the will of God, toward a new concept of Israel that rejected the ambitions of political leaders in Jerusalem as expressions of the divine will. Instead, he demanded a community marked by faithful religious observance, ethical rigor, and a loyalty to God as the holy one of the universe, whether at home or in exile, whether independent or subjugated.

G. Questions and Problems about Ezekiel's Ministry

Commentators have long been troubled about certain seeming inconsistencies between the claims for Ezekiel's historical ministry and the nature of the actual oracles in the book. One major question has centered on the personality of the prophet. There are accounts of great ecstatic visions which seem to seize the prophet (chaps. 1, 8, 10, 37, 40); he speaks of the hand of God grabbing him and moving him physically (37:1), or the spirit of God entering him in power (2:1). He performs symbolic actions which appear impossible or crazed by modern standards, lying on his side for 390 days (4:5), or digging through a wall of his house (12:7), or swallowing a scroll in esctasy (3:23). Many scholars have argued that he received most of his words in a trance (Buttenweiser 1931: 8–18), or showed signs of abnormal parapsychology, or even of an unbalanced mind.

Still others have been troubled by the contrast between the vividness of his descriptions of Jerusalem and his knowledge of what was going on there and the claim that he knew this only through prophetic revelation while in Babylon. Over the last hundred years, several notable scholars have argued that Ezekiel's ministry must have taken place only in Jerusalem, at least for the period from 593 to 586, and the so-called Babylonian locale was an editorial fiction to make the book acceptable later to the exiles (Herntrich 1932; Brownlee *Ezekiel 1–19* WBC). However, in light of the book's unwavering insistence on Ezekiel's location in Babylon, and the strong probability of exchange of messengers between the exiles and the homeland, this seems mostly a forced exercise and has won very little critical support. If Ezekiel was already an adult when sent into exile in 598, he probably knew the Jerusalem scene well, and his

oracular words may well have been fueled by specific incidents reported to the exiles in Tel-abib by an occasional messenger from Jerusalem. And this by no means rules out the further possibility that he had some parapsychic powers to envision events at a distance.

The language of the book has also disturbed modern commentators. It lacks the direct style of earlier oracular forms, and often involves convoluted and elaborated metaphors and even allegories, as well as extensive motivational sections that are unique to this prophet. There are strong similarities in many of the topics covered to the priestly concerns found in the Holiness Code of Leviticus 17–26, and many of the passages seem more like prose lessons than individual prophetic oracles of judgment or hope. In other ways, the language of Ezekiel seems more of a forerunner of the apocalyptic imagery found in the later materials of Zechariah 9–14, Daniel, and such pseudepigraphical works as *1 Enoch* and *4 Ezra.* In literary style, the book of Ezekiel has often been characterized as repetitive or redundant. The complexities of the throne vision in chaps. 1 and 10, e.g., repeat whole phrases and expressions on top of each other. In many passages, too, the prophet seems to mix poetic oracles with long prosaic expansions. In 29:1–16, e.g., a short poetic oracle in vv 3–7 is followed by a longer, seemingly more prosaic addition in vv 8–16. All of these observations about language have generated major controversies over whether the present book represents more the preaching of Ezekiel himself or more a school of priestly redactors and a plethora of glosses and added comments.

H. History of Critical Interpretation

Until the turn of the 20th century, Ezekiel escaped the heavy hand dealt to the books of Isaiah and Jeremiah that questioned their unity and their authorship. Because Ezekiel had such explicit indications of an overall plan by means of the vision structures and the series of dates, most commentators were impressed with its literary unity. After 1900, several scholars raised doubts about the complete coherence of the book, pointing to doublets such as in chap. 1, and noting the difference between poetic and prose passages with the suggestion that much of the prose may have been later inserts, while the poetry represented the oral preaching of the prophet.

It was not until Gustav Hölscher, however, in 1924, that a full-scale attack was launched against the traditional confidence that Ezekiel was the major source of the material in the book. He identified only 144 poetic lines out of 1235 as original to the prophet. These were based on ecstatic phenomena common to prophetic types of shamans throughout the world and easily recognized as genuine oral utterances. The remaining 80 percent of the text were later additions, often attempts to explain and make application of the prophet's words to postexilic situations. Soon after, C. C. Torrey (1930) proposed that the whole book was composed in the Seleucid period (3d century B.C.E.) as a fictive account not unlike the slightly later book of Daniel. Millar Burrows (1925) suggested an opposite solution: the book was largely written in an earlier period under King Manasseh in reaction against his idolatrous practices (ca. 650 B.C.E.). J. Smith (1941) moved it even earlier, to a N Israelite writing after the fall of Samaria sometime between 721 and 650. In 1945, Nils Messel returned to a postexilic date, holding that the book was composed after 400 B.C.E. to deal with the same problems faced by Ezra and Nehemiah. Other scholars were equally skeptical in different ways. Numerous commentaries in the 1930s doubted that Ezekiel ever lived in Babylon, or held that at least his Jerusalem prophecies had to have been delivered in Palestine. For a full treatment of this period, see Zimmerli *Ezekiel 1* Hermeneia, 3–9.

After World War II serious efforts were made to link the materials in Ezekiel with the exilic period. The studies of C. G. Howie (1950) and G. Fohrer (1952) and a number of American scholars stressed the stylistic elements, dates, and unique subject matter that situated the core of the book solidly among the problems of the period in which the text claims to have been written. These authors, however, did not return to the position that every word was from the prophet himself but acknowledged many additions and expansions of the text made by others who adapted it to the exilic or, in most cases, the postexilic situation. The prevailing opinion was that the book showed a long history of compilation and editorial activity, with the most skepticism directed toward the bloc of priestly materials in the vision of the new temple and land in chaps. 40–48. Many doubts were also expressed whether the apocalyptic style of

chaps. 38–39 could date to the 6th century. And, in light of the many discrepancies between the LXX and MT, several studies pointed to the expanded character of the Hebrew text.

Walther Zimmerli's massive commentary (2 vols. BK [1969]; ET Hermeneia [1979, 1982]) was the high point of this resurgence of respect for the book of Ezekiel. He carefully traced a core of Ezekiel's words throughout the text and then defined a series of later developments from Ezekiel's "school" of disciples. Thus he differentiated between a substantial *Grundtext* from the prophet and a *Nachinterpretation* from a circle of faithful developers of the prophet's thought. These followers had a strong interest in the same reform that motivated the Priestly editors of the Pentateuch. Elsewhere, Zimmerli provided groundbreaking studies on the genuine oracular style of the prophet (1965). His work can be judged a fine example of a return to the middle in critical scholarship. However, his rigorous use of a form-critical methodology still led him to doubt much of the book came from the prophet, and to be more skeptical than necessary (see Boadt 1981).

Since Zimmerli, proponents can still be found who admit little of the prophet's own thought and attribute most of the book to redactors (Garscha 1974). But the wheel has continued to turn farther toward recovering more of the prophet in the book than even Zimmerli allowed. The studies of Boadt (1980), B. Lang (1981), and M. Greenberg (*Ezekiel 1–20* AB) all work with the literary style and historical setting of the book as a whole. They find a greater unity of viewpoint than do the primarily form-critical scholars, a unity to be closely associated with the prophet's own program of preaching. While all scholars today are deeply in debt to Zimmerli's insights into the editorial process, these literary critics see the editing tied more to the original thought of Ezekiel and not so much to the aims and goals of a later priestly movement of reestablishment after the Exile.

I. Textual Problems

The book of Ezekiel has a fair number of difficult words and grammatical forms that suggest faulty transmission and copyist errors through the centuries. But larger questions of the textual reliability of the Hebrew as we now have it are raised by two outside difficulties. One is the irregularity of the LXX Greek version in rendering the Hebrew. In many places the Greek is a shorter and tauter text. Does this suggest expansions at a late date to the MT, at least after the time when the Hebrew *Vorlage* of the LXX was brought to Egypt? A second is the tautological and repetitive nature of the style found in the Hebrew oracles. Does this imply glosses were added to make the message clearer by restating and enlarging the original words of the prophet? Two answers are possible. One is that indeed the Hebrew represents a later and more expanded text than does the Hebrew *Vorlage* of the Greek; the other is that the LXX has abbreviated long, difficult, and perhaps boring passages to make them sharper and clearer for a Greek audience outside of Palestine.

Studies have shown that LXX Ezekiel is the work of different translators in different sections. Thus chaps. 1–27 were by one translator, 28–39 by another, and 40–48 by still a third (or perhaps by the same translator who did 1–27). The translators are recognized by their choices of vocabulary; so, e.g., the first translator rendered the city Tyre by *Sor* regularly, the second by *Tyros.* They also rendered the divine title *ʾădōnāy* found throughout Ezekiel differently from section to section. Indeed, older scholarly opinion judged from its irregular translation in LXX that *ʾădōnāy,* "the Lord (God)," was a late addition to the Palestinian text. However, more recent discoveries, such as the remarkable Papyrus 967, show quite different divergences from the Hebrew than does the standard LXX. Pap. 967 fragments now contain nearly all the text of Ezekiel except chaps. 1–11. They reveal that certain passages were left out altogether (12:26–28 and 36:23–38); they also reveal that part of chap. 37 followed chaps. 38–39. G. A. Cooke (*Ezekiel* ICC) gives a thorough chart of the variations between MT and LXX, and judges that in half the cases MT is a more likely original text, and in the other half LXX is. In general, then, it can be said that the Greek witness to the Ezekiel text is not homogeneous but represents its own traditions and reasons for rendering the Hebrew which probably follow principles other than a careful copying of a different *Vorlage* from that used by the Masoretes (see McGregor 1985).

Other versions do not change the story. The Syriac Peshitta largely follows the complete order of the Hebrew though in a freer style. The large scroll of Ezekiel found at Qumran could not be opened, it was in

such poor condition; but the numerous fragments of Ezekiel found in a number of other caves are all close to the MT (see Lust 1986). The Aramaic *Targum of Ezekiel* is closer to being a paraphrase of the original text, but it follows the MT almost line by line. Its additions give good clues to the interpretation of difficult thoughts in Ezekiel in the 5th century C.E. The comparison of the Greek and other versions with the many problems and apparent errors of copying in the MT of Ezekiel, then, has already proved useful in learning the techniques of ancient translation. It has not, however, been able to establish any agreement on a better and shorter text of the book than that found in the present MT. Answers to why Ezekiel is such a convoluted and repetitive text cannot look to the versions for a solution.

J. Style and Form in Ezekiel

Many of the doubts expressed about the unity of the book of Ezekiel depend on analyses of the literary style it employs and the conventions it uses, as well as an expectation of consistency in thought. All of these criteria are difficult to establish from the perspectives of a scholarship that is 2500 years later. Modern historico-critical presuppositions, as well as many canons of contemporary literary style, must be put aside. Critical efforts to emend the text on grounds of consistency or style have not met with widespread acceptance, although new attempts are made regularly. Hölscher's conviction that only a tiny portion of the present text stems from the prophet himself was based on the a priori judgment that prophets spoke only in rhythmical poetry. E. Vogt (1981) divided the call vision of Ezekiel in chap. 1 into two separate strands by separating out all repetitions on the supposition that the original must have been simply narrated. Neither of these positions, nor many others over the years, took seriously the observations of still other form critics that the oracular style in Ezekiel and other exilic writings had taken on an expansive and more repetitive style that included not only accusation and announcement of judgment but visions, extensive motivational reflection, and even long descriptions of the reactions of the audience to the prophetic charges (cf. Westermann 1967: 205–8). The modern reader can evaluate the style and originality of Ezekiel only by a careful comparison of the overall usages of the book, by listening to the text and its manner of expression, and by trying to get some grasp on the relationship between text and historical situation.

The book of Ezekiel has many unusual features that mark it off from other prophetic collections. These include special vocabulary and forms of address; connections to priestly and apocalyptic ideas and language; employment of nonprophetic genres in prophetic oracles; revival of ecstatic language to describe prophetic inspiration; and the use of dramatic techniques on a much larger scale than in the earlier books of classical prophecy. In this section, it will be enough to mention many of these features and techniques, and then discuss their ramifications for the composition of the book as a whole under K below.

1. Dramatic Signs and Symbolic Actions. Although most prophetic books include some dramatic actions performed by the prophet, Ezekiel uses them regularly. Some are for dramatic effect: God commands Ezekiel to clap his hands and stamp his feet (6:11), and to turn his face toward the people against whom an oracle is directed (6:1; 13:17; 21:2). Other symbolic actions are dramatic occasions which will lead people to ask why Ezekiel is doing them, and this in turn will initiate the oracle that the dramatic action hinted at: he is commanded to groan aloud so people will ask why he is groaning (21:11); he is not to perform the customary mourning customs at the death of his wife so people will wonder (24:17–19); he digs through the wall of his house at night with a backpack on to provide a context for predicting the Exile (12:5). Finally, he acts out long involved dramatizations of his message as a motivation or basis on which to interpret coming events. Thus the series of involved symbolic actions in chaps. 4 and 5, such as lying on his side for 390 days, building brick models of the siege, or cutting his hair into three piles and destroying each differently, are all intended as elaborate explanations or settings for the important series of judgment oracles of impending doom delivered in chaps. 5 to 7. These are close to being parables. They are not to be seen as magical acts, but rather as a form of teaching aid; they have a performative character that makes them a kind of street theater to provoke the people to listen (Lang 1986: 297–316).

2. Ecstatic Prophecy Forms. The auto-dramatic focus of Ezekiel in words that are coupled with symbolic actions links him most closely with the preclassical prophets such as Elijah and Elisha, and to details of the Balaam narratives in Numbers 22–24. An expression such as "the hand of the Lord fell upon me" (1:3; 3:22; 33:22; 37:1) is also said of Elijah in 1 Kgs 18:46 and of Elisha in 2 Kgs 3:15. The writing prophets generally avoid the equally ancient imagery of the "spirit of the Lord rushing upon" the prophet, perhaps to distance themselves from the wonder-working reputations of earlier prophecy. But Ezekiel uses it regularly (2:2; 3:12; 8:3; 37:1), largely to indicate divine compulsion to speak or to be moved physically in a trance, much as it occurs in references to Elijah being carried off by the divine spirit in 1 Kgs 18:12 or 2 Kgs 2:16. The power of the spirit to overcome the prophet is also typical of early prophetic accounts in Num 11:17–19; 24:2; 2 Sam 23:2. It is the spirit that also moves the bands of prophets to ecstasy in 1 Sam 10:6, 10; 19:20, 23. It is in the archaizing account of Balaam (Num 22:41; 23:13; 24:1) that we also find the practice of facing toward the object of the prophecy.

Other notes about Ezekiel link him to earlier practices: sitting at home for the elders to visit, also reported of Elisha (2 Kgs 6:32; cf. Ezek 14:1; 20:1; 33:31); acting out his own words as a lesson, said of Elijah (1 Kgs 19:9) and Ahijah (1 Kgs 11:29–30). These seem to indicate that the prophet Ezekiel consciously reinstituted some archaic prophetic signs of divine inspiration and authority, perhaps to bolster faith in the prophetic word when people were doubting its power during the crises of 593–586 (see Jeremiah 23 on this).

3. Nonprophetic Genres. The oracles and literary forms in Ezekiel are notable for their diversity and freshness. Although the traditional oracular components of address, accusations, passing of judgment, and the divine messenger formula ("Thus says the Lord") are all recognizably present, they are often combined with parables, proverbial wisdom, legal cases, disputations, and lengthy poems. He delights in using quotations or citations as a starting point for argumentation. He quotes God's word to him to people when they ask about the death of his wife (24:21–24); he quotes the people against themselves in 18:29 and 37:11; and he quotes dialogue with God as a reason for his words in several places (see 9:8–10; 12:23–25). Ezekiel also cites wisdom proverbs as a point of departure (12:22; 16:44; 18:2). He employs poems that were well-known, or else mocked well-known songs, for part of his accusation (cf. 21:9–17; 24:3–5). He develops long diatribe speeches (16:44–52; 22:3–12), legal disputations (33:34–39; 18:1–32), and extended historical recitals (20:3–26). He favors mocking laments over the dead (19:1–14; 26:15–18; 28:11–19; 32:1–16). Most striking, perhaps, is the development of extended allegories and metaphoric parables to make vivid lessons for the audience (15:1–6; 16:1–43; 17:1–22; 27:1–36; 28:12–19; 31:1–18). Many of these forms are artistic masterpieces and betray their origins in Ezekiel's oral preaching. They have a strong rhetorical flavor and are employed in the art of persuading the audience to change their ways of thinking.

4. Connections to Priestly and Apocalyptic Traditions. Many passages in Ezekiel show strong priestly concerns. He accuses Israel above all of defiling the sanctuary (5:11), following after other gods (8:7–9), and worshipping idols (14:3–5). The people have made themselves unclean (20:30–31; 22:26; 36:18). This same message underlies the involved allegories of the two sisters in chaps. 16 and 23. The text also has a strong cultic vision of the land. It frequently condemns the mountains of Israel as symbols of the sacred land because the people have defiled it with crimes and abominations (see chaps. 6, 36). The disaster that comes upon them is a result of disobeying the ordinances and commands of the Lord (5:6; 18:1–32; 33:25; and especially the reasons given in 20:1–44 and 22:1–31). While sins against the rights of others are occasionally cited, by far the largest number of offenses are against laws of purity or cultic fidelity to God.

There is a particularly close connection between the concerns of Ezekiel and the legal admonitions of Leviticus 17–26, the so-called "Holiness Code." Since this code is generally understood to have originated in the late preexilic period among Priestly circles, it is possible that Ezekiel was familiar with its general outline, although specific differences suggest that Leviticus 17–26 received its final form only after the time of Ezekiel. They both share a similar vision of a community ordered toward right worship

of God with a clear distinction between the realms of the profane and the holy. This cultic-legal vision takes its ideal shape in the description of the new land and new city of chaps. 40–48.

Many critics have pointed to the use of apocalyptic imagery in Ezekiel 38–39. Often they take this as proof that these must be later insertions into the text. However, most of the language is tied to the ancient imagery of the cosmic battle of the gods in creation which was seen in early Israelite traditions of God as the divine warrior. The appearance of mythological themes of creation, including such major pagan themes as the cosmic tree (chaps. 17, 31) and the chaos monster (chaps. 29, 32), are used to emphasize God's lordship. It is unlikely that Ezekiel should be identified with the later apocalyptic movement; rather, these later developments owe some of their imagery to Ezekiel. Commentators (e.g., Reventlow 1961) have long pointed to the connections between the Holiness Code and the covenant traditions of the autumn festival of New Year, at which the divine kingship over creation was celebrated. Ezekiel may have combined legal and creation language to reestablish the symbol power of the covenant for his day.

5. Special and Unusual Vocabulary. Although the text has quite a number of difficult words (e.g., *ʿăbōtîm* in 31:3; *něḥōšet* in 16:36), most of these may be due to scribal copying errors, and a few to the use of Aramaisms. However, they remain few and may well be influenced by the Babylonian context of Ezekiel's ministry, where Aramaic was the lingua franca. More interestingly, the book lacks many key terms found commonly in OT theological language. Ezekiel never uses *yāšār* for the upright person, *ʾāhab* or *rāḥam* for the love of God, *ʾāman* for faithfulness, or *daʿat* for the knowledge of God, all common themes in the preexilic prophets. He also lacks many important words from the language of the Psalms and Deutero-Isaiah: examples include *bārak,* "bless," and *ʾārar,* "curse," *ḥesed* for "covenantal love," *ḥānan* for divine favor, or *ṣāddîq* as a noun for a righteous person. Many other important words dealing with the traditional prophetic attacks on idolatry such as the baals, asherahs, massebot, and the idols are also missing. There is very little of traditional wisdom language, and surprisingly, only one use of the important prophetic-legal term for indictment of the people by God, *rîb* (44:24).

On the other hand, there are 130 words found only in Ezekiel, or overwhelmingly found in this book (e.g., *gillûlîm,* perhaps meaning literally "dung balls," occurs 39 times, but only 9 times elsewhere in the Bible).

Most striking are the few major formulas used throughout the book. "Son of Man" is the form of address from God to the prophet. It is unique to Ezekiel, and underscores his merely mortal status before God who speaks and acts. The prophet may make eloquent words, but they are not his (cf. 33:30–33). The oath formula given by God, "As I live," is also common in Ezekiel, as is the formula for a divine saying, "the oracle of the Lord" (85 times), and the formula for closing a divine saying, "I the Lord have spoken," and the formula for a threat, "Behold, I am against you." What stands out in common among these heavily used words for structuring oracles is their intimate first-person nature. Their constant reuse creates a majestic effect of God speaking, but also emphasizes the direct encounter between God and prophet. These words from the divine side are matched by the introduction of new oracles with the formula, "The word of the Lord came to *me,*" in which the recipient is stated in the first person and not the customary prophetic third person. But by far the most important formula in Ezekiel is the recognition formula, composed of two elements joined together: "that you (or they) may know," and the conclusion, "that I am the Lord." The second half is clearly related to the frequently stated "because I am the Lord," at the end of laws in the Holiness Code (Leviticus 19). It is a formula of divine self-revelation used in a theophany to establish divine authority. The first half also comes from legal proceedings, where it concludes a presentation of evidence on behalf of an accused (as in the case of Joseph's brothers in Gen 42:34). This formula occurs 54 times in Ezekiel and declares God's freedom to act and his decision to act either on behalf of Israel or in judgment against it. The proof that God is indeed active lies in the coming about of the contents of the oracle just pronounced. Thus Zimmerli (*Ezekiel 1* Hermeneia, 37–38) has labeled this key expression a "proof saying."

6. Artistic Devices. Ezekiel's language has often been characterized as prosaic, and modern translations often put much of the book in prose form. But this should be questioned. Alliteration, assonance, chiasmus, the breakup of stereotyped expressions, heightened imagery, climactic series, polarity,

intentional repetition and rhetorical euphemism are common. M. Greenberg (*Ezekiel 1–20* AB) has further identified other techniques: the use of panels in which parts are constructed parallel to one another; spiraling techniques in which an oracle moves to a higher or more intense level; and "halving," in which an echoing short oracle follows the main oracle as an afterwave. When combined with other patterns, such as the use of allegorical and mythological language, it would be better to identify the style of most oracles as a kind of artistic prose, what the Germans call *Kunstprosa,* which owes more to poetry than to ordinary narrative or legal prose (see Boadt 1978; 1986). There has been a decided movement in recent study of Ezekiel toward recognizing the literary coherence and powerful effect of its overall message.

K. Composition of the Book

Most commentators in this century have argued that much of the book of Ezekiel does not come from the prophet's own preaching but from the work of the redactors. This has been given massive and careful undergirding by the work of Zimmerli in his commentary. However, he himself represents a turn away from the tendency to see almost nothing of the prophet in the present book toward a moderating position that ascribes the majority of the book to Ezekiel himself. Still more recently, several studies have tried to find that all except a few editorial additions stem from the basic message of the prophet. However, arguments for or against claims of redaction hinge on several considerations that must be answered individually. The general "style" of the whole book alone cannot decide the question, since a thorough redaction could as easily leave a striking character on the book as the genius of the prophet would. Since the claim is put forward that many glosses have been added to the text, these need to be evaluated. Historical claims and references need to be situated: Are the dates reliable or are they an artificial device from a later time? Is the style clearly a written style or are there oral indications? Finally, are the main concerns of the book due to postexilic priestly reform or to problems that can most reasonably be attributed to the period from 593 to 571 B.C.E.?

1. Glosses. To answer the question of glosses in the text requires defining what one considers a gloss. Both Fohrer (1951) and Zimmerli consider single lines or short sections that seem to be missing from the *Vorlage* of the LXX as arguments for late glosses in the text. But if doubt is cast on the reliability of LXX as a witness to a better and more original text, then the argument collapses. Other phrases and words appear to be either repetitive or editorial linkage between sections. These, too, are often judged as secondary. Fohrer identified 25 percent of his glosses as some form of repetition, either by dittography or clarification. He recognized a further 21 percent as added comments to fill out and complete a thought; 5 percent to be editorial connectors, but a full 43 percent to be later explanations of ideas that were not clear.

Zimmerli's *Nachinterpretation* focuses on the expansions of solid Ezekielan oracles that adapt them to reuse in the postexilic situation. Thus he identified much larger sections that he considered theological reinterpretations from later disciples. Examples include 1:6–10, 14–21; 3:16–21; 7:20–24; 12:13–16; 16:16–23, 26–34, 42–63; 17:22–24; 20:27–29; 23:39–49; 24:25–27; 33:17–20; 36:16–38; 37:25–28; 38:10–23; 43:13–27; 45:1–25; 46:1-24, and several others. When taken as a whole, they amount to a substantial part of the book. And where extensive, such as in chaps. 16 and 36, they eliminate major parts of the conclusion of the oracles. Greenberg, on the other hand, argues strongly against many of these decisions (see, e.g., his treatment of the unity of 17:1–19 and 20–22).

2. Oral vs. Written Prophecy. The oracles of the prophet are highly developed artistic productions embedded in a careful overall structuring of the book. This would lend support to the common opinion that much of Ezekiel is the result of literary activity and not oral presentation. Certainly the book of Ezekiel is not a collection of oracles strung together by an editor, but manifests all the signs of having a thorough plan behind its composition. And yet the combination of strong formulaic language for attracting and persuading an audience and the regular use of symbolic actions that accompany oracular speech suggest the opposite, namely that most of the oracles of judgment, at least, were forged in an oral setting. This is confirmed by the constant use of double imperatives, "prophesy … and say" (6:2–3; 13:2; 34:2; 36:1); "declare … say" (22:2–3); "lament … and say" (19:1–2; 27:2–3; 32:2); "proclaim … and prophesy" (20:46; 21:2) which highlight the necessity of speaking out immediately. The vivid connection

of the oracles to particular events occurring in Babylonian or Egyptian campaigns and the specific dating of many of these oracles also argue for oracular utterances delivered on ad hoc occasions. It will be necessary to study more fully the indications in the book that reveal how the oral words of the prophet were edited into literary form that would speak to a later audience and generalize the lesson for them (see Clements 1986: 287–88).

3. Prophetic Influence on Ezekiel. By all criteria, Ezekiel stands closest to the book of Jeremiah in content and style. Both prophets introduce themselves into their words, almost to the point of composing autobiographical oracles. Their own personalities play a stronger role in their message than was true of Amos or Hosea or Isaiah. They also engage their hearers much more intensely in debate on issues, working to win them over by disproving all counterarguments. Both prophets are concerned with the question of divine justice to the individual and the relation of personal responsibility to national accountability. Indeed, both prophets counter the same proverb used by the people: "The fathers have eaten sour grapes, and the children's teeth are on edge" (Jer 31:29; Ezek 18:2). Both prophetic books pioneer the use of the prose oracle style, and both share many rhetorical features, such as repetition of key words (*ḥereb,* "sword," in chaps. 5–7; *yôm,* "day," in chap. 7; *hămôn,* "crowd," in chap. 29; and use of *yārad,* "go down," 15 times in chaps. 31–32; cf. use of *tqʿ,* "to blow the trumpet," in Jer 6:1–12 and of *ʾarez,* "cedar," in 22:6–23), word plays and puns (cf. use of *npl/tpl* in Ezek 13:11–12, *hikratî ʾet-kĕrētîm,* "I will cut off the Cretans," in 25:16, and *beḥŏrābôt baḥereb,* "in the ruins by the sword (will they fall)," in Jer 31:15–22), and summing up important words for added emphasis (e.g., Ezekiel often repeats the reasons for the "recognition formula" a second time, as in 30:25–26; while Jeremiah favors the use of chiastic structure and inclusion to bolster a point by repetition, as in 2:33–37, where the sequence of particles, *mah, gam, gam, lō* is repeated; for further cases, see Lundbom 1975).

Above all, the topics they treat are often nearly identical. Jeremiah is to be a wall against this people, as is Ezekiel (Jer 1:18; Ezek 3:8); Jeremiah condemns the lying spirit of prophecy, as does Ezekiel (Jer 14:14; Ezek 12:24; 13–17); Jeremiah speaks of Judah and Samaria as sisters in infidelity, and Ezekiel expands this into an entire allegory (Jer 3:6–11; Ezek 23:1–27). This last passage is the key example showing that Ezekiel knew Jeremiah and built on his words, molding them in an even more dramatic fashion (Jer 8:1–3, on the desecration of bones, should be compared with the great vision of the bones coming to life in Ezek 37:1–14). It is probable that Ezekiel knew of Jeremiah's words written on the scroll prepared in 605 B.C.E. and then expanded by Baruch (Jeremiah 36). They both framed their message of warning in the years before 586 around a common concern, one in Palestine, the other in exile: "Do not rebel against Babylon, for it is a violation of your covenant bond with the Lord!"

Many scholars identify a school of Deuteronomists active in the early years of the Exile and point to close ties between its message and that of Jeremiah. Links to Ezekiel are much harder to pinpoint, since Ezekiel uses language much closer to the Holiness Code in Leviticus 17–26 (which itself is nearly parallel to Deuteronomic thought). In general, Ezekiel and Deuteronomy share a broad common outlook that understands God's covenantal word as either threat or promise, depending on the people's response. Ezekiel, however, like Jeremiah, was quite pessimistic about any possibility of turning back the divine punishment. Ezekiel may nonetheless depend on Deuteronomy in one important theme, namely that fidelity to God can be done only with all one's heart. This persistent theme in Deuteronomy inspired Ezekiel's reflections on the possibility of a new covenant with a new heart in 11:20; 36:27.

4. Priestly Connections. The literary similarities to Leviticus 17–26 have already been noted above. But does Ezekiel depend on the Holiness Code or vice versa? The contacts between the two are numerous, but they are clustered. Ezekiel is undoubtedly familiar with the ideas found in Leviticus 19–20 and 26, but it is harder to find many connections to Leviticus 21–25. What few there are almost all occur in Ezekiel 44–45, which many see as a later expansion. The most extensive parallels are between Leviticus 26 and Ezekiel 4–7 and 34–37. Even on specific laws, however, the two books differ frequently. The Talmud records that this so bothered the early rabbis that Hanina ben Hezekiah stayed up and burned three hundred jars of oil in his lamp at night until he could reconcile Ezekiel with the Pentateuch (*Šabb.* 13b). Unfortunately, his reconciliation has been lost! The best scholarly consensus now is that Ezekiel and

Leviticus 17–26 represent independent uses of the covenant laws proclaimed in the Autumn Feast, and that the final form of Leviticus 17–26 probably represents a slightly later state of growth than does Ezekiel.

5. Importance of the Date Notices. Enough chronological information has come to light from neighboring countries to establish a close correlation between the dates in Ezekiel and specific historical events to which the attached oracles seem to refer. A comparative study of the Babylonian and Egyptian chronicles of the period permits the conclusion that all of the dated oracles in the section against foreign nations (chaps. 25–32) stem from particular sermons triggered by known crises and therefore are likely to stem from the prophet himself (see Freedy and Redford 1970: 462–85; Wiseman 1956). The dating style of the book throughout is also similar to contemporary practices in Babylon and elsewhere.

Several other observations can be made about the dates given. Certain themes and predictions could only be made early in the Exile and do not fit a possibility of significant redaction after the restoration of 539 B.C.E. The reunion of Israel and Judah envisioned in chaps. 36–37 did not take place after the Exile but was true during the last years of Josiah. No prince of David regained the throne as chaps. 34 and 36 envision; Egypt never fell to the Babylonians as 29:17–21 promises; the temple portrayed in 40–43 never became the blueprint for the Second Temple of 520, and the schema shows much closer connections to the P ideals of the desert sanctuary and to the Solomonic temple than to any later developments. Nor did Ezekiel's concern for Zadokite priests (44:15) ever become regulation in the postexilic period. Finally, Babylon is never condemned even after the fall of Jerusalem, suggesting that the book of Ezekiel was edited while that nation still held power, i.e., before 539. All in all, the combined dates, historical situation, and the contents of oracles work together to support the position that the major editing of the book as it stands, including the temple vision of chaps. 40–48, was completed well before the end of the Exile.

6. Ezekiel's School. Besides the expansions in the text identified by Zimmerli, other scholars have pointed to whole blocs of material that they consider later additions. The two most notable examples are found in the vision of Gog in chaps. 38–39, and in the new temple description of chaps. 40–48. Seen in the larger perspective of the book as a whole, these chapters probably belong to the original level of editing, because the great battle scene and the building of a new temple reflect a primal pattern in Israelite tradition. On the one hand, the frequent use in Ezekiel of mythopoetic language from ANE creation stories argues that these chapters are modeled on the myth of the divine warrior Marduk (or Baal), who conquers the cosmic forces of evil and builds himself a palace as the climax of his victory celebration. On the other, it also fits the Priestly theology of Exodus that sees the great victory of God at the Red Sea climaxed by the building of the sanctuary in the desert.

Scholarship is still divided as to whether the advances that have been made in recent decades in understanding the intricate and purposeful structuring of the book as a whole support claims that the prophet Ezekiel himself had a major role in planning and executing its redaction. Greenberg would say yes; Clements (1986) would say no. B. Childs (*IOTS*) would also say no, although, because he writes from a canonical criticism viewpoint, he would reject a reading of the text that separated any original words of the prophet from later redactional expansions.

One of the major questions facing Ezekiel research for the future will be a clearer identification of exactly what composes a "school" of disciples. It is at least certain that they must have had ties to priestly ideals of a reconstructed community, that they functioned largely in the Exile and therefore do not precisely match the vision of the slightly later Priestly editors of the Pentateuch, and that they worked to produce a literary blueprint built on the oral message of Ezekiel. In all of these concerns, the prophet himself may have played either a minor or a major role.

L. Message of the Book

Because the book of Ezekiel has aspects of a ministry warning the people of God's impending judgment as well as of later prophecy of God's intention to restore, it contains three separate theological foci. The first is an explanation of what God is doing in bringing about the Exile and rejecting the covenant. The second is a program for what God will do in the future to reestablish the covenant relationship. The third

is the combined meaning of the entire sequence of judgment and restoration as a new way to understand the divine purpose and avoid the failures of the past.

Ezekiel is uncompromising in his condemnation of Israel's infidelity to God. Even though he indicts Israel for numerous sins against justice and right ethical behavior (7:10, 23; 18:7–9; 22:11–12), his stress falls mainly on disloyalty to God. They are sins by which the people defiled themselves and the land when they rejected the God of Israel for other gods. Israel has been rebellious from its first days after the Exodus (chaps. 16; 20; 23) and has never given its heart to God. It profaned the Sabbath (20:12, 24), worshipped on high places (6:13; 20:28), and defiled the sanctuary (23:37–38). Ezekiel can even condemn cultic offenses such as having sexual relations with a woman in her menstrual period in the same sentence as he denounces adultery (18:6). They all equally violate the holiness of God, who has taken possession of this people and this land and put his holy name on it. Ezekiel betrays his priestly outlook in taking this stand. If Israel is to be God's people, then it must tolerate no defilement or infidelity in its midst. But, in fact, the sin of generations had piled up and now brought disaster to Ezekiel's own age.

He wrestles with this question in two major thematic attempts to address the why of responsibility. One is the theme of the watchman that heads both the period of judgment and the period of hope (chaps. 3 and 33). It addresses the frustration of preaching to people who will not listen. His answer is that God has given him the duty to do what he is commanded; the people must assume responsibility for their own actions. Just as God will demand that the prophet act responsibly, so God will treat this generation. The book's second theme is explaining why this generation must pay for the sins of its ancestors; it is found in chaps. 14:12–23; 18:1–32; 33:10–20. He boldly proposes that a generation that obeys God's commands will not suffer for the sins of its ancestors, nor will future generations be spared punishment for their sins because of the goodness of a previous age. God will judge each generation on its own. In light of the pessimism that pervades chaps. 1–24 about reversing the coming punishment of God, we can be sure that Ezekiel did not believe repentance was any longer possible. And yet he proclaims the possibility of repentance for the people (16:54–63; 33:10–16). This ambivalence stems from the complete engagement of the prophet with the fate of his own people. He knows God will forgive, but he sees that they will not accept. This position is fully stated in the call of the prophet in 3:1–11.

In the salvation oracles of chaps. 33–37, the prophet stresses God as life-giver, and above all as the king over Israel. These oracles promise that God will take over the role of shepherd that had been abused by the kings (chap. 34); God will also purify the land, restore its boundaries, and bring the people back from exile (chaps. 36–37). In these passages, the stress falls clearly on the contrast between what Israel had done on its own and the faithfulness of God, who maintains the holiness and glory of his divine name. God will act out of the freedom of his divine power and commitment, and not out of duty to Israel. At the same time, the destruction of Israel has made God seem powerless in the eyes of the pagan nations. They will now discover the divine power when they are destroyed for their arrogance in attacking Israel (chaps. 35; 38–39).

A special aspect of this promise of restoration is the promise of a new heart (11:17–20; 36:26–28). Here Ezekiel clearly takes a stand that it will not be through repentance or recommitment that change will come, but only through the initiative of God transforming Israel. By means of a new heart and a new spirit, they will be enabled to be faithful. Repentance will come after the recognition that God is acting on their behalf, because they will be filled with shame at their past conduct (16:54; 36:32). This new teaching on the part of Ezekiel finds its natural fulfillment in the preparations of a new, purified people and city in chaps. 40–48, climaxed by the divine presence in its midst (43:1–9; 48:35).

The third aspect of the theological message of the book is found in its vision of God's activity in light of the sequence of disaster and salvation. The individual emphases of each half are combined in a single purpose: to renew the faith of Israel in God's credibility at a time when doubt and despair gripped the people in the terrible sequence of the loss of their land, nationhood, kingship, and temple, and their exile from home. Former confidence in the God who would never let Israel fall, based on a naive reading of Isaiah's oracles and the promise of the Davidic covenant in 2 Samuel 7, had led to serious questioning whether the God of Israel had any power at all compared to the gods of Babylon.

Such basic doubt accounts for the enormous stress that Ezekiel places upon the transcendence and majesty of God. The prophet never beholds God directly but only sees the form of the divine glory (1:26); and he speaks reverently not of the Holy One, as does Isaiah, but of the holiness of God's Name (20:39; 36:20; 43:7). For the same reason, he refers constantly to *ʾădōnāy yhwh*, "The Lord Yahweh," using a plural of majesty unique to this book; and to himself as prophet only by the humble "son of man." The use of the recognition formula, "That they shall know I am the Lord," is also calculated to engender new trust in the power of God to act decisively both in judgment and in salvation; against Israel or against any foreign power. Moreover, the expression is borrowed from the traditional cultic proclamation of the awesome power of God to save and deliver the people out of slavery in Egypt that is preserved in the Priestly level of the Pentateuch (Exod 6:6–8; 7:5; 10:1–2; 14:4, 18).

The book of Ezekiel attempts a complete program of reform that would reestablish the covenant in its proper relationship. God would again be overlord of the land and rule from the sacred mountains of Israel. To underscore this, the prophet introduces the theme of the mountains in chaps. 6, 17, 35–36, 38–39, and 40–43. In doing so, he condemns the defiled mountains of Israel, purges them, and then establishes his temple on them. In the process, Ezekiel never refers to the home of the temple as Mt. Zion, in effect rejecting the past theology. The new mountain of the temple in 40–48 is closely connected with careful observation of the priestly laws, and thus becomes instead a new Mt. Sinai. The people, on their part, would be the faithful vassals, who kept their loyalty to God alone and did not betray it for other gods. They would be separated off as a holy people, and nothing profane would defile the tribes in the land. God in turn would protect them and destroy their enemies as an overlord was supposed to do. Thus there is an important place in this scheme for both the oracles against foreign nations and the cosmic war against Gog in chaps. 38–39.

We must look to the cultic rituals for the background of much of this controlling vision. It was in the great feast-day liturgies that God was proclaimed in mythic categories as the victor over chaos, as the divine warrior, and as the king enthroned in the temple. It was a major purpose of the prophet to summon up the ancient convictions of God's power by structuring his message in the ancient mythic patterns. The oracles against nations mockingly allude to certain pagan myths on the divine status of kings to show how God destroys these divine pretensions of the kings of Tyre, Sidon, or Egypt. But the oracles of judgment in chaps. 15–19, with their strong allegorical coloring, also introduce cosmic language about the royal hubris in charges against Zedekiah and the rulers of Jerusalem. The parallel strongly suggests that Judah's royalty had fallen into idolatry by believing these false myths. To restore the power of the Yahweh myth, the prophetic plan then goes on to lay out the oracles of salvation in the pattern discussed above, namely that of the divine warrior who marches to victory from his holy mountain and returns at the end to his holy dwelling to rule (cf. the ancient hymns of Exodus 15; Judges 5; Habakkuk 3). It also follows the pattern of the Exodus-event itself, in which victory at the Red Sea is completed by the triumphal manifestation of God on Mt. Sinai.

Thus the book of Ezekiel proclaims not a god who is powerless to act but rather an awesome God who rightly exercises divine judgment and divine compassion; and who will not abandon the covenant but will rebuild it on an even stronger footing. Thus all will know by concrete evidence in action just who is God and what God will do for this people that obeys the covenant commands. Only then will God be worshipped properly.

EZEL (PLACE) [Heb *ʾezel (אֶזֶל)]. A stone behind which David hid until Jonathan could inform him of King Saul's attitude (1 Sam 20:19); however, its location is unknown. The Hebrew text reads *ʾēṣel hāʾeben hāʾāzel,* "near the stone Ezel," but LXX reads *para to Argab ekeino,* "by that Argab/Ergab." Since Argab means "heap stone" (BDB, p. 918b) in Hebrew, the Gk demonstrative pronoun *ekeino,* "that," corresponds to the *hāʾāzel* of the Heb text. The Gk translation "by that Argab" presupposes the Heb original of LXX as *hāʾargab hallāz* (or *hallāzeh*), "this heap-mound (or cairn)." For this reason some consider *hāʾāzel* as the metathetical spelling of the Heb demonstrative pronoun *hallāz,* "this." The RSV renders this phrase, "beyond yonder stone heap."

Another possible interpretation of this "Ezel" is to seek a relation with the same triconsonantal Aramaic verb *ʾăzal,* "to leave, go." The noun *ʾezel* with the meaning of "leaving or departure" makes good sense in the context: "go, for Yahweh has sent you away" (1 Sam 20:21). Consequently, this phrase would be understood as "the stone of Parting" in the sense of a commemorative stone for the separation of the two intimate friends.
YOSHITAKA KOBAYASHI

EZEM (PLACE) [Heb *ʿeṣem (עֶצֶם)]. A settlement of the tribe of Simeon (Josh 15:29). The KJV variant, Azem, derives from a Masoretic pausal form in Joshua. Ezem appears twice in Joshua; in 15:29 it is listed as part of the tribe of Judah, and in 19:3 it is a Simeonite settlement. It is also listed as a town in Simeon in 1 Chr 4:29. Since Simeon was assimilated to Judah at an early date, it is recorded under both tribes.

Though the present literary context of the Judean town list is set in the period of Joshua, its original setting was as part of a post-Solomonic administrative division of the S kingdom. The date for the establishment of this system is debated, with suggestions ranging from the early 9th to the late 7th century B.C. Ezem is in the southernmost district of Judah, the Negeb.

The location of Ezem is problematic. It is apparently mentioned on an ostracon from Tell esh-Shariʿa (Oren and Netzer 1974: 265), which may mean seeking the site somewhere to the N of Beer-sheba (M.R. 134072). In the past many commentators have located Ezem at Umm el-ʿAzam, 20 km SE of Beer-sheba (Albright 1924: 154; Simons, *GTTOT,* 144, 178, 183; M.R. 140055), but this may be too far S. Cohen (*IDB* 2: 213) suggested Umm el-ʿAzem, two knolls not far to the N of Beer-sheba. It is possible that Ezem may be the *ʾ-i-ḏ-m-i3* which is the 66th town Shishak claimed to have conquered in his topographic list (Simons 1937: 178, 183).

EZER (PERSON) [Heb *›ēṣer* (אֵצֶר)*; ‹ēzer* (עֵזֶר)*; ‹ezer* (עֶזֶר)]. The name of several men in the OT.

The name *›ēṣer* may come from a root meaning "store up." The *‹ezer* forms may have the meaning "help" (*IDB* 2: 213).

1. One of the clan chiefs listed in the genealogy of Seir the Horite in Gen 36:21, 27, 30 and in the matching genealogical clan list in 1 Chr 1:38, 42. He is said to be the sixth son of Seir and the father of BILHAN, ZAAVAN, and AKAN/JAAKAN (Gen 36:27; 1 Chr 1:42a). The kinship terms found in the text may simply reflect alliances or the designation of tribal territories within this region.

2. A descendant of Judah in the genealogical clan list in 1 Chr 4:4. Ezer's exact relationship with Judah is unclear since the genealogy is confused, not giving the lineage of each of Judah's sons. Ezer is simply described as the father of HUSHAH. This latter name, like several others in the list (Tekoa, Bethlehem), is the name of a village in the Judahite hill country.

3. A member of the tribe of Ephraim mentioned in 1 Chr 7:21. Along with another Ephraimite, ELEAD, Ezer was killed by the men of Gath for raiding the Gathite cattle herds. Raids such as these are not uncommon among tribal peoples wishing to increase their own herds or weaken those of their neighbors (see Judg 6:2–5; 2 Kgs 13:20). It may also be reflective of the tensions which existed between the peoples of the high country and the towns and villages of the Philistine plain.

4. The chief of the Gadite warriors who joined David in his stronghold at Ziklag during the time he was outlawed by Saul (1 Chr 12:10—Eng12:9). These men, along with those from several other tribes, represented David's growing political strength and gave him the "mighty and experienced warriors" he needed to form an army corps when he succeeded to the throne of Israel.

5. A Levite, a son of Jeshua, who was assigned to repair a section of the wall of Jerusalem during the administration of Nehemiah (Neh 3:19). He is described as the ruler of Mizpah and the section of the wall he was assigned was "opposite the ascent to the armory at the Angle." As a "ruler" his role in the construction probably consisted of providing the funds and the men to do the work.

6. One of the priests listed among those who participated in the dedication of the reconstructed walls of Jerusalem in Neh 12:42. They led the people with blaring trumpets and the offering of sacrifices.

VICTOR H. MATTHEWS

EZION-GEBER (PLACE) [Heb *‹eṣyôn geber* (עֶצְיוֹן גֶּבֶר)]. A port city on the S frontier of biblical Israel. The name is recorded in the Hebrew Bible seven times (Num 33:35; 36; Deut 2:8; 1 Kgs 9:26; 22:49; 2 Chr 8:17, 20:36). The former three are written *‹eṣyōn geber* and refer to the camping stations of the Israelites en route to the promised land. The latter four pertain to the S port city of Solomon and Jehoshaphat. While most translations render the name verbatim, the Aram translation of *Tg. Ps. J.* to the first three verses translates the place-name as *kĕrak tarnĕgôlā›,* perhaps in the sense of the "strong citadel." For *‹eṣyôn* KB (1958: 727) suggests the Ar cognate *ġaḍiān* (*Lane* 2269a) while *geber* is left unexplained.

Whether the Pentateuchal *‹eṣyōn geber* is identical with the Judean kings' *‹eṣyôn geber* is a question yet unanswered. No archaeological traces of the former have been uncovered so far and no location during that period has been unearthed. The place name *‹eṣyôn geber* reappears in the history of Israel during the Solomonic era and is mentioned through the reign of Jehoshaphat. Solomon initiated construction of

vessels and shipping on the Gulf of Elath with the Phoenician partners and for this reason he went to Ezion-geber and Jehoshaphat followed suit.

Where is the geographical site of Ezion-geber? The Bible locates it "near Eloth on the shore of the Red Sea, in the land of Edom" (1 Kgs 9:26). In the 19th century, Robinson (1856: 169–72) identified it as *ʿAin el-Gõuḍyan* along a small wadi opening into *el ʾArabah.* It was later revised by Phythian-Adams (1933: 137–46) to refer to *el-Meniyyeh.* These earlier identifications have been toppled by three seasons of archaeological excavations of N. Glueck during the years 1938–40, who argued that it should be identified with Tell el-Kheleifeh (M.R. 147884), a suggestion put forth by Frank (1934: 244). The mound lies at about the center of the N coast of the Gulf of Elath (Aqabah) between Aqabah of Jordan at its E end and Elath of Israel at the W end. Glueck's (1940a: 93–104) early explanations have revolved around what seemed then to be the main activities of Tell el-Kheleifeh: construction of seagoing vessels, a large smelting refinery of local copper in furnaces, and industry of tools made out of copper. To support the theory of a metallurgical center at that site, Glueck (1940b: 3–7) argued that remains of extensive sulfuric discoloration due to the smelting activities are evident on the furnace's wall, and copper slags in substantial quantities are found at the site. He unearthed a casemate wall characteristic of the Solomonic construction of buildings and dated the pottery excavated at the mound to the 10th century B.C., parallel to the Solomonic period. Hence, the conclusion that Tell el-Kheleifeh = Ezion-geber. Glueck further inferred that Solomon's commercial prosperity depended largely on exporting ingots of copper produced at Tell el-Kheleifeh, which were shipped abroad from the port city. Moreover, Glueck (1940a: 110; 1940b: 15) asserted that the findings included the burnt relics of a heavy rope industry of the type employed for anchorages and the stretching of the boat's sails. Among other things, he found pitch for caulking the boats, nails made of iron and copper, and fishhooks and spearheads popular among seafarers, which testified that naval construction and maritime activity took place there.

Glueck's identification was hailed by Wright (1957: 132–37), even though he admitted that actual remains of a port were never excavated. Albright (1960: 127–28), who agreed with Glueck that a tremendous metallurgical industry functioned at that site, nevertheless, following opinions of metallurgy experts, was perplexed as to how the production of copper was indeed accomplished.

Glueck's findings were challenged by Rothenberg (1962: 44–56), who refuted the existence of a large metallurgical complex at Tell el-Kheleifeh. He proved indubitably that the room thought to be a furnace room turned out to be a large storehouse and what was considered to be sulfide fumes of copper ores on the walls were the result of a tremendous conflagration. A closer look at the surroundings did not show a significant quantity of slag associated with the production of copper and the flue holes in the so-called furnace room were in fact holes for wooden beams. Even the theory of Glueck (1940a: 93–94) about the strong northern winds blowing in the area essential for smelting refineries was found wanting as a result of Rothenberg's meteorological measuring. Had the builders wanted to take advantage of the strongest winds, a geographical point further to the W should have been located, where the winds are indeed turbulent and effective for a refinery. In sum, Rothenberg questioned the validity of Tell el-Kheleifeh = Ezion-geber.

Glueck (1965b: 15–17) then radically revised some of his previous conclusions. He accepted that the place was primarily a fortified district granary and caravansary, yet he maintained that Tell el-Kheleifeh served as a copper center and that the place was the biblical seaport Ezion-geber. His excavations (1965a: 82–87) revealed five strata of settlements extending from the Solomonic age until the end of the 5th century B.C. when Tell el-Kheleifeh was abandoned and a subsequent Nabatean settlement was located at Aila. Biblical Ezion-geber existed during two of those periods. Period I dates to the Solomonic era. It contained a small center for storage, industry, and commodities which also served the main S seaport of the king, a place probably destroyed by Shishak during the reign of Rehoboam (1 Kgs 14:25–26; 2 Chr 12:2–4).

Indeed, biblical citations from the chronicles of the Judean kings indicate a disproportionately fierce struggle for control of the S Arabah, an area vital to the economy of the kingdom, especially with regard to the valuable trade with Arabia and regions beyond it. It is therefore not surprising that the only

competitors for these routes, the Egyptian kings, did not look favorably at the spread of this trade. Against this backdrop it is possible to explain the military foray of Shishak (ca. 924 B.C.) into the Negeb. List XXXIV of the Great Temple of Amon in Karnak (Simons 1937: 178–87) includes a yet unidentified conquered location *š-b-r-t n g-b-r-y-*, which may be transliterated as *šblt n-gbr (y),* meaning the whirling mass of water *gbr,* suggesting the likelihood of reference to Ezion-geber.

Possible reconstruction at Period II took place during Jehoshaphat's reign and it reveals strengthening of the location with massive double walls and elaborate city gates. While the royal fleet was destroyed by a stormy sea (1 Kgs 22:49) the city may have been destroyed later because of an Edomite rebellion in the middle of the 9th century (2 Kgs 8:20–22; 2 Chr 21:8–10). The name Ezion-geber is not mentioned again in the Bible.

Talmudical sources, however, preserve the tradition that the Sages visited a S town named *ʿsyʾ,* geographically located along a seacoast which Klein (1939: 76, 122) identifies with Ezion-geber. Glueck (*Elath* 1963: 10–11) claimed that Elath (2 Kgs 14:22; 2 Chr 26:2) is the substitute for decimated Ezion-geber and was constructed on top of the mound of the city which was never to be rebuilt. In any event the excavations and findings of Tell el-Kheleifeh (*Elath,* 1963: 19–20) contain the histories both of Ezion-geber and Elath and therefore it is correct to say Tell el-Kheleifeh = Ezion-geber = Elath.

Avigad (*Elath,* 1963: 24) lent support to Glueck's theory when he found an inscribed signet ring which he deciphered as *"LYTM"* i.e., "belonging to Jotham," and described the picture on the ring as either an ignot of copper or a representation of bellows in front of a horned ram. This testified to continued metallurgical performance during a latter period of the Judean King Jotham. Aharoni (*Elath,* 1963: 71–73; 1982: 169, 243, 249–51) while agreeing with the identification of Tell el-Kheleifeh with Ezion-geber, nevertheless disputed the theory of the city as being a copper mining center. He suggests, instead, that it was a fortified depot in a network of citadels securing the land route for commodities exported and imported through the port of this fortified complex. He, like Glueck, suggested that biblical Elath took on the functions of Ezion-geber once the latter ceased to exist.

Glueck's identification of Tell el-Kheleifeh with Ezion-geber was contested again by Mazar (1975: 126–31) on the basis of topographical evidence. He disproved the theory of sea regression in the region of Tell el-Kheleifeh. Furthermore, the shoreline along the location of the mound is sandy, the water is shallow, leaving it unsuitable for small boats, let alone for a substantial trader fleet. Some of the scheduled trips extended for three years, and Ezion-geber, while not built by Solomon, was employed as a naval yard for building a commercial fleet. King Hiram of Tyre supplied the woodcraft, the skilled labor, and the navigational expertise while King Solomon provided manpower and located a safe port for anchorage. The magnitude of the operation required facilities which could not have been provided by the coast of Tell el-Kheleifeh. Furthermore, a recent restudy of Glueck's material by Pratico (1986: 24–35) summarized the following: Tell el-Kheleifeh is post-Solomonic, and the mound, while important by itself, cannot be identified as Ezion-geber.

The search for a natural harbor in the gulf of Elath suggested, therefore, the small island of Jezîrat Farʿôn (recently named Coral Island) as a safe anchorage for boats. Indeed, 19th-century diaries of travelers acknowledged the island as a haven during stormy seas. Robinson (1856: 160–61) described it as oriented from NW to the SE, some 300 yards in length with two hills, one higher than the other, linked by a narrow strip of land. On the island, an Arabian fort was found. It was surrounded with battlements, with two pointed arches often signifying gateways.

Unvanquished by the fleet of Ronald of Chatillon (ca. 1182 C.E.), the fort was identified by the Arabic geographer Abulfeda (ca. 1300), with the former citadel of Aila; however, in his own time it was already in ruins. While touring the place, Robinson also quoted former geographers, Laborde, Rüppell and Wellsted. The latter gave it the name Jezîrat Farʿôn, the "Island of Pharaoh," and described it as the only sheltered place for boats when caught in a stormy sea. He sensed that this was perhaps biblical Ezion-geber.

It should be noted that the only natural anchorage in the N part of the gulf is the harbor on the island, while the modern ports of Elath and Aqabah are of wholly artificial construction.

Mazar's scholarly interest in the island in 1956 (1975: 130), was followed by Rothenberg in collaboration with Aharoni and Hashimshoni (1961: 86–92, 183–89), who mapped the island and established the existence of a small harbor.

Aharoni (1967: 182–83) was inclined to identify the island with Jotbatha, the Pentateuchal camping station listed before Ezion-geber. He relied on the phonetic similarity of biblical Jotbathah, Byzantine Yotabe (according to Procopius' testimony, a small island dominating the sea traffic in the gulf during the Byzantine era), and modern Ṭabeh.

Rothenberg (1967: 212–13), however, on the basis of the ceramics found on the island suggested occupation as early as Iron Age I, and posited that the place must be Ezion-geber. His identification gained credence through underwater archaeological surveys conducted by Linder and Flinder (Rothenberg 1972: 204–7) and a British-Israeli joint expedition in 1968. Flinder (1989: 39–41) concluded that Jezîrat Far›ôn is indeed biblical Ezion-geber. The survey plus the underwater archaeological search shows that Jezîrat Far›ôn had massive navigational installations put in position for heavy maritime traffic. It had a walled island comprised of an outer wall, an inner wall, and transversal walls forming casemate rooms plus towers. He confirmed that the edifice facing the mainland had groundwork similar to the casemate rooms, hence dated before its upper parts. Unique were the underwater archaeological findings which established the existence of an artificial enclosed harbor bordering a sizable natural anchorage, with jetties built out into the water to influence currents opposite the island on the shore of the mainland.

Can we definitively identify the island with Ezion-geber? Solid dating indications are yet to be uncovered. What can be said is that the island's pottery dates to Iron Age I and that the island was utilized as a pharaonic mining anchorage by the Egyptians (Rothenberg 1972: 203). Furthermore, Jezîrat Far›ôn's natural harbor shows man-made technological improvements by yet unknown ancient marine engineers. Comparisons of the structure of the port in the island suggest resemblance to the work done by Phoenician maritime personnel, who were the first to improve natural harbors in the Mediterranean basin.

Tyre, the capital of Hiram, was originally an island (Isa 23:2) upon which man-made jetties and safekeeping walls were built for the protection of sea vessels. (The path built across the water to connect the offshore island to the mainland was a later addition as a result of Alexander the Great's work during 322 B.C.) Leptis magna, founded by the Phoenicians from Sidon in what later became Roman Africa, was an offshore island with an artificial harbor adjoining a natural anchorage with breakwaters opposite the island on the mainland. Accordingly, it is not inconceivable to suggest that the partnership between the Tyrians and the Israelites was a continuation of what took place in the region during the reigns of earlier Egyptian monarchs who employed Giblite-Byblian mariners while embarking on their maritime endeavors along the Red Sea. It is likely that Solomon went to Pharoah's island, Jezîrat Far›ôn, whose name in the Bible is Ezion-geber, and Hiram sent in the navy, his servants, and maritime personnel, along with servants of Solomon (1 Kgs 9:27–28; 2 Chr 8:18).

This partnership is alluded to by Philo of Byblos, who cites the Phoenician historian Sanconiaton who in turn reports that a Phoenician caravan consisting of 800 camels carried timber to the southern port for the construction of the merchant fleet. The sources do not report improvements of anchorage facilities by either of the partners, but Ezion-geber, the point of embarkation for long voyages (1 Kgs 10:22; 2 Chr 9:21), required adequate port facilities for oceangoing boats, and underwater archaeological excavations proved that reconstruction indeed provided the necessary efficiency.

The identification of Ezion-geber with Jezîrat Far›ôn rather than biblical Eloth or Elath is supported by the Bible. The Bible plus the major translations, the LXX and the Vg, view Ezion-geber as separate from Elath or Eloth. The terms "next," "near," or "beside" are inserted between Ezion-geber and Eloth in 1 Kings (9:26) and the *wāw copulativum* joins them in Deuteronomy (2:8) and 2 Chronicles (8:17).

Flinder (1989: 45) further maintains that both sites fulfilled a commercial task for the partners. Ezion-geber, on the island, while adequate for loading and unloading sturdy seagoing vessels, was not equipped to store and disburse the goods. Therefore, it was necessary to transfer the merchandise via smaller seacraft to the mainland, i.e., to Eloth, from where it was distributed through the traditional network of Solomon's far-flung land trading posts.

Geographically, Israel enjoyed the role of an intermediary between adjacent countries. Not only did the Mediterranean seaports of the Solomonic empire offer commercial links with the communities W of the kingdom, but the S port gave Judah the added advantage of being able to control the valuable trade of luxury commodities. This was the exalted moment in Israel's secular history when the Israelites were the only land bridge between the two continents and had various ports serving the Mediterranean clientele, spreading toward the Atlantic Ocean in the occident, and Ezion-geber, which led to the Indian Ocean and farther to the orient.

MEIR LUBETSKI

EZORA (PERSON) [Gk *Ezōra* (Ἐζωρα)]. Progenitor of a family which had six descendants who divorced their foreign wives during Ezra's reform (1 Esdr 9:34). Although 1 Esdras is often assumed to have been compiled from Ezra and Nehemiah, "Ezora" does not appear among the names listed in Ezra 10. Omissions such as this also raise questions about 1 Esdras being used as a source by Ezra or Nehemiah. Furthermore, problems associated with dating events and identifying persons described in 1 Esdras have cast doubt on the historicity of the text.

MICHAEL DAVID MCGEHEE

EZRA (PERSON) [Heb *ʿezrā* (עֶזְרָא)]. "Nehemiah and Ezra, the creators of the post-exilic Jewish community in Palestine, are two of the greatest figures in Jewish history"; so concludes a recent (far from conservative) volume (Widengren *IJH,* 538). Does this dictum, even apart from notably putting Ezra in second place, reflect what we really know from history?

C. Conclusions

———

A. Biblical Data

Ezra 7–10 and Nehemiah 8–12 contain only some twenty passages (mostly a single verse) giving any personal trait, title, or work of Ezra.

1. Only six of these are really "personal." In Ezra 9:3 is his highly emotional but also carefully calculated behavior, tearing his garments and beard, then sitting speechless an hour or more with a crowd waiting for his word. When it comes (9:6) that word is also deeply emotional, but in an oratorical

composition nominally addressed to God and largely made up of biblical phrases. Also a lyric outburst is Ezra 7:27, which could well be an editorial gloss except that it concludes, "I took courage since the hand of my Lord God was upon me"; so also 8:22b. Ezra 10:6 features his night of fasting and mourning. The long speech of Neh 9:6–37, also a lyric cento of biblical echoes, is attributed to Ezra by the Greek text, but rather unexpectedly, and not by the Hebrew at all; and the Greek (2 Esdr 19:38, even more than Neh 9:15) seems to include the speaker as himself guilty of the marriage abuse he deplores.

2. Another six verses give titles, claimed by Saeb (1982: 380) to be our firmest clue to the real Ezra. Chief of these is Ezra 7:12, attributed to Artaxerxes, describing Ezra as "priest and scribe of the law of the God of Heaven" (so also 7:14, 21; in 7:6 Artaxerxes is said to detect God's hand upon Ezra). The biblical author himself presents Ezra (7:6 in third person; as also 8:5; 10; Nehemiah 8) only as a "scribe skilled in the law of Moses," though the preceding genealogy shows him as a descendant of known priests and of "Aaron the high priest."

"Scribe" (Aram *sāpar,* Heb *sōpēr;* probably an equivalent of Akk *šāpiru, AHW* 1172) as attested in Persian royal usage could well mean "an official" (Schaeder 1930: 46) of high or low degree; but in relation to the law of God and Moses it would seem rather "he is a jurist and patron of text-scholars" (Gelin 1960: 24) with an eminent role in promulgating and interpreting or even editing "the Law"—whether "the Pentateuch in its present form" as Myers still firmly and plausibly maintains (*Ezra, Nehemiah* AB, lxxiv; more cautiously Donner 1986: 429), or at any rate the Priestly Source (P) or others.

"The Law," of which Ezra is *sōpēr,* is in Ezra 7:12–26 *dāt,* which in other attested Aramaic cases means rather "the king's edict" (even if here "making the Judeans' law his own"). But in Nehemiah 8 "the Law" is *tôrâ,* which Ezra merely "reads out" (like any priest in a liturgical ceremony; not "promulgates" or "compiles," as Rendtorff 1984: 171 notes; he concludes sweepingly that any relating of Nehemiah 8 to the mandate of Ezra 7 is secondary).

The occasion for the king's edict of Ezra 7 is seen to be the reaction against rebellions precisely in 458 B.C. destabilizing coastal Dor near Jerusalem under Greek and Egyptian influence (Smith 1965: 361; Margalith 1986: 110).

3. A third group of some five passages shows what Ezra actually did do or had a mandate to do. He had a certain freedom not only to dispose of surplus funds but also to supply deficits "out of the king's treasury" (in Beyond the River, Ezra 7:20) up to amounts specified in v 22: a power he is never shown using. Then too (7:25, still in Artaxerxes' words) Ezra can appoint officials to impose the Jewish law on "everybody (Jewish?)" in Beyond the River, with fearful sanctions (hardly "the original Great Synagogue," Ellison 1981: 52).

Quite different are the two passages which show Ezra actually functioning (Cazelles 1982: 224). In Ezra 10:5 he merely implements (as "his duty") the advice of a local culpable official; and in Neh 8:13 "in the presence of Ezra" the people themselves discover and implement the *sukkot* law. The speaker of Neh 10:1 (Greek 2 Esdr 19:38; named as Ezra only in the Greek 19:6) merely states that a new covenant is being made; what follows in Nehemiah 10 is the work of Nehemiah and others, not including Ezra. (Neh 12:26 links Ezra with Nehemiah but as a purely chronological horizon, "in those days.") From the above evidence it may be concluded that "little political activity is ascribed to Ezra" (Myers *Ezra, Nehemiah* AB, lxxiv; rather than Gelin 1960: 24, "he too is a manipulator of men, but of a more logical approach than Nehemiah").

B. Evaluations

The above personal traits, titles, and real or authorized activities give us all we need in order to know who Ezra really was, "an ultraconservative would say," observes Williamson (*Ezra and Nehemiah* OTG, 69); he himself finds a solid historical kernel even while redimensioning such claims made by others. A historical minimum even smaller is clung to (following Noth [*NCH*]) by Kellermann in Ezra 7:12–26 and 8:26–27 (1967: 458), though he dismisses all the rest of Ezra 8–10 and all of Nehemiah 8–12 as "the Chronicler's midrash"; so, too, In der Smitten (1973).

But in 1986 there appeared a strong scholarly revival of the opinion that Ezra never existed at all, and was invented only in 159 B.C. to be the emblem of a religious reform which turned out to be abortive.

Garbini (1986: 212) traces the history of similar theories from Vernes through Renan and Torrey to Hölscher. The undoubted factual data which they invoke to prove that the Bible does not give us a real Ezra history, chiefly the silence of Sir 49:13 praising Nehemiah, have in fact never been ignored by Ezra scholars. Most notable is the veritable revolution effected by Van Hoonacker's claim that an Ezra *before* Nehemiah as our Bible presents him is unthinkable. His success in imposing an Ezra date in 398 B.C., the 7th year of Artaxerxes II, though not as complete as claimed by Castel (1985: 160) has doubtless contributed to the widely held third alternative of (Albright-)Rudolph, emending 7th to 37th of Artaxerxes I (so Pavlovský 1957).

The existence of a (first-person) "Ezra source" has, since the eminent Rudolph (*Esra und Nehemia* HAT), been held only by "the most conservative, like Kidner and Fensham" (Williamson *Ezra and Nehemiah* OTG, 21; see also Mowinckel 1961; cf. Kidner *Ezra and Nehemiah* TOTC, and Fensham *Ezra and Nehemiah* NICOT). Meanwhile the historical reality of Ezra has suffered also from either of two contrary extremes. On the one hand, rabbinical tradition attributed the veritable creation of Judaism to him (*m. ʾAbot* 1:1). "Ezra and the Torah surpassed in importance the building of the Temple" (*b. Megilla* 16b); "Ezra would have been worthy of receiving the Torah had Moses not preceded him" (R. José, *b. Sanh.* 21b; other citations in Myers *Ezra, Nehemiah* AB, lxxii). Doubtless rabbinic acclaim never quite reached the "Son of God and Messiah" claimed in the Quran 9:3 (Uzair, linked by Hirschberg [*EncJud* 6:1107] with Yemenite Jewish traditions; Ellison 1981: 49 does not specify the "traditions making Uzair the place of his burial in Babylonia"). Only Josephus informs us that Ezra died in honored old age in Jerusalem and was magnificently buried there (*Ant* 11.158; Tuland 1966; *Ant* 11.193 more soberly record Nehemiah's death).

At the other extreme were the early Pentateuch critics (less careful than Wellhausen) assigning to Ezra the invention of much "Mosaic" tradition. Though no one of the current interpretations of Ezra's law (as the whole Pentateuch; or P Source or the Holiness Code alone; or Deuteronomy; or lesser biblical-related prescriptions; or some purely civil authority conferred by Artaxerxes) can be categorically excluded, there is still a significant and sound group of critics regarding the "editing and promulgation" of the more ancient Pentateuch traditions as the work of an "Ezra-school."

C. Conclusions

The claim of having proved that "Ezra never existed," when looked at more closely turns out to mean rather that hagiographic and ideological features are attached to an individual who may have existed in some much humbler fashion, as in some Acts of the Martyrs or Golden Legends. It is surprising that Garbini does not ask us to consider that he is doing for Ezra precisely what has been done for Daniel, at first with great general scandal but now with almost universal acceptance: transposition of authorship to the Maccabean situation. His thesis is that in 1 Macc 9:54 Alcimus orders an inner Temple wall torn down in order to bring the populace closer to priestly functions; and though the opposition party prevailed ("he was struck by paralysis") the idea had worked itself out into general acceptance by the time of Herod's Temple (Garbini 1986: 227). In evaluating this thesis it would be well to put ourselves into the position of the scholarly and devout exegetes who were first confronted with the notion that Daniel reflects a Maccabean situation; and profit by their example in order to be more judicious and far-seeing in our reaction. In principle we admit the claim that around the vaguely known figure of Ezra (or Daniel, or Jonah, or Esther) were elaborated features intended to justify theologically the piety of a later date. Even Pfeiffer's discussion of Ezra (*IDB* 2: 215), pregnantly "assuming he is a historical figure," notes that in some lines of Jewish tradition his name is considered a variant of Malachi. Also, similarities between 2 Maccabees and 3 Esdras have been studied (Gardner 1986).

If Garbini had posed the question of whether his presumed Maccabean author was rather ornamenting the figure of an Ezra who genuinely existed in the 5th century, he would have noted that this is what almost every scholar admits "the Chronicler" or other compiler to have done. But then he should go on to explain more fully why such a procedure was more likely in the Maccabean period than in the momentous days of the return from Babylon. Instead, he weakens his case by going on to "prove too much," namely that his "Ezra exploits" are verified in the Damascus Rule-Zadokite Document 1:19 and the Qumran

Temple Scroll 35:10–14. We do not object to his claim that "3 Ezra" (the Greek Esdras A) is the earlier form of the story because it is the one which Josephus follows; but neither do we find in it Ezra traits notably different from the twenty we enumerated above.

The four points with which Williamson concludes (*Ezra and Nehemiah* OTG, 69–76) are well worth noting, not only because they do provide in their way a viable underpinning for a realistic portrayal of "the historical Ezra," but also because in their redimensioning of almost every similar project they show that even the "likelier" approaches are still open to further inquiry.

1. That Ezra was a high or stable official of the Persian court is unproved, even by Schaeder's (1930) use of arguments which only an Iranologist can evaluate; "scribe" was taken in subsequent tradition simply as "religious leader," and any civil authority "simply vanishes from view" (apparently toning down even the mild dissent of Williamson *Ezra, Nehemiah* WBC, 100 from North 1972).

2. Equally dubious is Koch's (1974) claim of a grandiose "second Moses" who came leading a "sacred Exodus procession" from Babylon to reform not only the Judeans but also the Samaritans.FEzra does not speak ill of the Samaritans as Nehemiah does (Cazelles 1982: 224), and our own sympathies still lie with those who claim that "Ezra's Pentateuch was accepted by the Samaritans" (Cazelles 1954). But this is at best a hypothesis; and it remains true that the Samaritans vilify Ezra, but also that Koch's claim of a "spectacular failure" by Ezra is unproved.

3. What was Ezra really sent from Babylon to do? Clearly he is shown as somehow "in charge" of the Jews who were returning with him from Babylon at that time, and he may well have carried some token gifts from the king. The extent to which he had a mandate to investigate and reform Jewish religious practice remains somewhat mysterious, despite alleged parallels in the Passover Papyrus and the Cyrus Cylinder (*ANET,* 316). Partly at issue is what role in quashing mixed marriages is really to be ascribed to Ezra. Even Ackroyd (1984) exaggerates his "community-building" powers.

4. Ezra's recorded activity lasted only twelve months and was headed toward a bad ending (when last heard of), even if he was not involved in a pre-Nehemiah wall-building such as Ezra 4:12 may perhaps suggest.

The difficulties which Williamson faces under these four heads, and Garbini's too, would largely vanish if we limit ourselves to "what the Bible really says"—not in a fundamentalist or maximalizing way, but considering how human speech actually functions. For one thing, human nature is prone to give any high-placed person a title higher than he really deserves, and to interpret even the titles which he rightfully possesses as implying powers beyond what they really convey. Even the grandiose chancery-language of Artaxerxes' decree (as fondly preserved in Jewish sources) could quite normally mean no more than that Ezra is legitimately at the head of a group of returning exiles intent on law-abidingness—and to that extent in a general way likely to support the existing overlordship, whether or not in relation to Mediterranean coastal uprisings. Ezra at any rate was certainly *not* "the signer of a Concordat" nor even "Persian Under-Secretary for Jewish Affairs."

A second normal functioning of human speech is the proneness of lofty dignitaries to have themselves recorded as saying to humble people, "Any time I can be of help to you, just call on me!" Even taking into account conformity with known Persian usages, what is said about "appointing magistrates to apply strong sanctions" and "drawing upon the king's treasury" (in view of their total nonimplementation in the biblical narrative, as also in the relevant Temple building of Ezra 1:4) may quite literally, i.e., realistically be interpreted merely as a rhetorical expression of the greatness and power of the speaker.

This granted, what remains is not negligible. "Ezra is a genuinely pious individual whose concern for the Law was based on his conviction that it was God's revelation for Israel's welfare" (Hoppe 1986: 285; also Dulin 1986). He had come to observe and to teach, and it is chiefly by these two activities that the Bible shows him as leader of the community. By studying the Law and by listening to what the local Judean community themselves felt ought to be done about their mixed-marriage problems, he understandably earned the gratitude of all subsequent Judaism. The aggrandizement to which this eventually led may be due to trends, already apparent in Sir 49:13, more separatist than Ezra himself would have approved.

ROBERT NORTH

EZRA, BOOK OF. See EZRA-NEHEMIAH, BOOKS OF.

EZRA, FOURTH BOOK OF. See ESDRAS, SECOND BOOK OF.

EZRA, GREEK APOCALYPSE OF. This work, known only in Greek, was first published in 1866 (von Tischendorf). Only two Greek manuscripts are known to date and both have been utilized in the most recent edition (Wahl 1977). Some emendations have been suggested (von Tischendorf 1866; Stone 1982: 17–18; Wahl 1977). The book has been translated twice into German (Riessler 1928; Müller 1976) and three times into English (Walker 1899; Stone *OTP* 1; Sparks and Shutt 1984). There seems to be no reason to doubt that *Greek Apocalypse of Ezra* was composed originally in Greek. It seems to have utilized the Greek version of *4 Ezra* (Violet 1910: l–lix), but that was in existence by the 2d century. It most likely originated sometime during the 1st millennium, as is evident from its literary affinities (see below).

Ezra fasts and prays for the mysteries of God to be revealed to him. In answer to his prayer he is taken to heaven where he intercedes for sinners. Ezra prays again, questioning the righteous of the world and the fate of the sinners, and is informed that Adam's sin was due to Satan. He then argues with God, pleading for mercy on behalf of the Christian people (chaps. 1–2).

Next Ezra petitions for a vision of the day of judgment. The signs of the end and the messianic woes are shown to him (2:26–3:7). He is then taken down to the depths of Tartarus where he sees various sinners being punished. A revelation of the signs of the Antichrist follows. Ezra sees further punishments and is taken to heaven (5:1–7).

At this point a new subject is introduced: the development of the human infant, which highlights Ezra's doubts about the creation of human beings (5:12–14). Miscellaneous revelations about the saints, cosmological matters, and judgment follow. The final part of the book deals with themes discussed in

other Ezra apocalypses: the seer's struggle with the angel for his own soul, God's solace given him in the face of death, and the narrative of his death and burial (chaps. 6–7).

The work is clearly composite, and a number of sources have been distinguished within it (Stone *OTP* 1: 562–63). The descent to Tartarus (4:4–21) is shared with *Vis. Ezra* and formed a common theme of many Byzantine apocalypses (Stone 1982: 6–8; Himmelfarb 1983). There are also three bodies of apocalyptic themes which seem to have been incorporated into the book from various sources: (a) The "hanging punishments" (4:22–25, 5:2–4 [?5–7], 8–11, 24:25 [26?]). This material is connected by theme with the preceding and in broader terms with the ongoing concern of the author for the fate of humans. It is also found in *Vis. Ezra* (Stone 1982: 9–10). (b) The description of the physiognomy of the Antichrist (4:25–43). The same description, dependent on a common source, is found in *Apocalypsis Ioannou* (von Tischendorf 1866: 47–48) and many similar passages occur in later apocalypses (Stone and Strugnell 1979: 27–39). (c) The description of Paradise (5:20–23). In particular, the material from source (a) has been broken up and interwoven with the descent to Tartarus.

It has been suggested that the materials dealing with the tour of hell in *Gk. Apoc. Ezra* and in *Vis. Ezra* "derive from a Christian tour of hell written relatively early in the development of the genre" (Himmelfarb 1983: 167). These two works, together with *Apoc. Sedr.*, have been regarded as independent developments of a common stock of material (Stone 1983: 569), though the independence of *Vis. Ezra* has been questioned (Himmelfarb 1983: 26). The *Ques. Ezra* is a more remote representative of the same material.

The relationship of *Gk. Apoc. Ezra* to *4 Ezra* is quite unmistakable (Sparks and Shutt 1984: 929). In addition to the list of parallels noted above, the very argumentative character of the seer in his discussion with God and the dialogic character of the book are both derived from *4 Ezra* (Stone *OTP* 1: 569; Himmelfarb 1983: 26).

This apocalypse is part of a much broader literature that developed around the figure of Ezra in the Byzantine period. It is particularly closely related to the Greek *Apoc. Sedr.* and the Latin *Vis. Ezra,* and more remotely to the Armenian *Ques. Ezra*. By comparing it with *4 Ezra* we can see something of its possible sources and discern which aspects of *4 Ezra* were of concern to the writers of later apocalypses. Moreover, the complexity of the literary relationships between the various Ezra apocalypses is paralleled in other corpora of writings from this period, such as the Adam Literature.

M. E. STONE

EZRA, QUESTIONS OF. The *Questions of Ezra* is preserved in two Armenian recensions. The first recension (A) was published by S. Yovsēp‘ianc‘ (1896: 300–3) and translated into English by J. Issaverdens (1900: 505–9). The text is drawn from a *Ritual*, Ms. 570 of the Mechitarist Library in Venice (1208 C.E.). No other copy is known. The second recension (B) occurs in the 4th recension of the Armenian *Menologium.* This text, based on the printed edition of 1730, with readings from a single further manuscript (Oxford Ms. Marsh 438 of the 17th cent.), was published by Stone (1977). Another copy of it had been printed by Dashian, but its relationship to *Ques. Ezra* had not been noted (Dashian 1895: 79–80, from Venice, Mechitarist Ms. 10 of the 16th cent.). Recent English translations of both recensions exist (Stone *OTP* 1: 591–99. The text might be improved by examination of further manuscripts.

Recension B is much shorter than A, but where the two overlap, B often preserves details not in A. There are two physical lacunae in the single manuscript of Recension A, following v 10 and v 40. Conversely, B contains nothing corresponding to vv 11–30 of Recension A.

Ques. Ezra opens with a discussion of the fate of the righteous and sinners. Ezra poses questions to the angel about the fate of the wicked and the lot of the soul after death. In Recension B, at this point, a discussion of the aim of creation and the intermediate residences of the wicked is introduced. In Recension A, a fascinating description of the seven steps up to the Divinity then occurs. The role of expiatory prayer in liberating souls from Satan's clutches is discussed, and finally, in Recension B alone, the resurrection and judgment are foretold.

Ques. Ezra should be viewed within the larger context of the apocryphal Ezra literature. This includes not just *4 Ezra* (= 2 Esdras), but works such as *Gk. Apoc. Ezra*, Vis. Ezra, and others. The oldest of these works is *4 Ezra*, which clearly has influenced, perhaps inspired, *Ques. Ezra*. The concern for the fate of the souls after death, the question-and-answer form, and the seven levels of the ascent of the soul are all features betraying its connection with *4 Ezra.* The concern for the fate of sinners after death is also prominent in *Gk. Apoc. Ezra*, Vis. Ezra, and *Apoc. Sedr.* The *Ques. Ezra*, however, is not as closely related to these three works as they are to one another.

Connections have been made between *Ques. Ezra* and other Armenian dialogic works which deal with the fate of the soul after death (Sarghissian 1898: 452–82). It is impossible, however, to know whether *Ques. Ezra* was written in Armenian originally or in another language, such as Greek.

The comparison of Recensions A and B indicates that there may have been two source documents. The first was a dialogue between the prophet and an angel about the fate of souls (A, vv 1–10; B, v 4 or its original; A, vv 11–15; B, v 6 or its original; A, vv 31–40; and B, vv 10–14 or its original). The second document (A, vv 16–30) dealt with the ascent of the souls. This section has rather distinctive views and is a pastiche of older sources.

M. E. STONE

EZRA, REVELATION OF. In a variety of languages of the Christian Orient and of Europe the name of Ezra is found associated with calendrical prognostications. The reason for the connection of such works with the person of Ezra remains unclear, but to some extent at least, his prophetic status, certified for the Middle Ages by *4 Ezra*, must have played a role in this (Stone 1982: 14–16).

The best known work of this type is the *Revelatio Esdrae*, which survives in several Latin manuscripts of the ninth century and later (Mercati 1901: 76). It prognosticates the weather of the seasons, the fertility of the flocks, and the abundance of the crops by the day of the week upon which the calends of January fall. Three versions of the Latin text were edited by Mercati (1901: 77–79), and further copies are known to exist. A modern English translation of the oldest of these has been published by Fiensy (*OTP* 1: 601–4).

The important article by Matter (1982) is replete with essential and thorough information about the Latin *Revelatio Esdrae.* The same text exists in Old French, Provençal, medieval Italian, German, and Czech (Matter 1982: 380–81). In English, the name of the author was later transformed into "Erra Pater" and under this title it saw many printings both in Britain and in North America (Matter 1982: 384–86).

In Greek, three versions are known. The first is a document, extant in two forms, communicating propitious and unpropitious days of the month (von Tischendorf 1866: xiii–xiv; Nau 1907: 14–15). The second resembles the Latin *Revelatio Esdrae* (Nau 1907: 15–16), and it, or some similar writing, is likely to be the ancestor of a Georgian version preserved in a manuscript of the year 949 C.E. (Tarchnišvili 1955:

355). The third Greek document lists the thirty days of the lunar month and the birth or death of assorted biblical personalities. It is variously attributed to Ezra, Aristotle, or said to have been found in a temple in Egypt (Nau 1907: 17–21).

Writings of like character, but with no particular association with Ezra, have been published in Syriac and Ethiopic as well (Grebaut 1913; Charlesworth *OTP* 1:473–80) and doubtless many similar works could be found in a variety of tongues.

EZRA, VISION OF. A pseudepigraphal book written in the name of Ezra. The work is entitled in most manuscripts *visio beati Esdrae,* "Vision of the Blessed Ezra." It opens with a petition by Ezra that he should not fear when seeing the judgment of the sinners (v 1). Ezra is then taken by seven angels to hell. He sees the just passing the fiery gates, which the sinners cannot transverse (vv 4–10) and asks for mercy on them (v 11; this theme is also prominent in *Gk. Apoc. Ezra* 1:15, 5:6). Ezra passes the gates and enters Tartarus, which is described in great detail (vv 12–55), far more than the corresponding passage in *Gk. Apoc. Ezra*. He then enters Paradise, led by Michael and Gabriel (v 56). The angels ask him to intercede with God for sinners (vv 60–62), but God replies that humans are justly recompensed (v 64). Ezra then poses a question about intercession that is not answered (v 66). All forms of the text but one conclude at this point. A fourth recension (see Bogaert 1984) contains additional material on the Antichrist (vv 71–80) and on Ezra's argument with the angel concerning the taking of his soul (vv 97–111).

The work survives only in Latin with manuscripts chiefly from the 11th–14th centuries. The text is found in four forms. (1) The shortest is Vatican lat. 3838. Mercati, who first published it, regarded it very highly (1901: 64) and his assessment was accepted by others (e.g., Mueller and Robins *OTP* 1: 582; Sparks and Shutt 1984: 944). (2) A longer form occurs in manuscript L (Linz, Bibliothek der Priesterseminars A I/6—the oldest manuscript, 10th–11th centuries). (3) A third form is found in the *Magnum Legendarium Austriacum* (12th century) and in other Austrian manuscripts. This form of the text was used in the 12th century Vision of Alberich of Setterfrati, one of Dante's sources (Dinzelbacher 1976; Wahl 1977, 22–23). This is also a long form, like L, containing five additional passages, one of which is argued to be later than the 6th century. Dinzelbacher compared these three text forms, and argued for the priority of the Vatican manuscript (1976: 437). (4) A major reassessment is demanded, however, by the publication of the text of Vat. Barberini lat. 2318 (14th–15th century) by Bogaert (1984). This text is most important because it has additional material parallel to *Gk. Apoc. Ezra* and *Apoc. Sedr.* This makes *Vis. Ezra* a fuller text, comparable to both *Gk. Apoc. Ezra* and *Apoc. Sedr*. Bogaert suggests that the Barberini manuscript preserves a somewhat corrupted copy of the oldest form of *Vis. Ezra*. All other text forms, lacking the long ending, are secondary; the best of these is ms L. All the remaining text forms, including the shortest Vatican manuscript, derive from this.

Vis. Ezra was apparently originally written in Greek. This has been argued from its close relationship with *Gk. Apoc. Ezra* and *Apoc. Sedr.*, as well as on linguistic grounds. The matter merits some further investigation. The date of the work is uncertain, except to say that it is older than its oldest manuscript, which is of the 10/11th century. Mercati argued that it predates its two sister apocalypses, since it is far less dependent than they on the other Christian apocalypses (1901: 66). It seems, however, that this conclusion must be reassessed in light of the new text form.

On the basis of the previously known texts, although the existence of a relationship with the *Gk. Apoc. Ezra* and *Apoc. Sedr.* is commonly accepted, the exact nature of that relationship has resisted definition.

For example, Mercati saw *Vis. Ezra* at one end of a chain of development, followed in turn by *Apoc. Sedr.* and *Gk. Apoc. Ezra* (1901: 67–68). Himmelfarb regarded it as later than those works (1983: 165). In his study of the new manuscript, Bogaert asserted that this matter will now have to be reexamined (1984). The same is clearly true of the relationship between *Vis. Ezra* and *4 Ezra.*

———

A. Name

The books of Ezra and Nehemiah were originally considered a single literary work called Ezra. Although this work was separated into two books by Origen (3d century C.E.) and Jerome (4th century C.E.), the division does not appear in Hebrew Bibles before the 15th century, and even in modern Hebrew Bibles the *masora finalis* occurs only at the end of the twenty-three chapters of Ezra-Nehemiah. In addition to the canonical book, the following writings carry the name of Ezra (Esdras):

1. 1 Esdras. A Greek translation of 2 Chronicles 35–36; Ezra 1–10, and Neh 8:1–13, plus a major addition that is located at 1 Esdr 3:1–5:6 and lacks a counterpart in the Hebrew Bible, dealing with three royal pages, among whom is Zerubbabel, who debated before Darius to determine what is the strongest thing in the world. Zerubbabel won the contest by defending his nomination of "truth." In 1 Esdras the equivalent for Ezra 4:7–24 (1 Esdr 2:15–25) is placed before the supplementary wisdom tale (1 Esdr 3:1–5:6) and before the translation of Ezra 2:1–70 (1 Esdr 5:7–45). The work is also known as 3 Esdras in the Vg, where it appears in an appendix to the NT. The title 1 Esdras is used in the Vg for the canonical Ezra.

2. 2 Esdras. The translation of the books of Ezra and Nehemiah in the LXX; a few Greek manuscripts distinguish between Ezra and Nehemiah and call the latter III Esdras. The term 2 Esdras is used in the Vg for the canonical Nehemiah.

3. 3 Esdras. The name for 1 Esdras in the Vg.

4. 4 Esdras. The name in the Vg for the work called 2 Esdras in English bibles. Chaps. 3–14 are a Jewish apocalyptic work from late in the 1st century of the common era. Chapters 1–2 and 15–16, both Christian additions, are sometimes identified as 2 and 5 Esdras in late Latin manuscripts. Modern scholars usually designate chaps. 1–2 as *5 Ezra*, chaps. 3–14 as *4 Ezra*, and chaps. 15–16 as *6 Ezra.*

B. Canonicity

Ezra and Nehemiah consistently appear in all canonical lists of Judaism and of Western Christianity, though they and 1 and 2 Chronicles are lacking in lists of the Syrian church. In the Hebrew canon they are considered part of the Writings. In the Palestinian tradition, followed by Spanish Hebrew Bibles and the Aleppo Codex (10th century C.E.), the Writings begin with Chronicles and end with Ezra-Nehemiah; in the Babylonian Talmud, followed by German and French Hebrew manuscripts and modern printed Hebrew Bibles, the Writings end with Ezra-Nehemiah and Chronicles (Clines *Ezra Nehemiah Esther* NCBC, 2–3).

C. Extent of the Original Work

A principal issue in research on Ezra and Nehemiah is whether the books were once part of a longer Chronicler's history, or whether they formed from the beginning an independent work. The question has not been finally resolved in recent studies (see CHRONICLES, BOOK OF 1–2). The following discussion is presented in terms of diverse authorship.

D. Date and Place of Authorship

Because Ezra and Nehemiah recount the rebuilding of the Temple and the work of Ezra and Nehemiah after their return to Judah, it is universally granted that the books were composed in Palestine.

The date for the present shape of the books must be later than the events they recount: the dedication of the Temple in 515 B.C.E., the return of Ezra in 458 B.C.E. (or 398 B.C.E.; see H.2), and the governorship of Nehemiah, 445–433 B.C.E., and his second visit to Jerusalem, no later than 424 B.C.E. How many years elapsed after these dates until the basic shape of the books evolved depends on the compositional theory presupposed. Among recent commentators, Williamson (*Ezra Nehemiah* WBC, xxxvi) dates the final form of the books to about 300; Clines (*Ezra Nehemiah Esther* NCBC, 13–14) puts it "within a few decades" of the time of Ezra and Nehemiah, or about 400 B.C.E. Japhet (1982: 89, n. 55), who notes that the last king mentioned (in 12:26) is Darius II (423–404) or Artaxerxes II (403–359), if Ezra came during his reign, and who believes that the last high priest mentioned, Jaddua, served under these Persian kings, assigns the book to the first quarter of the 4th century.

E. Text

The principal textual witnesses, in addition to MT, are both in Greek: 1 Esdras, a paraphrastic rendering of the Hebrew-Aramaic text, and 2 Esdras, the formally equivalent, or literal, translation of Ezra and

Nehemiah in the LXX. The Syriac translation of Ezra-Nehemiah was not originally a part of the Peshitta, and no Targum exists for these books (cf. also Daniel). Little has been preserved from the Old Latin or from Aquila, Symmachus, and Theodotion. 1 Esdras appears to be typologically older than 2 Esdras, and the Semitic text it presupposes is further removed from MT.

In almost seventy cases, a Hebrew or Aramaic expression omitted by 1 Esdras is also omitted by 2 Esdras (see CHRONICLES, BOOK OF 1–2), the Syriac, or, in 2 Chronicles 35 and 36, the corresponding text of the Deuteronomistic History. Nearly a score of conflations in MT can be detected on the basis of 1 Esdras. The use of double translations and hendiadys reveals an attempt to give a full representation of the Vorlage. Many other pluses in 1 Esdras result from bona fide Hebrew-Aramaic readings, some of which may be original readings and not expansions.

MT is mildly expansionistic. The text of 2 Esdras appears to have been edited incompletely toward the *kaige* recension (Klein 1966; on the term, see SEPTUAGINT, D.1.d).

F. Sources

1. Ezra 1–6. Williamson (1983) isolates the following sources that were available to the editor of Ezra 1–6: *1:2–4,* the decree of Cyrus; *1:9–11,* the inventory of Temple vessels; *2:1–3:1,* the list of those who returned from the Exile; *4:6, 7,* a Hebrew summary of two letters; *4:8–16,* a letter in Aramaic from Rehum to Artaxerxes; *4:17–22,* Artaxerxes' reply, in Aramaic; *5:6–17,* a letter from Tattenai to Darius, in Aramaic; *6:3–12,* Darius' reply, in Aramaic, including an Aramaic copy of the decree of Cyrus in vv 3–5.

The Hebrew copy of the decree of Cyrus (1:2–4) provides for the repatriation of the Jews in addition to the rebuilding of the Temple. Bickerman (1946: 253, 273–75) suggests that these verses are the Hebrew text of a herald's proclamation addressed to the Jews that was also designed to be posted in a public place. A number of scholars, however, argue that the narrator created the account of the decree in 1:2–4 on the basis of 6:3–5 (see Donner 1986: 409). The latter memorandum is almost universally held to be authentic today.

Williamson (*Ezra Nehemiah* WBC, 7) conjectures that the inventory of Temple vessels (1:9–11) was written in Aramaic.

There is no consensus on the original purpose of the list of returnees from the Exile (2:1–3:1). In its present context the list suggests that Zerubbabel replaced Sheshbazzar at an unspecified time. To Williamson (*Ezra Nehemiah* WBC, 31) it is a composite summary of a number of returns to Palestine during the reigns of Cyrus and Cambyses. Galling (1951) thought it was drafted to offer proof to the Samarian adversaries (Ezra 5:3, 10) that the Jews had sufficient resources to rebuild the Temple. Hölscher (*Ezra Nehemiah* HSAT, 503–4) understood it as a Persian tax list; Alt (1934: 25–26) interpreted the list as determining the land rights of returning exiles; Albright (1963: 87, 110–11) proposed that it was a census of Judah from the time of Nehemiah. Mowinckel (1964a: 98–99) also believed it was a list of inhabitants of the province of Judah from a little after the time of Nehemiah.

Also controverted is the original location of this pericope within Ezra-Nehemiah. Williamson (29–31) argues extensively that Ezra 2 was copied from Nehemiah 7; hence the editor of Ezra 1–6 already knew the combined account of Ezra and Nehemiah. Noth, Kellermann, and Mowinckel, on the other hand, argue that the list had its original position at Ezra 2 and that its repetition in Nehemiah 7 was made subsequent to the editorial work of the Chronicler.

The two notices at 4:6, 7 summarize letters from Jewish adversaries in the time of Xerxes (4:6) and Artaxerxes (4:7). According to Clines (NCBC, 77), the latter letter was positive in its attitude toward the Jews.

The principal dispute about the letters of Rehum (4:8–16) is whether only the letters themselves were available as sources (so Williamson 1983: 16–23), or whether the correspondence had been woven together into an Aramaic Chronicle prior to its editing by the biblical writer (so Clines, p. 8; Gunneweg 1981: 150). De Vaux (1971) argues convincingly that the edicts of Cyrus and Darius in 6:3–12 are authentic.

2. The Ezra Memoir. The account of the activities of Ezra (here, conventionally, called his Memoir; abbreviated EM) contains narratives in the first person (7:27–9:15), as well as in the third person (Ezra

7:1–26; Neh 8, 9:1–5 [partim]). While the first-person narrative probably comes from Ezra himself, it is unclear whether the third-person perspective results from the recasting of Ezra's account by an editor (who was the Chronicler, according to Clines, p. 6) or whether there was an independent third-person source. Koch (1974: 177–78) finds an analogy to the alternation of third-person (7:1–26) and first-person (7:27–9:15) narrative in Egyptian biographical inscriptions; he attributes the return to the third-person perspective in Ezra 10 and Nehemiah 8 to the Chronicler.

The narrative in Nehemiah 8, the canonical text of which makes Ezra and Nehemiah contemporaries, is thought to have dealt originally only with Ezra and to have had an original location between Ezra 8 and Ezra 9 or after Ezra 10 (see G. below). The materials lying behind Neh 9:1–5, though not the present text itself, also seem to have had a different original setting (between Ezra 10:15 and 10:16 according to Williamson; after Ezra 10 according to Rudolph [HAT]). Clines assigns all of Nehemiah 9 to the Ezra Memoir and places it and Nehemiah 8 right after Ezra 8.

Within the Ezra material the following documents can be distinguished:

7:12–26, the Firman of Artaxerxes, an Aramaic document giving the Persian king's commission to Ezra. According to In der Smitten and Kellermann, this is virtually the only authentic document dealing with Ezra; the rest of the Ezra materials are assigned by them to the Chronicler or to later redactors. In der Smitten (1973: 11–21) identifies 7:14 and 7:20–24 as secondary, but regards 8:1–14 as material older than the Chronicler. Kellermann (1968b: 56–59) identifies 8:26–27 as possibly coming from a source prior to the Chronicler.

8:1–14, the list of those who returned with Ezra.

10:8–43, the list of those who had been involved in mixed marriages.

3. The Nehemiah Memoir. This first-person, autobiographical narrative (here, conventionally, called his Memoir; abbreviated NM) recounts events in which the author was personally involved. Because the author appeals to God to remember him and hear his prayer (5:19; 13:14, 22, 29, 31; cf. 6:9, 14), it must be considered in its present form as addressed in some sense to God. A number of formal analogies in ancient literature have been proposed (surveyed by Clines, pp. 4–5), among which are royal inscriptions, narrating the king's deeds in the first person, followed by a wish for good fortune and remembrance (Mowinckel); votive inscriptions (Sellin); biographical tomb inscriptions (von Rad); documents submitted for the defense in a lawsuit at the royal court (W. Erbt); reports to the king to safeguard the author from possible recriminations by opponents (M. Haller); and legal appeals to God against one's enemies; prayer of the falsely accused (Kellermann).

Though one or more of these forms may have been employed by Nehemiah, none of the proposals is completely satisfactory. For criticisms of the first five see Kellermann (1967: 76–84) and for criticism of Kellermann see Emerton (1972: 171–85).

The exact places where the NM breaks off and editorial work begins is in some dispute, though rarely is this a major interpretive problem. NM originally included the following passages:

1:1–7:73a. Contested passages within this unit include 3:1–32. This list of those involved with rebuilding the wall of Jerusalem and the sections to which they were assigned is usually included in NM (Mowinckel 1964a: 109–16 forms an exception), although there is debate whether Nehemiah himself composed it. Clines speaks of the possibility that it is an editorial addition though he holds it "reasonable" to regard Nehemiah as the original author (NCBC, 149). Williamson (p. 200) argues that Nehemiah himself did not write this chapter because its chronological standpoint is after the completion of the walls, because the account is in the third person, and because of the use of "nobles" for local leaders and a reference to Nehemiah as "their lord," but he sides with Kellermann (1967: 14–17) and others in maintaining that Nehemiah included it in the original NM.

Also contested is 5:14–19 (cf. 13:4–14, 15–22, 23–31). Williamson (xxiv–xxviii) assigns this paragraph to a second edition of NM. See the discussion of 13:4–31 below. 7:5b–72a (—Eng 73a) is the list of those returning from the Exile. This document stems from the early years of the restoration period. Those who include it in NM (e.g., Clines, Williamson) argue that Nehemiah could have used it in his genealogical determination of who was to be translocated to Jerusalem. Kellermann (1967: 23–26) denies the list and

the transitional verses 7:72a (—Eng 73b)–8:1a to both NM and to the Chronicler, assigning them both to a later redactor. He believes the Chronicler himself included this material in Ezra 2:1–3:1a.

11:1–2. These verses report the completion of the repopulation of Jerusalem, initiated by Nehemiah in chap. 7, but they are not in the first person and do not even mention Nehemiah. Clines (p. 211) holds that NM must have contained such an account while admitting that the wording may not be that of Nehemiah. Kellermann and Williamson deny the verses to NM.

12:31–43. These verses recount the dedication of the wall. Williamson believes that some of these verses stem from an alternate account and that only vv 31–32, 37–40, and 43 were in NM.

13:4–31. This description of activities during Nehemiah's second stay in Jerusalem is assigned by Williamson to a second edition of NM (cf. 5:14–19 above). He notes that there is a gap of twelve years between the account of the wall building and the items mentioned in chap. 13 dealing with Nehemiah's second stay in Jerusalem. All but one of the "remember" formulas (5:19; see the first paragraph under F. 3) refer to the later period and specifically to items also mentioned in chap. 10, which is historically later than chap. 13. He proposes that the first edition, written in Aramaic and without the prayers of 1:4–11, 3:36–37(—Eng4:4–5), and 6:14, was a report on Nehemiah's work on the walls composed a year or two after his arrival in Jerusalem. In the second edition, Nehemiah claimed credit for certain activities for which he was not being given adequate credit in the community. The hypothesis of two editions is then used to explain the hybrid character of the document's genre. Kellermann (1967: 56) retains 13:4–31 in the NM though he identifies a number of late glosses (13:ab*b*, 6b, 7b*b*, 10b*b*, 22a, 23b, 24b, 29b*b*).

4. Other Sources. Williamson believes that there were a number of documents from the Temple archives that were favorable to the reforms of Nehemiah though they showed less allegiance than the NM to Nehemiah himself. These included, in addition to Neh 3:1–32 and 11:1–2 mentioned above, 10:1, 29–40(—Eng9:38, 10:28–39) (a pledge by the people to live in accord with the law of Moses and touching on many of the issues in the account of Nehemiah's reforms in Nehemiah 13; Clines would add to this source the list of those who signed the pledge, 10:2–28[—Eng10:1–27]); 11:4b–20 (a list of those who settled in Jerusalem); 12:27–43 (this account of the dedication of the walls is a mixture of the archival source and the NM); and 13:1–3 (a narrative of how the people themselves separated out from Israel all those who are of mixed descent; Talmon [*IDBSup,* 326–27] inserts this passage after Neh 9:1).

The materials in 11:21–36 (a list of the settlements of Judah and Benjamin not including Jerusalem) and 12:1–26 (lists of priests and Levites from various periods) were added at a very late time to Ezra-Nehemiah.

G. Composition of Ezra-Nehemiah

1. Ezra-Nehemiah as Distinct from 1 and 2 Chronicles. The composition of Ezra-Nehemiah consisted of the editing of previously available sources; the process may have taken place in two or more stages. Several recent proposals have been made. Williamson proposes that EM and NM were combined about the year 400 B.C.E into a work that juxtaposed the lives of the two great leaders of the restoration and brought their careers to a climax in Nehemiah 8–10. The editor began with Ezra 7–8, 9–10, part of which he recast from its original, first-person form. This editor was also responsible for moving Nehemiah 8 from its original position after Ezra 8 and Neh 9:1–5 from its original position between Ezra 10:15 and 10:16. In the latter case he recast and expanded 9:1–5 and added to it the prayer in vv 6–37 which was known to him from contemporary liturgical sources (WBC, xxxii). Neh 10:1, 29–40 was added from the Temple archives though the editor expanded it with a list of participants to show the participation of the whole community in the pledge. The editor concluded his presentation with 11:1–2, 4b–20, supplemented with 11:3–4a, a report of the repopulation of Jerusalem, drawn from the temple archives; 12:27–43, a description of the dedication of the walls made up of a combination of materials from NM and the Temple archives; 12:44–47, the editor's own composition dealing with tithes and offerings; 13:1–3, an archival record dealing with separation of the people from foreigners; and 13:4–31, which, together with 5:14–19, had been added to the NM in a second edition. A later hand added 11:21–12:36. Since the last high priest mentioned is Johanan, who served near the end of the 5th century (Jaddua

is dismissed as a later gloss), the materials from Ezra and Nehemiah would have been combined by about 400 B.C.E.

This document, basically Ezra 7:1–Neh 13:31, lay before the editor who put together Ezra 1–6. He worked with the sources identified above and his knowledge of other relevant biblical literature (especially Haggai and Zechariah 1–8) to show that the Jerusalem Temple of his day and its cult were the legitimate successors of preexilic Israel (the comparison of the Second with the First Temple in Ezra 3 is dependent on the books of Chronicles; see Williamson 1983: 26–29). Williamson sees the purpose of Ezra 1–6 as a polemic against the building of the first Samaritan temple on Mount Garizim.

2. Ezra-Nehemiah as Part of the Chronicler's History.

F. M. Cross (1975: 13–18) proposed a three-stage development: Chr 1, Chr 2, Chr 3.

Chr 1: [1 Chronicles 1–9], 1 Chronicles 10–2 Chronicles 34, 2 Chronicles 35–Ezra 3:13 (520–515 B.C.E.); thus without material about Ezra or Nehemiah. Originally Cross did not include most of the genealogies in 1 Chronicles 1–9 in Chr 1 (cf. McKenzie 1984: 30, n. 32).

Chr 2: [1 Chronicles 1–9], 1 Chronicles 10–2 Chronicles 34, 2 Chronicles 35:1–36:23; Ezra 1–Nehemiah 8 and the story of Zerubbabel's wisdom and piety now present only in 1 Esdr 3:1–5:6 (450 B.C.E.); thus including the Ezra tradition.

Chr 3: 1–2 Chronicles; Ezra-Nehemiah (400 B.C.E.); Nehemiah tradition added and other editing; wisdom tale about Zerubbabel dropped (1 Esdr 3:1–5:6).

Ulrich Kellermann (1967: 68) concentrated on the Ezra and Nehemiah materials, with little attention to Ezra 1–6. The only Ezra materials available for the Chronicler according to him were 7:12–23, 26, and possibly 8:26–27. The Chronicler supplied most of the rest of the Ezra materials in attempt to portray Ezra as parallel to and even superior to Nehemiah. The passages he assigns to the Ezra and Nehemiah sources, to the Chronicler, and to an even later redaction are laid out in table form in Kellermann (1968b: 56).

Clines (pp. 9–12) assumes that the Chronicler was the editor of Ezra and Nehemiah, although he acknowledges the divergent positions of Williamson and Japhet. He proposes that this editor transposed Nehemiah 8 and 9 from their original location in the EM, the most dramatic change from his sources, in order to emphasize that it was an obedient and repentant community that Nehemiah brought to inhabit Jerusalem (11:1). He believes that the Chronicler composed Neh 12:27–30, 44–47, and 13:1–3, but remains undecided on whether 11:1–3 and 11:13–19 were part of NM. Like Williamson, he assigns 11:20–36 and 12:1–26 to a very late redaction. Unlike Williamson, Clines does not propose an intermediate state in which EM and NM were combined prior to their inclusion in the books of Ezra and Nehemiah.

H. Historical Problems

1. Sheshbazzar and Zerubbabel. According to Ezra, Sheshbazzar was prince (1:8; Hebrew) and governor (5:14; Aramaic) of Judah. Appointed by Cyrus and entrusted with the return of the Temple vessels (1:7–11), he laid the foundation (that is, repaired the platform or podium?) of the Temple (5:14–16).

Zerubbabel, the son of Shealtiel (Ezra 3:2, 8; 5:2; Neh 12:1), on the other hand, replaced Sheshbazzar, perhaps early in the restoration period (Ezra 2:2), and it was during his tenure that the Temple was founded (Ezra 3:10–12; cf. 5:2).

These data are difficult to harmonize, and they also stand in tension with material outside Ezra-Nehemiah. Though Zerubbabel is also called the son of Shealtiel in Haggai (1:1, 12, 14; 2:2, 23), a genealogy in 1 Chr 3:17–24 makes him the son of Shealtiel's younger brother Pedaiah. Perhaps Pedaiah was his physical father and Shealtiel his legal father by Levirate marriage, but this genealogy in any case does make Zerubbabel a descendant of the Davidic line (cf. Hag 2:23; Zech 3:8). The silence about the royal ancestry of Zerubbabel in Ezra may reflect the book's anti-eschatological stance, which was receptive to Persian domination and which had no salvific hope tied to the house of David (Japhet 1982: 75–76). The Bible nowhere identifies the ancestry of Sheshbazzar, and recent studies (Berger 1971) have undermined the proposed identification of him with Shenazzar (1 Chr 3:18), a descendant of David.

Japhet (1982: 96) nevertheless argues for his Davidic origins and deems the silence about this in Ezra-Nehemiah ideological. She even holds that Sheshbazzar may have been a son of Jehoiachin.

Zerubbabel is called "governor" in Haggai (1:1, 14; 2:2, 21), but not in Ezra (but see 2:63 and 6:7; cf. Neh 7:65, 69[—Eng 701]). Albrecht Alt (1934) contended that the use of the "governor" for predecessors of Nehemiah (Neh 5:14–15) was inexact and that Judah was part of the province of Samaria until the coming of Nehemiah in the mid-5th century (cf. McEvenue 1981: 363; contra Smith 1971: 196). It seems difficult to deny, however, that Nehemiah referred to predecessors of his as provincial governors (Clines, 171; Williamson, 242–44; note the anonymous governor referred to in the 5th-century book of Malachi [1:8]). Avigad's attempt (1976: 35; cf. *IDBSup,* 327) to reconstruct a list of such governors of Judah from the 6th–5th centuries is unsuccessful because a number of the names in question are actually the names of potters rather than governors (Cross 1969: 24). It is unclear whether the Hebrew title "prince of Judah" given to Sheshbazzar (Ezra 1:8) is to be equated with the Aramaic term "governor" that is also applied to him (5:14; so Japhet 1982: 97–98) or whether the title "prince of Judah" is merely one of the New Exodus motifs incorporated into the account of the first return (so Williamson WBC, 17–18). In the final analysis, it is almost impossible to decide whether either title is used in the technical sense of a governor of a province of the Persian Empire as early as the time of Sheshbazzar and Zerubbabel. Almost all are agreed, of course, that Nehemiah was a governor in the strict sense of the term (for a refutation of the contrary opinion of Robert North, see Klein 1976: 365).

The exact date of the end of Sheshbazzar's tenure and of the beginning of Zerubbabel's is unclear from Ezra. Haggai and Zechariah seem to know of no work on the Temple before the time of Darius I (cf. Ezra 5:2), when the foundations of the Temple were laid (Hag 2:18–19; cf. Ezra 3:10–12). Williamson, who belives that Zerubbabel succeeded Sheshbazzar early in the restoration period, explains the reference to Sheshbazzar founding the Temple (Ezra 5:16) as an exaggeration by the Jews in their letter to the Persian court, designed to show that the decree of Cyrus had not been ignored. He also sees a chronological gap between the building of the altar in Ezra 3:1–6, shortly after the decree of Cyrus and under the leadership of Jeshua and Zerubbabel, and the laying of the foundations in 3:8–13, under the same leadership, in the time of Darius I (cf. 4:4–5; Zech 4:6–10). Halpern believes that Sheshbazzar laid the foundations of the Temple in 538 (he, too, concedes that the claim to uninterrupted activity from 538 on [Ezra 5:16] is hyperbole), and that the building of the altar (3:1–6) and the (renewed) laying of the foundations (3:7–13) were done 18 years later, under Darius I, by Zerubbabel and Jeshua. In his view, Sheshbazzar's preliminary work would have needed to be repeated at the later date. Others lessen the conflict between 3:10–12 and 5:16 by translating the references to the Temple's "foundation" in Ezra 3:10–12 as descriptions of the Temple's being "repaired" (Clines NCBC, 69; Ackroyd *CHJ* 1: 139).

2. Date of Ezra and Nehemiah. According to the present text of Ezra-Nehemiah, Ezra came to Jerusalem in 458 B.C.E. (Ezra 7:7–8, the 7th year of Artaxerxes) and Nehemiah in 445 B.C.E. (Neh 1:1; 2:1; 5:14, the 20th year of Artaxerxes). Nehemiah's first stay in Jerusalem lasted 12 years, to 433 B.C.E. (Neh 5:14; 13:6), with a second stay at an unknown time and of unknown duration (but before the end of Artaxerxes' reign in 424). In 445 Ezra read the law at a public ceremony at which Nehemiah was also present (v 9). All of these dates assume that the Artaxerxes to whose reign the chronology of both Ezra and Nehemiah is correlated is Artaxerxes I (465–424). In the case of Nehemiah the correlation seems confirmed by one of the Elephantine papyri (AP 30), which shows that by 407 B.C.E. the Samaritan governor Sanballat, Nehemiah's implacable foe, was an old man whose duties were being handled by his sons Delaiah and Shelemaiah. The papyrus also shows that the high priest in 407 was Johanan, presumably the second successor of Eliashib, the high priest at the time of Nehemiah.

The difficulty with this chronology is threefold (Clines, p. 16). With the exception of Neh 8:9 (the reading of the law) 12:26 (a note correlating Nehemiah and Ezra—in that order—with the high priest Joiakim), and 12:36 (the dedication of the walls), the two men are never mentioned together; they ignore one another completely. Since their powers and responsibilities are so similar, it seems unlikely that they would have played their respective roles in the Jewish community at the same time. Finally, Ezra, who came to implement and teach the law at the direction of Artaxerxes, did not hold the public law-reading

ceremony recounted in Nehemiah 8 until 13 years after his arrival, which seems like an excessively long delay. (For 15 arguments customarily advanced in favor of this traditional date, see Kellermann 1968b: 73–75).

Three alternate modern chronological understandings have attempted to meet these objections. The first (associated with the names of Ackroyd, Bowman, Emerton, Galling, Rowley, von Hoonacker, Widengren and others) understands the Artaxerxes of Ezra to be Artaxerxes II (404–358), with a consequent dating of Ezra to 398. (Kellermann [1968b: 67–71] provides a list of 22 arguments often advanced in favor of this date.) While this solution involves no emendations of the figures given in the Hebrew Bible, it deletes the references which present Ezra and Nehemiah as contemporaries (probably correctly), and assumes (probably incorrectly) that the author who combined the Ezra and Nehemiah materials reversed the historical sequence of the two men despite the fact that Nehemiah antedated Ezra by nearly 50 years. Bright (*BHI*, 399) argues against this chronology because it suggests that Ezra stayed in the room of Jehohanan, the son of Eliashib (Ezra 10:6) even though Johanan (Joannes) had murdered his brother Jesus before 398 according to Josephus. But Josephus' negative interpretation of this event may not be the whole story. Johanan may have killed his brother because he saw in him a would-be usurper (Emerton 1966: 12). In addition, the murder may have happened at a later date (Mowinckel 1964a: 161; Saley [1978: 156–58] dates this incident about 350–340, during the reign of Artaxerxes III!).

A second alternative chronology changes the date of Ezra's arrival to 428 B.C.E. by emending the text of Ezra 7:7–8 to the 37th, instead of the present 7th, year of Artaxerxes. (For a list of 11 positive arguments for this date, see Kellermann 1968b: 75–77). This view, popularized in the United States through the influential history of John Bright (*BHI*, 391–402), is based on a very questionable emendation (Emerton 1966: 18–19) and leaves unexplained why there is so little organic relationship between these contemporary leaders of the postexilic community.

A third alternative leaves the dates of Ezra at 458 and of Nehemiah at 445, but transfers Ezra's public reading of the law to the first year after his arrival in Jerusalem by placing Nehemiah 8 immediately after Ezra 8 (Williamson WBC, 286; Talmon *IDBSup*, 325 includes both Nehemiah 8 and 9 at this position) or immediately after Ezra 10 (cf. Mowinckel 1965: 7–11; Pohlmann 1970: 127–48; cf. 1 Esdras). An editor later moved Nehemiah 8 to its present position in order to create a liturgical sequence of Nehemiah 8, reading of the law; Nehemiah 9, public repentance, and Nehemiah 10, undertaking of a covenant pledge.

According to this reconstruction, Ezra began his journey from Babylon to Jerusalem on month 1, day 1 (Ezra 7:9) or month 1, day 12 (Ezra 8:31) of the 7th year of Artaxerxes (= 458 B.C.E.) and arrived in Jerusalem on month 5, day 1 of the same year (Ezra 7:8–9). If Nehemiah 8 belongs historically after Ezra 8, the public reading of the law took place on month 7, day 1 (Neh 8:2). The public assembly called to deal with the problem of mixed marriages came together on month 9, day 20 (Ezra 10:9) and the commission appointed to resolve this problem completed its work on month 1, day 1 of the 8th year of Artaxerxes (Ezra 10:17). Thus, the activities attributed to Ezra in the books of Ezra and Nehemiah were completed in a single year. It is possible that the return from exile and the attempted, but unsuccessful, rebuilding of the walls, during the reign of Artaxerxes I (Ezra 4:12), is an allusion to the work of Ezra.

Several objections have been raised to this interpretation (these objections and other less serious ones are discussed by Clines, pp. 17–20). According to Ezra 10:1, Ezra found many people in Jerusalem, but it was underpopulated in the time of Nehemiah (Neh 7:4; 11:1–2). We cannot be sure what caused the depletion of population at Nehemiah's time; perhaps there had been some kind of disaster in the intervening period.

A second objection notes that the reforms of Nehemiah (Nehemiah 13) would not have been necessary if Ezra had brought about popular acceptance of the law. But in the 25 years between Ezra's arrival and the end of Nehemiah's first stay in Jerusalem, there would have been ample time for abuses to develop. In addition, Nehemiah seems to be dealing with abuses against an already accepted way of life, thus actually presupposing that Ezra had implemented the requirements of the Torah in daily life.

The wall that Ezra finds in Ezra 9:9 would seem at first to demand a date for his career subsequent to the arrival of Nehemiah, but the term "wall" may be metaphorical (the RSV translates it as "protection")

and in any case the wall is not the city wall reconstructed by Nehemiah, but a wall "in Judea [!] and Jerusalem."

The most serious objection to this chronology involves the difficulty of correlating it to the sequence of contemporary high priests. According to Ezra 10:6, Ezra went to the chamber of Jehohanan the son of Eliashib. If this Jehohanan is the same as the high priest Johanan, grandson of Eliashib, then this incident would have to be dated later than Nehemiah, because Eliashib was clearly the high priest in Nehemiah's time (Neh 3:1, 20–21; 13:4, 7, 28). Three ways out of this difficulty have been pursued. First, Ezra 10:6 does not indicate that Jehohanan and Eliashib were high priests. The names are relatively common, and the relationship of Jehohanan to Eliashib (son-father) is different from that of Johanan to Eliashib in the high priestly line (grandson-grandfather; Neh 12:22, but see 12:23). Secondly, the name Jehohanan may not have been associated with this room until the time of the person who edited the Ezra and Nehemiah materials. It was this editor who called the name of the room according to its contemporary designation and thus reveals only that he lived after the time of Nehemiah, a chronological sequence which is sure in any case.

A third way out of this difficulty is to suppose that the line of high priests found in the books of Ezra and Nehemiah is defective. That line includes Jeshua (high priest at the time of the Temple building), Joiakim, Eliashib, Joiada, Jonathan (=?Johanan; cf. Neh 12:22; Williamson [p. 363] makes Jonathan a nephew of Johanan and his successor), and Jaddua (Neh 12:10–11).

Cross (1975: 10–11, 17), on the supposition that papponomy (the naming of a baby after his grandfather; see Sanballat II in the Samaria Papyri) was used within the high priestly line, conjectures that an Eliashib [I] and a Johanan [I] should be inserted before the Eliashib [II] listed in Neh 12:10 (cf. the list in *IDBSup,* 327). Thus Ezra would have functioned during the high priesthood of Johanan I, and it was to the latter's room that Ezra repaired in Ezra 10:6. The Eliashib who served as high priest during the governorship of Nehemiah must, therefore, be called Eliashib II. Critics of the Cross solution have pointed out that there is no necessary reason to conclude that papponomy was practiced at this point in the high priestly line, that the relationship between Joiakim and Eliashib I that Cross proposes (brothers) is contradicted in Neh 12:10–11, which makes Eliashib I the son of Joiakim, and that the chronological difficulties with the list of the high priests in Neh 12:10–11 and 22–23 are not as severe as Cross implies.

While the correlation between Ezra and the high priestly line remains the greatest difficulty in dating Ezra to 458, one or more of the three solutions above, dealing with the reference to the chamber of Jehohanan son of Eliashib, would still make it possible to retain the traditional early date for Ezra.

Either 458 or 398 is a possible date for the arrival of Ezra, but the former date seems more probable since it agrees with the seqence of Ezra and Nehemiah presupposed in the present text of Ezra 7–Nehemiah 13. Nehemiah's handling of mixed marriages also seems to presuppose the more general solution effected by Ezra and utilizes the type of hermeneutical approach Ezra employed in Ezra 9:1–2 (Williamson, p. xliii). Whichever date is selected, the text of Neh 8:9, suggesting that the men were contemporaries (cf. 12:26) is to be viewed as secondary calculation. It is not impossible, of course, that Ezra could have taken part in the procession at the dedication of the walls (12:36) as a private, if prominent, citizen.

Saley proposed (1978), with great caution, a unique chronology, placing Nehemiah into the time of Artaxerxes II. Like Cross he adds an additional Eliashib and Johanan to the line of high priests and identifies Nehemiah's high priest with Eliashib II. For him, contrary to Cross, this Eliashib served in the 4th century and the opponent of Nehemiah was Sanballat II, who appears elsewhere only in the Samaria Papyri. But the line of high priests he reconstructs would require a number of very long lives since Eliashib II (ca. 380) is only the fourth in succession after Jeshua (ca. 520). In addition, Nehemiah's enemy Sanballat is called the Horonite (2:10, 19), and this lack of a patronymic might suggest that he is the first in his line rather than the second. Nehemiah's other foe, Geshem, is also most easily dated to the 5th century (*IDBSup,* 320). Kellermann (1968b: 87) argues for a date about 448 for Ezra, but his position is weakened by his drastic reduction of material he considers authentic in the Ezra materials. See G.2 above.

3. Ezra's Book of the Law. Much attention has been focused on the "book of the law" of which Ezra was a scribe (Ezra 7:6, 12, 21). Artaxerxes sent Ezra to make inquiries on the basis of this law (Ezra 7:14) and to teach it to those who did not know it (Ezra 7:25). The Ezra story concludes with his festive reading from the law (Nehemiah 8). The Bible says nothing about Ezra writing or compiling this book, and the text seems to presuppose that it was already known before Ezra's arrival (cf. Ezra 7:25; but see Koch 1974: 182–83). Since the law is identified as the law of Moses in Ezra 7:6 and Neh 8:1; 13:1, the present text of Ezra-Nehemiah suggests that this law was the Pentateuch.

Numerous modern scholars have shared this opinion (e.g., Wellhausen, H. H. Schaeder, Galling, Mowinckel, and Albright). Others thought the law book of Ezra was only the priestly writing (A. Kuenen, H.-J. Kraus; Vink 1969: 63; for a discussion of the latter see Klein 1976: 367), a more or less undefined group of laws now included in the Pentateuch (e.g., Noth, von Rad, W. Rudolph), or some form of Deuteronomy (e.g., Bowman, Kellermann; the latter [1968a] believes that the P source was only a narrative and did not contain legal materials). Koch (1974: 181) finds no sure trace of D in Ezra's actions.

Most conclude that a law which proved so crucial in the restoration community would not be lost and therefore must be somewhere in the present canon. Texts like Ezra 9:2 seem to allude to Deuteronomy (7:1, 3; 23:3) while Neh 8:14–15 is best construed as an interpretation of Deut 16:15 and Lev 23:33–43. Hence a restriction of the law book to either D material alone or P material is unlikely. Since Ezra-Nehemiah is not explicit about the extent of this law book in any case, one's view of its identity may be colored by one's view of the composition history of the Pentateuch. If the Pentateuch was complete by the time of Ezra, there seems to be no reason to deny that his law book was the Pentateuch in its present form, or something very much like it.

Rendtorff (1984) distinguishes between the law (Heb *dat*), referred to in the Aramaic text of Ezra 7:12–26 and the Torah referred to in Ezra 7:6, 10; 10:3 and extensively in Nehemiah 8. In his view Ezra's law dealt only with legal issues and was given royal sanction in 7:12–26. The law of Nehemiah 8 was the Pentateuch, to be sure, but this narrative reflects only contemporary worship practices, especially the synagogal reading of Scripture, and has nothing to do with the commission of Ezra. He presupposes, therefore, that the law of Ezra has been lost and that the editor of the text (the Chronicler) misunderstood what this law was. Both of these presuppositions seem unlikely.

C. Houtman (1981) notices that there are discrepancies between the laws cited in Ezra (6:18) and Nehemiah (8:14–15; chap. 10; 13:1–3) and the text of the Pentateuch and concludes that Ezra had a law book with a character of its own which has not been transmitted to us. He points to the recently discovered Temple Scroll as an analogous collection. But the Temple Scroll's laws in the first person may not be an adequate analogy and the discrepancies between Ezra-Nehemiah and the Pentateuch may result either from an ancient, less precise manner of citation or from Ezra's interpretation of the ancient laws to meet the needs of his day (Williamson, pp. xxxviii–xxxix; summaries of the history of research in Donner 1986: 428–30; Houtman 1981; Kellermann 1968a; Klein 1976: 366–68).

I. Outline of Ezra-Nehemiah

I. Return from Exile and Rebuilding of the Temple (Ezra 1–6)
- A. Cyrus Grants Permission for Jews to Return and Rebuild Temple; Temple Vessels Entrusted to Sheshbazzar (Ezra 1)
- B. A List of Those Who Returned with Zerubbabel from the Captivity (Ezra 2)
- C. Jeshua and Zerubbabel Rebuild Altar in Seventh Month (Ezra 3:1–6)
- D. Foundation of Temple Laid in Second Year of Their Coming to the House of God (Ezra 3:7–13)
- E. Adversaries' Offer to Assist with Temple Refused (Ezra 4:1–3)
- F. Oppostion of People of the Land Prevented Building until Time of Darius (Ezra 4:4–5)
- G. Summary of Accusatory Letter in Time of Ahasuerus (Xerxes) (Ezra 4:6)
- H. Summary of Letter (Against the Jews) in Time of Artaxerxes (Ezra 4:7)
- I. Aramaic Narrative (Ezra 4:8–6:18)
  - 1. The Incident with Rehum and Shimshai (Ezra 4:8–4:24)
    - a. Introduction of Letter of Rehum and Shimshai to Artaxerxes (Ezra 4:8–10)

b. Letter to Artaxerxes Reporting Jewish Rebellion (Ezra 4:11–16)
c. Artaxerxes' Reply Forbidding Rebuilding of City (Ezra 4:17–22)
d. Rehum and Shimshai Make Jews Cease Their Building (Ezra 4:23)
e. Repetitive Resumption Linking to 4:5 (Ezra 4:24)

2. The Incident with Tattenai and Shetharbozenai (Ezra 5:1–6:15)
a. Inquiry about Rebuilding of Temple (Ezra 5:1–5)
b. Introduction of Letter to Darius (Ezra 5:6–7a)
c. Letter of Tattenai and Shetharbozenai to Darius (Ezra 5:7b–17), Including a Jewish Message in vv 11–16
d. Introduction to Reply by Darius (Ezra 6:1–2)
e. Reply by Darius (Ezra 6:3–12), Including a Quotation of Decree by Cyrus in vv 3–5
f. Work on Temple Completed (Ezra 6:13–15)
g. Dedication of Temple (Ezra 6:16–18)

J. Celebration of Passover in Response to Completion of Temple (Ezra 6:19–22)

II. The Initial Work of Ezra (Ezra 7–10)
A. Ezra Returns in Seventh Year of Artaxerxes—Narrative in Third Person (Ezra 7:1–10)
B. Introduction to Artaxerxes' Commission (Ezra 7:11)
C. Commissioning Letter (in Aramaic) (Ezra 7:12–26)
D. First Person Narrative about Ezra (Ezra 7:27–9:15)
1. Doxology (Ezra 7:27–28)
2. List of Those Who Returned with Ezra (Ezra 8:1–14)
3. Ezra's Trip to Jerusalem (Ezra 8:15–36)
4. Crisis Arises over Mixed Marriages (Ezra 9:1–5)
5. Ezra's Prayer (Ezra 9:6–15)
E. Third Person Narrative about Ezra (Ezra 10:1–44)
1. Covenant to Put Away Wives and Children; Assembly on Month 9, Day 20; Commission Appointed on Month 10, Day 1 to Handle the Task; Work Completed on Month 1, Day 1 (Ezra 10:1–17)
2. List of Those Who Put Away Foreign Wives and Children (Ezra 10:18–44)

III. Return of Nehemiah and Rebuilding of Walls of Jerusalem (Neh 1:1–7:72a [—Eng 7:73a])
A. Nehemiah Hears of Wall's Destruction; Offers Confessional Prayer (Nehemiah 1)
B. Artaxerxes Authorizes Nehemiah to Return and Rebuild Wall (Neh 2:1–10)
C. Nocturnal Inspection of Wall (Neh 2:11–15)
D. Nehemiah Invites Jews to Rebuild; Opposed by Sanballat, Tobiah, and Geshem (Neh 2:16–20)
E. List of Those Who Worked on the Wall (Nehemiah 3)
F. Ridicule by Sanballat and Tobiah; Imprecation by Nehemiah (Neh 3:33–37 [—Eng 4:1–5])
G. People Assigned to Work on Walls and to Guard Duty (Neh 3:38–4:17 [—Eng 4:6–23])
H. Socioeconomic Problems during Wall Building (Neh 5:1–13)
I. Nehemiah's Generosity; His Declination of Governor's Allowance (Neh 5:14–19)
J. Nehemiah Avoids Plots by Sanballat, Tobiah, and Geshem and by the prophets Shemaiah and Noadiah (Neh 6:1–14)
K. Completion of Wall in 52 Days (25th day of Elul); Further Conflict with Tobiah (Neh 6:15–19)
L. Nehemiah Makes Plans to Repopulate Jerusalem (Neh 7:1–5)
M. A List of Those Who Returned with Zerubbabel from Captivity (Neh 7:6–72a [—Eng 73a] = Ezra 2:1–70)

IV. The Climax of the Work of Ezra and Liturgical Responses (Neh 7:72b [—Eng 7:73b]–Neh 10:40 [—Eng 39])
A. Ezra Publicly Reads Law on Month 7, Day 1 (Neh 7:72b [—Eng 7:73b]–8:12)
B. Celebration of Feast of Booths (Neh 8:13–18)
C. National Mourning on Twenty-Fourth Day (Neh 9:1–5a)

D. Confessional Prayer (by Levites?) (Neh 9:5b–37)
E. A Pledge by the Community to Keep God's Law (Neh 10:1–40 [—Eng 9:38–10:39]; cf. Neh 13:10–31); List of Those Who Signed Pledge (Neh 10:2–28 [—Eng 10:1–27])

V. Further Acts of Nehemiah; Related Matters (Neh 11:1–13:31)
A. People Cast Lots to Increase Population of Jerusalem (Neh 11:1–2)
B. List of Residents in Jerusalem (Neh 11:3–24)
C. List of Other Dwelling Places (Neh 11:25–36)
D. List of Priests and Levites at time of Zerubbabel and Jeshua (Neh 12:1–9)
E. List of High Priests from Jeshua to Jaddua (Neh 12:10–11)
F. List of Priests and Levites from Time of Joiakim (Neh 12:12–26)
G. Dedication of Wall of Jerusalem (Neh 12:27–43)
H. Supervisors of Contributions Appointed (Neh 12:44–47)
I. Separation from Foreigners (Neh 13:1–3)
J. Reforms during Nehemiah's Second Term in Jerusalem (Neh 13:4–31)
1. Misuse of Temple Chambers (Neh 13:4–9)
2. Provisions for Levites (Neh 13:10–14; cf. 10:38–40 [—Eng 37–39])
3. The Sabbath Day (Neh 13:15–22; cf. Neh 10:32 [—Eng 10:31])
4. Intermarriage with Foreigners (Neh 13:23–30a; cf. 10:31 [—Eng 10:30])
5. Duties of Priests and Levites (Neh 13:30b)
6. Wood Offering and First Fruits (Neh 13:31; cf. 10:35–37 [—Eng 10:34–36])

J. The Message of Ezra-Nehemiah

In addition to the valuable historical data supplied in Ezra-Nehemiah, the canonical form of these books also conveys an important theological message, which may be summarized as follows (see also the accounts of the canonical form of Ezra-Nehemiah by Childs, Eskenazi, Gunneweg, Williamson):

1. Return from Exile and the Rebuilding of the Temple. At the beginning (1:1–3) and end (6:22) of this section, the text asserts that Yahweh had brought about both the return of the exiles to Judah and Jerusalem and the rebuilding of the Temple through the favorable actions of the Persian kings toward Israel. Cyrus' own decree permitted the rebuilding of the Temple and the restoration of its vessels (6:5), and Darius reinforced these privileges and added to them a curse against any who would attempt to countermand them (6:6–12). The Persian authorization to rebuild includes not only the work on the Temple, fostered by Cyrus and Darius, but also, because of the mention of Artaxerxes in 6:14, the rebuilding of the walls as well (the term "house of God" in Ezra-Nehemiah may include both the temple and the refortification of the city).

The book seems to foster a collaborative attitude toward the Persians, or at least a resignation to the status quo (perhaps an argument against the late date for these chapters advocated by Williamson), and this may explain the absence of any reference to the Davidic ancestry of Sheshbazzar and Zerubbabel, and the failure to refer to the governors of Judah except in materials drawn from the author's sources, both of which might lead to a more eschatological or revolutionary orientation (Japhet 1982). The work of Cyrus fulfills the prophecy of Jeremiah (1:1), and contemporary prophets like Haggai and Zechariah merely encourage the Temple building (Ezra 5:2; 6:14) without setting forth any additional eschatological promises.

The community in Jerusalem is made up of those who returned from the Exile (2:1–70) and who constitute the true Israel (note the 12 leaders mentioned in 2:2, with Nahamani restored from Neh 7:7 and 1 Esdras). In order to maintain continuity with the great preexilic traditions, the totality of the Temple vessels, captured by Nebuchadnezzar, is returned to Jerusalem through the agency of Sheshbazzar (1:7–11; 5:14–15; 6:5; cf. Ackroyd 1972: 178), and both altar (3:3) and Temple (6:7) are reerected on their former sites. The return from the Exile (1:6) and the rebuilding of the Temple (3:7–13) show similarities to accounts of the first Exodus and the construction of the First Temple respectively. The celebration of the Feast of Tabernacles after the completion of the altar (3:4–5) anticipates the joyful dedication of the Temple (6:16–18) and the equally joyful observation of the Passover a few months thereafter (6:19–22).

The reason for the delay in the completion of the Temple is not blamed on the people's concern for their own comforts (as in Hag 1:4), but on the actions of the enemies of Judah and Benjamin, the people of the land, who persistently opposed the work in Jerusalem and disheartened the people (3:3; 4:1–24) and who later enlisted Artaxerxes I in their efforts to stop the building of the walls (4:21–22). The laying of the foundation for the Temple was a time for rejoicing, but also a time for weeping when the foundation was compared with the First Temple by older members of the community. The great noise produced by these emotions (3:13) was heard by the adversaries, and it spurred them on to a deceptive offer to help with the Temple building. Their opposition in the days of Cyrus (3:1–6) had already prevented further work on the Temple until the time of Darius (3:7–13; see the summary notation in 4:4–5 and *IDBSup,* 322).

2. The Second Scene in Ezra-Nehemiah. This scene (Ezra 7–10) is formed by the initial activities of Ezra some 58 years later. Like Sheshbazzar and Zerubbabel, he, too, led a group of exiles home (8:1–14; 8:15–34). His lineage is traced back to Aaron, the high priest (7:1–5), and his own attitude toward the law parallels that of Moses (7:10). The authority of the law is underscored by the firman of Artaxerxes (7:12–26), which commanded Ezra to lead Jews to Jerusalem (7:13), deliver gifts offered by the Persian authorities and by the people to the Temple (7:15–18), make inquiry about conformity to the law in Judah and Jerusalem (7:14; 10:16–17), and appoint magistrates and judges to teach the law (7:25; cf. Nehemiah 8). Blenkinsopp finds an analogy to the mission of Ezra in the work of a contemporary Egyptian scribe and priest, Udjahorresne.

After the leaders reported their concern about the problem of mixed marriages (9:1–5), the prayer of Ezra in 9:6–15 made clear that the community was not yet the complete embodiment of Yahweh's will since it was still under bondage to Persian power. Still, Yahweh's love for the community precisely in these circumstances was considered as a sign of his favor and evidence for hope of a little reviving (Ezra 9:8–9). Ezra articulated the people's confession of sin because of their intermarriage with foreigners (9:10–15), a fault deemed doubly shameful because they had sought a link with the surrounding powers from which every generation of the restoration community had experienced hostility. Ezra's prayer and confession were accompanied by public weeping (10:1) and fasting (10:6).

The people echoed Ezra's confession of sin and resolved to correct it (10:1–5), gathered in a mass assembly during inclement weather to express their contribution publicly (10:6–12), and requested the creation of a special commission to carry out the removal of the foreign wives and their children (10:13–17). Within a year of Ezra's departure from Babylon (cf. 7:9 with 10:17), a purified community was created in Jerusalem. (This was in addition to the earlier reestablishment of sacrificial worship and the completion of the Temple, which are the themes of Ezra 1–6).

3. Nehemiah and the Rebuilding of the Walls. Nehemiah, too, led exiles home (cf. Sheshbazzar, Zerubbabel, and Ezra). Opposition from Sanballat and his allies was met by Nehemiah's defensive maneuvers (Neh 4:15–17 [—Eng 4:21–23]). He saw through the opponents' plots and their false charges about his desire for the office of king (6:1–14); he prayed for deliverance from them and placed an imprecation upon them (3:36–37 [—Eng 4:4–5]). The nations lost self-esteem when they perceived that the completion of the wall was the work of God (Neh 6:16). Nehemiah's work, then, authorized by Persian authorities (2:6–8; cf. Cyrus and Darius in Ezra 1–6 and Artaxerxes in Ezra 7–10) was ultimately successful: the purified community (Ezra 7–10) completed the building of walls (Neh 6:15) around the holy city (Ezra 1–6). Nehemiah himself corrected abuses in the making of loans and charging of interest (Neh 5:1–13) and generously provided for others at his table with no help from taxes enjoyed by former governors (5:14–19).

After the threefold restoration of the community and city reported in Ezra 1–6, 7–10, and Nehemiah 1–6, Nehemiah decided to remedy the lack of population in the city and resolved to select people for relocation there whose genealogy could be correlated with the list of those who returned at the first with Zerubbabel (7:5, 6–72a [—Eng 73a]), again identifying those who had returned from the Exile as the true Israel.

4. Climax of the Work of Ezra and Nehemiah. Before the actual repopulation of Jerusalem the people unanimously requested Ezra to read them the law (Neh 8:1). Instructed by the Levites, and urged on by

them and by Nehemiah and Ezra, the people heard the law with both joy and weeping. Ezra reassured them that the joy of the Lord offers protection against the judgments proclaimed by the law against transgressors (Neh 8:10; Williamson WBC, 292).

The people resolved to study the law (Neh 8:13) just as Ezra had done (Ezra 7:10). On the basis of this study, they held a unique celebration of the Feast of Tabernacles (the booths signified the wilderness wandering and not just harvest booths), unparalleled since the days of Joshua (Neh 8:17). (According to 2 Chronicles, the Passover at the time of Hezekiah was the first of its type since Solomon (30:26) while the Passover at the time of Josiah was without parallel since the days of Samuel [35:18].) The celebration at the time of Ezra also recalls the Tabernacles celebration at the erection of the altar (Ezra 3:4), and the dedication celebration (Ezra 6:16–18) and Passover (Ezra 6:19–22) observed at the completion of the Temple.

According to the present arrangement of the materials, the people next separated themselves from foreigners and confessed their sins and those of their parents (Neh 9:2–3). A speech by the Levites (Neh 9:6; LXX Ezra) rehearses the sinfulness of Israel in the days of the wilderness wandering (9:16–18), during the stay in the land (9:26–30), and including the present generation (9:33) despite Yahweh's repeated benefactions in creation (9:6), in the time of Abraham (9:7–8), in the Exodus from Egypt and the giving of the law on Sinai (9:9–14), in providing food, water, and guidance in the wilderness (9:15, 19–21), in the gift of the land (9:22–25), and in providing rescue and patient warning through the prophets in the land (9:27–30). Even the defeats at the time of the Exile did not bring Yahweh's mercies to an end (9:31).

The confession concludes with an acknowledgment that the present international situation, accepted elsewhere with equanimity in Ezra-Nehemiah, leaves the community in a less than perfect situation: "We are slaves this day … and we are in great distress [9:36–37; cf. Ezra 9:8–9]. It appeals to God not to take this hardship lightly [9:32]."

In chap. 10 of Nehemiah, the community, then, enters into a covenant to walk in God's law and to do all his commandments (10:29 [—Eng 10:28]; cf. Ezra 7:10). The community obligates itself to correct practices in areas that later in the book will require Nehemiah's direct actions: mixed marriages, the Sabbath, the wood offering, firstfruits, Levitical tithes, and proper care of the Temple.

Nehemiah 8–10, therefore, sets forth an ideal picture of the community. Made joyful by the reading of the law, after an initial reaction of grief, they celebrated Tabernacles, confessed their previous sins and God's constant deliverance—and their less than perfect current status. The appropriate sequel to reading the law and offering a confession was a community-wide commitment to keep the prescriptions of the law. McCarthy (1982: 35) saw the emphasis on law as an important factor in giving the covenant renewal rites of Ezra-Nehemiah their different cast from those in the books of Chronicles.

5. Final Acts of Nehemiah. The perfected community decided to relocate one of every ten persons from the local towns to Jerusalem, thus carrying out what Nehemiah had begun in Neh 7:1–5. Subsequent lists identify those who lived in Jerusalem (11:3–24) and in the villages (11:25–36) and provide the names of priests, Levites, and high priests at various times of the restoration period (12:1–26). With the city fully repopulated, the author provides an account of the dedication of the city's wall, featuring a double procession in which both Ezra and Nehemiah play a role. The joy at the dedication (12:43) echoes the joy at the reading of the law (Neh 8:12, 17), at the beginning of the rebuilding of the Temple (Ezra 3:12–13), and at its dedication (Ezra 6:16). As at the commencement of the Temple building (Ezra 3:13), the joy at the dedication of the wall was heard at a great distance (Neh 12:43).

After the appointment of supervisors of contributions, following the command and example of David (Neh 12:44–47), and a decision to separate from all foreigners (13:1–3), the rest of the book consists of specific corrections of abuses during Nehemiah's second stay in Jerusalem. He removed the Ammonite Tobiah from a chamber in the Temple (Neh 13:4–9), restored the portions due to the Levites (Neh 13:10–14), reinstituted proper observance of the Sabbath (Neh 13:15–22), remonstrated with those who had married foreign women and whose children could not speak Hebrew (Neh 13:23–27), chased away the son of the high priest who had married the daughter of Nehemiah's arch-rival Sanballat (Neh 13:28–29),

cleansed the community from foreign contamination and established priests and Levites in their duties (Neh 13:30), and provided for the wood offering and firstfruits (Neh 13:31). These reforms are precisely in those areas where the community had undertaken covenantal obligations according to Nehemiah 10.

The line "Remember me, O my God, for good" (Neh 13:31) and similar expressions in Neh 13:14, 22, and 29, whatever their function in the Nehemiah Memoir, call attention in the canonical context to the virtue of Nehemiah, wall-builder and reformer of the community. At the same time, Nehemiah 13 reminds the reader that even the best intentions of the perfect community under ideal leadership (see the ceremonies in Nehemiah 8–10) can fail and the people can lapse into sin. While the people confessed in chap. 9 that God's saving goal for them had not yet been achieved, the final chapter of Nehemiah concedes that the behavior of the restored community, too, is never fully perfected and often in need of reform. The real circumstances in which people live—still under Persian rulership and in imperfection—set limits to the salvation that God gives in fulfilment of his promises. The author leaves unresolved the relationship between the present and the future in the divine plan of salvation (cf. Gunneweg 1981: 161).

EZRAHITE [Heb *ʾezrāḥî* (אֶזְרָחִי)]. Clan or family name of Ethan and Heman, wise men in ancient Israelite literature (1 Kgs 5:11—Eng4:31; Pss 88:1; 89:1). It has also been suggested that "Ezrahites" could be another form of the "sons of Zerah" found in 1 Chr 2:6.

W. F. Albright has proposed that the term "Ezrahite" means "native," that is, Canaanite (*ARI,* 210). In this case, Ethan and Heman would be two pre-Israelite figures renowned for their great wisdom. The writer of Kings incorporates these men as symbols of great wisdom and states that Solomon's wisdom was greater than even these sages from the past.
PHILLIP E. MCMILLION

EZRI (PERSON) [Heb *ʿezrî* (עֶזְרִי)]. A state official and the son of Chelub. He was one of twelve stewards of royal property appointed by David, and is named in a list of administrative officials (1 Chr 27: 25–31). His specific charge was to oversee the workers in the royal fields (1 Chr 27:26).

FABLE. See FOLKLORE IN THE ANCIENT NEAR EAST.

FACE. The Hebrew *pānîm* is the primary OT word for "face." In its various forms, the word *pānîm* occurs over 2100 times. In Hebrew the word *pānîm* occurs only as a plural, unlike the cognate form in Akkadian, *panū,* which occurs both as a singular and as a plural. The plural is often explained as the plurality of features that make up the face. Like the English word "face," the Hebrew root has both a common noun and a less frequently occurring denominative verb, "to face, turn," *pānāh.* The word *pānîm* can refer to the face of a human, God, an animal, and inaminate objects such as the earth and waters.

Although other Hebrew words are occasionally translated as "face," no other word expresses the range of emotions that could be indicated by *pānîm.* The word *ʿayin,* literally "eye," is translated five times in the RSV as "face." Four times the phrase used is "cover the face *(ʿayin)* of the earth," and once it is the phrase "face to face" *(ʿayin bʿayin).* The word *ʾap,* literally "nose," is translated "face" at least 15 times in RSV. In 14 of these cases, the expression speaks of falling upon the face *(ʾap)* or bowing the face. The one other occurrence of *ʾap* translated as "face" speaks of the sweat of the face.

Pānîm is the most common word in the OT for "presence" in a broader sense than just "face." Thus *pānîm* was used in reference to entering or leaving the presence of a king or a superior, or of being in Yahweh's presence. The technical term *lipnê YHWH,* literally, "before or to Yahweh," occurs 225 times in the OT and regularly refers to cultic activity in Yahweh's presence. In a number of uses, *pānîm* becomes synonymous with the person. Thus references to "the angel of his (Yahweh's) presence" and to "the bread of the presence," and even a statement as "My (Yahweh's) presence will go with you, and I will give you rest" refer respectively to Yahweh's own angel, his own personal bread, and his own presence.

As indicated above, the face expressed a full range of emotions to the Hebrews. Thus anger, especially from a feeling of being rejected, was indicated by a fallen face or countenance. A closely related phrase, "to fall on one's face," was a sign of obeisance or homage. The opposite of the fallen face is having one's face lifted or raised. This probably has its origin in the literal lifting the face of one who has fallen on his face. The meaning is acceptance or approval and often implies the granting of a request. When Yahweh lifted his face upon one, it was a sign of blessing.

"To see the face of a king" indicated having an audience or entering his presence directly, and not being permitted to see his face indicated the absence of such an audience. In one unusual phrase the same verb, *rāʾāh,* occurs in a *Hitpaʿel,* with *pānîm* meaning "to look at one another in the face" in the sense of doing battle. Probably in a related usage, the Mesha stela speaks of Chemosh causing Mesha "to see over" all his enemies—giving Mesha victory.

It seems obvious that "seeing Yahweh's face" had much the same meaning, of entering Yahweh's presence directly. However, Hebrew theology had definite problems with the worshiper literally seeing God. Yahweh was not physically visible in the sanctuary, nor even in theophany. In the form the OT text is preserved, it is aniconic—the Hebrews had no images of Yahweh in their sanctuaries. Further, Exod 33:20 clearly states that man cannot see Yahweh or Yahweh's face and live, thus the smoke and cloud of the theophany hid God. Even the *kāb̃d-glory* does not represent the fullness of God and God's presence. It shields the individual from Yahweh's unmediated presence. Deuteronomic theology spoke less of Yahweh or his presence being in the sanctuary, but instead stated that the sanctuary was the place Yahweh caused his name to dwell. Only occasionally does the OT speak of one seeing God's face or seeing God face to face. The more common phrase is the passive *(Nipʿal)* form of "to see" with *pānîm,* literally, "to appear (be seen) before the [face of] Yahweh," a technical term for visiting a sanctuary.

Other phrases that relate closely to an audience with an important person include "seeking the face of" and "entreating the favor of." Both of these phrases are used frequently in reference to Yahweh. Seeking

the face of Yahweh may originally have referred to divination or seeking an oracle. "To entreat the favor of Yahweh" literally meant "to make sweet or appease [the face of] Yahweh." Its meaning is more generally that of seeking favor, as is evident from one occurrence in reference to a man.

When the king, or God, with whom one has an audience recognizes the person, he turns his face toward the person. This is a way of expressing the king's attention and usually his positive response. Turning away the face, or turning the back and not the face, is a lack or attention and response; it is normally a sign of rejection. Hiding the face normally has a similar meaning. When, however, Yahweh hides his face from one's sins, it is a gracious act. Also, one response of mankind to the presence of God is to hide the face, usually out of fear. Strong determination was shown by the phrase "to set the face" or "to set one's face like flint." When Yahweh set his face on one it was usually set against one in judgment.

The face could be either cheerful or sad, or even tearful. The light of one's face represented a bright, beaming, or cheerful face and therefore one's favor. A shining face speaks of a cheerful or joyful person. Thus when Yahweh caused his face to shine on someone or gave the light of his face, it represented Yahweh's joy and, therefore, his blessing.

FAIENCE. See JEWELRY, ANCIENT ISRAELITE.

FAIR HAVENS (PLACE) [Gk *Kaloi Limenes* (Καλοι Λιμενες)]. Harbor located along the S coast of Crete near the town of Lasea (Acts 27:8). The harbor (Leekley and Noyes 1975: 91–92) is now identified with a bay E of Cape Littinos. The biblical name means "fair harbor." The ship carrying Paul, during his voyage to Italy, anchored at Fair Havens and supplies were probably obtained from the nearby Lasea, located about five miles to the E (Acts 27:8). The captain of the ship decided not to winter here, despite Paul's warnings, and sailed on to the W into a storm which wrecked the ship (see Smith 1880: 251, 259).

Captain T. A. B. Spratt (1865: 1–6) in 1853 led a Mediterranean survey team to this area and located a church dedicated to Paul on a hill overlooking the bay. This naval officer determined that the harbor would have been unsafe in the winter because of strong winds from the E and SE. Perhaps this is what prompted the captain of Paul's ship to leave the harbor. See Foakes Jackson and Lake 1932: 338.

FAITH. This entry consists of three articles. The first expounds upon the concept of faith as it is expressed in the Old Testament. The second treats the concept in the Hellenistic period, focusing especially on the New Testament. The third article discusses the peculiar NT expression *pistis Christou,* which is often rendered "faith *in* Christ" but may mean "faith *of* Christ."

_____

A. Introduction

Faith is a peculiarly Christian concept. While other religious traditions have aspects of what the churches have come to name "faith," none has the specific quality of intellectual assent that distinguishes faith from fidelity. The problem of faith and the central discussion of it arises in the context of the medieval attempts to codify and integrate the Christian experience into the emerging philosophical language of the scholastics. From these attempts there arose a uniquely Western view of faith which finds exquisite expression in the *Summa Theologica* of St. Thomas Aquinas. "Faith is the act of the intellect when it assents to divine truth under the influence of the will moved by God through grace" (*Summa Theologica* II.II.q2.a.9).

But such a view intellectualized the experience of God and appeared to reduce this inexpressible encounter to a sort of syllogism. In the period of the Reformation it was precisely to this point that Luther and the early reformers came seeking new ways to express it. Luther, of course, appealed to a biblical idea of faith, distinguishing it sharply from this scholastic model.

While there was rich territory to mine in the writings of St. Paul and, indeed, in the Gospels themselves, the notion of faith in the Hebrew Bible was not so clearly articulated as to allow the fullest development of the reformed theology.

The Hebrew Bible, in fact, does not really have a word for faith. The New Testament term which is used to express the idea is *pistis,* which occurs frequently. *Pistis* does translate, or at least approximate, the sense of faith as assent. But *pistis* does not express very well the variety of meanings encompassed in the Hebrew Bible's terminology. The Hebrew terms are much more elastic.

B. Terminology

The Hebrew Bible uses the root *ʾmn* to express what we are calling "faith." The verb *ʾamān* occurs in the *Qal, Niphʿal,* and *Hiphʿil* forms. In the *Qal* form it never means "believe" but expresses the basic sense of the root "to sustain, support, carry" (2 Kgs 18:16).

The root occurs in the *Niphʿal* form referring to daughters carried at their mothers' sides (Isa 60:4): it refers to firm places (Isa 22:23); permanent posts in the royal service (1 Sam 2:35; 1 Kgs 11:38); to the people of Israel in perpetuity (Isa 7:9); to a variety of notions all of which have the sense of firmness, stability, confidence (1 Sam 2:35; 3:20; Deut 7:9, 12; Isa 49:7; Jer 42:5; 1 Kgs 8:26; Pss 89:29, 111:7; Neh 9:8).

The root occurs in the *Hiphʿil, heʾemîn,* a significant number of times (52) in the Hebrew Bible. The *Hiphʿil* form often occurs with the prepositions *b* and *l,* and in several instances with subordinate clauses introduced by *kî* (Exod 4:5, 31; Isa 43:10; Job 9:15; Lam 4:12). It is also used in the absolute, without an object. The general sense of the word in the *Hiphʿil* is "to be firmly set in/on something." With the preposition *b* it means to have confidence (1 Sam 29:12), and with the preposition *l* it seems to mean "to hold something to be true," "to believe" (Gen 45:26). Three significant passages occur with the *Hiphʿil.* The first is Gen 15:6, "And [Abraham] believed in Yahweh and He counted it as righteousness in him." Further in Exod 3:1–22, the narrative has a dialogue between Moses and God where Moses noted that if he were sent even at God's command the people would not believe him. Again in Exod 4:28–31 the people are said to "believe" or "not to believe." Another instance of the word coming close to the idea of "belief in" something is in Isa 7:9, the oracle of Isaiah to Ahaz: "If you do not believe you will not endure." In the latter the two nuances (to believe and to be firm) of the meaning are nicely expressed.

In these instances the sense of *trusting* and having confidence is most noticeable. In Isa 43:10–12 the *Hiphʿil* occurs in a context that would readily lend itself to the understanding of faith as "assent." "You are my witness, says the Lord, and my servant whom I have chosen, that you may know and believe in me and understand who I am." Here the intellectual quality seems clear: knowing and believing. A distinction is made in some authors (Pfeiffer 1959: 155) between "profane" and "religious" use of the term "believe."

For example, Gen 45:26, where Jacob refuses to believe the report of his sons that Joseph was indeed alive and in Egypt, would be a "profane" use. But "faith" in the primary sense (that it has in the communities of faith) is faith in God, "not only in his *ʾemet* but all his characteristics and attributes (truth, constancy, goodness, love, justice, holiness, his claims on humanity), in a word, everything that makes God God" (Pfeiffer 1959: 157).

The root also occurs in the nominal forms *ʾemet* and *ʾemunâ,* both meaning "steadfastness," "reliability," and the like, and both are also used for the concept "truth." The word *ʾemet* is translated in the LXX by *pistis, aletheia,* and *dikaiosune,* "because in the biblical context truth is grounded upon the divine faithfulness and the covenant relationship which sets it up" (Torrance 1956: 112).

This brief overview of the etymological situation is intended simply to point out the variety of meanings which are attached in Hebrew to the root *ʾmn.* Even the Greek *pistis* which generally translates the verbal forms is said to be nuanced in its use. One author even goes so far as to say that it "is never used to signify faith in the LXX but always translates the sense of faithfulness" (Torrance 1956: 111).

The classic statement of this remains Martin Buber's *Two Types of Faith* (1951). Buber argues that the differences between the Christian and Jewish religious experience lies primarily in the distinction between *pistis* and *ʾemunâ,* believing in something and fidelity. Buber, of course, approached the question from an existentialist point of view. He was especially concerned with the "objectification" of God in the Christian act of faith.

This distinction can also very clearly be found in the examination of the Hebrew Bible and the models of faith which are present there. The central texts are Gen 15:6 and Hab 2:4. But these two texts need to be seen in the context of the description of faith in the Hebrew Bible.

C. Biblical Descriptions of Faith

Faith is described rather than defined in the Hebrew Bible. The description tends to be used in two ways, one where the relationship of Israel to Yahweh is described and the other where the relationship of certain key figures to Yahweh is described. Two models are clear, Abraham and David. One could certainly add others (Jacob, Joseph, Moses, Ruth, Deborah, etc.), but in a sense Abraham and David are paradigmatic for an understanding of faith. The common characteristics of the two are their unswerving loyalty to Yahweh even in the face of what appear to be insurmountable obstacles, and second is the purely gratuitous character of their chosenness.

1. Abraham. In a way Abraham best exemplifies the notion of faith in the religion of ancient Israel. Perhaps that is the key role from a purely theological point of view that Abraham plays. The faith story of Abraham is clearly a conflation of varied traditions and so the role of Abraham is not to be seen as some well-delineated historical chronicle. Rather Abraham, Jacob, and Joseph (Isaac plays a very slight part in the history) found and articulate the notion of "relationship" which is at the root of the Yahweh-Israel connection. The stories about them are told almost as "afterthoughts" to this primary notion. They come from the classic traditions, traditions amalgamated over time and first clearly documented in the Davidic-Solomonic monarchy (*CMHE*, 294–95).

Von Rad argues that the oldest statement of faith in the Hebrew Bible is found in Deut 26:5, the "wandering Aramean" story. In that statement he notes: "the events in the saving history up to the conquest were still very simply enumerated as facts in chronological sequence, without any special theological connection being brought out between the patriarchal era and that which followed or between the individual facts themselves generally" (*ROTT* 1: 170). He further argued that the story of the patriarchs was to be seen as a history of "promise and fulfillment" (ibid.). The absence of tradition, cult, priesthood, and calendars, the utter simplicity and unquestioning character of the narrative, he thought, all indicated a developed and conscious theological view, rather than evidence of "primitive religion" in early Israel.

If one examines the story of Abraham from Genesis 12–15 it is most striking that the whole emphasis is on the notion of testing. Leaving aside the gratuitous character of the choosing (to which we will return), what is uppermost in the stories is the sense that this is a test, almost Jobian in its premises. Abraham is given divine instructions without explanations and is expected to fulfill these instructions

unquestioningly. This he does over and over. Despite the hesitancy and ridicule he encounters from his wife and family, he leads them on in response to the demands.

Now the rationale for the response lies surely in the promise. "Leave your own country, your kinsmen, and your father's house, and go to a country that I will show you. I will make you into a great nation. I will bless you and make your name so great that it shall be used in blessings" (Gen 12:1–2). But again the promise is based on a logical impossibility, since Abraham is "old" and since he has no offspring, and since Sarah is barren. The whole idea that this promise represented a real possibility is ludicrous. It may have represented what Johnson said of the second marriage of a friend, "the triumph of hope over experience," but it clearly did not represent a measured response. This same motif of the impossible dream occurs again and again in this narrative, reaching its peak in Gen 18:12 where Sarah laughs.

But the promise is fulfilled in Genesis 21. Only the tale is not finished because, immediately after, Yahweh tests a final time in the story of the binding of Isaac (Genesis 22). Again von Rad writes extensively on this.

> That which happened to Abraham in this story is called in the very first verse a "testing." For in commanding Abraham to offer up Isaac, God apparently destroys his whole continually reiterated promise to Abraham. All the blessings which he had promised to bring about were all bound up with Isaac. The story of the offering up of Isaac goes beyond all the previous trials of Abraham and pushes forward into the realm of faith's extremest experience where God himself rises up as the enemy of his own work with men and hides himself so deeply that for the recipient of the promise only the way of utter forsakenness by God seems to stand open.

(*ROTT* 1: 174)

The story of Abraham contains the notion of promise and fulfillment as von Rad shows. But that aspect is not sufficient, for surely Abraham's relationship with the God whom he worshiped was much more complex than this. Abraham was *tested* and the testing it would seem was not peripheral to but foundational for the relationship.

It might be helpful to consider a further remark of von Rad concerning the patriarchal narratives. "For it is by no means the case that the later Israel simply projected herself and the theological ordering of her life and problems back into the era of the ancestors. Rather she here depicted a relationship to God of a quite peculiar and unique character" (*ROTT* 1: 125).

It would be important to note that it is in this complex of narratives that the Hebrew Bible uses the word "faith" in a sense close to what contemporary theologies mean (Gen 15:6). But as we noted earlier it occurs in this sense only twice in the Hebrew Bible.

2. David. The second figure we should consider in the notion of faith in ancient Israel is David. David has, of course, much greater historical data in his stories but, as is evident from the two variants of his origins (1 Samuel 16 and 17), there is considerable legend and lore associated with him. Whatever the purpose of hero stories may have been, it is David's peculiar relationship with Yahweh that interests the writer. Whether David was chosen out of the sons of Jesse by an oracle to Samuel, or emerged as a war hero out of the conflicts with the Philistines, he is established clearly in the court of Saul as a rival to Saul and to his dynasty. It is in this rivalry that the book of Samuel is set, and the reflection on the issues of kingship itself and then on the character of the two first kings, Saul and David, is the theological point of the book.

The story of David cannot be disconnected from the Deuteronomistic History. The whole piece of the Deuteronomistic work and reflection is intimately woven together. And the most astonishing aspect of the story is the utter gratuitousness of the relationship and the way in which "chosenness" supplements "testing" as the central piece of the work.

Once we begin to consider the model of David we are necessarily compelled to examine the notion of covenant as it pertains to the faith of ancient Israel. In a very brief synopsis we ought to note that there are two distinct "covenants" in Israel. See also COVENANT. The Sinai covenant articulates a relationship based on mutual (although as this pertains to Yahweh the term is certainly analogical) obligations and promises: "You shall be my people. I shall be your God" (Exod 19:5). "You only have I known of all the

families of the earth; therefore I will punish you for all your iniquities" (Amos 3:2). The second is an unconditional covenant or a covenant of grant (Weinfeld 1970: 185). The Davidic covenant falls into this latter category. The promises made to David do not depend on David's future responses or those of his descendants. The oath which Yahweh takes on behalf of David is the result of David's *previous* activity. "In other words, it is the ancestor who is the human partner in the covenant" (Levenson 1985: 101).

David's actions are clear enough. He is called. He responds. He serves Yahweh's purpose. He is the agent of historical change in Israel. He is the instrument of God's power against the enemies of Israel. For the Hebrew Bible David is the paradigm of the faithful Israelite. David's fidelity is manifested in his history, by which is meant that David's life history is the model of fidelity. His activities prosper as he obeys the call(s) of Yahweh. His victories over the Philistines contrast sharply with the continuous failure of Saul and his descendants to achieve the goals of the promised land. Of course, one could argue that the events are constructed to prove the claim or that David's political astuteness is mythologized into a religious calling. And from a historical-critical point of view that may very well be. But theologically, or perhaps more correctly, as a lesson in faithful living, David's intense loyalty, his unswerving devotion to the cause of extending the land which God had promised to Abraham, those things make David the paradigm. He listened and obeyed unquestioningly (again in sharp contrast to Saul). So he achieved goals, and the goals he achieved made real the divine promise.

Thus, as in the binding of Isaac, David too was "tested," not so much in specific acts, but in the whole thrust of his life. His life's actions are a response to the call he had received. And, as a result of his fidelity to the call of Yahweh, he is made the bearer of unconditional promises from God.

Thus, in Abraham and in David, the two poles of the life of faith in the Hebrew Bible are illustrated: in Abraham obedience and fidelity, in David chosenness and reward. The Hebrew Bible does not contrast these two as if they represented opposites. Rather in its narrative and its structure it continually illumines now one side, now the other of this model of fidelity.

3. Prophets. Another important model of the life of fidelity is the prophet. The prophetic message reflects not primarily an ethical instruction, but rather a call to an ongoing relationship of trust. If one considers the parade example of "faith" in Isa 7:9, where Ahaz's timidity is reprimanded by a reminder of the power of Yahweh (Pfeiffer 1959: 160–62), it is clear that the faith which Ahaz is called to exhibit is not an intellectual act but an act of trust in the action of the God of Israel.

Further, the examples of the prophetic call and mission demonstrate over and over again that what is required is not understanding but trust. The prophet does not seek to understand God's way or God's call to him but seeks to respond to an imperative by acting appropriately. In fact, of course, it is often the case that reason and understanding serve as barriers to responding (Jer 15:10–18).

The opposite of faith in the prophets is not unbelief; it is apostasy, because the faith which is required is not an act of assent but a commitment to a tradition, to a body of received things. The prophetic faith is clearly based in the covenant, especially the Sinai covenant, and expresses itself in *acts* of fidelity, not in creedal formulas. The passage of Jeremiah at the Temple gate (chap. 7) is quite illustrative. The interpretation of this passage as a polemic against temple worship is a complete misunderstanding of the context and scope, indeed the power of the passage. The prophet does not condemn temple or priests, or ritual—quite the opposite. He condemns the contempt of these, the reduction of these "holy things" to mere formulas. He asserts the fundamental necessity of conversion of heart in the act of doing those things which are required, because to do these things without an upright heart is to apostasize and be unfaithful.

In this the prophetic message reflects the Deuteronomistic proposition that faithfulness consists in the acknowledgement and keeping of commandments (*ROTT* 1: 379).

D. Believing and Doing

Again, it is important to reiterate the basic idea that faith in the Hebrew Bible is a multifaceted idea which is more clearly exemplified than explained. Perhaps to further illustrate the point we might consider a series of other texts related to the Hebrew notion of faithfulness.

Mic 6:8

God has told you what is good
and what is it that the Lord asks of you?
Only to act justly, to love loyalty;
to walk wisely before your God.

Here the notion of fidelity is tied to the actions of the "good" person. This is a classic text for "activist" religion, but, in fact, it really addresses a more fundamental notion: the tight connection between believing and doing.

Deut 30:1–2

… If you turn back to him and obey him and obey him heart and soul in all that I command you this day, then the Lord your God will show you compassion and restore your fortunes.

In this passage faith is seen as a response to a command of God. And the reward of faith (a loving relationship to Yahweh) is conditioned on that obedience. So we find the theme of "commanded love" (Moran 1963: 83–87). Obedience is an essential element in the faith relationship. All the "models" of faith were obedient first and foremost.

Jer 29:10–14

If you invoke me and pray to me, I will listen to you: when you seek me, you shall find me; if you search with all your heart, I will let you find me … I will restore your fortunes and gather you again from all the nations and all the places to which I have banished you.

There are two important aspects of Hebrew faith in this passage. First, the faithful seek God. They not only wait for God, they actively search for God and for God's purpose. And this search is a total commitment (with *all* your heart). And this search is not an intellectual quest (with all your *heart*). The second point to be noted in the text is the historical consciousness which grounds the relationship. The relationship is not ethereal but real, concrete, earthly (prosperity, return from exile, restoration).

Ps 103:17–18

But the Lord's love never fails those who fear him, his righteousness never fails their sons and grandsons who listen to his voice and keep his covenant, who remember his commandments and obey them.

The Psalms, of course, reflect the worship of Israel, and so the theme of the Psalms leads us into the heart of the believer's self-understanding. The notions that stand out here are (a) the *fidelity of God,* (b) the obedience of the follower, and (c) the remembrance of the acts of God.

God's fidelity is foundational. "The words 'faith' and 'to believe' *(he›emin)* do not properly describe a virtue or quality of man, in the sense that virtues such as prudence or courage are ascribed to him, they describe *man taking refuge from his own frailty and instability in God who is firm and steadfast*" (Hebert 1955: 374).

Obedience we have already discussed. So finally there is the notion of remembrance (Heb *zikkārôn*). This important notion identifies the historical and "eschatological" dimensions of the faithful life as a catalytic concept for understanding the faith of the Hebrew Bible. But before discussing this idea and its role in understanding the faith of the Hebrew Bible, it is necessary to recapitulate what has been discussed already.

We have explored the etymological data in the Hebrew Bible from which it should be clear that faith and fidelity are intertwined inextricably in the Hebrew Bible, that is, faith is primarily not an intellectual act but an attitude which encompasses the two-sided sense of the root *›mn:* steadfastness, which addresses the concept of acts of obedience; and trust or confidence, which rests on the notion of God's constancy and fidelity. Moreover, there is a dual sense associated with trust: one aspect touches the notion of hope and future directedness; and the other alludes to the idea of assent, but not assent to a proposition so much as assent to a way of life that is consistent with the claims of God upon the community.

There is an important factor present in all the texts that ought not to be overlooked. That is the sense of faith as residing in a community. It would require another lEngthy article to elaborate on the notion of the individual and the corporate in the Hebrew Bible, but it seems fairly clear that at least in its early phases, or at least in the presentation of its early phases, the faith of Israel was seen primarily as a relationship

between the faithful community and Yahweh. It was not a "conversion" experience that brought individuals to faith. It was their inclusion in the community of Yahweh, the People of the Lord.

It is sometimes argued that the evolution of Israel's religion from the epic narrative to the prophetic interpretation includes the notion of a change in the nature of faith from a community-based to an individually-based idea. Both von Rad and Vischer argued for the origins of Israel's idea of faith in corporate notions. Von Rad saw it emerging from the Holy War ideology, and Vischer saw it coming from the cult. Many have argued that the prophetic faith uncoupled the notion of individual faith from the faith of the community (Pfeiffer 1959: 163). Such evidence as we have gives no clear indication either way. But the intellectual movements of the late biblical period did involve a general development of the notion of individuality, so such a development in the religion of Israel would not be surprising. Moreover, in the late biblical period, after the Maccabean revolt, the whole question of which community represented the faithful Israel necessarily involved the notion of the holiness and fidelity of the members. Apocalyptic ideas of sin, evil, punishment, reward, and the like also influence the notion of faith.

To attempt to identify the chief among all the strands that are interwoven in the notion of Hebrew faith is an awesome task. It may be, also, a fruitless and even deceptive task. Believers and scholars, historians, and the curious all look for the unique and special qualities of Israel's faith. And because the search often begins with the conclusion, the quest is simply confirmation.

Further, the faith of the OT is alive and well in a living community, indeed in a number of living communities of faith. And so there is a history and a course of development that each of the communities keeps, cherishes, studies, and elaborates. So the task of commentary is not uncharted. Indeed, the tasks may be so well charted that there is very little room for comment.

E. OT Faith in Holistic Perspective

At the risk of reviving a long debate over biblical theology, it seems appropriate to comment finally on the faith of the OT from a holistic point of view. It is a progressive development that comes from a common and identifiable source, because, whatever the manner of its development, every development claimed continuity with the original.

1. Remembrance. It seems that among the many themes and strands thus far explored, one in particular might serve as the central focus of Israel's faith: the idea of "remembrance" (Heb *zikkārôn*). The core of Israel's faith is found now, as it always has been, in the elements of the Seder meal and celebration of Passover. Since the Mosaic period the community of Israel has gathered on the 14th day of Nissan (or the appropriate alternatives in history) to celebrate, to pray, and to remember. The central notion among these three, in the writer's view, is that of remembering.

The notion of remembrance as a central religious concern in the culture of the ANE can be illustrated in the Aramaic inscriptions from Zinjirli, where the king predicates the blessing of God toward his offspring on their fidelity to the remembrance of the king's name and deeds forever (*KAI* 214.21). So much of our knowledge of the culture and religion of the ANE is built precisely on the habit of memorializing. And, as with the Pannamū inscription, remembrance is not a single act of recollection. It is in effect the re-creation of the deed.

"Moses said to the people, 'Keep this day in remembrance, the day you came out of Egypt from the house of slavery, for it was by sheer power that Yahweh brought you out of it' " (Exod 13:3–4).

> For ask now of the days that are past, which were before you, since the day that God created man upon the earth, and ask from one end of heaven to the other, whether such a great thing as this has ever happened or was ever heard of. Did any people ever hear the voice of a god speaking out of the midst of the fire, as you have heard, and still live? Or has any god ever attempted to go and take a nation for himself from the midst of another nation, by trials, by signs, by wonders, and by war, by a mighty hand and an outstretched arm, and by great terrors, according to all that the Lord your God did for you in Egypt before your eyes?
>
> But take care what you do and be on your guard. Do not forget the things your eyes have seen, nor let them slip from your heart all the days of your life; rather—tell them to your children and your children's children.

(Deut 4:9–10)

It is this remembering that is the essence of the faith of Israel. In the stories of Israel's triumphs and its tragedies, through glory, destruction, love, and hate, fidelity and apostasy are the two constant and enduring aspects of Israel's remembrance of Yahweh's deeds. In the retelling of the myth of the fateful night on which the angel of death passed by the Israelite children to destroy Egypt's firstborn, Israel's whole meaning is gathered. So even today, among all the religious ceremonies and cultic acts we experience or learn about, there is no more solemn or sacred night, no more poignant or "pregnant" question than this which the youngest child is to ask: *Why* is this night different from every other night?

2. Faith Confronts Fear. At the beginning as now, the question confronts the very nature of faith itself, because faith in the OT, as all faith by its very nature, confronts *fear.* Not just fear, but *the* fear. The fear that limits the possibilities of human life—fear of death, fear of self, fear of the universe. And Israel's faith asserts that the universe of human experience is the domain of human freedom.

When you raise your eyes to heaven, when you see the sun, the moon, the stars, all the array of heaven, do not be tempted to worship them and serve them.

(Deut 4:19–20)

What both enthralls and enslaves human beings is this overpowering sense of being unable to control not just nature, but one's destiny. What the faith of Israel affirms in the Seder and Passover is to place humanity under the power not of nature, or fate, or political, or economic forces, but in the power of the God of Life itself. And so it confirms the ultimate freedom of the believers.

But this freedom was not left abstract. This freedom is founded on a relationship, and this relationship is described in a significant way through the analogy of a covenant. The covenant analogy illustrates the tension between the Creator God and God's creative partner—the human community—and specifically the community of Israel as the chosen instrument of the divine love. And since God declares humanity free and gives over to it the power to create nature anew, and further, since God requires the exercise of this dominion as a condition for ongoing relations, the stage is set for the long drama of conflict between the divine and the human, between this world and the world to come, time and eternity, between moral absolutes and ethical compromise. It is a monumental struggle exquisitely illustrated in the story of Job, who serves as a brilliant metaphor of the faithful models (Moses, Abraham, David) discussed above.

Because the faith of Israel rests on this strange and unique relationship between the believing community and God, it is always difficult and dangerous to try to explain it too carefully. The danger of the covenant analogy is to reduce this creative tension to a somewhat narrow, legalistic idea. It is rather a co-creative union. And the danger of historicizing the faith of Israel is that one fails to Engage the journey that this co-creative union represents. The journey does not deny the history. It simply refuses to absolutize the history. The history of Israel is not past- but future-oriented. God is not bound. God is not predictable except that his *ḥesed* endures. So, wherever hope triumphs over despair (or logic), wherever justice vanquishes injustice, wherever the creative potential of humanity emerges to respond to the needs for life, for love, for the solution to social, political, or economic problems, there the God of Israel is affirmed. God gives existence its completeness.

These triumphs come at a cost, however. The compulsion to seek security gives the *status quo* a legitimacy to challEnge God, since it seeks to answer rather than to ask questions. So the prophetic element emerges as a vital part of the faith of Israel. Prophets reveal the eternal in the temporal, proclaim the future against the present, and make the remembrance of God real.

JOSEPH P. HEALEY

NEW TESTAMENT

In the NT "faith" belongs to the terms of self-definition of what is later called "Christianity." It is thus not advisable to determine the NT meaning of "faith" on the basis of a phenomenological investigation. In order to do this, one needs to ascertain the general concept of faith, which can be done only by reference to the history of Christian theology. For this reason, the following article follows the Greek vocabulary closely: however, the investigation of such a central theological category cannot remain purely lexical; much more, it must determine the sense which the word conveys.

———

A. The Word "Faith"

The noun "faith" is the very consistent translation of the Greek word *pistis,* and the verb "to believe" translates the Greek verb *pisteuein.* Other than in the Germanic languages (German: *Glaube* and *glauben;* Scandinavian: *troen* and *troer*), the Romance languages translate the noun and verb using different stems (French: *foi* and *croire*), just as the Latin language consistently rendered *pistis* with *fides* and *pisteuein* with *credere.* Because in the English language "believe" corresponds to "belief" (just as in German *glauben* corresponds to *Glaube*), the noun "faith" goes back to the Latin *fides.*

Just as the Latin translation of the Bible had influenced the language of Western theology, the other ancient translations provided, respectively, precise equivalents for what in the Semitic languages appeared as *ʾmn.* As the result of Bible translations, "faith"/"to believe" came to occupy a central position in the Christian language tradition. Recent translations of the Bible societies, produced for the purpose of missionary activity, often deviate from this straightforward way of translating, so that often a single word does not satisfy the translators. This is not unrelated to the fact that "faith" is not a general phenomenon in all religions; rather, this central meaning was gained first in Christianity. This is clearly related to the Jewish language tradition, which, in addition, Islam took up in its own way. In Buddhism, Hinduism, or other religions unrelated to Christianity, Judaism, and Islam, to inquire as to the meaning of "faith," as it is always interpreted, leads nowhere or at least to the conclusion that "faith" is in no way such a central category as in the religions of the West.

B. Greek

The Greek words which come from the root *pist-* have a broad range of meanings, which correspond to belief, confidence, trust, faith/faithfulness (LSJM 1407f.). The noun appears first in Theognis (66, 831, 1137, 1244) with the meaning "confidence," "trustworthiness" (the passage listed in LSJM 1408, Hesiod, *op.* 372, appears only in later manuscripts). The opposite of *pistis* is *apistia* (*Theog.* 1831). The noun and verb have technical meanings in the linguistic fields of law and philosophy.

1. Legal Usage. In legal language *pistis* conveys, in addition to the general meaning of "trustworthiness," the special meaning of "guarantee," "trust," or alternatively "argument," "proof," which sense one encounters especially in rhetoric. Frequently it is also connected with an oath. The Latin legal concept *bona fide* can be traced back to the Greek with *kale pistei.* Thus one can show the semantic and etymological closeness of *fides* and *pistis;* yet the two words are not exactly congruent, as the different interpretations of comparing *pistis* and *fides* among Greeks and Romans (Polyb. 20.9f.) showed. This legal linguistic usage approaches the understanding of what is meant in the NT by *pistis,* but only insofar as it plays a role in the Letter to the Hebrews (see D.8 below) and in Philo (see C.5 below) as the *pistis* of Abraham is connected with God's oath. In the Western tradition generally, as it has been mediated by Roman law, "faith" remains a legal concept until the present day.

2. Philosophical Usage. More important than the legal linguistic tradition, however, is the philosophical tradition. In the latter one encounters *pistis* in the sense of "faithfulness" with Pittakos (*FVS* 10.3.5.13) and with Thales (*ibid.,* line 4) in a catalog of virtues. Parmenides uses *pistis* first in his theory of knowledge: *pistis alethes* in contrast to *doxai* ("meanings" in the sense of "the true understanding of the essence"; *FVS* 28 B 1.30; cf. *FVS* 28 B 8.28). In Empedocles (*FVS* 31 B 71) *pistis* is, in opposition to "doubt," the understanding of the rightness of an opinion.

Throughout the Pre-Socratics *pistis* could mean the entrance to the knowledge of truth; for Plato, however, it is the highest step of knowledge only in the realm of the visible. It is in fact superior to *eikasia,* the "apprehension by means of images"; for the knowledge of ideas *noesis* ("understanding") or, respectively, *episteme* ("knowledge") is necessary, a level completely opposite to *dianoia* ("thought") (*Resp.* 6.511 D–E; 7.533E–534A). The exact opposite of *pistis* is the sensible world (*Ti.* 27D–28A); suffice it here to say that it does not approach the world of ideas. In opposition to *mathesis* ("learning"), *pistis* can be either true or false (*Grg.* 454D–E). According to Plato, *pistis* succeeds through rhetoric; more importantly, it is the higher art of dialectic which leads to *episteme.*

Differently from Plato, Aristotle applies the meaning of "faithfulness" to *pistis.* In his *Rhetoric,* the different styles of *pisteis* ("arguments") play important roles; this corresponds with the legal linguistic usage (see B.1 above). For Aristotle *pistis* is not the opposite of *episteme;* rather, it is a step on the way to the *mathesis* ("learning") of knowledge, which leads from doxa through *pistis* to *logos.*

In the Stoa, one finds *fides* (= *pistis*?) in a citation from Chrysippus, according to Seneca (*Ben.* 2.31), as a virtue of the wise along with pietas ("piety") and iustitia ("justice"). In his doctrine of knowledge, *pistis* was the opposite of apistia (*SVF* 3.147, no. 548): "confidence" as opposed to "distrust." According to Epictetus and his students, *pistis* meant the "faithfulness" of the wise man in relation to himself (*Diss.*

2.4.1), a virtue certainly among others in which the purpose of life was realized. This corresponds as well to a customary Greek usage of *pistis* as to the Latin usage of *fides*.

As soon as early Christianity makes its claim before philosophy (see E below), a self-definition of "faith" as opposed to the Platonic tradition is dangerous. It would indeed mean that the Christian faith was a priori inferior to philosophical knowledge. In this case, philosophers of the Platonic school would find that Christianity was an intellectual absurdity.

3. Greek and Hellenistic Religion. "Faith" as a central category of Greek religious language did not exist. The History-of-Religions school and their follower R. Bultmann freely maintained that "*pistis* became a catchword in those religions which Engaged in propaganda. This did not apply to Christianity alone" (Bultmann, *TDNT* 6:181). The texts given as evidence for this assertion about *pistis,* however, did not use the term *pistis,* or were not unquestionably independent of the usage of Christianity or Judaism. Hence, one cannot postulate that "[a]ll missionary preaching demanded faith in the deity proclaimed by it" (*TDNT* 6:181). We will show that what is meant in early Christianity by "faith" cannot be deduced by a general religious linguistic usage in the Hellenistic period.

Bultmann had suspected such a usage first for the Hellenistic period, and he argued in favor of such a usage in the Classical period (*TDNT* 6:179), so that his conclusion concerned the Greek language generally (see Barth 1982 and von Dobbeler 1987: 283–303, concerning both parts of Bultmann's conclusion). He was, of course, correct that *pistis* and *pisteuein* were not foreign words in Greek. On the other hand, it can be shown in the passages to which Bultmann refers, and in other texts as well, that although *pistis* and pisteuein are encountered in religious texts, they do not form a comprehensive or adequate self-definition of religious groups. In Greek tradition, one can refer here to eusebeia ("piety"); the conviction in favor of the existence of gods was formulated as nomizein theous einai ("to hold that gods exist"). Such terminology is to be found first in early Christianity at a later time (see E below). What was evidence for a special religious use of language can be seen to be a general usage of language: how human beings can believe in or trust the gods, how human words or oracles can be trusted. In contrast, the Christian use of "faith" is exclusive, and its object is God alone. *pistis* and *pisteuein* are nevertheless Greek words and not words foreign to Greek; yet they gained their meanings from the language of Greek-speaking Jews, as it has been taken up in the NT.

C. Judaism

Strongly formative for the language of at least the first generations of early Christians was the Greek of Jewish tradition. From Greek-speaking Judaism came not only basic words, but also the framework for basic conceptions. All early Christian authors were influenced by it more or less, and particularly were they influenced by the language and word choice of the LXX. The point of reference for the NT is therefore not the Hebrew Bible as such, but rather Judaism, which for several centuries had taken its place in the Greek world, by way of being open to the Greek world or closed off from it.

1. LXX. The LXX translates with unusual consistency the Hebrew words from the root *ʾmn* with Greek words with the root pist-, while otherwise throughout the LXX, Greek words can correspond to a variety of Hebrew words. Most obvious of all is the fact that (em-, kata-) pisteuein translates exclusively (with the single exception of Jer 25:8) the Hebrew verb *ʾmn* in the *Hipʿil* and the *Nipʿal* conjugations. *pistis* translates only the nouns formed from *ʾmn,* including *ʾmth,* which is otherwise translated by aletheia ("truth," including especially 22 times in the Psalms for *ʾemunâ*). This indicates a strong affinity between *ʾmn* and *pist-*, which is conveyed by the meaning of "trust" for both words. This affinity has neither to do with similar uses of these words in religious language, nor with similar uses in legal language, which accounted for the equivalence of the Greek *pistis/pisteuein* and the Latin *fides/credere*.

Although the NT did not quote Isa 7:9, the LXX translation of this verse, Kai ean me pisteusete, oude me synete (*cf.* Vulgate: Si non credideritis non intelligetis; as well as the Syriac translation), "if you do not believe, you will not understand," became important for the later history of theology (see E below). In certain traditions of Greek philosophy, albeit in opposition to Platonism, *pistis* can be seen to be the crucial preliminary stage for knowledge. Irenaeus of Lyons was the first Christian writer to appeal to this verse; he used it to show that Christian faith justifies, which philosophical knowledge does not.

a. Ecclesiasticus. Clearly influenced by the language of the LXX was the Greek translation of a book composed originally in Hebrew, the book of Ecclesiasticus, or Jesus ben Sirach. It dates from the second half of the 2d century B.C.E. Here again *ʾmn* is translated by *pist-*, although the compound verb empisteuein is used instead of pisteuein. (Em)pisteuein also translates Hebrew verbs other than *ʾmn.* The ancient wisdom speech includes passages in which *ʾmn* in the *Hipʿil* conjugation appears in the sense of "credulity." While in all parts of the Hebrew text of Ecclesiasticus (as much of it as we possess), there is no evidence of a connection between *ʾmn (Hipʿil)* or *ʾemunâ* to God or to the Law, the Greek translation speaks of (em)pisteuein kyrio or nomo ("to be faithful to the Lord" or "to be faithful to the Law"); and this Greek usage is traceable to other Hebrew verbs than *ʾmn (Hipʿil)* (35[32]:24; 36[33]:3). There exist other passages, for which no Hebrew text is available to us, where the Greek translation appears to render other Hebrew verbs as well (2:6, 8, 10; 11:21). One can thus see in the Greek translation of Ecclesiasticus that "faith" occupies a central position in the understanding of the relationship to God, whereby the Law is the document of the will of God. The adjective pistos (1:14) becomes a self-designation of those who involved in the Law; Abraham (44:20) and Moses (45:4) become models of "faith."

b. Wisdom of Solomon. The tendency observed in the Greek translation of Ecclesiasticus is carried forward in the Wisdom of Solomon, where in 1:2; 12:2; and 16:26 "faith" becomes a designation of the relationship to God, even though in the rest of the book the author follows philosophical language of the Greek tradition.

c. Later Books. In later books of the LXX pist- is used as the overall designation of the relationship to God and his Law. This meaning is, however, not limited to the Greek-speaking world, and should not be explained as an adaptation in Greek of previous terminology. Rather, *pistis* became more and more a self-definition of Judaism, from within its own linguistic world, a world enlarged from the outside only in the case of Philo (see C. 5 below).

2. *4 Maccabees.* In *4 Maccabees* faith is, above all, the observance of the Law under persecution. Included within pisteuein is the meaning of faith in eternal life (7:19). This "faith" appears in a series with "philosophy" and "virtue" (7:21). Models of faith include Abraham, Daniel, and the three men in the fiery furnace (16:22), along with the mother whose seven sons were put to death (15:24; 17:2). In *4 Maccabees* pist- designates the ability to hold fast to God and his Law.

3. Qumran. Written in the Hebrew language without direct contact with the intellectual categories of Greek, the Qumran texts take as the object of "faith" the commandments (1QpHab 2:14), the covenant (2:4), the interpretation of the words of the prophets by the priests (2:6), and the interpretation of the Law by the "teacher of righteousness" (8:1–3). It may well be that this understanding of faith in Judaism was influenced by Deuteronomy (9:23) or, respectively, by the Deuteronomistic tradition (2 Kgs 17:14), as well as by Hab 2:4. The Hebrew text of Hab 2:4a is unclear; 2:4b is to be translated as follows: "the just shall live by his faith" (RSV). This statement is founded upon a declaratory form, wherein life is promised to the just (e.g., Ezek 18:9). In Hab 2:4 faith stands for life, corresponding to the life-promising commandment of God, which is in response to the faithfulness of God, just as the righteousness of the righteous corresponds to the righteousness of God. After the closing of the canon of the Hebrew Bible, the righteousness of the righteous was defined in this way: that they hold fast to the will of God revealed in the Law. Turning to this God means "to come to believe" (Jonah 3:5; Jdt 14:10). See also FAITH (OT).

4. The Wider Sphere. That "faith" has become a term of self-definition of Judaism in the times preceding early Christianity, cannot indeed be explained by the encounter of Judaism with the Greek world. This concept developed within a sphere little affected by such an encounter, and the equivalence of pist- and *ʾmn* evidenced in the LXX transferred into the Greek-speaking world. Immediately arose the problem of how such a self-definition could be made understandable in connection with the Greek language.

In the wider sphere of early Jewish Greek literature, pist- is in any case used as, in Greek usage, it refers to "faithfulness" (Pseudo-Hecataeus and Pseudo-Phocylides), "trustworthiness" (Ezekiel the tragic writer), "to trust" (Pseudo-Phocylides). The definition of pist- as a relationship to God is indeed lacking in the *Letter of Aristeas* and in *Joseph and Asenath.* The texts collected in the Corpus Papyrorum

Judaicarum, which displays the everyday use of Greek words, provide only *pistis* and pisteis, respectively, in the sense of legal terminology (*CPJ* 143.17; 146.44; 490.4; 508.5; *cf.* 424.6, 450.31). In the inscriptions of the Corpus Inscriptionum Judaicarum we find *pistis* once as "faithfulness" (*CIJ* 1451.4); in the same collection the meaning of *fides* appears twice (*CIJ* 72.3; 64.1), along with one occurrence of the meaning vera fides ("reliable pledge," *CIJ* 476.7). The fragments of literary texts, especially Jewish texts, which are contained in papyri and inscriptions, therefore, demonstrate a great restraint in the use of pist- as a self-definition; it is much easier to identify a familiarity with the possibilities of the meanings of words in Greek.

5. Philo. Philo of Alexandria is the first theologian known to us who represents his Jewish tradition as *pistis.* He clearly follows the Greek usage which connects *pistis* ("faithfulness") with the oath or employs *pistis* to mean "proof"; yet he also uses the phrases *pisteuein to theo* and *pistis pros theon* ("to believe in God"/"to be faithful to God") as a central part of his representation of the "Mosaic philosophy." In this connection, he attaches great importance to the story of Abraham and especially to the passage Gen 15:6; concerning Moses, he refers not to Exodus 4 but Num 12:7. *pistis to theo* is, throughout, the opposite of putting trust in the creature or in vain reasonings; it is, rather, turning to the one who alone is truth and stands over and above the creature. The interpretation of Gen 15:6 in *Heres* 90–101 is a good example of how Philo understood *pistis* (cf. also *Abr* 262–74). He asks the question of whether pisteuein is worthy of praise. He understands *pistis* to be the most perfect of virtues (91); it was also a virtue in Stoic tradition (see B.2 above), although not the most perfect virtue. *pistis* is not easy to achieve, because of our "mortality, which works upon us to keep our trust (pisteuein) placed in riches and repute and office and friends and health and strEngth and many other things" (92); *pistis* is "to distrust created beings …, and to trust in God, and in him alone, even as he alone is truly worthy of trust" (93). On the second part of Gen 15:6, Philo remarks "that nothing is so just or righteous as to put trust in God alone" (94).

In *Heres* 96–99 Philo explains the journey of Abraham out of Chaldaea (Gen 15:7) as a departure away from apistia. Abraham turned away from his trust in the creature to a trust in the Creator. Abraham thus became the model for conversion to Judaism as the true way to honor God. The way to faith, according to the Aristotelian tradition (see B.2 above) was in mathesis ("learning"); yet a mathesis which did not simply pertain to an investigation of the nature of the world, but a complete transformation: "to put on that surest and most stable quality, faith" (*Conf* 31). In Philo is displayed a self-definition of Judaism as *pistis* under the conditions of Greek philosophical language. Philo obviously cuts himself off from the tradition of the Stoa and to Aristotelianism, though not from Platonic tradition. From his biblical texts he took up *pistis* as a key word and interpreted it in categories which were understandable and plausible in the Greek philosophical tradition. How difficult such an enterprise was can be seen in the fact that no Christian achieved such a synthesis until Clement of Alexandria (see E below).

6. Josephus. It is interesting to compare Philo's use of pist- with that of Josephus, even though in the latter's representation of the OT he makes use of the word group pist- only where it could be understandable to Greek readers. This word group is lacking in Josephus' representation of Abraham, just as it is lacking, incidentally, in the writings we possess from other Jewish-Hellenistic authors. The concept which stands for Judaism as a whole is, according to Josephus, eusebeia ("piety"); he peri theou pistis ("the belief concerning God") is only a version of it as teaching (cf. *AgAp* 2.163–171). The meanings of *pistis* which predominate in Josephus are "faithfulness," "pledge(s)," "proof," and he registers his description of OT legal passages in the Greek language, whether or not the LXX had pist- or the Hebrew text had *ʾmn.* Otherwise, just as Philo led Josephus in works written for non-Jews, faith in Josephus is not a self-definition of Judaism; and nowhere is it visible in Josephus' works that "faith" is a phenomenon specific to Judaism.

D. New Testament

In the NT, in otherwise theologically quite different writings, pist- predominates as a self-definition of what the essence of the Christian proclamation is. Lexically, one finds first in the NT the connection between *pistis* and pisteuein through the preposition eis, "in," a connection made possible by the interchangeability of eis, "in (to)," and en, "in," in Koiné Greek. Such a dominance was prepared for in

the Greek language of Judaism, which was influenced by the translation of the LXX (see C.4 above); those who, through the Diaspora synagogues, had confidence in this specific language, could well understand what was meant by, and could take offense at, Christianity's frequent use of *pistis* to define itself.

1. "Faith" and Self-definition. It is therefore indicative that in the later writings of the NT, e.g., the Pastoral Epistles (see D.5.), the theological language of Christianity relieved itself of ideas originally influenced by Judaism, and went back more strongly to religious ideas traditional in Greek. On the other hand, Christianity understood *pistis* as "faithfulness," yet it also understood dikaiosyne ("righteousness"), corresponding to Greek tradition, all the more in the ethical sense. Since the Christian canon of the Hebrew Bible and the NT passed on *pistis* so strongly as a self-definition of Christianity, the Christian theologians of the 2d and 3d centuries gave up *pistis* not simply in favor of other categories; but they had to take on *pistis*, and in the Latin-speaking world *fides*, as fundamental categories (see E below).

At the beginning of early Christianity, it was not the linguistic usage of Jesus which had formed the language of Christian theology. Rather one can see in the NT a variety of traditions, which at the same time in Judaism had taken up the developed meanings of pist-, and from them formulated concepts of how salvation was accomplished in Jesus. At the beginning there was no unified concept of faith, which was interpreted in different ways; yet early Christianity did have a common self-definition of *pistis*, which referred in different ways to salvation accomplished in Christ.

2. The Jesus Tradition. In the Jesus tradition of the Synoptic Gospels, one encounters pist- quite often. A large and obvious block of occurrences of these words is in miracle stories. Since these stories go back to stories of Jesus told by the Church, they will be dealt with separately. There are, however, a series of passages which use pist- partly in the general sense of "trust" (Mark 13:21 and par.); yet partly these passages are to be traced back to the later Church (e.g., Mark 1:15: "believe in the Gospel"). The word group pist- is lacking in the tradition of the parables which can be unquestionably ascribed to Jesus.

Jesus had not encouraged "faith" in and of itself. Such a formulation appears first in Matt 18:6 (it is lacking in Mark 9:42, although many manuscripts add there the words eis eme ["in me"] from Matthew). In the tradition of the words of Jesus there does appear nonetheless the logion on faith able to remove mountains in Mark (11:22–24 [= Matt 21:21f.]. Paul refers to it in 1 Cor 13:2 (*Gos. Thom.* 24 and 106 have it without the motif of faith). In Mark, the conclusion of the story lies in the opposition between faith and doubt; in Q, where Matt 17:20 has the original version (except for the final "and nothing shall be impossible for you") compared with Luke 17:6, the conclusion of the story refers to the discrepancy between faith as little as a mustard seed and its ability to remove mountains. This saying is in accordance with other sayings of Jesus, proclaiming trust in God alone (e.g., Luke 12:22–34; Matt 6:25–34).

3. Missionary Language. The missionary language of early Christianity did not take up this linguistic usage of Jesus, yet it did use pist- as a central term in the sense of conversion. It is joined in a minor way to Jewish language, where, in Jonah 3:5; Jdt 14:10; Wis 12:2; and Philo, *Heres* 99, pisteuein in the aorist tense means "to come to believe." As opposed to epistrephein ("to turn toward") or metanoein ("to change one's mind"), which appear as synonymous with pist- (cf. 1 Thess 1:9; Acts 20:21), pist- did not have in Greek the meaning or sense of "conversion." The fact that pisteuein in the aorist, along with *pistis*, appear with this meaning in the NT, is to be explained by the fact that *pistis/pisteuein* was in both Judaism and Christianity a term of self-definition. Paul, for example, reminded his readers in 1 Cor 15:1–11 how they came to faith (episteusate, 1 Cor 15:2, 11). He cites there the words he used to preach the gospel to the Corinthians, and he uses terms of verbal transmission ("to deliver"/"to receive"). The content of this gospel is that Christ died for our sins and that he has been raised on the third day (1 Cor 15:3f.); this content of the gospel is the content of their faith. "To come to believe" means therefore the acceptance of this proclamation. In the letters of Paul noun and verb display a thorough affinity to the Christos-title. This title has a firm position in the tradition taken up by Paul in 1 Cor 15:3b–5, where different interpretations of the death and resurrection of Jesus are compared. The connection of this precise content with pisteuein in the aorist, along with *pistis*, often is not traceable back to Paul himself; Paul, rather, took up already existing early Christian language (cf. Acts 24:24; Col 2:5). Faith has, in this connection, the

meaning of the acceptance of the proclamation of the death and resurrection of Christos as a final salvific event (cf. 1 Thess 4:14; Rom 6:8). The reason why Paul speaks only in 1 Thess 1:8 of faith in God is to be found in the fact that in his tradition, faith had this specific content. One should not suppose that faith in Jesus stood over against faith in God; rather, faith was in God who in the death and resurrection of Christ had accomplished salvation. God is the logical subject of the passively formulated expression concerning the resurrection of Christ. This expression of faith did, of course, set itself over against Judaism; yet it did not proclaim a new God, but the final salvific activity of God. This faith set itself also against paganism, as 1 Thess 1:9–10 shows: the proclamation of the living and true God (in contrast to the idols), along with God's son, whom God raised from the dead and who will deliver us from the wrath to come. The acceptance of this faith meant salvation (1 Thess 5:9–10).

That God achieved salvation is also a theme of NT miracle stories, while in other ancient miracle stories *pistis/pisteuein* often does not occur. Particularly typical is the story of the healing of the epileptic boy, Mark 9:14–29, where faith on the part of the healer, as well as those who seek healing, is a condition for the success of the miracle. The connection of *pistis* with gifts of healing and the working of miracles in 1 Cor 12:9f. shows that *pistis* can mean a special charisma of the healers of the sick. In Acts 9:42; 13:12; and 14:9, faith is indeed the reaction of the observers of the miracle; this corresponds to the linguistic usage of conversion: on the basis of the miracle, faith is present as the act of turning oneself toward the proclamation.

4. The Letters of Paul. The linguistic usage presented above is above all to be found in the letters of Paul. For Paul *pistis*, along with pisteuein in the aorist, means conversion to the proclamation of God, who raised Jesus from the dead, a new God for people who were previously pagans, the same God for Jews. With the exception of Rom 3:3 and Gal 5:22, where *pistis* appears with the meaning "faithfulness," *pistis* always means "faith" in this sense; in the connection *pistis Christou* the genitive always designates the content of faith (cf. otherwise the pairing of eis Christon Iesoun episteusamen, "we have believed in Christ Jesus," and *pistis Christou*, "faith in Christ," in Gal 2:16), not the faithfulness of Jesus. Such a conversion Paul describes for himself in Phil 3:4b–11 (cf. Gal 1:11–16) as the turning away from the Law and the turning toward faith. The Law does not lead to the righteousness of God; only faith does. Faith here indeed means salvation, citizenship in heaven (Phil 3:20).

Programmatic is the connection between justification and faith formulated in Rom 3:21–31, where verb and noun appear no less than 9 times. Paul had said in Rom 1:16 that in the gospel the righteousness of God has been revealed unto salvation for everyone who believes. This he takes up again in 3:21, now in contrast to the Law, even though this righteousness of God is demonstrated from the Law and the Prophets. The basis of his argumentation is the christological formula he takes over (3:24–26a), which describes salvation as a renewal of the covenant through the redemption by means of the blood of Christ, which will suffice for the forgiveness of sins. Paul, however, attaches to the end of the formula the result of salvation history, justification by faith in Jesus (3:26b). For this exclusive connection of justification and faith (in Christ) Paul appeals in Romans 4 to the story of Abraham, which indeed comes from the Law in Gen 15:6, where righteousness is reckoned to him because he believed God. The Jewish traditions had always maintained that Abraham had known the Law and kept it (cf. Sir 44:20; *Jub.* 24:11; among other passages), and that Abraham's *pistis* (= faithfulness) had been demonstrated in his readiness to sacrifice his son Isaac (cf. Sir 44:20; 1 Macc 2:52). Against this view, Paul maintains that the Law came 430 years after Abraham, while Jewish tradition since Gen 26:5 had understood Abraham's faith as resting on his observance of the Law. Paul maintained in Rom 4:9 that Gen 15:6 was said before Abraham was circumcised (cf. Gen 17:24). Paul takes as the content of Abraham's faith the belief that God gives life to the dead and calls into being that which is not (Rom 4:17). This was already interpreted as faith in God, who justifies the godless (4:5); at the end of the chapter Paul takes up those who believe in God, who raised Jesus, our Lord, from the dead (4:24).

For Paul, therefore, Abraham becomes the example of conversion, in fact the conversion to the proclamation of God who has achieved salvation in Christ. Paul in this way goes back to Jewish traditions which held Abraham to be the first proselyte (cf. *Jub.* 11:16–24; 12:1–18 among others; above all Philo,

Heres 90–101). In Jewish interpretation, Abraham turned at his conversion to the Law, while Paul sets Law and faith as alternatives: Abraham came to faith before he knew the Law. His circumcision was only the "seal of the righteousness by faith" (Rom 4:11). Such an interpretation of Gen 15:6 had been spoken against by the author of the letter of James (see D.9. below). According to Paul, faith is first of all made precise from its content, which achieves salvation; faith is made possible by proclamation (Rom 10:14 f.). Indeed, where *pistis* is used absolutely (cf. especially Gal 3:23–25), without specification of its content, this content is understood: faith in God, who in the death and resurrection of Christ has achieved salvation, outside of the Law. The triad of faith, love, and hope (1 Thess 1:3; 5:8; 1 Cor 13:13; cf. Col 1:4 f.; Eph 1:15–18; Heb 10:22–24) is often put forward by Paul; in 1 Thess 5:8 these three ideas are assigned to the two parts of disarmament in Isa 59:16. Paul explains the triad thetically, not polemically; the triad is not used here as an anti-gnostic attack (Porphyry was the first to understand a way from faith to the knowledge of the truth, to love, to hope, in opposition to the Christian insistence on faith). Paul interprets the triad in Rom 5:1–5 in the sense of his doctrine of justification: justification by faith (5:1), hope in the glory of God (5:2), grounded in the gift of God's love (5:5). The three concepts are therefore fulfilled, according to their content, through justification.

5. The Deutero-Pauline Letters. The use of pist- is established in two directions in the Deutero-Pauline letters. On the one hand, proclamation is established as right teaching, as opposed to heretical teaching (cf. Eph 4:5; 1 Tim 4:6); on the other hand *pistis* as "faithfulness" is understood as a virtue which, for example, Timothy should take for his example (cf. 1 Tim 1:5; 2 Tim 1:5, among other places). *pistis* in this double sense is a criterion of opposition to heretics; yet it has otherwise become a central term of self-definition. In its internal usage, however, *pistis* remains a self-definition; although it is especially submerged in the Pastoral letters beneath the Greek terms eusebeia or epiphaneia; otherwise *pistis,* like dikaiosyne, is understood as an ethical concept, corresponding to the tradition of Greek usage.

6. The Synoptic Gospels. a. Mark. Mark locates programmatically at the beginning of the activity of Jesus a summary of the proclamation of Jesus (1:15): the nearness of the kingdom of God and the demand for conversion and faith in the gospel. In this demand, the early Christian linguistic usage of conversion is taken up (see D.3 above). Those addressed by this demand are the readers of the gospel, who should put their honest faith in the name of Jesus, as he is presented in the gospel itself (13:21 f.). It is important to note that the proclamation of the nearness of the kingdom of God in 4:1–34 is followed immediately by the story of the stilling of the sea (4:35–41), in which Jesus reproaches his disciples' failure of faith (4:40). For Mark, the kingdom of God has come near only in the word of Jesus, not in the situation of the destruction of the Temple in the Jewish War; faith in the gospel means, therefore, to hold fast to this gospel. Such a faith can remove mountains; Mark 9:14–29 clearly shows that faith, free of doubt, was an obvious problem for the readers of Mark.

b. Matthew. Matthew brings into prominence, out of the Sayings Collection Q (Luke 12:28 = Matt 6:30), the usage of oligopistia ("little faith"; Matt 8:26; 14:31; 16:8; 17:20). This usage has parallels in rabbinic terminology. According to Matthew (and by way of contrast with Mark), faith is an attitude which can be quantitatively expressed as smaller or greater. Since Matthew's gospel was written in argument with newly forming Judaism after the Jewish War, pist- cannot display the disagreement with Judaism as a Christian self-definition; such a self-definition lacks the encouragement to belief (= conversion), for example, in Matt 4:17 as compared with its parallel Mark 1:15.

c. Luke. Luke, in his two-volume work Luke-Acts, takes over from earlier tradition the meaning of pist- as "conversion." It is obvious that in the speeches of Acts, pist- is encountered, in fact, in the speeches made to Jews (Acts 16:31; 10:43; 13:39; 20:21; 24:24), but not in those made to gentiles (Acts 14:15–17; 17:21–31). Luke also shows, therefore, the difference between the internal linguistic usage and such usage of language which occurred in Judaism without the influence of the outer world. In contrast to Matthew, who defined the Jesus tradition as over against Judaism after the destruction of the Temple, Luke looks back into Judaism from the standpoint of his contemporary Church, which was truly formed by gentile Christians. Unlike the later apologists, however, who entered the battlefield against Greek tradition, Luke revealed himself to be aware of the problem of defining Christianity against its background as *pistis*.

7. The Johannine Tradition. a. The Gospel of John. The gospel according to John was written "that you may believe that Jesus is the Christ, the Son of God; and that believing, you may have life in his name" (20:31). This passage shows that the content of the gospel is understood to be signs, of which Jesus had performed even more than were written in this book (20:30). These "signs" were miracle stories (cf. 2:11, 23; 4:54; 12:37, among other passages). In contrast to the Synoptic Gospels' miracle stories, John's miracle stories lack the motif of faith which saves (cf. D.3 above). Faith is not the entity that makes miracles possible, from the side of the healer or of those who needed the miracle; rather, miracles happen in order to compel Jesus' followers to believe (2:11, 23; 4:54), who quite occasionally do not do so (12:37). John probably took these miracle stories out of a "gospel of signs," of which indeed the first half of the original end of the gospel (as cited above; 20:31a) is to be explained as a summary. This source recounted the miracles of Jesus (partially parallel to the synoptic miracle stories) with the purpose of awakening faith in Jesus. As the miracle worker of these signs, Jesus is the Christ, the Son of God; one would believe in him because he had performed the miracle. The church which stands behind this tradition continues this activity of Jesus; the faithful also do miracles, even greater ones than Jesus (14:12).

In the gospel of John this miracle tradition is integrated into a larger connection in which especially the self-interpretation of Jesus is expressed in speeches; these speeches partially take up motifs of the miracle stories. The speeches make possible not only the faith in the miracles of Jesus; the miracle stories are also the proclamation of Jesus, the Christ, the Son of God. Thus faith is not bound to the direct encounter with Jesus (in the gospel of John only the verb pisteuein occurs, not the noun *pistis*). Faith is present on the basis of "witness" or "testimony" (1:7; 3:11, 32f.) and is drawn from the word (2:22), and from the words (5:46 f.; 6:63) which are continued in the word of the disciples (17:20). The sayings in the gospel of John, which are against a linking of faith and sight (20:29; 4:48), refer on the one hand to a continuation of the activity of Jesus in the proclamation of the Church; on the other hand, the content of faith refers to a specifically Johannine christology, which is to be found in the sayings about the sending of the Son (5:24, 38; 6:29; 11:42; 12:44; 17:8, 21) and in the sayings about the relation of the Son to the Father (14:1, 10f.; 16:27, 30f.). The "I am"-sayings of the gospel are taken up in 8:24 and 13:19; they mean that in believing in Jesus, all human hopes for life, truth, bread, etc., find their fulfilment. Just as in Paul (see D.4 above), faith is strongly specified by its content; clearly the content of this faith is not formulated in terms of the death and resurrection of Jesus, but in terms of a christology of God's sending Jesus into the world. Salvation is accomplished in the sending of Jesus; faith, the acceptance of this salvation, means salvation, so that the believer already possesses eternal life (3:15f., 36; 5:24; 6:40, 47; 11:25f.) and no longer comes into judgment (3:16, 18). "To believe" is thus synonymous with "to realize" (6:69); "to realize" (which, like believing, occurs only as the verb, not the noun) means, just as "to believe" does, the acceptance of salvation which has already happened. In taking up the linguistic usage and the intention of his "gospel of signs," John therefore specifies the content of faith with the faith that is connected to salvation.

b. The Johannine Letters. The linguistic usage and intention of the gospel of John is taken up in the Johannine letters: faith rests upon evidence (1 John 5:10f.), "to believe" and "to realize" stand side by side (4:16). Inside the Johannine tradition, however, the definition of the content of faith is debated (in 1 John 5:4, one finds indeed the noun *pistis*), whereas in 1 John 5:1–12 it is formulated against every sort of Docetism. The victory over the world has been won because the Son of God "is come in the flesh" (1 John 4:2). The struggle concerning this confession brings hate into the Church, even though love is commanded.

8. Epistle to the Hebrews. In Hebrews, pisteuein and *pistis* occur very frequently, although the majority of occurrences are in the stereotyped repetition of the noun in chap. 11. *pistis* which is bound to an object is found only in 6:1: "faith toward God." This occurrence stands in the midst of a list of "principles," in parallel to "repentance from dead works," which indeed recalls the conversion of the addressees of the letter. The use of the verb pisteuein in the aorist with the meaning "to come to faith" (4:3, in opposition to apistia) also takes up this usage. The verb and the noun, however, are not applied in this letter to the widely unfolding christology of the Son, who was appointed as high priest according to

the order of Melchisedek. The single statement of the content of faith (11:6) takes up a Jewish confessional formula: "that he is, and that he is a rewarder of those who seek after him." *Pisteuein* and *pistis* occur especially in the paraenetic parts of the letter; the dogmatic basis of Christianity does not make use of a self-definition as *pistis. Pistis* is in this letter, in contrast to Paul and John, not used in connection with the christological content of faith, but it marks the way which those who belong to the Christ, as Son and High Priest, must follow. The word *pistis* can be seen to stand behind "patience" (hypomone 10:36; 12:1; makrothymia 6:12). *pistis* means above all "perseverance," the holding fast to a promised hope; it is threatened by apistia as the loss of such a hope. This is unfolded in chap. 11. In 10:32–34 the author had reminded his readers of "perseverance"; the reality of the promise is proven by the OT (10:37f.: Isa 26:20 and Hab 2:4; the series is turned about in Hab 2:4). Because of its opposition to shrinking back in cowardice (10:38f., according to Hab 2:4), *pistis* has here the meaning of "perseverance" or "endurance" in view of the hope. In 11:1 follows a defining sentence; the noun hypostasis occurs also in 1:3 and 3:14 and, corresponding to the philosophical linguistic tradition, should be translated with "substance" (not "assurance" as in the RSV): "faith is the substance of things hoped for, the proving of things not seen." This sentence is exemplified through the whole chapter with a long series of examples from the history of Israel. For Christians, this "cloud of witnesses" should mean those who have followed the previously ordained way (12:1); Christ is the model for them as "author and perfector of faith." "Perfector" means that he is the only one who has reached the goal of the way. In Hebrews, one sees also the same conception of faith which is used in Philo of Alexandria (see C.5.) in the Stoic sense (see B.2.), as an attitude; this is in opposition to how faith is meant in Paul and John as the content of belief.

9. Epistle of James. Only through the genitive object in 2:1, "of our Lord Jesus Christ in his glory," is faith defined christologically in James. As in Hebrews, faith is above all an attitude; so in 2:1 the readers are warned against partiality, which is not appropriate to faith. Faith is put to the test through temptations, which produces patience. James 1:6 urges the right way to pray, "in faith," which stands in opposition to doubt. The poor are the ones who can be rich in this faith (2:5). In 2:14–26, the theme of "faith and works" is handled with the thesis (2:20) that faith without works is useless (cf. 2:17, 26). This section is obviously polemically oriented, in contrast to the paraenetic character of the rest of the letter; this polemic can only be directed against the theological tradition which emanates from Paul, since Paul first presented the expressed antithesis of faith against works. This can be seen from the fact that James, in his examples from Abraham and Rahab, uses the catchword "justification" (2:21, 24f.), according to which he spoke of deliverance. The Pauline connection, "works of the Law," is lacking; yet the theme of the Law is indeed taken up in 2:8–13, and the addition "of the Law" to "works" can also in the wider transmission of the Pauline doctrine of justification be omitted (Eph 2:9; cf. Titus 3:5, among other passages). In Jas 2:19 the content of faith is given as a monotheistic confession, which even a demon can say. The passages in James given above, outside this polemical section, show that the Pauline definition of faith as holding fast to something is contradicted; the sayings concerning the Law in 2:8–13 intentionally do this. We encounter in James a massive theological debate between two currents which, particularly in their understanding of faith, are diametrically opposed to one another, resulting only in an either/or: in Paul *pistis* is based on the proclamation of the death and resurrection of Christ, resulting in the antithesis of faith *vs.* works of the Law; in James the understanding of *pistis* is as a Christian virtue, resulting in the unacceptability of Paul's thesis.

E. The Early Church

The NT writings display throughout different settings of what is meant by the same self-definition of faith. This is partially because of different ways of taking up Jewish language and Jewish tradition, as well as critical dissociations among them. The Church's compilation of a canon of the NT did not result in a unified concept of faith, just as no unified concept of faith was achieved by the Church's connection with the Hebrew Bible through its acceptance of the LXX as the first part of a Christian canon.

The later history of theology was, however, influenced by the canon. Faith was there as a term of self-definition, and every determination of Christian theology will have to refer back to what is said in the

canon about faith. Since Paul, Hebrews, and James all had to supply, for example, an interpretation for the story of Abraham, this was also true of those who taught about faith. One can see first in Augustine the medieval and also the modern theological differentiation between the *fides quae creditur* and the *fides qua creditur*, i.e., the difference between faith as teaching and faith as behavior, which is in a certain way a product of the connection of NT traditions, in which faith is primarily viewed on the basis of its content (Paul, John), along with the tradition found in Hebrews and James, as well as Matthew, in which faith is viewed primarily from its subjective side. Yet this differentiation is not worthy of recognition in the interpretation of biblical writings. In the strictest sense, NT writings were quoted as part of a normative canon first in the second half of the 2d century C.E.

It is in the Apostolic Fathers, however, that one next sees the continuation of the lines of thought which we had observed in the writings which would become the NT canon: the line of Hebrews can be seen to continue in *1 Clement* and the *Shepherd of Hermas;* the line of Paul continues in Ignatius of Antioch, Polycarp, and Justin Martyr in his *Dialog with Trypho.* These two lines converge in the *Epistle of Barnabas.* The combination of different early Christian understandings of faith occurs, however, in the time in which the question of faith of the two sides was yet again asked anew: once in the inner-ecclesial debate with Christian Gnosticism, and again in the new, unfriendly discussion with the Greek philosophical tradition. Indeed if these two new contexts of the question concerning faith were seldom suggested in the NT, and then appear to stand out clearly in the 2d century, then the asking of the question has become more radical, and the categories for the designation of faith in both of these horizons must first be developed. For this reason, solutions cannot be sought close at hand.

In the debate with Gnosticism, faith was dealt with primarily as the inner determination of faith, which is part of a whole complex of relationships with God, the world, and the human being. Clearly, Gnosticism was in no way a unified movement; hence, there was no single terminology developed. Thus it should not be surprising that gnostics spoke in entirely positive terms of faith, in which the traditional Pauline formulas of "salvation through faith" were taken up or in which the term "faith" was used polemically with a newly developed meaning and content; other gnostics, such as the Valentinians, exercised caution with respect to "knowledge" (gnosis), which was used by them as a concept opposed to "faith," a concept which they devalued. The role of *pistis* is obvious in the Sethian *Paraphrase of Shem* (NHC VII,*1*), even though this theme is lacking in the parallel report of Hippolytus, *Ref.* 5.19–22, as well as in other reports of the Sethians. Clearly one does not encounter *pistis* in the cosmology with the otherwise well known triad of Light, Darkness, and Mind, which appears in soteriology along with Spirit, pneuma. Since it was related to Light, the demon who became powerful, it led directly to the revelation of Faith. *pistis* finally destroys physis. Pistis is used here as the name of the redeemer, and that is not to be explained by way of the Christian tradition, in which Paul established *pistis* as that which expected the Christos (e.g., Gal 3:23–25). The gnostics could also speak very positively about faith, in terms of faith as something within the human person, which was not obtained by the previous activity of God in Christ. Otherwise it is possible that a devalued sense of faith was meant, e.g., by the Valentinians (according to Irenaeus, *Haer.* 1.6.2), when *pistis* was assigned to the psychichoi, and these persons were identified with the Christians in the Church.

The decisive difference between Gnosticism and the theologians referred to as orthodox was formulated in the "rule of faith" (*kanon tes pisteos = regula fidei*); *pistis,* or *fides,* is there the orthodox position. This rule of faith was not something already formulated in a previous confession, such as a baptismal confession, which could be brought into play against those who deviated from it. It had to be hammered out in a concrete theological debate. It is not surprising that in the very same Church father, the formulation of the *regula fidei* could be, not insignificantly, disagreed with in its actual wording. The point of disagreement with the gnostics was that the Creation was not the work of an alien, evil God, but the work of the father of Jesus Christ. Another point of disagreement was that Christ was susceptible to suffering, and was in fact crucified. In the shadow of this development of the inner-ecclesial debate about faith, there stood also a longstanding dispute with Jews concerning what faith is. Here, as one views Justin's *Dialog with Trypho,* there are indications that these debates did not take place in a purely literary

way. The subject of the debates was in what way, given the foundation already laid down by Paul of the identity of Christian faith with the OT, the Christian faith could claim "faith" as a self-definition of its own, indeed in direct opposition to the Jews.

More radical than the challEnge of Gnosticism to the Christians, the philosophical tradition brought the faith of Christianity into question. In the philosophical tradition, *pistis* had stood since antiquity among the ideas of knowledge. As in the wide circles of Judaism, which were strongly affected by the Greek background surrounding them (see C.4 above), where faith was not understood to be a self-definition, so also the early Christian apologists attempted to justify Christianity in the face of its Greek and Roman background. They used as technical terms of self-definition ideas from the religious and philosophical tradition, which did not include faith.

Particularly obvious is the usage of Melito of Sardis, who used *pistis* throughout as a self-definition for his Christian readers; Justin Martyr also claimed faith for Christianity as a self-definition, denying it to Jews. In both of these apologies, insofar as words with *pist-* are used, the apologists appear embarrassed for their philosophically trained readers. Out of the Platonic tradition, in which *pistis* could mean knowledge only in the realm of the world of appearances, came Celsus' *Alethes Logos* (about 178 C.E.) as an attack on Christianity. He reproached Christianity directly because of its *pistis* character, and he maintained the superiority of philosophical knowledge over simple *pistis* on the part of Christians.

Even before Origen, who took up the debate with Celsus, Clement of Alexandria was preoccupied in the second book of his *Stromata* with the justification of the *pistis* character, as represented by him, against the background of philosophical epistemology. Behind these prepared defenses against philosophers stood controversial debates; yet for Clement and for any similarly trained Christians the problem was also inner-ecclesial. In the following generations, one can see more and more experiments of a Christian philosophy, which were carried out with the aid of philosophical epistemology. The problem was eased for Clement by the fact that in Stoicism *pistis* could be understood quite positively as "confidence," as opposed to "vain reasonings"; thus the problem did not appear here in its full sharpness, as it would in the encounter with the Platonic tradition. Clement defined faith as an "introduction" *(prolepsis)* and as an "assent" *(synkatathesis),* as it developed from Heb 11:1, which he understood to have been written by Paul: "Faith *(pistis),* however, spoken of as terrible by the Greeks, who hold it to be empty and barbaric, is an introduction *(prolepsis)* out of a free decision, an assent *(synkatathesis)* with the fear of God" (*Strom.* 2.8.4). Origen, on the other hand, in opposition to Celsus, relativized the self-definition of faith insofar, in his view, that all other religious and philosophical schools claimed faith. Thus Origen made faith a general idea, and faith no longer meant the exclusive self-definition of Christianity. The translation of Isa 7:9 in the LXX and Vulgate, which made faith the presupposition of knowledge, was not to be found in the NT, and was first used by Irenaeus to specify the relationship between faith and understanding.

In the time in which the NT canon was being formed, Christianity was forced by Gnosticism, by Judaism, and by philosophical traditions, especially Platonism, to deal with its self-definition of faith; it had to make it precise, defend it, and establish it. With roots in Jewish tradition, taken up in different ways by Christianity, faith as a self-definition became the criterion for differences both within Christianity and outside.

DIETER LÜHRMANN
TRANS. FRANK WITT HUGHES

"FAITH OF CHRIST"

The phrase *pistis Christou* (or its equivalent) occurs eight or nine times in the Pauline corpus (Rom 3:22, 26; Gal 2:16 [twice], 20; 3:22 [3:26 in P^{46} et al]; Eph 3:12; Phil 3:9). Grammatically speaking, the genitive *Christou* may be objective or subjective. In the former case, its meaning is: "faith whose object is Christ." Thus most modern translations render it "faith in Christ" although one can question whether "faith *in*" is equivalent to "faith *whose object is.*" In the latter case, its meaning is "faith (fulness) of Christ." A modern translation which accepts this meaning is the Hebrew version of Franz Delitzsch, which renders it "the faith of the Messiah." In recent years a number of studies have concluded that Paul intended to express a subjective genitive.

A. Arguments in Favor of the Subjective Genitive

The construction of *pistis* followed by the genitive of a person or of a personal pronoun occurs 24 times in the Pauline corpus not counting the places where *pistis Christou* and its equivalent appear. Twenty times this construction refers to the faith of Christians, individually or collectively, one time to the faith (fulness) of God (Rom 3:3), two times to the faith of Abraham (Rom 4:12, 16) and one time to anyone who has his faith reckoned to him for righteousness (Rom 4:5). In all cases the phrase refers to the faith *of* the individual, never to faith *in* the individual. Kittel (1906: 424) observed that after Paul had used the subjective genitive in Rom 3:3 in reference to the "faith of God," and the subjective genitive in 4:16 in

reference to the "faith of Abraham," he would have hopelessly confused his readers unless he intended the same grammatical construction in 3:22, 26 to refer to the "faith of Christ."

A peculiar change of idiom in Gal 2:16 points to the subjective use of the genitive. Paul says that "a man is not justified by the works of the law but through the faith of Jesus Christ, and we believed in Christ Jesus, in order that we might be justified by the faith of Christ, and not by the works of the Law." The passage makes a distinction in construction by alternately using the genitive to express the faith *of* Christ and *eis* with the accusative to express man believing *in* Christ. These phrases can hardly mean the same thing; otherwise the sentence is full of redundancies and tautology.

The use of *pistis* in Hellenistic Jewish literature supports the subjective genitive. *pistis* followed by the personal genitive is quite rare; when it does appear it is almost always followed by the nonobjective genitive. Thus *pistis* occurs 23 times in the OT Apocrypha. Twice it is followed by the subjective personal genitive (Sir 46:15; 1 Macc 14:35) but never by the objective personal genitive. In Philo *pistis* occurs 116 times. Twice it is followed by the subjective personal genitive (*Spec Leg* IV 30, 34); never is it followed by the objective genitive. Josephus uses *pistis* 93 times, four times followed by the subjective personal genitive (*Life* 1.84; *AgAp* 2.218; *JW* 3 §6; 6 §330) and one time by the objective genitive (*Ant* 19 §16). This last reference reads: "provides good evidence *(pistin)* of God's power." In this case *pistin* does not refer to the active faith of a person and consequently is unparallel to the construction *pistis Christou.*

From the above statistics one can argue that it was inappropriate to the Hellenistic Jewish mentality to express the object of faith by means of the objective genitive. Though a theoretical case can be made for it, in actual practice it does not occur. Characteristically the writers use the preposition when they wish to express the object of faith. Thus such phrases as *pistis pros ton Theon* frequently occur (*4 Macc.*15:24; Philo *Mut* 201). But never does *pistis* followed by the genitive of person appear with this meaning. Conversely, the genitive of person is used after *pistis* when the construction expresses the subject of the implied action. Thus frequently such phrases occur as *ten pistin tou Simonos* (1 Macc 14:35) and *tou plethous ... pistis* (Joseph. *Vita* 84), each referring to the faith of the person(s) involved.

The early versions of the NT (the Syriac, Latin, and Coptic) make it clear that the early Church understood *pistis Christou* to mean "faith (fulness) of Christ." The evidence is as follows. The Peshitta renders *pistis Christou* as *haymanutha dameshiḥa,* "the faith of Christ" (or the like) in all 9 occurrences in the Pauline corpus. On occasion it uses the anticipatory *He* to express the genitive relationship and in doing so it renders the phrase even more explicitly to mean "the faith *of* Christ." In Gal 2:16, for example, the Syr reads: *demen haimanutheh dameshiḥa neʿdadaq,* "that by his faith, that of the Messiah, we might be justified." There can be no doubt; the translator understood the genitive to be subjective and the meaning of the phrase to be "the faith of Christ." The Syriac, on the other hand, clearly distinguishes this from phrases that mean "believing in Christ." For the latter the Syriac uses the preposition to convey the meaning. Thus in Gal 2:16 it reads: *ʿaph ḥenan beh beyeshu meshiḥa haymen,* "and we believed in him, in Jesus the Messiah." This renders the parallel Greek phrase, *eis Christon Jesoun episteusamen.*

The Vg always renders *pistis Christou* literally *fide Christi,* "the faith of Christ." In addition it always maintains a clear distinction between this phrase and the act of our believing in Christ. It translates the latter *in Christo credimus.* The consistency with which the Latin makes this distinction makes it clear that the Vg translator(s) understood *pistis Christou* as a subjective genitive.

The Sahidic version renders *pistis Iesou Christou* consistently *tpistis n̄iī̄ pex̄x̄,* "the faith of Jesus the Christ." The Sahidic distinguishes this from "faith in Christ Jesus" by rendering the latter *pistis hm̄ pex̄x̄ ī̄ī̄.* Again there can be no doubt; the two concepts were kept distinctly separate by the different renditions in the Sahidic version.

Although an account of all the versions of the Church lies beyond the scope of this survey, it appears that translations of the NT used throughout the Middle Ages understood *pistis Christou* as a subjective genitive. This is true for the Latin Vg, the Sahidic and Bohairic Coptic, and the Peshitta Syriac. During the Reformation period translations both in England and on the continent continued to render the phrase with the meaning of "faith of Christ." Typical examples are: (a) the old Spanish version of Casiodoro de Reine revised by Ciprano de Valera in 1602, which translates without exception *la fe de Cristo;* (b) the

version of John Wycliffe, dating *ca.* 1380, which translates invariably (including Gal 3:26) "the feith of Jhesu Crist"; and (c) the Authorized Version of 1611 which translates the phrase "faith of Christ" (an exception is Rom 3:26).

Although it would have to be proven by an exhaustive study of all NT versions, it appears that Luther was the first in the history of NT translators to render *pistis Christou* as an objective genitive. He consistently (except for Gal 2:20) translated the Greek *Glauben an Christum.* His rendition, which was perhaps influenced by his theology, has become dominate today and is followed by virtually all modern translations (an exception being that of Delitzsch; see above).

B. Objections to the Subjective Genitive

It has been argued that elsewhere in the NT, outside the Pauline corpus, *pistis* is occasionally followed by a personal genitive that is nonsubjective. The key passages are Mark 11:22; Acts 3:16; Jas 2:1; Rev 2:13; 14:12. None of these passages, however, uses an unambiguous objective genitive. Each may be understood as employing a subjective genitive or some other nonobjective usage of the genitive. Mark 11:22 may be translated: "Hold on to the assurance of God [who will do for you what you ask]." (Cf. *AgAp* 2 §218, "confirmed by the sure testimony *(pistin)* of God.") Acts 3:16 may be translated: "And by the assurance *(pistei)* of his name, this one whom you see and know, his name has made strong, and the certainty *(pistis)* which [comes] through it [i.e., his name] has given to him this wholeness before you all." The last three passages, Jas 2:1; Rev 2:13; 14:12, can also be understood as employing a nonobjective use of the genitive. In each instance a genitive of author or source may be implied.

Arland Hultgren (1980) has argued that there is a syntactical reason why *pistis Christou* should not be considered a subjective genitive. Whenever Paul uses the *pistis Christou* formulation he never has the article before either noun. Elsewhere when Paul uses *pistis* before a genitive that is clearly subjective he uses the article before *pistis.* Twice the genitive is a noun (Rom 3:3 and 4:12); in other cases it is a pronoun such as *hēmōn* (Rom 1:8, 12; etc.). But the article with *pistis* followed by a pronoun does not provide evidence for Paul's use of *pistis* followed by a noun since, as Williams (1987: 432) correctly pointed out, usually in the NT the anarthrous noun followed by a personal pronoun does not occur. In other words one normally finds *hē pistis hēmōn,* not *pistis hēmōn.* This means that Hultgren has only two examples where articular *pistis* is followed by a subjective genitive noun to set against the *pistis Christou* formula. This is insufficient to prove his point. Furthermore, according to the canon of Apollonius (3d century), if two nouns are united by a genitive the article should occur with both or neither. Paul regularly employs both ways of writing nouns united by a genitive as the following examples show: *tō nomō tēs hamartias* (Rom 7:23), *nomō hamartias* (Rom 7:25); *tō nomō tou Theou* (Rom 7:22), *nomō Theou* (Rom 7:25). These examples suggest that no difference in meaning exists between such forms as *pistis Christou* and a theoretical *hē pistis tou Christou.*

C. The Meaning of "Faith of Christ"

A number of interpretations have been given to the *pistis Christou* formula by those who believe it employs a subjective genitive. Herbert (1955: 373–79) explained it as the frailty of man taking refuge in the firmness and faithfulness of Christ. Torrance (1957: 111–14) explained it as both the faith of God and the faith of man being performed by Christ. Taylor (1966: 58–76) believed that for Galatians the phrase referred to the *fidei commissum* of Roman law. According to him it explains in juristic terms how Abraham's inheritance is passed on through Christ to both Jews and Greeks. Goodenough (1967: 57) argued that Christ's faith was "his trusting that the cross would not be the end, and that God would save him from death because God is *pistos,* God is the righteous one who is absolutely supreme in that he is beyond life and death." He further stated that we share Christ's faith when we identify with him. Hays (1983: 174) concluded that Christ's faith "was manifested in his death on the cross, which, as a representative of human faith, brought about redemption and which at the same time manifested the faithfulness of God." He further said that Christians are saved not by their own faith but by participation in Jesus Christ who was a representative figure. Pollard (1982) interpreted the phrase as Christ's own faith in God demonstrated by his obedient life and death. He suggested that Christians participate in this system of faith by believing in God and by obeying him as Christ did.

It is likely that the *pistis Christou* formula, especially when it occurs in Romans and Galatians, relates primarily to the inclusion of the Gentiles. The faith of Christ is the fulfillment of the promise given to Abraham that all the nations will be blessed in him. Christ kept faith (= faith of Christ) with the divine promise by opening the doors to the Gentile nations. For Paul, then, the doctrine of justification by faith is the doctrine that by the faith of Christ God has united Israel and the nations in the present age in order to lead them to faith in God and to accomplish the salvation of mankind.

FALCON. See ZOOLOGY (FAUNA).

FALSE APOSTLES [Gk *pseudapostoloi* (ψευδαποστολοι)]. False apostles are mentioned only in 2 Cor 11:13 within the context of Paul's defense of his apostleship (chaps. 10–13). The term may have been coined by Paul himself as a derogatory refutation of his opponents' claim to be apostles (cf. "false witnesses" *[pseudomartys]* in 1 Cor 15:15 and "false brethren" *[pseudadelphos]* in 2 Cor 11:26). The term aptly summarizes Paul's characterization of his opponents which is antithetical to a true apostle. They preach another Jesus, offer a different spirit, and proclaim a different gospel (11:4). Although claiming to be servants of Christ (10:7; 11:23), they are really servants of Satan disguised as apostles of Christ and servants of righteousness (11:13–15).

Virtually nothing is said about the teaching of the false apostles. Some scholars claim that they are Judaizers because they stressed their Jewish heritage (11:22). Paul's accusation that they are false apostles and his later insinuation that they are false brethren (11:26) recall his characterization of Judaizers in Galatians as false brethren (Gal 2:4). There is some indication that, like the Gnostics, they claim to possess special knowledge (10:5; 11:6).

Only slightly more can be surmised about the character of the false apostles. They are so boastful of their own accomplishments (10:12; 11:12, 18, 21) that Paul ironically refers to them (or the Corinthians appraise them) as "super apostles" (11:5; 12:11). They claim that Paul was weak and their speaking ability superior to his own (10:10; 11:5–6). They challenge Paul's claim that the Corinthian Church was his own field of mission (10:13–18). They were leading the Corinthians away from a sincere devotion to Christ (11:3) for selfish exploitation (11:19–20; cf. 11:9).

The false apostles claim that because Paul accepted financial support from other churches while refusing it from the Corinthians, he did not love them (11:11; 12:13). With this accusation they may have capitalized upon contemporary understanding that by refusing to fulfill patron-client expectations, Paul was affronting the Corinthians' friendship. Perhaps they went so far as to stress that rather than receive their support Paul chose to be a craftsman (tent maker), the most demeaning way an itinerant teacher could make a living.

DUANE F. WATSON

FALSE CHRISTS [Gk *pseudochristoi* (ψευδοχριστοι)]. The sole NT references to false Christs are parallel sayings of Jesus found in the eschatological discourses of Matthew (24:24) and Mark (13:22). In both contexts Jesus warns his disciples of the appearance of false prophets and false Christs who will show signs and wonders (and also probably teach falsely) for the purpose of deceiving the elect into thinking that his Parousia has arrived (cf. the description of the false prophet in Rev 13:11–18). In a related passage, it is said that these deceivers will even claim, "I am the Christ" and "The time is at hand" (Matt 24:4–5 = Mark 13:5–6 = Luke 21:8). Since the genuine Parousia will be sudden and everywhere visible (Matt 24:27; Mark 13:26), the sign that they are false Christs will be the proclamation of both their followers and false prophets that they reside in a specific hidden location prior to their public appearance, such as the wilderness (where John the Baptist found Jesus) or inner rooms (as if plotting revolution) (Matt 24:26; cf. Mark 13:21).

There is considerable disagreement over whether or not these false Christs are to be equated with the antichrists or the Antichrist mentioned elsewhere in the NT. Stressing their distinction, the false Christs are said to be those who make false claims to be the Messiah, impersonate him, and allow others to proclaim them as such. Stressing their equality, it is argued that the false Christs' very act of impersonating Christ is akin to the antichrists' attempt to usurp his position and pervert his teaching. Like the antichrists, the false Christs are active opponents of Christ, seeking to undo his work and teaching (1 John 2:18, 22; 4:3; 2 John 7), like the supreme Antichrist of the last days (2 Thess 2:1–12; Rev 13:1–10). See also *DNTT* 1: 124–26.

FAMILY. This entry focuses on aspects of family structure in ancient Israel, as well as on the association of household units with early Christianity.

OLD TESTAMENT

An understanding of the nature of the family in the OT is complicated by two factors. One is the historical lEngth of time involved and the changes in cultural and social patterns within that span of time. The other is the range of terminology for kinship relationships, which is often not accurately reflected in English versions of the Bible. The word "family" is used to translate several Hebrew words, none of which means exactly what "family" means in modern, Western usage. In the following survey of the major components and terminology of Israel's kinship system, allowance must be made for variation and changes in the course of history, and for some terminological fluidity.

———

A. Terminology
1. *Šēbeṭ/Maṭṭeh* (“Tribe”)
2. *Mišpāḥâ* (“Clan”)
3. *Bêt-ʾāb* (“Father’s House”)
4. Other Kinship Terms
B. Social Functions
1. The *Mišpāḥâ*
2. The *Bêt-ʾāb*
C. Marriage
D. Parents and Children

———

A. Terminology

Israelite nomenclature is the clearest window into Israelite kinship structure. The search for the guilty person responsible for Israel’s defeat at Ai narrows down from “tribe” *(šēḇeṭ)* to “clan” *(mišpāḥâ)* to “family” *(bêt-ʾāḇ),* and finally to the individual, Achan. These three major social units are then repeated in reverse order when his full name is given: “Achan son of Karmi [patronymic, his own father’s name], son of Zabdi [grandfather and head of his *bêt-ʾāb*], son of Zerah [name of his *mišpāḥâ*], of the tribe of Judah” (Josh 7:16–18). The same three levels of kinship are to be found in many other texts where names are used or selected, e.g., the selection of Saul (1 Sam 10:20f.), and the self-deprecating formulas of Saul (1 Sam 9:21) and Gideon (Judg 6:15): *tribe*, *clan,* and *house*.

1. *Šēbeṭ/Maṭṭeh* (“Tribe”). This was the primary unit of social and territorial organization in Israel. The tribes bore the names of the twelve sons of Jacob/Israel, with Joseph divided into Manasseh and Ephraim. Their varied histories are as complex as the history of the emergence and settlement of Israel in Palestine itself. Although, as the nomenclature shows, a person’s tribal identity was important, and in wartime the military levy was on a tribal basis, in terms of practical social impact on ordinary life, the tribe was the least significant of the circles of kinship within which one stood. The secondary and tertiary subdivisions of the social structure were both more socially relevant and also closer to what we could recognize as meaningfully “family” structures.

2. *Mišpāḥâ* (“Clan”). This word is awkward to translate. English versions (e.g., RSV) often render it “family,” but this is misleading since the *mišpāḥâ* could comprise quite a large number of families. It was a unit of kinship, but of far wider scope than the English word “family” denotes (except metaphorically). For a subunit of the tribe, the words “clan” and “phratry” are sometimes used (cf. Anderson 1969; *IDBSup*, 519–24). However, in common anthropological and sociological terminology these words usually designate exogamous kinship divisions (i.e., where marriage must take place outside one’s own clan or phratry), whereas the Israelite *mišpāḥâ* was normally (and in some circumstances, statutorily) endogamous, in order to preserve Israel’s system of land tenure (cf. Num 36:1–12). Nevertheless, in spite of this difficulty (fully discussed by Gottwald 1979: 301–5), the word “clan” is perhaps the best available rendering (as in the NIV), since it signifies something smaller than a tribe but larger than a family—precisely its intermediate role in Israel.

The primary nature of the *mišpāḥâ* was a unit of recognizable *kinship.* The clearest evidence of this is in the census lists of Numbers 1 and 26 (cf. Mendenhall 1958), where the sons (in a few cases, the grandsons) of the tribal ancestors (i.e., the sons of Jacob) give their names to the clans of each tribe, as its major subdivisions. It is this kinship factor which lies behind the motive for the supportive and restorative roles of the *mišpāḥâ* in the social and economic spheres (see B.1, below). The tribal and subtribal lists of Numbers 26 would yield a total of about 60 clans in Israel. But it seems certain that there were many more than that, since the numerical size of each would have been very large if limited to 60 clans. In the narratives, some clan names occur which are not recorded in the census lists, and there were probably many more: Saul, for example, was from the Matrite clan (1 Sam 10:21), and David was from the Ephrathite clan (1 Sam 17:12), but neither of these names are found among the clans of Benjamin or Judah in Numbers 26. It also appears that in the process of settlement some place-names became absorbed

into the genealogical structures as clan names, so that some clan names and village or town names became interchangeable (Mic 5:2; 1 Chr 2:5ff.; 4:5). Thus, for example, Shechem, Tirzah, and Hepher, which were Canaanite towns (Genesis 34; Josh 12:17, 24), were included among the clans of Manasseh (Josh 17:26; Num 26:31–33).

This points to the second major feature of the *mišpāḥâ*—its *territorial* identity. The clearest evidence for this is found in the ancient tribal boundary lists purporting to give the tribal portions in the division of the land, in Joshua 13–19. It is repeatedly recorded there that in the division, the tribes were allotted land "according to their clans" (e.g., Josh 13:15, and *passim*; cf. Num 33:54). Within these clan portions, each household also had its patrimonial portion *(naḥălâ),* as is clear from Judg 21:24, but the role of the *mišpāḥâ* in Israel's economic system was very important (see below). So when an Israelite gave his full name, including his house, clan, and tribe, it not only stated his kinship network but practically served as a geographical address as well.

3. *Bêt-ʾāb* ("Father's House"). This was the third level of the kinship structure of Israel, and the one in which the individual Israelite felt the strongest sense of inclusion, identity, protection, and responsibility. The "father's house" was an extended family, comprising all the descendants of a single living ancestor (the head, *rōʾš-bêt-ʾāb*) in a single lineage, excluding married daughters (who entered their husbands' *bêt-ʾāb* along with their families), male and female slaves and their families, resident laborers, and sometimes resident Levites. Thus, the *bêt-ʾāb* included the head of the house and his wife (or wives), his sons and their wives, his grandsons and their wives, plus any unmarried sons or daughters in the generations below him, along with all the nonrelated dependents. Given the early age of marriage, a head of household could well preside over three generations below his own, so that his house would comprise several nuclear (two-generation) families and (with average fertility even under monogamy) would have been numerically substantial. It is likely that a *bêt-ʾāb* could have comprised some 50–100 persons, residing in a cluster of dwelling units. Thus, Achan was a married man with children, but he was part of the house of Zimri, his grandfather (Josh 7:17f.). Gideon, likewise, though married with teenage sons and servants of his own, lived under the authority and the protection of his father Joash and his house (Judg 6:11, 27, 30f; 8:20). The household of Micah the Ephraimite occupied several dwelling houses and could muster a contingent of men, but they were no match for a superior *mišpāḥâ* (Judg 18:14, 19, 28f.).

The *bêt-ʾāb* in Israel was patrilineal (descent was reckoned through the male line) and patrilocal (the wife left the *bêt-ʾāb* of her father and went to reside within the *bêt-ʾāb* of her husband). Growth would happen by births, acquiring wives for sons, adoptions, attraction of resident workers and craftsmen (*gērîm* and *tšābîm*), and purchase of slaves. Conversely, a *bêt-ʾāb* could shrink even to extinction, through deaths (natural, or unnatural—i.e., war or famine), infertility in general or lack of sons especially (since daughters would marry into other households), and the extremity of selling land and dependents because of debt. Various mechanisms existed to protect households from such attrition or extinction (see below). It is probable that on the death of the head of the household, his sons in the next generation would become heads of their own houses, either dividing the patrimony, or possibly in some cases choosing to live on it together (cf. Deut 25:5).

4. Other Kinship Terms. Kinship terms in the Israelite family were simple, the same terms being used both for immediate blood relatives in the family and for wider relationships both vertically and horizontally, on the male side. Thus: *ʾāb,* "father" (and any male ancestor in the same lineage); *ʾēm,* "mother"; *bēn,* "son" (and any male descendant in the same lineage); *bat,* daughter; *ʾaḥ,* "brother" (and any male member of the same *mišpāḥâ*); *ʾāḥōt,* "sister." Since kin was reckoned unilineally through the male, the mother's relatives were not counted genealogically as kin, nor given differentiated generic names (cf. *IDBSup,* 519–24 on different systems of distinguishing kin). Thus, *dōd* and *dōdâ* refer respectively to the paternal uncle (father's brother) and his wife (sometimes father's sister). But although the terminology could be elastic in scope, the relationships themselves within the empirical extended family were carefully regulated. The prohibitions on certain degrees of kinship for marriage purposes (Lev 18:6–18; 20:11–14, 19–21) were not concerned so much with sexual ethics in a general sense, but

with limiting and protecting the permitted sexual liaisons within and between the nuclear units within the extended family, for the sake of its overall stability (see Porter 1967).

B. Social Functions

The Israelite capture of Palestine meant the replacement of one social system with a very different one. Palestine before Israel was a city-state culture, with a very stratified social and economic hierarchy, topped by the local kings and their elites, supported by the mass of taxpaying tenant peasants. This power-at-the-top, poverty-at-the-bottom pattern was accurately portrayed and warned against in Samuel's speech to monarchy-seeking Israelites (1 Sam 8:10–18). By contrast, Israel emerged as a social system based on a broad equality of kinship groups, initially without a centralized, elite power base. Even after the establishment of the monarchy (after much resistance, which never really died out), the kinship pattern survived as a potent social reality at local levels of authority and decision making. Many studies have shown that it was within the smaller kinship units, especially the *bêt-ʿāb* and the *mišpāḥâ,* that the individual found his or her identity as a member of the covenant people of Israel, and learned his or her obligations to the society and the God of Israel. The following brief survey of the social roles and functions of the *mišpāḥâ* and the *bêt-ʿāb* will show this familial basis of Israelite society and its significance in its members' theological self-understanding.

1. The *Mišpāḥâ.* a. Socioeconomic. The expression "protective association of extended families" (Gottwald 1979: 257ff.) is accurate as a description of the *mišpāḥâ* because its role was primarily protective and restorative for the constituent households. The focus of this role was the figure of the *gōʾēl,* the "kinsman-redeemer." The extent of kinship within which a man could be required to act as *gōʾēl* was bounded by the *mišpāḥâ.* This is clear from the regulations for land redemption by a relative in Leviticus 25:49. The responsibility starts with a brother, moves to uncle, cousin, and then to "any blood relative [lit. "of the flesh of"] in his *mišpāḥâ.*" The range of responsibilities that could fall on the shoulders of a kinsman as a *gōʾēl* was wide and varied.

First, he was supposed to avEnge the murder of a kinsman (Numbers 35). This is obviously a form of deterrent protection of the lives of the personnel of the *mišpāḥâ* (though it could, in extreme circumstances, be counterproductive, as the hypothetical, but presumably realistic, story of 2 Sam 14:4–11 shows).

Second, the *gōʾēl* was supposed to raise a male heir for a deceased relative (Deut 25:5–10). This was a form of emergency marriage (known as "levirate," from Latin, *levir,* brother-in-law) to the widow of an Israelite who had died childless. Its purpose was to preserve his name and patrimony by raising a son who would be counted as the son and heir of the deceased, even though fathered by the kinsman. It appears to have been a less than popular duty, judging by the form of the law. The economic reasons for the reluctance to perform it appear in Ruth 4. The nearer kinsman to Boaz declined to redeem the land of Naomi and Elimelech (deceased) when it turned out he would have to marry Ruth, since any son born to them would inherit the land which he had paid for and would have to maintain throughout the child's minority. Boaz's contrasting willingness to act as *gōʾēl* for both the land and for Ruth is consequently seen as even more praiseworthy. The local residents appropriately pray that he will have more than one son (Perez was a twin, and bore two sons)—the first for an heir to Elimelech, and others as heirs for himself.

Third, land within the *mišpāḥâ* had to be redeemed (Lev 25:23–28). If a kinsman became poor and had to sell part of the land of the *bêt-ʿāb,* it was the duty of a fellow kinsman either to buy it in advance (preemption) or buy it back if sold (redemption—the law has been interpreted both ways and both were possible). It then remained in the hands of the redeemer until the Jubilee year, when it returned to the original *bêt-ʿāb.*

Fourth, the redeemer was supposed to maintain or redeem the person or dependents of a kinsman in debt (Lev 25:35–55). The duties included providing interest-free loans (vv 35ff.), complete maintenance within one's own work force (39ff.), and redemption from bondage if the poor brother or his dependents had sold themselves to an outsider (i.e., outside the *mišpāḥâ,* not necessarily to an ethnic foreigner, vv 47ff.).

From this it is clear that the *mišpāḥâ* existed primarily for the good of the constituent families. There is no evidence that it exercised any separate authority over them, or wielded any economic demands of its own. As Gottwald (1979: 267) notes: "The *mišpāḥāh* stands out as a protective association of families which operated to preserve the minimal conditions for the integrity of each of its member families by extending mutual help as needed to supply male heirs, to keep land, to rescue members from debt slavery, and to avEnge murder. These functions were all restorative in that they were emergency means to restore the normal autonomous basis of a member family, and they were all actions that devolved upon the *mišpāḥāh* only when *bēth-ʾāv* was unable to act on its own behalf."

b. Military. The census lists of Numbers 1 and 26, which stress the listing of clans and houses, were explicitly linked to military capacity and the enrollment of the army. The term *ʾelep,* as well as being the numeral "one thousand," also could be used synonymously for *mišpāḥâ,* usually in military contexts. It seems that the *ʾelep* was the "*mišpāḥâ*-at-arms"—i.e., the contingent of soldiers supplied as its quota to the tribal levy. This may have been very ideally 1,000, but in reality was far fewer than that. (Some scholars reckon that this accounts for the impossibly high figures for the army in Numbers 1 and 26: the number of "thousands" may actually be the number of clan units in the tribal quotas.) When Gideon set out to raise an army against the Midianites, he began with his own Abiezrite *mišpāḥâ,* after which he called out the rest of the clans of Manasseh, and only then came the wider appeal to the clans of other neighboring tribes (Judg 6:34ff; 8:2). Jesse's Ephrathite clan's contribution to Saul's army against the Philistines included three out of his eight sons in the *bêt-ʾāb,* and the provisions he sent by young David included ten cheeses for the commander of their *ʾelep* (1 Sam 17:12–19). Thus the obligations of kinship in Israel included not only the socioeconomic restorative role of the *mišpāḥâ,* but also the duty of providing manpower for the army in time of war, and both were regarded as fundamental obligations to Yahweh himself. The Song of Deborah is strong evidence for this sense of mutual obligation and equates the "righteous deeds [i.e., military triumphs] of Yahweh" with the "righteous deeds of his peasant farmers in Israel" (Judg 5:11).

2. The *Bêt-ʾāb.* Sociologically the *bêt-ʾāb* was the most important small unit in the nation and for the individual Israelite, man, woman, or child—slave or resident alien—it was the essential locus of personal security within the national covenant relationship with Yahweh (cf. Mendenhall 1960; Wright fc.).

a. Economic. The *bêt-ʾāb* was the basic unit of Israel's system of land tenure, each having its own *naḥălâ* (inheritance) of land, and therewith intended to be economically self-sufficient. The intention of Israel's land tenure system, namely that ownership of land should be as widely spread as possible with broad equality over the network of economically viable family units, was embodied in and protected by the principle of *inalienability.* This was the rule that the land should remain in the family to which it had been apportioned, and could not be sold permanently outside the family. It was a rule tenaciously adhered to through Israel's history, as far as the evidence points. The whole OT gives us no single example of an Israelite voluntarily selling land outside his family. Recorded land transfers were either kinship redemption (Jeremiah 32, Ruth), sale by non-Israelites (2 Samuel 24; 1 Kgs 16:24), or nonvoluntary mortgage of land for debt (Neh 5:3). Nor is there any inscriptional evidence from Palestine of Israelite sale and purchase of land, even though there are abundant records of such transactions from Canaanite and surrounding societies. The only legal method by which land in the OT period "changed hands" was by inheritance within the family. Even Ahab recognized this, when faced with Naboth's stand on this principle (1 Kings 21). The means used to circumvent it and the forcible confiscation of Naboth's family land show the grim fulfillment of Samuel's prediction as to what monarchy would entail for the previously economically autonomous families of Israel. In fact royal intrusion into Israel's traditional family land tenure system went back to David himself (see Ben Barak 1981). The case of the daughters of Zelophehad, according to which surviving daughters could inherit land in the absence of sons but must marry within their own *mišpāḥâ,* expresses the principle of inalienability most explicitly (Num 27:1–11; 36:1–12).

It was this inalienability principle which lay behind the duty of redemption within the *mišpāḥâ,* which we have already observed (Lev 25:23). Even more so it was the rationale of the Jubilee institution. One

effect of the exercise of land redemption over a period of time could be that a few better-off households within a *mišpāḥâ* could acquire (by redemption or preemption) the land of more impoverished ones, thus producing a polarization of economic wealth and social power by legal and superficially laudable means. The Jubilee functioned as an override to this potential inequity by requiring that in the fiftieth year (i.e., approximately every other generation), any land that had changed hands within the *mišpāḥâ* through redemption should return to the original *bêt-ʾāb,* along with any dependents who were in bondage for debt. The Jubilee was thus designed to maintain the viability of families on their own land by periodic restoration. It illustrates the point that Israel's economic system was geared—in principle at least, if not in practice—not to the interests of a wealthy elite, but to the economic survival and social health of the lowest socioeconomic units—the extended families on their patriomial land.

b. Judicial. Law and the administration of justice were features of life to which the faith of Israel very specifically addressed itself, so much so that it has markedly affected the very shape and substance of the canon of Hebrew scriptures. In this sphere we also find that the *bêt-ʾāb* was of central importance. The role of the family had two dimensions in this matter: internal, domestic jurisdiction, and external, public administration, of justice.

(1) Internal Jurisdiction. In certain matters the head of an Israelite household had authority to act judicially without reference to any external civil authority. These included marriage and divorce, matters relating to slaves (except murder or physical injury, Exod 21:20f., 26f.), parental discipline (see Phillips 1973; 1980). This judicial independence of heads of households can be gauged also from the degree of inviolability enjoyed by members of a household under a strong head. They could not simply be seized on suspicion (Deut 24:10f.; Judg 6:30f.; 2 Sam 14:7). Only a "fool" would allow such a thing (Job 5:3f.). The law of the rebellious son (Deut 21:18–21) shows that it was only after internal family action had been persistently flouted that the matter came before the civil elders for public intervention. The *bêt-ʾāb,* therefore, was the primary framework of legal authority within which the Israelite found himself from childhood, and to which he remained subject for a considerable period of his life—even into adulthood and parenthood, while his father was alive. The fifth commandment endows this social fact with all the weight of fundamental covenant obligation to Yahweh.

(2) The Administration of Justice. As well as their responsibility for jurisdiction within their own households, the heads of houses acted judicially in the local civic assembly—"the gate." This was probably their major public function as "elders" in the everyday life of the community. The OT never spells out exactly the identity of the elders nor the qualifications for eldership, so there has been room for debate among scholars on the matter. But the most likely view is that they were composed of the senior males from each household—i.e., the *rōʾš-bêt-ʾāb,* who were qualified by their substance—their family and their land (see Wolf 1947; Gordis 1950; McKenzie 1959; Phillips 1970: 17). Job 29, for example, gives a very informative picture of Job's prominent role within the local judicial assembly, which he tragically lost as a result of the loss of his family and substance, described in chap. 30. From this example (which must be true to life, whatever one's view of the historicity of Job himself), it can be seen how disastrous were the results of the loss of land and family. While Israel preserved a social fabric of free, landowning households, the administration of justice by the plurality of local elders would have been potentially healthy and "democratic." But when large numbers of Israelite farmers lost land and dependents, not through sickness but through economic oppression, debt bondage, and dispossession, the results were unavoidably felt in the shift of power in "the gate" in favor of the wealthy few. The combination of economic and judicial corruption was keenly observed and bitterly denounced by the prophets. Obviously not even the judicial reform of Jehoshaphat in the 9th century could halt the process (2 Chr 19:4–11).

c. Didactic. A most important aspect of the role of the family in ancient Israel was as the vehicle of continuity for the faith, history, law, and traditions of the nation. The preservation of these "national assets" lay in the hands of the father especially. He was to teach the law of Yahweh to his children, not only as a duty of parenthood, but indeed (in the theology of Deuteronomy) as a condition of his own prolonged enjoyment of the gift of the land (Deut 6:7; 11:19; 32:46f.). Though it is going too far to see

the family as the originating source of Israel's distinctive legal traditions, as Gerstenberger (1965) does, he is right to emphasize the influence of the ancient tribal and patriarchal structure of early Israel on the form and development of Israel's law, and the role of the *bêt-ʾāb* and the *mišpāḥâ* in preserving it.

As well as teaching the law itself, the father was to give explanations to his child concerning particular events, institutions, or memorials. There are five such question-and-answer texts: Exod 12:26f.; 13:14f.; Josh 4:6f., 21–23; and Deut 6:20–24. Soggin (1960) termed these passages "catechetical," in view of the repeated formula "When your son asks you … you shall say …" He regarded them as liturgical in form, which may be so, but that does not exclude the natural locus for such material, i.e., family-level teaching. The examples given offer a catechesis that included events related to the Exodus, the Conquest and gift of the land, and the receiving of the Law—all themes which were at the very heart of Israel's historical faith and relationship with Yahweh. The family's role in preserving both knowledge and understanding of these things was correspondingly crucial.

One of the occasions for this parental catechesis related to the consecration of the firstborn son (and the sacrifice or redemption of all firstborn animals). The texts relating to the human firstborn are Exod 13:2, 12–15; 22:28; 34:1–20; Num 3:11–13; 8:16–18; and 18:15. The rite itself is important as a link between family life in Israel and the national relationship with Yahweh. It had a double significance. First, it seems to have been a symbolic declaration of Israel's complete belonging to Yahweh. The firstborn of Israel had been spared when the firstborn of Egypt had been slain. Hence, those whom God had delivered from death belonged entirely to him (Num 3:13). And since the firstborn, like the firstfruits, represented the whole of which they were the part, this was the basis of the sanctification of the nation as a whole (cf. Jer 2:3). Secondly, it was a declaration of the continuity and permanence of Israel's relationship with God. By claiming the firstborn in each family, God was claiming the whole succeeding generation as his own. The birth of the first son was a very significant event in the life of any family, since it ensured the continuation of the family into the next generation. The consecration of that son to Yahweh symbolically ensured the continuation of the covenant relationship into that generation also. As the psalmists delight to recall, Yahweh is Israel's God "from generation to generation." Like the Passover, to which it is closely related in the text (note the parallelism of the two rites in Exod 13:9 and 16), it is to serve as a constant memorial of the foundational redemptive events of the Exodus. And also like the Passover, it was within the family that this memorial and sign was to be perpetuated.

d. Covenantal. From all the above points it can be seen that the family (meaning the *bêt-ʾāb*) was of pivotal importance to Israel's relationship with Yahweh. Its position could be diagrammatically pictured as in Fig. FAM.01 (cf. Wright 1983: 184). First, the family was the basic unit of Israelite kinship and social structure (BD), with important military and judicial functions. Second, it was the basic economic unit of Israel's land tenure (CD), with a wide range of rights, responsibilities, and functions. Third, it was of central importance in the experience and preservation of the covenant relationship with Yahweh (AD).

The social, economic, and theological realms were thus bound together and converged on the focal point of the family. It can be understood how anything which threatened the stability of the socioeconomic structure of the nation (the triangle BCD) would have serious repercussions on the national covenant relationship with Yahweh also, by undermining its roots and soil—the network of free landowning families. From this perspective one can appreciate better the strong concern for the family in the Law and the Prophets. As well as the various institutions designed to protect the family and its economic viability (levirate, inalienability, redemption, Jubilee), there were laws whose severity can best be understood against this familial background. The death penalty for breaking the fifth commandment (honor to parents) and the seventh (adultery) served to protect the family *internally* from the disruption of its domestic authority and its sexual integrity. The eighth (stealing), tenth (coveting a neighbor's house and all that went with it), and prohibitions on the removal of landmarks (boundary encroachment) or kidnapping of persons protected it *externally* from the diminution or total loss of its economic substance.

The importance of the family and its land in the relationship between Israel and Yahweh also illuminates the prominence of the socioeconomic dimension in the prophetic preaching. From the time of Solomon onward, many factors in monarchic Israel militated against the characteristic socioeconomic

structure of earlier Israel with its broad network of economically self-sufficient households, equitable land division, and protective mechanisms. These factors included the political reorganization of the state by Solomon into administrative districts which cut across the older kinship groupings, especially in the N; the acquisition of foreign territories where concepts of land tenure were very different from the inalienable family inheritance structure of Yahwistic Israel; the imposition of taxation and forced levy, which, even when it only included Canaanites, fell heavily on Israelite households which were periodically deprived of working members; and the growth of a wealthy class whose wealth came from Solomon's trade, not from the land, but whose greed led to the intrusion of royal grants and confiscations and the accumulation of large estates at the expense of poorer farmers. The prophets protested against these processes, not merely as the side effects of the wider rejection of Yahweh and his laws, but as an intrinsic threat to the whole covenant relationship itself. If the relationship with Yahweh was so closely bound to the life of the household units and their land, then the social and economic forces which were destroying them would inevitably shatter the nation's relationship with Yahweh also, certainly as it was enjoyed by the members of those households. The familial aspect is apparent, for example, in Isa 5:8–10; Mic 2:1–3, 8f.; 7:5f.

C. Marriage

The arrangement of marriage fell within the category of family law in Israel (i.e., as distinct from civil and criminal law, though the distinctions are not as clear-cut as in modern legal categories; see Phillips). Marriages were normally arranged between families, outside the prohibited degrees of kinship in the *bêt-ʾāb* (Leviticus 18 and 20), but usually within the kinship of the *mišpāḥâ*. The latter was obligatory in the case of marrying daughters who, in the absence of sibling brothers, had inherited the land of their father (Numbers 36). Exceptions would have been marriage as the result of prior rape (Exod 22:16f., amended in Deut 22:28f.), and the taking of a wife from captives of war (which was hedged with humanitarian restrictions on mere rapacity, Deut 21:10–14). Marriage with foreigners is recorded (e.g., Gen 26:34; 41:45; Exod 2:21; etc.). For ordinary people, this may sometimes have been the result of economic necessity (e.g., Ruth 1:4); for royalty, a matter of political expediency (e.g., 1 Kgs 11:1ff.; 16:31). The Law, at any rate, disapproved of it (at least, as regards the Canaanite population, Deut 7:3f.) and in postexilic times draconian measures were taken against foreign marriages by Ezra (Ezra 9 and 10) and Nehemiah (Neh 10:30; 13:23–37). Genesis 2:24 and the common prophetic imagery of the exclusive relationship between Israel and Yahweh as sole wife to divine husband shows that monogamy was the ideal. But it is equally clear that polygyny (though not polyandry) was practiced, though the Law (e.g., Deut 21:15–17, and the law governing concubinage, Exod 21:7–11) and some narratives (e.g., Genesis 29 and 30; 1 Sam 1:1–8) are aware of its inherent problems. It seems very likely that an additional wife or concubine was taken primarily for the purpose of acquiring or adding to one's children, that monogamy was probably the general rule among ordinary people (for economic reasons), and that the taking of many wives was purely a symbol of prestige and power (or political alliances) indulged in by royalty, though condemned by Deut 17:14–17.

As in many societies, ancient and modern, the arrangement of a marriage between families involved the exchange of gifts, cementing the relationship not merely between bride and groom but also between their families. This is the context in which to understand the Israelite *môhar*—the money or equivalent given by the bridegroom to the bride's father (Gen 34:12 for Dinah; Exod 22:15f. and Deut 22:28f. for a violated virgin; 1 Sam 18:25, David's exploit for Michal). The common translation, "bride-price" is very misleading in giving rise to the idea that marriage in Israel was solely a matter of *purchase*. (In fact, the etymology and precise meaning of *môhar* is not at all clear, either in the OT or the comparative material which scholars have relied on heavily.) This view, and its oft-repeated correlates, that wives in Israel were chattel property and that adultery was simply a property offense, cannot be supported from a careful study of the laws and narratives about wives in the OT. (Texts concerning daughters or concubines or women in general cannot be used as evidence, though they are often loosely quoted. Daughters were considered a father's property, but that status did not continue after marriage; concubines were purchased slaves; but the status of wives was legally and socially quite distinct.) Nor does this view stand up to the impact of

extensive anthropological and sociological research into societies where such exchanges of money or gifts at the time of marriage still take place and where the practice in no way indicates that marriage is simply purchase (see Thiel 1970). In India, for example, the direction of dowry is the opposite of the OT—that is, it is common practice for the girl's parents to pay large amounts to the bridegroom's family. Scholarly research in this century on the status of women in general and wives in particular in ancient Israel has tended steadily to the consensus that the older view of marriage by purchase and wives as chattels is simply untenable (see Wright fc. chap. 6; Burrows 1938; Mace 1953; Otwell 1977).

Divorce was permitted in ancient Israel. The law of Deut 24:1–4, however, is not so much a law about divorce itself or the conditions on which it might happen (being a matter of family law, divorce cases did not come before the elders and the reasons for divorce in any case were not a matter of civil adjudication: hence the vagueness of the opening phrases of the law on that point). Rather, it is regulating for the protection of the woman in the event of a divorce taking place. First, she must be given a certificate of divorce (so that she could not be accused of adultery if she married again, nor could her second husband be so accused). Secondly, she could not be taken back by the original husband once she had married another (so that she could not be degradingly treated as a sexual object). Though the Law thus permitted divorce, it was not taken lightly in OT faith. Malachi's denunciation of divorce as something Yahweh "hates" (2:13–16) as a form of self-inflicted violence was surpassed only by Jesus himself. The same could be said of the high view of marriage, and the inner springs of thought and desire which threaten it, that are part of the lofty ethical content of Job's self-defense (Job 31:1, 9ff.). Even more inspiring are the portrait of the joys of sexual love and fulfillment in the Song of Songs, and the exalted evaluation of a good wife in Proverbs (31:10–31).

D. Parents and Children

It is very evident that children in ancient Israel were regarded as a precious gift from God (e.g., Pss 127; 128). Besides long life, a large family was among the most tangible and desirable of God's blessings. Not only was it the essence of the Abrahamic covenant (Gen 15:5, etc.), a large family was an important element in the blessings that were promised for obedience in the Sinai covenant (Lev 26:9; Deut 28:4). Conversely, barrenness or loss of children were great tragedies.

The authority of parents (both father and mother) and the duty of honor and obedience on the part of children is likewise stressed throughout the OT (e.g. Exod 20:12; 21:15, 17; Deut 21:18–21; 27:16; Proverbs *passim*, but N.B. 20:20; 30:11, 17; metaphorically Isa 1:2; Mal 1:6). In view of the foregoing discussion of the centrality of the family to the national relationship with Yahweh, this emphasis on internal discipline can be more fully appreciated. The security and stability of the family as a whole was valued even more highly than the life of one of its members, as the law of the incorrigible son shows (Deut 21:18–21). (The son in question should not be thought of as merely a mischievous child, but rather as of an age to seriously threaten, by his rebellious behavior, the very substance of the *bêt-ʾāb,* and incapable of being entrusted with an inheritance from it.)

As in the case of the status of wives, however, caution is needed in giving an accurate assessment of the position of children vis-à-vis their parents, especially the father. The view is sometimes expressed that children were the personal property of the father, who, accordingly, had absolute power over them *(patria potestas),* including the right of life and death. The first point is partially correct, with qualifications; the conclusion drawn from it is mistaken.

Several laws do show that a man's children were *legally* regarded as his property with a calculable economic value. In common with other ANE laws, Israelite law protected the child before birth, prescribing that one who injured or destroyed its prenatal life, even accidentally, should pay compensation to the father (Exod 21:22). A daughter had an economic value related to the *môhar* that could be expected at her marriage. Hence, if she were violated while unbetrothed, the offender must compensate the father for the presumed loss of the *môhar* (Exod 22:15f.). Similarly, compensation must be paid to the father of a bride if her husband made accusations about her which could be proved false (Deut 22:13–19). A man could sell his daughter as an *ʾāmâ* (maidservant), sometimes for the purpose of concubinage (Exod 21:7ff.). In circumstances of extreme poverty, parents might be reduced to selling children into bondage,

as working pledges against loans (cf. Neh 5:1–5; 2 Kgs 4:1–7). Thus, children did have a value as property, which could be "realized" in two kinds of circumstance, as far as the legal evidence goes, (i) if they were harmed or "devalued," and (ii) if financial extremity forced parents to use children as "assets."

However, the view that this gave the father absolute power over his children in *any* circumstance must be disputed. It is possible that the father had the legal right of execution over his children in the earliest, patriarchal period, but the evidence is not as strong as sometimes implied. Only Genesis 38:24 is a case of the head of a household passing a death sentence (on a daughter-in-law). Genesis 19:8 and Judges 19:24 describe a father's willingness to sacrifice his daughter's virginity, not the judicial right of life and death. No examples are to be found in the postpatriarchal narratives (Jephthah's daughter was a sacrifice, not an execution; see below). On the contrary, the law of Deut 21:18–21 explicitly limits any such interpretation of *patria potestas* by placing the power of execution of a son in the hands of a court of elders, after due investigation which includes the presence and testimony of the mother as well as the father—probably an added element of protection for a son, in that the consent of both parents was required for the charge to be legally actionable.

Child sacrifice is sometimes said to show the extent of a father's power over his children. Certainly, where it is practiced, it does. But it is decidedly not the same thing as the legal right of execution. The latter is the father's judicial authority over a child legally guilty of an offense. Sacrifice of a (legally) innocent child as a religious or propitiatory rite is a different phenomenon altogether. We have seen that it is very improbable that fathers had the judicial power of life and death over their children. Likewise the majority of scholars would now dissent from the older view that child sacrifice was ever an acceptable, let alone prescribed, feature of Yahwistic religion in Israel. Nevertheless, it happened. But, with the exception of the puzzling story of Jephthah's daughter (Judges 11; cf. also Genesis 22), the incidence of child sacrifice in Israel is limited in time and place: it was mainly concentrated in the reigns of Ahaz (2 Kgs 16:3) and Manasseh (2 Kgs 21:6), in Jerusalem, and survived also in the remnant of the N kingdom after the destruction of Samaria (2 Kgs 17:17). This locates it in the late 7th and early 6th centuries, when Assyrian domination was at its height, and Israel's reversion to pagan practices of all sorts was at its worst. The condemnation of the horrific rite is universal in the Law, the prophets, and the narrative text mentioned above.

Finally, there are several incidents in the OT where a whole family, or especially children, suffer death because of the sin or crime of the father. These have sometimes been understood as showing that in Israel children could be punished along with or instead of guilty parents. This has then been cited as evidence of "corporate personality," or the "primitive mentality" of the Hebrews. Such ideas, however, have been shown to be inadequate and misleading in more recent legal and anthropological research (see Porter 1965; Rogerson 1970; 1978). It must first be pointed out that none of the incidents in any way illustrates normal judicial procedures in Israel (Korah's rebellion, Numbers 16; Achan, Joshua 7; the Gibeonites' revenge on Saul's sons, 2 Sam 21:1–9). They are explicable rather in terms of the solidarity of the family, in cases of serious violation of the covenant or of blood vEngeance. Secondly, the Law itself actually excludes collective or vicarious punishment, in practice and in principle. The law of the goring ox (Exod 21:28–32), by stipulating that the owner of the ox must be dealt with in the same way, whether its victim is an adult or a child, excludes, probably deliberately the common ANE legal principle that for injury to a child the culprit could be punished by injury done to his own child (or even death, e.g., *ANET*, 176, 230). Similarly, in the case of a blow to a pregnant woman causing miscarriage (Exod 21:22f.), the Israelite law provides for compensation, but not the substitution by the offender of one of his own children, as in Middle Assyrian Law A 50 (*ANET*, 184). Such forms of vicarious, substitutionary or collective punishment of children for parents' offenses is ruled out in principle by Deut 24:16. This very law is regarded by the historian of 2 Kgs 14:5f. as the reason for Amaziah's refusal to execute the children of the murderers of Josiah.

Our conclusion must therefore be that while children were certainly subject to the authority of parents, under severe penalty, and while they did count legally as part of the father's property, the social reality

was not as harsh as is sometimes depicted. On the contrary, there is much in the OT to indicate that love, joy, care, and honor were to be found in the Israelite home.

NEW TESTAMENT

A. Terminology

Two words are used in the NT for family and related concepts. The first is *patria,* which signifies family from the perspective of historical descent, i.e., its lineage. Thus in Luke 2:4, Joseph is of the *patria* of David—his biological lineage, as well as his house, *oikos,* with which it is paired (cf. Luke 1:27). In Acts 3:25 it is used to translate the promise to Abraham that in him all "families" of the earth will be blessed. In Ephesians 3:14 it is linked to the fatherhood of God, which Paul discerns behind all human parentage and lineage.

The second word, *oikos* (plural *oikia*) is much more common and signifies family as household, in much the same way as *bayit* in the OT which this word frequently translates as. In the Greco-Roman world, the *oikos* (Latin, *familia*) was a comparable social unit to the Israelite *bêt-ʾāb.* It included not only blood relatives of the head of the house, but also other dependents—slaves, employees, and that peculiarly Roman phenomenon known as "clients," (i.e., freedmen, friends, and others who looked to the head of the house for patronage, protection, or advancement). *Oikia* could also be used to indicate the property or substance of the household (e.g., Mark 3:23ff.; 10:29f.; 12:40).

B. Households and the Church

Since the household was a major feature of the Jewish world, and the *oikos* likewise in the Greco-Roman world, it is not surprising that households played a significant role in the growth and character of the early Christian movement. The Jerusalem church worshiped and was instructed *kat'oikon* (Acts 2:46; 5:42; 12:12). The conversion of the entire household of Cornelius (Acts 10) was the first decisive transition of the gospel to the gentiles. Paul's missionary strategy followed suit, as the nucleus of most of his churches consisted of one or several households. Thus, we may note the households of Lydia and the jailer at Philippi (Acts 16:15, 31–34); Stephanas, Crispus, and Gaius at Corinth (Acts 18:8; 1 Cor 1:14–16; 16:15; Rom 16:23); Priscilla and Aquila, as well as Onesiphorus at Ephesus (1 Cor 16:19; 2 Tim 1:16; 4:19); Philemon at Colossae (Philemon 1f.); Nympha at Laodicea (Col 4:15f.); and Aristobolus, Narcissus, and others at Rome (Rom 16:10ff.). In some of these, Paul refers to "the church *(ekklēsia)* which meets in their house *(oikos).*" This could mean that the household itself constituted a church (e.g., all the categories addressed in the "household codes" in Ephesians and Colossians—husband and wife, parents and children, master and slave—would be comprised in a single household), or that it was the nucleus of a wider group of believers who met under its hospitality. At any rate, it is clear that the social nature of early Christianity was markedly centered on household units.

C. Social Functions

The important social and religious functions of the *bêt-ʾāb* in Israel have been outlined. They could be summarized by saying that the household, for the Israelite, was the place of inclusion, authority, and spiritual continuity (by its role in teaching and preserving the faith and traditions). The same three features are noticeable in the household-church pattern of NT Christianity.

1. Inclusion. When Paul describes the new inclusiveness of the gospel in Ephesians 2, he draws heavily on the kinship language of the OT. In Christ, through the cross, gentiles are no longer "para-family" *(paroikos),* that is, no longer "foreigners and aliens" (the equivalent terms to the *gērîm* and *tšābîm,* whose only means of sharing in Israel was to reside within an Israelite household). Rather, they have become "members of God's own household" (a term used to describe Israel), indeed "fellow heirs" (Eph 2:19ff.; 3:6).

Inclusion in the family of God produces strong obligation to one's "kin" in the faith. The social and ethical demands of *koinōnia* (a word with much more practical content than its common translation, "fellowship") are prominent in the NT (Acts 2:42, 44; 4:34; Rom 12:13; 15:26f.; Gal 6:6; 2 Cor 8:4; 9:13; Phil 1:7; 4:15ff.; 1 Tim 6:18; Heb 13:16). The emphasis on sharing, meeting needs, equality, and generosity strongly recalls the economic ethic of the OT and has roots in its household ethos. Thus, the "household of faith" ("family of believers," Gal 6:10, NIV) has priority in the general command to "do

good." And within that, obligations to one's own relatives are strongly reaffirmed (apart from the household codes, cf. also 1 Tim 5:4–8). See also HOUSEHOLD CODES. Of course, the early Christian community also included those for whom natural family ties had been disrupted as a result of their response to the gospel. Foreseen by Micah and commented on by Jesus, this was something for which the early Christian household churches provided compensation. "The way in which the Gospels take up Micah's prophecy of the end-time (Mic 7:6 = Matt 10:35f.; Luke 12:53) indicates that the primitive community had to reckon with the disruption of the family for the sake of the Gospel. Those who take this upon themselves are promised 'now in this time' new 'houses and brothers and sisters and mothers and children' (Mk 10:29f; Matt 19:29; Luke 18:29f). The place of the disrupted family is taken by the family of God, the Christian community" (Goetzmann *NIDNTT* 2: 250).

2. Authority. In Israel, authority and leadership, for all practical purposes at local level, lay in the hands of elders, who were almost certainly the senior males from each household. Whether consciously imitating this pattern or not, the early Christian movement entrusted its leadership (under the apostles) to "elders" in each church (always referred to in the plural in the NT), and these seem to have normally been drawn from the functioning heads of households, whose own family life was exemplary (see the guidelines for appointing overseers [*episkopoi*], elders [*presbyteroi*]—probably synonyms—and deacons [*diakonoi*], in 1 Tim 3:2–7, 12; Titus 1:6). It is interesting that women are mentioned as heads of households (e.g., Lydia, Nympha, and Priscilla are always named before their husbands). They are not explicitly called *presbyteroi* of the churches which met in their homes, but it seems not at all improbable that they would have been.

3. Worship and Teaching. The Israelite family was the locus of key elements in the continuity of Israel's faith, such as Passover, circumcision, and the teaching of the Law. Similarly in the NT, much of the Church's functioning life took place *kat'oikon,* in homes. This included the preaching of the gospel (Acts 5:42; 20:20); administering baptism (Acts 16:15; 1 Cor 1:16); breaking bread, probably meaning the Lord's Supper (Acts 2:46); and systematic teaching (Acts 20:20). In this last text, Paul recalls that his prolonged teaching ministry in Ephesus was conducted both in public and in homes. And the household codes envisage not only the family-centered nature of the Church, but also the home as the place of Christian education for wives (1 Cor 14:35) and children (Eph 6:4).

Finally, with all this wealth of familial characteristic and their OT background, it is not surprising that the early Christians also took over the metaphorical use of family as a picture for the whole Church. As Israel could be called the *bêt-Yahweh*, "house/family of Yahweh" (Num 12:7; Jer 12:7; Hos 8:1; and Mic 4:2, where the Temple probably stands for the whole land and people of God), so the Church, as the heir and organic continuum of Israel, could be called the *oikos* of God (Eph 2:19; Gal 6:10; Heb 3:2–6; 1 Tim 3:15; 1 Pet 4:17).

FAMINE. The main word used in biblical Hebrew for famine is *rāʿāb.* The same word is used to express the simple idea of hunger. As a noun this word occurs 100 times in the Hebrew Bible. Its verbal cognate *rġb,* "to be hungry," is attested in Ugaritic. The difference between the two main uses of this word depends on the number of persons involved. Hunger is experienced by an individual or small number of persons whereas a famine in biblical thought is a corporate hunger of a larger body of persons. When a famine was particularly severe it was described literally as "heavy" (e.g., Gen 12:10). The Greek term *limos* occurs twelve times in the NT, and a majority of these occurrences refer to famine in the broader sense.

A. Origin
B. Climatology
C. Historical Famines
D. Famine and Theology

———

A. Origin

A famine or shortage of food with which to feed the population can develop when the process of production and delivery of food is interrupted anywhere along the chain. Two main types of disruptions bring this about. The first is climatological. In this case the production of food—especially the grain crops—is cut off in its initial growth phase through inadequate rainfall. A significant decrease in the amount of rainfall in the grain-growing areas results in a corresponding shortage in the amount of grain produced. If this is severe or widespread the population may experience a famine of sufficient severity that some persons die from starvation.

Classical biblical examples of famines which resulted from conditions like these include the famines in the times of the patriarchs (Gen 12:10; 26:1; 41:54–57) and the famine in the time of Elijah (1 Kgs 17:1). In ANE texts these conditions were encountered especially during the First Intermediate Period in Egypt (ca. 2150–2000 B.C.E.) from which come an extensive series of inscriptions from local governors who

complained about low Nile river levels and poor crop production, and the need to search upriver and downriver to find grain with which to feed their subjects.

Plant disease or plagues of insects, especially locusts, may accompany drought conditions and worsen a famine by further destruction of crops, or this kind of damage may occur apart from a drought (note Joel 1–2). The 8th-century prophet Amos referred to the fact that plagues of this type had afflicted Israel by his time (Amos 4:9).

The other main type of disruption that can occur in the chain that brings food to human beings results from factors that destabilize the sociopolitical conditions necessary for the production of crops and their delivery to the consumer. An example of this type of famine is that which results from siege warfare. In this case it is the direct aim of the attacking army to produce famine in the besieged city by cutting off its food supply. This aspect of warfare was widely practiced in ancient times.

A detailed description of the effects of a famine that resulted from a siege of Samaria by Ben-hadad of Damascus is narrated in 2 Kgs 6:24–7:20. It became so severe that some residents of the city resorted to cannibalism (6:29). Although the details of the siege of Samaria later by the Assyrians (725–722 B.C.E.) are not specifically mentioned in the biblical text (2 Kgs 18:9–12), it is likely that the royal storehouses there did not have sufficient supplies to withstand such an onslaught. The population of countries attacked like this commonly fled into the walled and fortified cities from the countryside for protection, placing greater stress upon the supplies of food stored there. The severity of the famine in Jerusalem when it was besieged by Nebuchadnezzar of Babylon is described in several texts (2 Kgs 25:3; Lam 2:11–12; 4:9, 10).

Famines caused by siege are well known in extrabiblical sources. It took the Egyptian pharaoh Thutmose III seven months to starve the Canaanite coalition besieged in Megiddo into submission (ca. 1475 B.C.E.; *ANET*, 238). The Assyrian artist who executed Sennacherib's reliefs, which depict the conquest of Judahite Lachish by the Assyrian army, showed some of the animals emerging from the city more emaciated than the captured people, which probably indicates the preferential use of foodstuffs within the besieged city. Josephus provided an extensive description of the horrors of the famine experienced in Jerusalem during its siege by the Romans (*JW* 5.424–38, 571; 6.1–3, 193–213).

Similar conditions were also produced on occasion by internal factors within an ancient country without the invasion of foreign forces. When the central governmental control over a country disintegrated to such an extent that conditions of anarchy and chaos took over, farmers could no longer work their fields effectively, the delivery of the food produced was interrupted, and supplies in central storehouses were emptied and not replaced. This type of thing occurred on two prominent occasions in Egyptian history; at the beginning of the First Intermediate Period (ca. 2200–2100 B.C.E.), and at the beginning of the Third Intermediate Period (ca. 1200–1100 B.C.E.). The disturbed conditions of the former period are vividly illustrated by the description of the Admonitions of Ipuwer (*ANET*, 441–44).

B. Climatology

Shifts in climate along marginal and transitional zones in the ANE, between the desert and the sown, directly affected the amount of land available for human occupancy and agricultural use. The riverine societies of Egypt and Mesopotamia were able to circumvent some of these difficulties through the development of irrigation. Ancient Canaan, on the other hand, was more directly dependent upon and vulnerable to the amount of rainfall.

General theory suggests that there are rather wide swings in climate between wet and dry periods that extend over centuries. Superimposed upon this larger pattern are lesser oscillations in rainfall and temperature that occur over shorter periods of time. The most likely time for a serious drought and famine comes at the bottom of the trough during a longer dry period when a short-term downward fluctuation provides an even greater decrease in rainfall. Scientists and historians have employed studies of tree rings, pollens, varves of glaciers, peat-bog stratigraphy, and written and unwritten archaeological sources in an attempt to work out the pattern of fluctuations of the climate of the Near East through ancient times.

The evaluation and integration of the data derived from these different fields of investigation have been complex and sometimes disputed matters. In general it may be said that climatologists have not found any major long-term swings in climatic conditions through the historical period from the beginning of the EB

Age, ca. 3000 B.C.E., to the last pre-Christian centuries in Roman times (Raikes 1967: 52). The period that comes closest to being an exception to this general rule is the intermediate period from the end of the EB Age to the beginning of the MB Age, ca. 2200–2000 B.C.E. (Crown 1972).

It is from this intermediate period that the single largest collection of ancient famine texts has come, those from the nomarchs or local governors of Egypt from the 9th through the 11th Dynasties (Bell 1971). Changes in Egyptian fauna and retarded development of the Nile flood plain confirm the aridity of this period. Elsewhere in the Near East study of the laminated sediments from the Dead Sea indicates that the period from 2300 to 2000 B.C.E. was exceptionally dry, but since that time the climate of Palestine has been rather static (Neev and Emery 1967: 26–30). For the first millennium B.C.E., however, no major shifts away from the customary climate of the Near East have been detected.

C. Historical Famines

1. The Period of the Biblical Patriarchs. Gen 12:10; 26:1; and 41:54 indicate that famines due to drought occurred in Canaan through three successive generations of biblical patriarchs: Abraham, Isaac, and Jacob. The multiple references to this type of phenomenon suggest that this period as a whole may have been more dry than usual. If the patriarchs are dated somewhere around 2000 B.C.E. approximately, as is commonly the case, something similar can be said for Egypt at the same time.

This is the period from which some 20 Egyptian famine texts have come. The earliest of these is the Admonitions of Ipuwer, which probably dates to the first half of the 22d century (7th–8th Dynasties). The last of these famine texts comes from the time of Sesostris I of the 12th Dynasty, ca. 1950 B.C.E. The distribution of these texts through time indicates that this was a dry period generally, and these were also the conditions experienced by the biblical patriarchs living in nearby Canaan. While the famines of the patriarchs cannot be connected directly to specific famines in Egypt, it can be said that the two periods of relative drought and famine in these two sources correlate well with each other.

During the first and third of the patriarchal famines Abraham and Jacob migrated to Eygpt with their families and followers in order to survive. Thus while Canaan could not survive the crop failure due to lack of rainfall, Egypt was still able to produce some crops through irrigation from the Nile, reduced though it may have been. During the second patriarchal famine Isaac did not migrate to Egypt. Rather he simply moved farther N in Canaan from the Negeb, according to the place-names given for his settlements. In so doing he moved from a zone of lower rainfall to one of higher rainfall, from two inches of annual rainfall to an area of eight inches of annual rainfall, according to modern standards (*Atlas of Israel* 1970: 4/2).

The third and final patriarchal famine had the most far-reaching historical consequences because it involved more than just a temporary sojourn in Egypt. Jacob and his family moved to Egypt and settled there. The prolonged nature of this settlement led to the subjugation of their descendants by the Egyptians during the period known as the Sojourn. The conditions of bondage which they experienced during that period were relieved only when Moses finally led them out of Egypt. Tracing this problem back to its origin, it was a famine in the time of the patriarchs which caused the Eisodus that ultimately required the Exodus for its resolution.

2. The Late Bronze Age. There is no specific biblical reference to a famine in the time of the generations of the Exodus, Conquest, and Settlement which may be dated generally in the LB Age (ca. 1500–1200 B.C.E.). There are, however, some indications that drought and famine did occur on occasion in some parts of the Near East during this period. The twenty years of plague for which the Hittite king Mursilis petitioned the storm god for relief in the mid-14th century B.C.E. may have been accompanied by famine (*ANET*, 394–96). The Amarna Letters from the same period tell of ravaged fields and depleted grain supplies due to internecine warfare between the Canaanite city-states. Shipments of grain were sent by Rameses II and Merneptah of Egypt to their treaty partners the Hittites to save them from starvation in the 13th century B.C.E., and these conditions were presumably caused by drought (*ARE* 2: 243–44; Barnett *CAH* 1/2: 360, 369). It has been suggested that drought and famine in the W and central regions of the Mediterranean were either one of or the most important of the conditions which triggered the eastward migration of the Sea Peoples to Syro-Palestine and Egypt (Carpenter 1966: 59–66). This theory is,

however, unproved and disputed. From the same period in biblical history come the threatenings of famine as a curse for violation of the covenant (Lev 26:18–26; Deut 11:17; 28:23–24; 32:24).

3. The Early Iron Age. References to famine are more common from the Early Iron Age (ca. 1200–1000 B.C.E.) than from the LB Age, and this may be considered the next dry period after that of the First Intermediate Period. The evidence for this comes from Egypt, Mesopotamia, and Israel. From Egypt come the records of a prolonged period of intermittent labor strikes by the royal tomb cutters. They were not paid their wages of grain because the royal granaries were severely depleted. The strikes extended over the middle half of the 12th century, from the end of the reign of Rameses III to the reign of Rameses X (*CAH* 2: 184–95). These have previously been interpreted as symptoms of political instability due to the lack of a strong central government, but more recent study suggests that drought may also have played a part in them.

Climatological evidence drawn from tree rings, glacier variation, shifts in pollen and vegetation, soil samples, and samples of sediments from lakes and rivers indicates that the period from 1200 to 900 B.C.E. was a warm and dry period in both the Near East and Europe (Neumann and Parpola 1987). Texts of this time from Assyria and Babylonia talk of crop failure, high grain prices, and outbreaks of plague. Repeated incursions of nomads have been attributed primarily to drought and famine in their own areas (Brinkman 1968: 280, 389). Political and military effects from these conditions have been noted in the "dark age" during which Assyria and Babylonia suffered from a reduction in strength and power. Both texts and scientific studies indicate that a wetter and cooler climate returned after 900.

Evidence for similar conditions in the same period in Israel comes from three biblical narratives. The incursions of the Midianites, probably in the 12th century, resemble similar incursions of nomads at the same time in Babylonia. The severe pressure they placed upon food supplies and pastureland in Israel is described in the story of Gideon (Judg 6:2–6, 11). An approximate date in the early 11th century can be derived for the story of Ruth from the genealogy at the end of the book (Ruth 4:21). The experience which ultimately led to the incorporation of Ruth the Moabitess into the line of David's ancestors occurred because of a famine in Judah which drove Naomi and her family into Transjordan in search of food and crops for survival (Ruth 1:1–2). The three-year famine experienced in the time of David (2 Sam 21:1), in the early 10th century, occurred toward the end of this dry period. At the time of the dedication of the temple Solomon appealed for release from any potential future famine through prayer (1 Kgs 8:33–40).

These three biblical famines from the 12th, 11th, and 10th centuries respectively parallel Mesopotamian famines which extrabiblical texts date from ca. 1140 to 940 B.C.E. The Egyptian famine texts of the 12th century document a similar experience in the early part of this period.

4. The Later Iron Age. References to a three-year famine in the time of Elijah (1 Kgs 17:1) and a seven-year famine in the time of Elisha (2 Kgs 8:1–3) suggest that the middle of the 9th century B.C.E. may have seen a temporary return to drier conditions. There is no direct extrabiblical textual evidence for this but this is the time in which the Assyrian king Ashurnasirpal II began to take his army on the road to commence building an empire. In a text dated to 881 B.C.E. he mentions that he brought back to Assyria some of his subjects who had emigrated to the land of Shubru because of famine (Neumann and Parpola 1987: 181).

The occurrence of Elijah's famine in a generally wet period emphasizes its exceptional nature, which is the point that Elijah made (1 Kgs 17:1). The famine mentioned by Amos probably refers to one that occurred after the time of Elijah (Amos 4:6–8). Also coming from this time are references to famines caused by disturbed political conditions, especially siege warfare. The siege of Samaria by Ben-hadad (2 Kgs 6:24–29) and the later famine caused by Nebuchadnezzar's siege of Jerusalem (2 Kgs 25:3; Lam 4:7–10) provide examples of this type of development.

5. The Persian Period. References to reduced productivity of crops and relative deprivation of the people in Hag 1:6 and 2:16 indicate that 520 B.C.E. and the immediately preceding period was a time of shortage. The description is not one of total crop failure and famine, only one of relative shortage. In their reduced condition, residents of the community of returned exiles were more susceptible to serious problems from such shortages than a well-established and prosperous community. This description of the

people's plight resembles that of the futility curses found in extrabiblical covenant texts from Sefire (*ANET,* 659–61) and Tell Fekheriyeh (Millard and Bordreuil 1982: 138). No descriptions of drought at this time are presently known from extrabiblical sources.

6. Greco-Roman/Intertestamental Period. References to famine in sources for the history of Judea from this period are not common, but one example of each major type illustrates that they did occur. A famine from siege warfare is mentioned in 1 Macc 6:48–54 and the parallel account in Josephus (*Ant* 12.378). Beth-zur surrendered to Antiochus V Eupator in 162 B.C.E. because the supplies of food for its defenders were very low; the reason being that the crops had not been harvested that year since it was a Sabbatical Year. Most of the defenders of the temple complex in Jerusalem fled for the same reason, but those who remained were able to reach a truce with Antiochus.

A famine due to drought occurred in the time of Herod the Great according to Josephus (*Ant* 15.299–316). A drought lasting through 25 and 24 B.C.E. created famine conditions and an outbreak of the plague. Domestic animals were destroyed or consumed. With state supplies exhausted Herod stripped his palace of gold and silver in order to purchase grain in Egypt. His generous but careful distribution of the supplies obtained created much goodwill toward him on the part of a previously hostile public.

7. The NT Period. Two OT famines are referred to in the NT, those of Joseph (Acts 7:11) and Elijah (Luke 4:25). Only one historical famine in NT times is referred to in NT records, that which was predicted by the prophet Agabus during the reign of Claudius (Acts 11:27–30). Famines in the time of Claudius (41–54 C.E.) are well attested by Roman historians (Suetonius, *Claud.* 18.2; Tacitus, *Ann.* 12.43; Dio Cassius, *Hist.* 40.11; Eusebius, *Chron.*, Yr. of Abraham 2065). Josephus mentions the high prices of grain during this period but notes that notwithstanding the priests did not consume any of the flour to be utilized in the Feast of Unleavened Bread (*Ant* 3.320–21). Queen Helena of Adiabene, a convert to Judaism, bought large supplies of grain from Egypt and distributed them to the needy in Judea (*Ant* 20.101). Christians in Antioch took up a collection for relief for those in Judea at this time, and it was sent to Jerusalem with Paul and Barnabas (Acts 11:29–30). According to the procurators at this time named by Josephus, this famine can be dated between 44 and 48 C.E.

D. Famine and Theology

1. Canaanite Theology. Baal Hadad was the storm god of the Canaanite pantheon who was in charge of bringing the rains that made the crops grow. In one mythic cycle of the Canaanites, Baal Engaged the god Mot in battle. Mot won the battle and vanquished Baal to his underworld. Then Anat, the consort of Baal, did battle with Mot and won Baal back so that he could take up his activities in the world and the realm of the gods again (*ANET,* 138–41). This myth is commonly interpreted as derived etiologically from the annual cycle of rainy and dry seasons in Syro-Palestine. Drought and famine could result only if this pattern and Baal's absence or inactivity was prolonged beyond the annual cycle. In an epic text the king Danel prayed that Baal would withhold his clouds, dew, and rain for seven years, possibly as a punishment for the murder of his son (*ANET,* 153). Thus the Canaanites saw Baal in control of the factors that brought or relieved drought and famine, and they could petition him for their presence or withdrawal. The contest between Elijah and the prophets of Baal on Mt. Carmel at the end of three years of drought should be seen against this background (1 Kgs 18:23–39).

2. OT Theology. In contrast to the Canaanite view, the monotheistic religion of Israel saw Yahweh as the one god in control of all of the forces of nature, including those that brought the fructifying rains. While there was a normal course of nature which he established (Gen 1; 8:22) he could, on occasion, intervene in those regular appointments. This aspect of God's work was especially prominent in the blessings and curses of the covenant (Leviticus 26; Deuteronomy 28). Related to the idea of famine as a covenant curse is the prophetic pronouncement of famine as a judgment upon a covenant-breaking people. Along with threats of the sword and plague, warnings of famine to come through the actions of Nebuchadnezzar's troops became a prominent part of the pronouncements of the late preexilic prophets Jeremiah and Ezekiel (Jer 24:10; 27:8–13; 29:17; 34:17; 38:2; Ezek 6:11; 7:15; 12:16). On the other hand, judgments by famine could also call the people to repentance, lest they suffer a more severe fate (Amos 4:6–11). Amos also extended the imagery drawn from literal famine into a description of extended and

unrelieved spiritual hunger, "a famine … for hearing the words of the Lord" (8:11). Solomon acknowledged that relief from famine could come especially through prayer and supplication (1 Kgs 8:37–40).

In other biblical instances the coming of famine is not specifically attributed to divine activity, it is simply noted as a fact of historical occurrence. Even in these instances, however, God could still act on behalf of his righteous people, to preserve them through such trying times (Ps 33:18; 37:19; Prov 10:3). Thus Joseph saw his exile to Egypt before the famine as a providential way through which the preservation of the entire family of Jacob was accomplished (Gen 45:5–7). In a similar way God's servant Elijah was cared for in a special way through the famine which he was sent to announce (1 Kgs 17:1–6).

3. NT Theology. Aside from the two historical (Luke 4:25; Acts 7:11) and one contemporary (Acts 11:27–30) famines referred to in the NT, Jesus indicated that famines would occur prior to, and as a sign of, his Parousia at the Eschaton. Jesus also drew the contrast, as Amos had before him, between the relative importance of physical and spiritual bread (Matt 4:4). In the spirit of the OT prophets, Rev 6:8 indicates that famine would play a part in the judgments unleashed when the fourth seal was broken. Famine is also to play a part in the end-time judgment upon spiritual Babylon (Rev 18:8). Finally, conditions are to be established in the coming kingdom of God whereby no human beings will ever have to suffer from hunger and famine again (Rev 7:16; 21:4).

FAST, FASTING. Fasting is the deliberate, temporary abstention from food for religious reasons. In the biblical material, fasting is total abstention, and is thus to be distinguished both from permanent food restrictions, like those against unclean animals, and also from occasional abstention from certain foods, like meat on Fridays, a practice adopted by the later Christian Church.

At the end of the 19th century, our subject attracted the attention of social anthropologists of religion. They set out to compare fasting practices in many primitive religious cultures in order to construct a general theory of their origin and development (see Westermarck 1907). Some scholars, adopting an individualist perspective, emphasized that fasting produced heightened states of consciousness, resulting in visions and dreams, which were identified as the ground of all religious conceptuality (Tylor 1871: 410). Others, taking a collectivist starting point, treated fasting simply as a rite of preparation for the sacramental eating of holy food, positing that in fasting is to be found the communal origin of religion (Smith, 1894: 434). More recently, modern semantic anthropology has been far less concerned with theories of the origin of religion than with the analysis of cultures as living systems. This approach refuses to isolate fasting from the total complex of purity rules that form the basic categories through which the universe of meaning and the self-identity of any religious group is structured (Neusner 1973: 137–42). The implications of this development for the interpretation of the biblical material have yet to be fully worked out by biblical scholarship.

B. Fasting in Ancient Israel

C. Fasting in Intertestamental Judaism

D. Fasting in Early Christianity
E. Fasting in the Jesus Tradition

———

A. Terminology

The usual Hebrew noun for fasting is *ṣôm;* its cognate verb is *ṣûm.* These occur 14 and 20 times respectively in the Hebrew Bible. Periphrastic alternatives are "to eat no bread" (e.g., 1 Sam 28:20; an idiom reflected in Luke 7:33) and "to afflict oneself" or "to afflict one's soul" *(ʿinnah nepēš),* a technical term for fasting in the Priestly Code. The usual Greek words for fasting are the noun *nēsteia* and its verb *nēsteuo* (formed from a negative prefix and *esthio,* "I eat"). These denote the total abstention from food, whether by necessity or by deliberate choice. The verb may also be extended metaphorically, for instance it means "to hold back from evil or pollution" in the *Gospel of Thomas, logion* 27: "fasting from the world." There are 20 occurrences of the verb in the NT and 8 of the noun, but in three of these the text is uncertain (see below). The adjective *nēstis* occurs only at Mark 8:3 and Matt 15:32 in the involuntary sense "on an empty stomach." Two synonyms occur once each in the NT: *asitia* (Acts 27:21), probably in the natural sense of "hunger," and *tapeinophrosunē,* "humiliation of mind" (Col 2:18), which appears to echo the Semitic periphrasis "affliction of one's soul" and ought therefore to be translated "fasting."

B. Fasting in Ancient Israel

The Day of Atonement is the only annual national fast day prescribed in OT Law. Although the legislation was reworked in the exilic period, the rite, with fasting as its central motif, is probably preexilic. The requirement to fast on this day is universal, and its penitential character is underlined by the terminology of "self-affliction" (Lev 16:29, 31; 23:27, 32; Num 29:7). There may have been other liturgical fasts in the early period (see Jer 36:6); and a public fast could be called at special times of penance (1 Sam 14:24). The remaining preexilic references to fasting involve smaller groups or individuals, and are associated with the rites of mourning, personal penance, or the reinforcement of supplicatory prayer (e.g., Ps 35:13; 1 Kgs 21:27; Num 30:13).

The allusions to fasting as a mourning custom in 1 and 2 Samuel deserve special note. David's fast following the deaths of Saul, Jonathan and Abner (2 Sam 1:12; 3:36) is related with approval. But in 2 Sam 12:16 the king is said to have fasted only while the child produced by his illicit affair with Bathsheba was still alive. When it died, David discontinued his fast (2 Sam 12:20). Questioned as to his conduct, he explained: "Now he is dead, why should I fast? Can I bring him back again? I shall go to him, but he will not return to me" (1 Sam 12:23). Hertzberg (*1, 2 Samuel* OTL) suggests that the baby's death was accepted as an atonement for the sin of adultery, so that the usual mourning customs were inapplicable. The incident bears some similarities to the gospel controversy on fasting, in which Jesus is questioned for refusing to fast (Mark 2:18–22) and where, in its immediate sequel (Mark 2:23–28), breach of the Sabbath is justified by an appeal to Davidic precedent.

In the postexilic period, the number of annual public fasts was increased (see Ezra 8:21–23; Neh 9:1). In Zech 8:19 four fast days are specified. These clearly owe their origin to customs established during the Exile, though in later Jewish tradition they were given a wider historical rationale, and the Purim fast (following Esth 4:16) was added to them. Zechariah urges that these fasts be continued on the understanding that they are "seasons of joy and gladness" now that the Temple has been rebuilt. In postexilic prophecy, the need for fasting to be accompanied by sincerity and charity is stressed (e.g., Isa 58:3–9; Joel *passim,* e.g., 2:12–13). These passages use a pun on the words for fast *(ṣôm)* and day *f4(yoÆm),* i.e., the day of the Lord's judgment, a pun which is reflected in the gospel controversy (Mark 2:20 "they will fast on that day").

Fasting may well have been used in ancient Israel as a technique for divination. Moses' 40-day fast on the mountain (Exod 24:28; Deut 9:9–10) was interpreted by the rabbis in this sense (*b. Yoma* 4b.), although in the original story the dominant idea was that of miraculous sustenance (cf. 1 Kgs 19:8). The fasting of Hannah (1 Sam 1:7) may contain a vestige of this practice, since it is linked with a form of ecstatic prayer which could be mistaken for intoxication (1 Sam 1:14).

In later apocalyptic literature the use of fasting as a technique to become more receptive to divine revelation becomes more prominent. While penitence is probably the motivation of fasting in Dan 9:3, the use of fasting as preparation to receive visions cannot be excluded as a subsidiary idea (cf. Dan 10:3) since intertestamental references to this practice abound (e.g., 2 Esdr 5:13; *2 Bar.* 5:7f.; *Ascen.Is.* 2:7– etc.).

E. G. Hirsch (*JEnc* 2: 166) expresses the not uncommon opinion that the relative paucity of references to fasting in the OT proves that asceticism was essentially alien to the outlook of ancient Israel. The tacit assumption underlying this judgment, namely that asceticism always entails a pessimistic worldview and a body-soul dualism, and therefore can only have resulted from hellenizing influence is highly questionable. What the OT evidence indicates is that even before the Greek period, fasting practices were the social and religious norm in several different contexts and for a variety of motivations.

C. Fasting in Intertestamental Judaism

The intertestamental period witnessed a marked increase in Jewish asceticism, not only among sectarian groups, but also in popular piety. Fasting as an act of devotion, having value in itself, is commended alongside prayer and almsgiving in Tob 12:8. The book of Judith argues that fasting is rewarded with divine favor (Jdt 4:9), but observes that it should not be used in an attempt to bend the divine will (8:16). The conservative Ben Sira reiterates prophetic warnings against ritualism (Sir 36:26); but the *Testaments of the Twelve Patriarchs* make frequent reference to fasting as the hallmark of piety, e.g., *T. Jos.* 3:4: "They that fast for God's sake receive beauty of face" (cf. Dan 1:15 and Matt 6:16–18). According to Josephus, the ascetic practices of the Essene sect included fasting (*JW* 2.8.5). The Dead Sea Scrolls contain no explicit rules concerning community observances apart from the Day of Atonement, but discretionary practice by individuals is probably assumed. The Egyptian Therapeuts, as described by Philo, regularly fasted during the hours of daylight (*Vita Cont* 34). The pious Pharisee, according to Luke 18:12, fasted twice a week. Admittedly, there is some doubt about the accuracy of Luke's presentation, for the twice-weekly fast (on Mondays and Thursdays) cannot certainly be traced to Pharisaism of the pre–70 C.E. period, and when these fasts are referred to in the Mishnah, they are special devotions in time of drought, and not a regular pious devotion (*b. Ta‘an.* 12a; but cf. *Did.* 8:1). Nevertheless, the ascetic tendency of Pharisaism is indisputable, and the rabbinic warnings against the danger of excessive mourning fasts for the destruction of the Temple (*b. Ta‘an.* 57) only serve to underscore the point that asceticism was a customary reaction to such disasters.

In addition to the sects, there were notable individual ascetics during this period, among them Haninah ben Dosa (*b. Ta‘an.* 24b) and John the Baptist (Matt 11:18). The former fasted to increase the efficacy of his charismatic prayer; the latter seems to have wanted, rather, to evoke by his abstemiousness an ideology of wilderness simplicity and dependence upon God. Thus, in the background to the NT one finds widespread approval of voluntary fasting as a mark of religious devotion, as well as the almost spontaneous rise of individual and communal asceticism. "Fasting like a Jew" had become proverbial in the Roman world of the first century (Suet. *Aug.* 76).

D. Fasting in Early Christianity

The fasting practice of the early Church closely reflects that of its Jewish milieu. When Christian leaders are commissioned, fasting is the natural adjunct to fervent prayer (Acts 13:2–3 and 14:23). In Luke's infancy story, Anna the prophetess is held up as a paragon of traditional piety that expresses itself in fasting and continual prayer, and as a model for the church order of holy widows (Luke 2:27 cf. Acts 6:1 and 1 Tim 5:5). Similarly, Cornelius the God-fearer is renowned for his prayer and almsgiving (Acts 10:30–31). The textual tradition (P^{50},A^{2},D) quickly supplemented these two acts of piety (prayer and almsgiving, v 31) with a reference to the third, fasting. In the same way, the allusion to prayer in 1 Cor 7:5 attracted a textual addition of fasting in some manuscripts (Codex Sinaiticus, K, L).

Paul mentions "fastings" in his lists of the sufferings of a true apostle. In 2 Cor 6:4–5 it is unclear whether natural hunger or deliberate abstinence is meant; this difficulty hinges on whether one reads the word more closely with the preceding or with the following items. The list in 2 Cor 11:27–28 has already included "hunger and thirst" and so voluntary fasting is probably indicated. When Paul encounters

difficulties regarding food regulations in culturally mixed Christian communities (1 Corinthians 8; Romans 14) it is interesting to note how readily he adopts the ascetic solution.

Exaggerated asceticism evidently caused some problems in the early Church. In Colossians, the error involved "self-humiliation" (2:18). This is probably a Semiticism for fasting, since the practice is coupled with "angel worship," i.e., it was intended to induce visions of angels. In 2:23 the term is further defined as "severity to the body." Despite this, the writer refrains from rejecting asceticism completely; he simply opposes this form of it, which is, in his view, ineffective against the passions of the flesh and involves undue submission to external regulations. Elsewhere, despite the perversions of extremists, "bodily training," *askesis*, is commended as "beneficial up to a point" (1 Tim 4:8).

The Church in the NT period did not reject the pious Jewish practice of fasting. But it had not yet formalized its own discipline, considering it a matter of individual conscience. There is no trace in the NT of the requirement that candidates for baptism should fast (but cf. *Did.* 7:4; Justin *apol.* 61.2) nor is there reference in the NT to a twice-weekly Christian fast in imitation of and rivalry with the rabbinic custom. This first appears in the *Didache* (8:1). It was only during the 2d century that the statutory public fast on Good Friday took root—a practice that seems to have arisen in the wake of the Quartodeciman controversy. The Quartodecimans (see Eus., *Hist. Eccl.* 5.23–25) adopted the anti-Jewish practice of fasting during the feast of Passover and celebrating Easter the following day. When the date of Easter came to be determined independently of the Jewish calendar, always on a Sunday, the conditions were established for the institution of a public Christian fast on the preceding Friday. Eventually, as baptisms were normally celebrated at Easter, partial abstinence during the preceding weeks of preparation began to be observed not only by the candidates, but also by all Church members as an annual Lenten fast of penitence.

E. Fasting in the Jesus Tradition

Most of the references to fasting found within the Synoptic Gospels conform to the common pattern of piety indicative of 1st-century Judaism and early Christianity. There is, however, one exception, the fasting controversy in Mark 2:18–22 and parallels which stands out as dissimilar from both backgrounds.

Matthew's version of the longer Temptation narrative (4:2) states that Jesus fasted for forty days in the wilderness. The Moses typology here (cf. Exod 34:28) suggests that deliberate abstinence is meant; the Lukan parallel is more equivocal on the point: "he ate nothing" (Luke 4:2). The shorter Markan scene omits any reference to fasting, and the author's allusion to the "ministry of angels" (Mark 1:13) may even imply that he pictured Jesus receiving heavenly food in the desert. It is, therefore, likely that the motif of a forty-day fast has been introduced into the developing tradition of Jesus' temptation from the post-Easter preconceptions of the Church.

Matthew includes a series of exhortations in the Sermon on the Mount (6:1–18) concerning the three pious duties, which contrast the hypocrisy of outward display with the secret devotion which earns divine approval. Since the Evangelist interrupts the closely parallel structure of the exhortations by inserting the Our Father into the section on prayer, this material is likely to be pre-Matthean (see SERMON ON THE MOUNT/PLAIN). This view is supported by the presence of several Matthean *hapax legomena* in the passage, and also by the tension between its theme of secret devotion and the redactional publicity motif at Matt 5:16, "Let your light shine before men." But, that the tradition is pre-Matthean does not necessarily mean that it goes back to Jesus: for it is in line with conventional Jewish wisdom (cf. e.g., Sir 23:19)—upon which any early Christian preacher could have drawn. The assumption of the passage, that the disciples are to fast in secret, is also contradicted in the later controversy on fasting. The Evangelist seems to be aware of this, for he has slightly altered Mark's wording, so that Jesus can be understood to have rejected only the mourning custom of fasting (Matt 9:15) and not all other kinds. This alteration allows other motivations for fasting (i.e., inward devotion) to be appropriate for Christians, without making the practice a matter of coercion. Matthew's attitude to celibacy (Matt 19:10–12) is closely comparable. Certainly, his church could not have understood fasting as a mourning custom for removal of the bridegroom, for the Risen Christ was still continually present with the community (cf. Matt 28:20).

In the majority of mss at Mark 9:29 a saying of Jesus on exorcism by prayer and fasting appears. Notably, Codex Sinaiticus and B omit the fasting reference. This case is much less clear-cut than that of the two other variants mentioned above, but scribal addition is more likely than scribal omission at this point. The secondary insertion may have arisen from the erroneous supposition that the statement refers to the qualities required of a successful exorcist; in fact, if the shorter form is original, it refers to the qualities required in a successful suppliant for exorcism, and alludes to the hesitancy of the father's supplicatory prayer (cf. Mark 9:24).

The controversy dialogue found in Mark 2:18–22 and its parallels is the only NT text which raises any objection to the propriety of fasting. Its striking dissimilarity from prevailing views both in Judaism and in the early Church may be taken to indicate its substantial authenticity. The passage records that unidentified inquirers asked for an explanation of the difference in fasting practice between the followers of the Baptist and the Pharisees and the followers of Jesus. To the question "Why do your disciples not fast?" he does not reply, as one might expect from Matt 6:6–18, "How do you know they are not fasting; appearances can be deceptive!"; instead, he justifies the disciples' present neglect of fasting practice by analogy with wedding guests who are dispensed from ordinary religious duties during a marriage feast. This opening statement is then qualified: Jesus prophesies that fasting will, nevertheless, become appropriate at some later date, i.e., on the day when "the bridegroom is removed"; and the passage concludes with the two short parables of the old garment and the new wineskins.

The pioneer NT form critics M. Dibelius and R. Bultmann explained this puzzling text by a complex history of transmission, in which the original stance of Jesus against fasting was modified by the post-Easter Church to bring it into line with its own practices (Dibelius 1971: 65; Bultmann 1963: 19, 49). The Church, however, still wished to differentiate itself from Judaism and so made the further addition of the two concluding parables. This analysis faces two major difficulties. First, there is no evidence that the Church in the NT period practiced a memorial fast for the death of Christ; the weekly Friday fast and the annual Good Friday fast are of later origin, as we have seen. Secondly, the retention within the paradigm of an element which radically contradicts its overall message is contrary to the usual form-critical presupposition. For these reasons, a unitary, historical approach to the passage may be preferable. On this view, Jesus rejected fasting as inappropriate to the initial period of his ministry. But his rejection was not unqualified; he predicted that at some later stage "fasting," in the sense of deprivation and persecution, would again become appropriate, and he may have expressed this in language deliberately reminiscent of Joel 2:16. At the same time, in response to those who were ready to criticize both the Baptist for his asceticism and Jesus for his lack of it (cf. Matt 11:16–19), he argued by means of the parables that both lifestyles were justifiable in the context of their different aims. The Baptist's reform movement was concerned to repair the old order, by penitence and fasting (by "shrinking the patch"); whereas a more flexible dispensation was needed ("new wineskins") to accommodate the eschatological joy of the dawning Kingdom.

Whichever analysis of this passage is deemed to be more plausible, the way Jesus distances himself here from the pious practice of fasting, which was as widely esteemed in 1st-century Judaism as it continued to be in early Christianity, is highly distinctive.

FATE, GREEK CONCEPTION OF. "Fate" in the strict sense may be defined as "the principle, power or agency by which events are unalterably predetermined from eternity" *(OED).* Properly speaking, the concept presupposed some sense of a cosmic unity within which all individual events may be comprehended, as a system of causal chains. However, at the earliest stage of Greek thought, such a notion was not present in any coherent form, and indeed the ultimate implications of the concept were not worked out until after the Classical period by the philosophers of the early Stoa, in particular Chrysippus. The counterpart to the concept of Fate is that of Chance *(Tychē, Fortuna),* another concept which, while always present in Greek thought, attained vast influence in the Hellenistic and later Roman eras. In the case of Fate, all is determined; with Chance, nothing is; but the consequences, from the point of view of the ordinary individual, appeared very much the same.

———

A. Lexical Introduction

The English word "fate" derives from the Latin *fatum,* past participle of the verb *fari,* "speak," and means "what is uttered (sc. by the gods)"—analogous to the Greek adjective *thesphaton.* The earliest Greek terms for Fate are *moira, aisa,* and *to peprōmenon;* later, and generally in philosophical contexts, the usual term was *heimarmenē.* The etymology of *aisa* is obscure, but probably originally means "one's proper share" (of booty, cogn. with the verb *aiteo,* "ask for one's share"). *Moira* is the noun from *meiromai,* "apportion" (of which *heimarmenē* is the [fem.] past participle), the idea behind it being that of giving every man his due. *Peprōmenon* is the (neuter) past participle of a root **por-,* "provide" (cf. *poros,* "provision"), which conveys a similar notion. The idea of "due portion" is thus firmly rooted in the early Greek concept of Fate.

B. Greek Thought

1. Homer and the Poets. In early Greek thought, the concept of Fate is pervasive but in a rather loose form. Homer envisages a fated course of life woven for each person at birth (*Il.* 18, 115ff.; 24.525f.; *Od.* 7. 197–98), but this does not seem to result in determinism in any strong sense and there is even the periodic suggestion that one might "go beyond" one's fate (though that is never actually achieved)—a notion expressed by the phrases *hyper aisan* or *hyper moron,* "beyond fate" (*Il.* 16.780; 20.30; 21.517). There is some speculation, also, as to the relation of the decrees of Fate to the will of the gods, and in particular Zeus. Homer presents Zeus in *Iliad,* Books 16 (441ff.) and 22 (179ff.) as contemplating the overthrow of what is fated as a real option (in respect of saving Sarpedon and Hector), and only dissuaded from this by threats of retaliation from his wife Hera. Similarly, Poseidon in the *Odyssey* (5.288ff.) has to recognize that it is Odysseus' *aisa* to escape death at sea and reach home safely, but he does his best to dispose of him nonetheless. But this serves to remind us that Homer is a poet, not a theologian or philosopher.

These concepts, *moira*, *aisa*, and the allied notions of *kēres,* "death spirits," and *daimon*, "divinity" seen as an apportioning force, are susceptible of personification on occasion, both by Homer and later writers (*Il.* 18.535; *Od.* 10.64; 11.61). The Moirai seem originally to have been birth goddesses, balancing the *Kēres.* In Hesiod, we find the three Fates (Moirai) personified, and given names, Clotho, Lachesis, and Atropos, and differentiated roles (*Th.* 211–19). In at least one genealogy (*Th.* 901–6) they are subordinated to Zeus as his daughters by Themis (an abstraction meaning "right order"), but their decrees are still unalterable. In personifying them and linking them closely with the *Kēres,* Hesiod seems to suggest in this passage that they actually pursue evildoers and punish them, but all he can really mean is that evil deeds have their inevitable consequences.

Pindar, like Hesiod, places emphasis on the "moral" role of the Moirai, and their connection with Zeus—though he actually presents them as bringing Themis to be wed to Zeus, rather than as being her offspring (Fr. 30 Bergk). He speaks of Moira both in the singular (*Nem.* 7.57) and in the plural (*Pyth.* 4.145). In this latter passage, he speaks of the Fates "withdrawing in shame" if kinsmen fight. He lays down the general precept, "that which is fated cannot be escaped" (*Pyth.* 12.30).

This basic principle might serve as a keynote for Greek tragedy. The tragedians obviously dwell much on what is fated, often through the medium of a prophecy delivered by one of the gods (usually Apollo), or the agent of a god (a prophet such as Teiresias of Thebes or Calchas, prophet to the Greek army at Troy). A favorite theme, originally of myth, but then of tragedy, is the tracing of the futile efforts of a mortal to evade (and thus nullify) a prophecy—Laius, king of Thebes, and then his son Oedipus, being perhaps the most notable examples (celebrated above all in Sophocles' *Oedipus the King*). A curious feature of Apollo's prophecy in this case, as in certain others, is that it is stated as a conditional ("If you have a son, that son will kill you, and marry his mother"), though we know there is no real choice. A good statement of this occurs near the end of Euripides' *Hippolytus* (1256), where the Chorus is actually commenting on the fulfillment of Theseus' curse on his son, "No refuge is there from Fate and what must be!" (also Aesch. *PV* 511–25; Soph. *Ant.* 133708; Eur. *Or.* 976–81). In one play, however, the *Alcestis* (based on a folktale), Euripides presents the apparent overturning of the "fated" death of Alcestics by the plotting of Apollo (he actually got the Moirai drunk) and the agency of Heracles (who wrestled successfully with Death), but this is most peculiar and probably has something to do with the fact that the *Alcestis* was presented as the fourth play of a tetralogy, in place of a satyr play.

2. Prose Writers. The historian Herodotus (ca. 485–425 B.C.E.) has a very vivid sense of Fate, allied with the concept of divine retribution for both human transgressions and overweening human pride. In Book 3.40, King Amasis of Egypt warns Polycrates of Samos against excessive good fortune, "for I know how jealous is the divine nature." In Book 1.91, we find a particularly interesting statement of the relationship between Fate and the gods, in the words of the Delphic priestess to the envoys of King Croesus of Lydia: "It is impossible even for a god to escape his destined fate *(peprōmenē moira)*." But nevertheless she claims that Apollo delayed the capture of Sardis by three years and saved Croesus from death on the pyre. Where that leaves the inevitability of fate is not quite clear, but Herodotus does not appear to see any problem here.

Thucydides, by contrast, is not oppressed by either a sense of fate or of the jealousy of the gods, so he calls for no comment here. In the orators of the 4th century B.C.E., however, we find many examples of a belief in fate. Lysias (ca. 455–380 B.C.E.), at the end of his *Funeral Speech* (78), reflects that "the divinity *(daimon)* to whom has been allotted the charge of our fate is inexorable"—a suitable sentiment, of course, for such an occasion. Demosthenes, in the *De Corona* (205), on the other hand, seeks to make a distinction between one's "fated and natural death" and a death one might take upon oneself for the fatherland. This contrast between fate and free will, while purely rhetorical in this instance, is yet pregnant with significance for later philosophy, and specifically for later Platonism.

3. The Philosophical Tradition. When we turn to the philosophical tradition, the technical term for Fate becomes, as we have said, *heimarmenē,* which became falsely linked etymologically by the Stoics with *heirmos*, a "chain" or "series." The first philosopher to whom a concept of Fate can be attributed is Heraclitus of Ephesus (fl. ca. 490 B.C.E.). He is reported by Diogenes Laertius (9.7) as having declared

that all things take place through Fate, but the terminology here, and perhaps the doctrine also, may be a Stoic rationalization of his position. All we can be sure of is that he saw *logos*, which might be rendered "Reason" or "Cosmic Order," as the dominant principle of the universe. He was at any rate a powerful influence on the Stoics, so something in his recorded utterances must have attracted their attention. Parmenides (fl. ca. 480 B.C.E.) employs the term *moira* (Fr. 8.37 D–K), but only in a poetical phrase, to indicate the logical necessity of his concept of the plenitude and immobility of Being.

In Plato, the issue of Fate and Free Will is certainly addressed, but Plato's conclusions are obscured by the mythological and poetic form in which he chooses to present them. The most notable passage is the myth of Er (*Resp.* 10.617Dff.). Here Lachesis, who is presented as the daughter of Necessity *(Anankê),* makes a speech (through a prophet) to the assembled disembodied souls, which attempts to preserve a place for free will while laying down laws of fate. This passage is philosophically problematical, but it was taken in later times as Plato's definitive pronouncement on the subject, so it deserves careful study.

"Souls that live for a day, now is the beginning of another cycle or mortal generation where birth is the beacon of death. No divinity *(daimon)* shall cast lots for you, but you shall choose your own fate *(daimon).* Let him to whom falls the first lot select a life to which he shall cleave of necessity. But Virtue has no master over her, and each shall have more or less of her according as he honors or dishonors her. The blame is his who chooses; God is blameless."

On the one hand, then, one's course of life is determined by one's choice of life in the antenatal distribution of lots, but in fact one's choice, as becomes clear, is itself determined by how one has lived one's previous life. And yet Plato wishes to preserve the autonomy of "virtue," or the rational soul, in determining its future. This was a position clung to by later Platonists such as Albinus (*Didaskalikos,* ch. 26) and Pseudo-Plutarch *(On Fate),* as well as by the Aristotelian Alexander of Aphrodisian *(On Fate),* and later again by Plotinus, in Enneads 3.2–3 *(On Providence).* They tried to restrict the Stoic doctrine of determinism to the physical world and the lower soul (though Alexander is more defiant than the Platonists on that question), while freeing the rational soul from the ineluctable chain of causation.

Aristotle does not contribute anything to the theological problem of Fate, but his discussion of the truth value of statements about the future, and his rejection of the view that they are necessarily true or false, in chap. 9 of the *De Interpretatione,* did provide a stimulus to later Stoic theorizing.

It is only with the Stoics, in particular Zeno (335–263 B.C.E.) and Chrysippus (ca. 280–207 B.C.E.), that Fate as a philosophical problem comes into its own. *Heimarmenē* is now seen as coextensive with the structure of the universe and identical with both Nature and God (who is simply the soul or mind of the universe). This results in a blending of the notion of blind necessity with that of purposive ordering, producing a doctrine which, while apparently depressing in its implications, yet, if assented to, seemed to bring solace to the Stoic philosopher.

Chrysippus' principle that nothing takes place without an antecedent cause seemed to leave no room for anything spontaneous or "unprogrammed," but in fact the Stoics wished to find a place for the exercise of free will and responsibility, difficult though it might seem to do so. Chrysippus recognized that we do in fact make decisions, though such decisions are necessarily "co-fated" with the results that accrue from them. "Free will" is thus at best a subjective phenomenon, but one can decide to assent to the rational structure of the universe, which is God, and that way lies happiness and true freedom. To quote the later Stoic philosopher Seneca (*Ep.* 107, 11), "The Fates lead the willing subject, but drag along the unwilling" (cf. also *SVF* II 974–1007: *On Fate and Free Will*).

Meanwhile, on the popular level, a growing "science" of astrology, given a stimulus from Hellenistic contact with Babylonian star-lore and beliefs, made Fate seem an overpowering force which, however, it was thought possible (illogically) to tamper with through the use of magic.

Not far removed from the thought-world of magic, the movement broadly known as Gnosticism had a distinctive theory of Fate which is of some relevance for Christianity. For the gnostics, *Heimarmené* becomes a technical term for the sphere of existence ruled over by the Demiurge and his agents, and thus by definition a malevolent force, but also one from which the *pneumatikos,* or spiritual man, can escape (Jonas 1958: 156–210).

This has been exclusively a survey of Greek thought. The Romans, in fact, contribute nothing of significance to the concept of Fate, but a number of Latin authors, particularly Cicero in *De Fato, De Divinatione,* and *De Natura Deorum,* and the Stoic philosopher Seneca in his essays and letters, constitute good evidence for Greek philosophical theories.

FAYUM FRAGMENT. The so-called Fayum Fragment is a small scrap of papyrus (3.5 × 4.3 cm.), dating from the 3d century, that partially preserves a version of Jesus' prediction of Peter's denial. The papyrus, discovered in 1885 among a collection of ancient Egyptian documents acquired by Archduke Rainer, is now held by the Austrian National Library (P. Vindob. G 2325; Aland: Ap 13). It carries seven incomplete lines of Greek text consisting of 106 characters. With plausible reconstructions, the text may be translated as follows:

(He said, after)
eating according to custom, "Al[l of you on this]
night will fall away, [according to]
scripture: 'I will strike the [shepherd and the]
sheep will be scattered.' " [When]
Peter said, "Even if all, [yet not I," (Jesus said) "Before]
the cock crows twice [today]
[three times] you will deny me."

In substance this is closely parallel to the narrative given in Mark 14:26–31 = Matt 26:30–35 (cf. Luke 22:31–34), but there are some noteworthy differences. The fragment does not give the statement found in Mark 14:28 = Matt 26:32, "After I am raised up I will go before you to Galilee," which seems intrusive and irrelevant in Mark and Matthew. But even apart from this, the narrative as given in the fragment is considerably more brief (42 words) than the versions of Mark (71 words) or Matthew (76 words). Generally, the style of the fragment is much less literary than the synoptic accounts. The fragment has points of agreement with each of the synoptic accounts, but separately: with Mark it shares the simplicity of Peter's response (14:29) and mentions the cock crowing twice (14:30, absent in Matthew and Luke); with Matthew (26:31) it inserts the phrase "on this night" in Jesus' earlier, general prediction (omitting it in the later specific prediction about Peter, where, however, Matthew retains it [26:34]); with Luke (22:39) it mentions Jesus' following custom (although Luke relates this to going to the Mount of Olives, and the fragment seems to relate it to the eating of the meal). At the same time, the fragment differs appreciably from all the synoptic accounts. The fragment also exhibits some linguistic peculiarities: the formula for the citation of scripture *(kata to graphen)* "according to scripture" is peculiar and not exactly paralleled in the NT; its word for "cock" *(alektruōn)* has another form than the term exclusively used in the NT *(alektōr);* and whereas the synoptic accounts use *phonein* ("to speak") of the crowing of the cock, the fragment uses the onomatopoetic *kokkuzein.*

These observations pose the question of the relationship of the fragment to the Synoptic Gospels. Three alternatives have been considered: (1) that the fragment offers a secondary, somewhat abridged version of the episode, based on the account of Mark and/or Matthew, whether recalled from memory or perhaps drawn from a gospel harmony; (2) that the fragment comes from a primitive gospel document *(Urtext)* on

which Mark depended; (3) that the fragment offers an independent version of the synoptic pericope, and that the larger document of which the fragment is a part was an early gospel, otherwise unknown, composed on the basis of oral tradition. The last explanation has been the most widely held among students of the fragment, and gives the most plausible account of the pattern of similarities and differences between the fragment and the synoptic texts. The absence in the fragment of a reference to resurrection appearances in Galilee is especially telling. This is a Marcan motif (cf. 16:7), and seems to be a secondary element in the pericope: the disciples do not remark on it, and it is beside the point of the narrative. Without it, the incident is tightly coherent. Further, the idiomatic freshness of the fragment's version and its distinctive word usage do not suggest any literary dependence on Mark or on another known gospel. The plausibility of the fragment's having belonged to an independent gospel is enhanced by the modern awareness that many such documents circulated in the early Church, perhaps especially in Egypt. At least some of those that have survived are clearly independent of the canonical Gospels (e.g., the *Gospel of Thomas,* the *Gospel of Peter*). However, any conclusion about the Fayum Fragment must be tentative, owing to its slight scope.

HARRY Y. GAMBLE

FEAR OF ISAAC [Heb *paḥad yiṣḥāq* (פַּחַד יִצְחָק)]. An ancient title of the divinity used twice in the OT (Gen 31:42, 53, *paḥad ʾābîw yiṣḥāq,* "the Fear of his father Isaac"), uniformly rendered in ancient times and generally in later times as "the fear/terror of Isaac." Some modern scholars have challEnged this interpretation, which they believe conforms poorly to the context, and instead understand "kinsman of Isaac" (Albright *FSAC,* 248; de Vaux in *La Bible de Jérusalem,* but with more nuance in *EHI* 269–71; Anderson *IDB* 2: 260; Stähli *THAT* 2: 411; Schoors 1987). They appeal to the Arabic *faḫiḏ̄* and to the Palmyrene *pḥd* with the sense "tribe, clan, family" (*DISO,* 226). The meaning "kinsman" is not convincing, however, and has been strongly attacked (Hillers 1972; Puech 1984). Arabic *faḫiḏ̄* never refers to "kinsman" as an individual, but always signifies a social group, so that this expression designates at best "the clan of Isaac." This sense is confirmed by the Palmyrene usage of *pḥd,* no more than a straightforward borrowing from the Arabic, to designate exclusively Arab tribes in or around Palmyra. (In Palmyrene the forms *pḥd* and *pḥ (w)z* are employed equally; /z/ and /d/ are two ways of rendering the Arabic /ḏ̄/ and not Aramaic archaisms for transcribing the original /ḏ̄/.)

The first sense of the Arabic *faḫiḏ̄* is "thigh," as in Sabean; the Aramaic *pḥdyn (Tg. Onq.)* and the Syriac *pwḥd'* both signify "testicle(s)" or "thigh" in Job 40:17, and elsewhere "jugular veins," according to lexicographers. *Paḥad* in Job 40:17 must mean "thigh," but this unique usage of the Hebrew word is better understood as an Aramaism in Job, considering the irregularity of a Proto-Semitic development of /ḏ̄/ > /d/ in Hebrew, instead of the expected /z/.

Albright appealed also to Ug *pḫd* in the sense of "flock," but its single occurrence in *ʾimr bpḫd* is not all that clear. If it is related to Akk *puḫâdu,* "lamb" (Hillers 1972: 92), the word is not to be derived from *pḫḏ̄*; but since the sense "lamb" in this passage is hardly satisfying, some scholars have linked it to the Akk *paḫīdu,* "flour." However, the sense of "thigh" is not to be excluded here also (Puech 1984: 359–60 n. 5). Whatever the proper interpretation of Ug *pḫd* is, the meaning "flock," derived from "clan, tribe" in the Arabic, is improbable. This same meaning should not be sought in the plaster inscription of Deir ʿAlla where the word does not in fact appear, not even in II 8, *pḥzy.*

Since the meaning "kinsman" is never attested in Semitic, not even in Arabic, and since the meaning "clan," known only in Arabic, does not make sense in our context, an explanation which refers to the Arabic root *pḫḏ̄* cannot be retained. In fact, on the basis of its construction, the expression *pḥd yṣḥq* must be parallel to *ʾĕlōhê ʾābî/ʾabrahām/nāḥ̃r.* "God of [my] father/Abraham/Nahor," or *ʾăbîr yaʿăqōb,* determinative titles of the God of the patriarchs and, consequently, of their clans; cf. *ʾăbîr yiśrāʾēl* (Isa

1:24; see Alt 1966: 25–30). The phrase cannot be the euphemistic "father's thigh" (= sexual organs) by which Jacob swears (Koch 1980; Malul 1985; 1987) since the formula "put the hand under the thigh" (e.g., Gen 24:9) is missing. There remains, then, the only other root, well known in the sense of "to fear, tremble, be frightened," in the noun form "terror, fright, fear," as the ancient translators understood it (LXX *phobos*). The expression *paḥad yiṣḥāq* cannot signify "refuge of Isaac" without other convincing parallels (Kopf 1959).

The element *paḥad* is not a divine name (as argued by Lemaire 1978); the personal name ZELOPHEHAD (Heb *ṣĕlopĕḥad*), Num 26:33 shows, in its historically more correct Greek vocalization *Salpaad* (Num 26:37), cannot be compared to Akk names such as *Ṣilli-Adad, Ṣilli-Amurru, Ṣilli-bal,* or Heb *bṣl*ʾ*l,* nor understood as "the Parent is [my] refuge" (*HALAT* 3: 872) or "Shadow of *Paḥad*" (Müller 1980: 120; *TWAT* 6: 560; *DBSup* 11: 485–86). It rather means "the [divine] Fear is a/my refuge" (Puech 1984: n. 10); cf. Akk *puluḫti ṣillika* and for the construction compare names whose theophoric element is a kinship term (see *TPNAH,* 40–50). However, this does not permit *paḥad yiṣḥāq* to be translated as "Protector of Isaac" (Westermann *Genesis 27–35* BK, 607), where it is clear that "the god of X" is his protector.

The phrase must mean "Terror/Fear of Isaac," to be understood as a principal attribute of the god of Isaac, whose protective power sows terror among all his enemies. But this objective sense taken in the context of holy war (cf. Gen 35:5) does not exclude the *numen tremendum,* the divine majesty which inspires reverential fear of the sort well attested in ancient rituals (expressed in Akk *puluḫtu û melammu;* see 1 Sam 11:7; 2 Chr 19:7; Ps 36:2; Sir 7:29). It is even probable that the latter entails the former (see Becker 1965: 178–79). The phrase *pḥd yṣḥq* is comparable to *ʾăbîr yaʿqōb,* "the Powerful/Bull of Jacob" (Gen 49:24) an expression originating with regard to Baal, whose animal is the bull (see the Hyksos scarabs with *Yaqub-Baʿal* and *ʾibrd* at Ugarit: "Adad is the Bull" [Puech 1984: 357]). The sense of the word *paḥad* is not always negative: it is sometimes parallel to *yārēʾ,* "to fear" (see Ps 119:120). A protector god such as would inspire reverential fear and terror could be invoked as guarantor for the oath in Gen 31:53, and as the divinity on whom one could count in Gen 31:42. If so, then indeed "the sacred terror is a shelter" (a possible meaning of the name Zelophehad [corrected to *ṣalpaḥad*]). It is noteworthy that Zelophehad son of Hepher son of Gilead (Heb *gilĕʿad*) son of Machir son of Manasseh had only *daughters* (Josh 17:3) and that the story in Gen 31:42–53 for its part involves the *daughters* of Laban and the name *galaʿad/galʿēd.* These two precise points of contact are not due to chance, and it is probable that the name Zelophehad *(ṣalpaḥad)* has some relation to the designation of the God of Isaac, *paḥad yiṣḥāq,* at some point in the tradition.

In conclusion, neither the unattested sense of "kinsman," nor the meaning "clan" nor the euphemistic "thigh" can be upheld. The traditional interpretation of ancient and many modern commentators remains the best by far: "Fear of Isaac."

EMILE PUECH
TRANS. SARAH LIND

FEINAN, WADI. Wadi Feinan is cut into the E escarpment of the Wadi Arabah, about halfway between the Dead Sea and the Gulf of Aqaba. Its catchment area is the depression of the Wadi el-Ghuweir that divides the Edomite plateau into two halves: el-Jibāl to the N and esh-Sharā to the S. The Wadi Feinan area includes the major concentration of copper ore in the S Levant (Hauptmann et al. 1985: 164–66). Ancient roads connected the area with N Edom (el-Jibāl) via Wadi Ḍānā, and with S Edom (esh-Sharā), via esh-Shawbak.

A. The Name

Feinan is primarily the name of a district, not a settlement. It can be explained by means of Arabic *faynān,* "to have long, beautiful hair." Like "Seir" (literally: "the hairy one"), "Feinan" refers to a region according to its vegetation: trees, grass, and reeds. Typologically, the name may go back as far as the 4th or 3d millennia B.C. (Knauf 1987).

In the 13th century B.C., Rameses II might have referred to *pwnw* (that is, **pōnō* from **pānā* from **paynā*) as one of the regions inhabitated by Shasu, "nomads" (Görg 1982). The Feinan region is mentioned twice in the OT (Gen 36:41; Num 33:42–43). In the first passage (Gen 36:41), *Pînōn* was one of the tribes of Edom at the time in which the list (Gen 36:40–43) originated. This list is one of the later lists compiled in Genesis 36. It is dependent on the lists of Gen 36:10–14 and Gen 36:20–28 (Weippert 1971: 443–44). A date at the end of the 6th century B.C., which means after the Neo-Babylonians conquered Edom, is highly likely (Weippert 1971: 456–58). Regardless of whether one translates *ʾallûp* as "tribe" or as "chief" (Weippert 1971: 453–56), Pinon is a tribe of Edom whose name is derived from the name of a region. Tribes in ancient Palestine (and in ancient W Arabia and S Arabia) were primarily regional organizations (de Geus 1976: 124–56). In the same list (Gen 36:40–43), the tribal names Mibzar, Elah, Teman, and Timna also seem to be derived from geographical names. Pinon does not occur in the older lists which were partially the sources for Gen 36:40–43. This indicates that the Feinan region rose to prominence between the time of the compilation of the earlier lists (8th to early 7th centuries B.C.; Knauf and Lenzen 1987: n. 43) and the end of the 6th century B.C. This agrees well with the archaeological evidence (see below). Although a settlement at Khirbet Feinan (M.R. 197004) existed in the 7th and 6th centuries B.C., becoming the administrative center of the region and, finally, preserving its name, it is likely that Gen 36:41 refers to the region and/or the tribe rather than to this specific settlement.

The second biblical text (Num 33:42–43) lists *Pûnōn* (variant reading: *Pînōn*) as a road station in the Wadi Arabah. The different forms of the name (Weippert 1971: 433–34) may be explained both graphically (*w* for *y* by scribal error) and linguistically (cf. Egyptian *pwnw,* supra). The itinerary of Num 33:1–49 may date to the Persian period, 5th century B.C. (Hauptmann et al. 1985: 164; Knauf 1987). In the Roman-Byzantine period, this town was called *Phainō* (for the missing *-n,* cf. again the Egyptian reference); for both literary and epigraphical references, cf. Weippert 1971: 696, n. 1637.

B. History of Exploration

A. Musil gave the first detailed description of Kh. Feinan and its vicinity (Musil 1907: 293–98). F. Frank and N. Glueck discovered more ancient copper smelting sites to the N of Wadi Feinan (Frank 1934: 221–24; Glueck 1935: 20–34). Ancient mining sites have been described by geologists who worked in the Feinan area in the 1960s (Kind 1966). G. R. D. King surveyed Wadi Arabah during the survey "Late Antique and Early Islamic Sites in Jordan," and covered Wadi Feinan. He may have been the first to discover evidence for Early Bronze Age copper mining and smelting in the region (King 1985: 44–45). Since 1983, the Deutsches Bergbau-Museum, Bochum, has been conducting an archaeometallurgical and mining-archaeological survey in the Wadi Feinan region (Bachmann and Hauptmann 1984; Hauptmann et al. 1985). Archaeological survey work was carried out in 1985 by B. MacDonald and F. Koucky (MacDonald and Koucky 1987), and in 1986 by S. Hart and E. A. Knauf (Hart and Knauf 1986; and cf. Knauf and Lenzen 1987: n. 3).

C. History of Occupation

The Wadi Feinan region has been continuously occupied since the Late Neolithic period, i.e., from ca. 7000 B.C. onward. Late Neolithic and Early Chalcolithic villages are reported (Raikes 1980; 1985). Intensive copper mining seems to have begun with the EB I period (3200–3000 B.C.); it is possible that mining and metallurgy started earlier in the Feinan area, but sufficient archaeological evidence for this assumption has not yet been presented. Another period of high mining activity was the EB IV (MB I) period, 2200–1900 B.C. Human presence was scarce in the Feinan region during the Middle and Late Bronze Ages (1900–1200 B.C.).

Mining and smelting activities were more frequent in the Iron Age. Although the archaeological evidence for the earlier part of the Iron Age (1200–800 B.C.) is presently unclear (Hart and Knauf 1986), it can be reasonably assumed that from 1200 B.C. onward, if not some fifty or hundred years earlier, the Feinan region became increasingly important for the copper supplies of Syria-Palestine (and maybe even for Egypt; cf. Görg 1982). The troubles in the Aegean world around 1200 B.C. must have cut off Syria-Palestine from its main copper supplier in the Bronze Age: Cyprus (Knauf and Lenzen 1987). Under Assyrian, Neo-Babylonian, and Persian rule, the Edomites exploited the copper ore deposits of the Feinan region industrially and left approximately 100,000 tons of slag; they must have produced several thousand tons of copper. Edomite (800/700–400 B.C.) smelting sites, with architectural remains, comprise Kh. el-Ghuweibeh, Kh. el-Jāriyeh, Kh. en-Naḥās (M.R. 191010), and Kh. Feinan (all these sites are already described by N. Glueck [1935], who, however, dated the Edomite pottery to the 13th through 9th centuries B.C.; these dates are excluded by recent excavations on the Edomite plateau, cf. Hart 1986). It is likely that Job 28:1–12 describes mining as it took place in the Feinan area in the 6th or 5th century B.C. The references to Edom's "wisdom" (Jer 49:7; Obadiah 8) may allude to the technical skill of the Edomites in mining and processing copper, and may also reflect some envy on the part of their neighbors. Edomite copper smelting seems to have come to an end around 400 B.C. (Knauf and Lenzen 1987).

In the Nabatean period (1st century B.C. through 1st century A.D.), the area housed a number of small, isolated farmsteads. It is impossible to tell from the surface evidence how extensive and how urban the settlement at Kh. Feinan was at this time. The Nabateans did not mine copper in the Feinan area, probably because the ore deposits that could have been processed by the technical means of the Bronze and Iron Ages had been exhausted. It was the Romans who resumed metallurgy in the Feinan region. They mined new types of ore by means of new types of mines, and processed these ores in new types of furnaces (Hauptmann et al. 1985: 185). These activities took place mainly in the late 3d and 4th centuries A.D., another time of crisis and turmoil. Christians were among the slaves and criminals that were sent by the Romans to the furnaces and into the mines of Phaino/Feinan. In *The Martyrs of Palestine,* Eusebius of Caesarea includes a vivid description of the working conditions in Feinan ca. 300 A.D.

In the Byzantine period, Feinan became the seat of a bishopric. Ruins of three churches and some tomb inscriptions have been found which date to the 5th to 7th centuries A.D. Another ecclesiastic building, the so-called "monastery," seems to have been subsequently transformed into a mosque. The latest smelting site known so far belongs to the late Ayyubid/early Mamluk period, 13th century A.D. More discoveries are to be expected in the next few years.

FEJJA (M.R. 141165). A ruined Arab village, today located within the municipal limits of Petah-Tiqvah, about 5 km from Ras el-ʿAin (biblical Aphek/Antipatris). The name Fejja recalls the Gk name of the Hellenistic site Pegai, meaning "the springs." Pegai is first mentioned in the Zenon Papyri (ca. 259 B.C.) as a frontier post between Judea and Samaria, although for topographic reasons it seems more likely that this post was actually located at Ras el-ʿAin, not at Fejja. Mishnaic sources distinguish two places—Mei-Pigah ("Waters of Pegai"; *m. Para* 8:6) and Pigah (*m. Ter.* 1:15). It seems that from the Hellenistic period onward the whole area around Aphek/Antipatris was called Pegai ("The Springs"), and this would explain the persistence of the name in such a remote settlement.

A survey in 1951 showed that the Arab village had been built on formerly uninhabited land, although ancient remains were found scattered in three areas, all in the same vicinity just N of Fejja. Area A, closest to the ruined Arab village, contained a sizable number of MB and Persian sherds. Area B, NW of area A and parallel to the road connecting Petah-Tiqvah with Lod, was covered with small fieldstones and many sherds from the Iron II and Persian periods. In area C, about 100 m NE of area A, the remnants of a wine industry were found sunk into the ground.

Twelve years later trial excavations were conducted in areas A and B. Five short trenches were dug in area A. In trench A-1 were uncovered two settlement levels, but no building remains. The upper settlement dated from MB II–III; the lower one, built on virgin soil, dated from MB I. Trench A-2 yielded similar finds, including two Ghassulian potsherds and a single (bow rim) potsherd belonging to the Wadi Rabah culture. A number of Iron II sherds were also found, and on the surface near A-2 was found a coin of Alexander Jannaeus. In trench B a 60-cm-thick Persian-period stratum was followed by two MB strata, the first belonging to MB II–III and the second (on virgin soil) to MB I. In trench C a stratum was uncovered containing the remains of a Roman settlement, including a Roman coin from the 1st century A.D. Below the Roman stratum was a MB II–III settlement stratum, containing two sections of mud-brick walls with typical sherds of the period on the floor. A MB I stratum was below this level, founded on virgin soil; in its upper part was uncovered the foundations of a stone wall. Trench D was apparently beyond the ancient zone of settlement; the top stratum yielded only a dump of mixed Persian and MB pottery fragments. Beneath it, however, were discovered fragments of a basalt bowl with a rim decorated in a manner typical of the Chalcolithic period.

Area C was found to contain the remains of Roman period wine presses and winery pits. The remnants of three separate installations were uncovered. The first was mostly in ruins, except for part of its mosaic-paved treading floor. The second was also almost completely ruined, except for part of a round winery pit and paved mosaic floor. The third was almost completely preserved, making it possible to clear a section of the floor and the entire square winery pit; the floor was paved with mosaics, and a lead pipe was found running from the treading floor to the pit.

In conclusion, the presence of Wadi Rabah and Ghassulian sherds indicates that somewhere nearby are buried the remains of a Chalcolithic settlement. It appears, however, that the site at Fejja itself was established and reached its zenith mainly during the MB Age, from which time building remains were also found. This MB settlement was no doubt connected with the mother settlement of nearby Ras el-

ʿAin. See ANTIPATRIS (PLACE). The extent of the Iron II settlement was not examined, but it appears to have been limited. In contrast, the Persian stratum (apparently 5th century B.C.) revealed extensive settlement. The lack of Hellenistic remains seems to reinforce the suspicion that Pegai was not here specifically, but more generally within the wider surrounding area. Settlement was renewed at this site in the 1st century A.D. and continued through Byzantine times.

J. KAPLAN

FELIX (PERSON) [Gk *Phēlix* (Φηλιξ)]. The procurator of Palestine from A.D. 52–60 who, supposedly "possessing accurate knowledge of the Way" (Acts 24:22), heard Paul's defense shortly after the apostle had been removed from Jerusalem to Caesarea (Acts 23:23–24:27). The little we know about Felix we learn from Josephus and from a number of Roman historians.

Felix, interestingly, was a freed slave of the family of the Roman emperor Claudius. Since his brother, M. Antonius Pallas, was the freed slave (or "freedman") of Claudius' mother, Antonia, this may have been the case with Felix as well. His full name was probably Marcus Antonius Felix (for the problems entailed, cf. Schürer *HJP²* 1: 460 n. 19). We may reasonably suppose that Felix shared his brother's aspirations to royalty through descent from Pallas, son of Evander, and the kings of Arcadia (who were also significant figures in the foundation myths of Rome): these aspirations were even given formal recognition by the Senate under Claudius (Tac. *Ann.* 12.54).

Felix was a particular favorite of Claudius, who appointed him to a command in Palestine, a most unusual post for a freedman (Suet. *Claud.* 28 notes that Claudius had a reputation for giving excessive power to freedmen). However, our sources give conflicting evidence as to the precise nature of his post. It seems that Felix was appointed before A.D. 52 to govern Samaria and Judea, while Ventidius Cumanus governed Galilee. When problems arose, Quadratus, the governor of Syria, punished Cumanus but dealt favorably with Felix, though he was allegedly no less guilty (Tac. *Ann.* 12.54; Josephus' silence and contrary indications are puzzling; Schürer *HJP²* 1: 459 n. 15 tends to reject Tacitus' account). Josephus presents Felix as Cumanus' successor, as he was after the latter's removal; the high priest Jonathan had even called upon Claudius to appoint Felix (*Ant* 20.162).

However, it was during Felix's term as procurator that rebellion firmly took hold in Palestine (*HJP²* 1: 460), so Felix was an obvious candidate for blame. Josephus reports that he paid a large sum to induce the closest friend of Jonathan, the high priest, to arrange for the high priest's murder by *sicarii* (*Ant* 20.162ff.). Jonathan, it is said, had annoyed Felix by repeatedly urging him to be a better governor; yet Felix had evidently taken strong (if not entirely honest, and perhaps even counterproductive) actions to deal with the growing disorder (*Ant* 20.161; *War* 2.252ff.). Indeed, Josephus' account of Felix's suppression of Jewish rioters at Caesarea shows that he tried persuasion before force and that, having made his point, withdrew his troops at Jewish request and referred the matter to Nero (*Ant* 20.177–78; *War* 2.270; cf. *Life* 13). It is against this background of severe and growing disorder that we must understand Felix's detention of Paul (Acts 24: 26–27). Felix's reputation will not have been helped by his slave origins; his "servile nature" seems to be the burden of Tacitus' critique of him (*Hist.* 5.9; cf. Pliny *Ep.* 7.29 on Pallas). However, it must be observed that our sources are unanimous in their hostility toward Felix and it may very well be that their judgment is essentially sound (Schürer *HJP²* 1: 462–66).

Felix was succeeded as procurator of Judea by Porcius Festus in about A.D. 60 (*War* 2.271; *Ant* 20.182; Acts 24:27). Felix's influential brother, Pallas, is said to have saved him from punishment for his maladministration (*Ant* 20.182). As procurator he married DRUSILLA, daughter of Agrippa, after having seduced her away from her husband; she bore him a son, Agrippa, who died during the volcanic eruption of Mt. Vesuvius in A.D. 79 (*Ant* 20.144). She was one of three "queens" whom Felix is said to have married (Suet. *Claud.* 28). The second was granddaughter of Antony and Cleopatra—perhaps an otherwise unknown daughter of Juba II and Cleopatra Selene (herself the daughter of Antony and Cleopatra) and thus a member of the royal house of Mauretania. She may also have been called Drusilla (Tac. *Hist.* 5.9). Felix's third royal wife cannot be identified. Inscriptions record persons who might be his descendants (*CIL* 5.34; *BCAR* 1907, 215).

FELLOWSHIP, TABLE. See TABLE FELLOWSHIP.

FEMINIST HERMENEUTICS. Writing a dictionary article on feminist hermeneutics may encourage several misconceptions. It gives the impression that feminist hermeneutics is a finished research product rather than an ongoing process within the context of women's societal and ecclesial struggles for justice and liberation. It also highlights proposed solutions rather than the experiences and questions which have Engendered them. Insofar as this article is qualified by "feminist" and other entries are not marked, for instance, as "masculinist" or "white," readers may assume that an objective discipline and unqualified approach to hermeneutics exists. As long as other contributions do not explicitly articulate the fact that knowledge and scholarship is perspectival, such a misapprehension seems unavoidable. Yet feminist inquiry is not more, but less, ideological because it deliberately articulates its theoretical perspective without pretending to be value-free, positivistic, universal knowledge.

A. A Delineation of Terms

Since the expression "feminist" evokes reactions, emotions, and prejudices, it becomes necessary to delineate the ways in which the term is here used in conjunction with hermeneutics.

1. Feminist/Womanist. The term "feminist" is commonly used today for describing those who seek to eliminate women's subordination and marginalization. Although women have resisted their subordinate position of exploitation throughout the centuries, the roots of feminism as a social and intellectual movement are found in the European Enlightenment.

a. Although there are diverse articulations of feminism, feminists generally agree in their critique of masculine supremacy and hold that gender roles are socially constructed rather than innate. The "root experience" of feminism is women's realization that cultural "common sense," dominant perspectives, scientific theories, and historical knowledge are androcentric, i.e., male-biased, and therefore not objective but ideological. This breakthrough experience causes not only disillusionment and anger but also a sense of possibility and power.

Feminist analyses often utilize categories such as *patriarchy, androcentrism* or *gender dualism* as synonymous or overlapping concepts. Patriarchy is generally defined as gender dualism or as the domination and control of man over woman. Androcentrism refers to a linguistic structure and theoretical perspective in which man or male represents the human. Western languages such as Hebrew, Greek, German, or English—grammatically masculine languages that function as so-called generic languages—use the terms "male" or "human" as inclusive of "woman" and the pronoun "he" as inclusive of "she." Man is the paradigmatic human, woman is the other.

Masculine and feminine are the two opposite or complementary poles in a binary gender system, which is asymmetric insofar as masculine is the primary and positive pole. Dualistic oppositions such as subject/object, culture/nature, law/chaos, orthodoxy/heresy, and man/woman, legitimate masculine supremacy and feminine inferiority. Franco-feminist criticism therefore has termed this structuring of man as the central reference point "phallocentrism," understanding the phallus as a signifier of sociocultural authority.

The philosophical construction of reason positions elite Western man as the transcendent, universal subject with privileged access to truth and knowledge. The Western construction of reason and rationality has been conceived within the binary structure of male dominance as transcendence of the feminine. Femininity is constituted as an exclusion. In analogy to "woman" and the "feminine" the nature of subordinated and colonialized peoples is projected as the devalued other or the deficit opposite of elite Western man, rationalizing the exclusion of the "others" from the institutions of knowledge and culture.

b. In protest of this ideological construction feminist liberation movements around the globe unmask the universalist essentializing discourse on "Woman" and the colonialized "Other" as the totalizing discourse of the Western Man of Reason. Instead they insist on the specific historical-cultural contexts and subjectivity, as well as on the plurality, of "women."

Women of color consistently maintain that an analysis of women's exploitation and oppression only in terms of gender does not suffice, for it does not comprehend the complex systemic interstructuring of gender, race, class, and culture that determines women's lives. Therefore, feminist hermeneutics must reconceptualize its categories of analysis. It has to distinguish between the categories of *androcentrism* or gender dualism as ideological obfuscations and legitimizations of elite male power on the one hand, and *patriarchy* in the strict sense of the word defined as a complex social system of male domination structured by racism, sexism, classism, and colonialism on the other hand. The system of Western patriarchal ideology was articulated centuries ago by Aristotle and Plato in their attempt to define the democratic *polis*, which restricted full citizenship to Greek, freeborn, propertied, male heads of household. Although cultural and religious patriarchy as a "master-centered" political and cultural system has been modified throughout the centuries its basic structures of domination and ideological legitimization are still operative today.

African-American feminists in religious studies, therefore, have introduced Alice Walker's term "womanist" (i.e., feminist of color) to signal the fact that feminism is more than a political movement and theoretical perspective of white women. When we speak of Africans, Europeans, the poor, minorities, *and* women, we speak as if women do not belong to all the other groups mentioned. Yet the expression "women" includes not just white, elite, Western, middle- or upper-class women, as conventional language suggests, but all women. Whereas feminist scholarship has become skilled in detecting the androcentric language and patriarchal contextualizations of malestream theory and biblical interpretation, it does not always pay attention to its own inoculation with gender stereotypes, white supremacy, class prejudice, and theological confessionalism.

Jewish feminists in turn have pointed out that Christian feminists perpetuate the anti-Semitic discourse of otherness ingrained in Christian identity formation when they uncritically reproduce the anti-Jewish tendencies inscribed in Christian Scriptures and perpetrated by malestream biblical scholarship. This is the case, e.g., when Judaism is blamed for the "death of the Goddess" or when Jesus, the feminist, is set over and against patriarchal Judaism. It also would be the case if this article on "feminist hermeneutics" would be read as giving a descriptive and comprehensive account of feminist biblical hermeneutics as such, although it is written from a Christian but not from a Jewish or Islamic hermeneutical perspective. If feminist interpretation does not wish to continually reproduce its own internalized structures of oppression, it must bring into critical reflection the oppressive patriarchal contextualizations of contemporary discourses and those of the biblical writings themselves.

2. Feminist/Womanist Hermeneutics. While women have read the Scriptures throughout the centuries, a feminist/womanist hermeneutics as the theoretical exploration of biblical interpretation in the interest of women is of very recent vintage.

a. When one remembers Miriam, Hulda, Hanna, Mary Prisca, Felicitas, Proba, Macrina, Melania, Hildegard of Bingen, Margret Fell, Antoinette Brown, Elizabeth Cady Stanton, Jarena Lee, Katherine Bushnell, Margret Brackenbury Crook, Georgia Harkness, or Else Kähler, it becomes apparent that women have always interpreted the Bible. Moreover, books about Women in the Bible—mostly written by men—as well as studies of prescriptive biblical male texts about women's role and place have been numerous throughout the centuries.

Biblical scholarship *about women* Engages diverse historical, social, anthropological, psychological, or literary models of interpretation without analyzing their androcentric frameworks. In addition, it tends to adopt the scientific posture of "detached" inquiry that eschews feminist politics. Although such scholarship focuses on "women," it reproduces and reinscribes the androcentric-patriarchal dynamics of the text as long as it does not question the androcentric character of biblical texts and reconstructive models.

Only in the context of the women's movement in the last century, and especially in the past twenty years, have feminists begun to explore the implications and possibilities of a biblical interpretation that takes the androcentric or patriarchal character of Scripture into account. This exploration is situated within the context of both the academy and the church. Insofar as feminist analysis seeks to transform

academic as well as ecclesial biblical interpretation, it has a theoretical and practical goal. This praxis-orientation locates feminist hermeneutics in the context of philosophical/theological hermeneutics as well as critical theory and liberation theology.

b. The technical term *hermeneutics* comes from the Greek word hermeneuein/hermeneia and means the practice and theory of interpretation. The expression was first used as a technical term for exegetical handbooks that dealt with philology, grammar, syntax, and style. Today the term *exegesis* is generally used to describe the rules and principles for establishing not only the philological, but also the historical sense, of biblical texts.

Hermeneutics, by contrast, explores the dialogical interaction between the text and the contemporary interpreter in which the subject matter of the text or the reference of discourse itself "comes-into-language." It is not simply conveyed by, but manifested in and through, the language of the text. Understanding the meaning of texts emerges from a dialogical process between interpreter and text. This dialogical process presupposes a common pre-understanding of the subject matter of the text, since we cannot comprehend what is totally alien to our own experience and perception.

Biblical interpretation seeks to understand the text and its world as a rhetorical expression in a certain historical situation. Insofar as the interpreter always approaches biblical texts with certain preunderstandings, and from within a definite linguistic-historical tradition, the act of interpretation has to overcome the distance between the world of the text and that of the interpreter in a "fusion of horizons." Interpretation has as its goal to establish agreement to and acceptance of the subject matter of the text. Understanding is achieved when the interpreter appropriates the ways of being human projected by the text. According to Gadamer the authority of the text has nothing to do with blind obedience, but rests on recognition *(Anerkennung),* because the subject matter of the text can be accepted in principle.

c. However, insofar as patriarchal ideology and systemic domination have been passed down through the medium of Christian Scriptures, feminist biblical interpretation does not only seek to understand but also to assess critically the meaning of androcentric texts and their sociopolitical functions. Although I have introduced the nomenclature "feminist hermeneutics" into the theological discussion, I have at the same time maintained that a critical feminist interpretation has to move beyond dialogical hermeneutics. It does not just aim at understanding biblical texts but also Engages in theological critique, evaluation, and transformation of biblical traditions and interpretations from the vantage point of its particular sociopolitical religious location. Not to defend biblical authority but to articulate the theological authority of women is the main task of a critical feminist hermeneutics.

Insofar as hermeneutical theory insists on the linguisticality of all reality and on the sociohistorical conditioning of the act of interpretation, it is useful for womanist/feminist biblical interpretation. However, dialogical hermeneutics does not consider that classic texts and traditions are also a systematically distorted expression of communication under unacknowledged conditions of repression and violence. It therefore is not able to critique the androcentric, male-centered character of Western classics and texts, nor to problematize the patriarchal character of the "world of the text" and of our own. Even Ricoeur's insistence on the restoration of the link between exegesis and hermeneutics as the dialectics between alienating distanziation and appropriating recognition cannot encompass the transformative aims of a critical feminist hermeneutics for liberation, because such a dialectics does not get hold of the "doubled vision" of feminist hermeneutics.

3. A Critical Feminist Hermeneutics of Liberation. Feminists/womanists have become conscious of women's conflicting position within two contradictory discourses offered by society. Unconsciously women participate at one and the same time in the specifically "feminine" discourse of submission, inadequacy, inferiority, dependency, and irrational intuition on the one hand and in the "masculine" discourse of subjectivity, self-determination, freedom, justice, and equality on the other hand. If this participation becomes conscious, it allows the feminist/womanist interpreter to become a reader resisting the reifying power of the androcentric text.

a. The theoretical exploration of this contradictory position of women from the vantage point of an emancipatory standpoint makes it possible to "imagine" a *different* interpretation and historical

reconstruction. For change to take place women and other nonpersons must concretely and explicitly claim as their very own those values and visions that Western Man has reserved for himself. Yet they can do so only to the extent that these values and visions foster the liberation of women who suffer from multiple oppressions.

This "doubled vision" of feminism leads to the realization that gender relations are neither natural nor divinely ordained but linguistically and socially constructed in the interest of patriarchal power relations. Androcentric language and texts, literary classics and visual art, works of science, anthropology, sociology, or theology do not describe and comprehend reality. Rather they are ideological constructs that produce the invisibility and marginality of women. Therefore a critical feminist interpretation insists on a *hermeneutics of suspicion* that can unmask the ideological functions of androcentric text and commentary. It does not do so because it assumes a patriarchal conspiracy of the biblical writers and their contemporary interpreters but because when reading grammatically masculine supposedly generic texts women do not, in fact, know whether they are meant or not.

b. The realization that women are socialized into the "feminine discourse" of their culture and thus are ideologically "scripted" and implicated in power relations Engenders the recognition that women suffer also from "a false consciousness." As long as they live in a patriarchal world of oppression, women are never fully "liberated." However, this does not lead feminists to argue that historical agency and knowledge of the world are not possible. Western science, philosophy, and theology have not known the world as it is. Rather they have created it in their own interest and likeness as they wished it to be. Therefore, feminists/womanists insist that it is possible for liberatory discourses to articulate a different historical knowledge and vision of the world.

In order to do so feminist/womanist scholars utilize women's experience of reality and practical activity as a scientific resource and a significant indicator of the reality against which hypotheses are to be tested. A critical feminist version of objectivity recognizes the provisionality and multiplicity of particular knowledges as situated and "embodied" knowledges. Knowledge is not totally relative, however. It is possible from the perspective of the excluded and dominated to give a more adequate account of the "world." In short, womanists/feminists insist that women are "scripted" and at the same time are historical subjects and agents.

Therefore, a critical feminist/womanist hermeneutics seeks to articulate biblical interpretation as a complex process of reading for a cultural-theological praxis of resistance and transformation. To that end it utilizes not only historical and literary-critical methods which focus on the rhetoric of the text in its historical contexts, but also storytelling, bibliodrama, and ritual for creating a "different" feminist imagination.

B. Approaches and Methods

In conjunction with feminist literary criticism, critical theory, and historiography, four major hermeneutical strategies have been developed for such a critical process of interpretation.

1. Texts About Women. a. In pondering the absence of women's experience and voice from biblical texts and history, a first strategy seeks to recover information about women and to examine what biblical texts teach about women. This analysis usually focuses on "key" women's passages such as Genesis 1–3; the biblical laws with regard to women; or on the Pauline and post-Pauline statements on women's place and role. This selective approach was adopted by Elizabeth Cady Stanton in *The Woman's Bible* and has strongly influenced subsequent interpretations. Its "cutting up and cutting out" method isolates passages about women from their literary and historical contexts and interprets them "out of context."

After having gathered the texts about women, scholars then catalog and systematize these texts and traditions in a dualistic fashion. They isolate positive and negative statements in order to point to the positive biblical tradition about woman. They isolate positive texts about women and the feminine from "texts of terror" that are stories of women's victimization. All statements about woman and feminine imagery about God are cataloged as positive, ambivalent, or negative strands in Hebrew-Jewish and early Christian tradition. Negative elements are found in the Hebrew Bible as well as in the intertestamental and postbiblical writings of Judaism, whereas in the Christian tradition they are seen as limited to the writings

of the Church Fathers. Such a biased classification favoring Christian over and against Jewish tradition Engenders anti-Jewish attitudes and interpretations.

b. A second approach focuses on the women characters in the Bible. From its inception, feminist/womanist interpretation has sought to actualize these stories in role-playing, storytelling, and song. Whereas the retelling of biblical stories in midrash or legend is quite familiar to Jewish and Catholic women, it is often a new avenue of interpretation for Protestant women. Interpretations that focus on the women characters in the androcentric text invite readers to identify positively with the biblical women as the text presents them.

Since popular books on "the women of the Bible" often utilize biblical stories about women for inculcating the values of conservative womanhood, a feminist/womanist interpretation approaches these stories with a *hermeneutics of suspicion.* It critically analyzes not only their history of interpretation but also their function in the overall rhetoric of the biblical text. Such a critical interpretation questions the emotions they evoke and the values and roles they project before it can reimagine and retell them in a feminist/womanist key.

Within the African-American tradition of storytelling R. Weems, e.g., creatively reconstructs the "possible emotions and issues that motivated biblical women in their relation with each other" in order to draw "attention to the parallels between the plight of biblical women and women today." Weems informs her reader that the only way she could "let the women speak for themselves" was to wrestle their stories from the presumably male narrators.

Although it is important to retell the biblical women's stories, it is also necessary to reimagine biblical stories without women characters. In order to break the marginalizing tendencies of the androcentric text feminists/womanists have also to retell in a female voice and womanist perspective those stories that do not explicitly mention women.

c. A third approach seeks to recover works written by women in order to restore critical attention to female voices in the tradition. This work has restored many forgotten or obscured women writers. In early Christian studies scholars have, e.g., argued that the gospels of Mark and John were written by a woman evangelist or that Hebrews as authored by Prisca. Others have pointed out that at least half of the Lukan material on women must be ascribed to a special pre-Lukan source that may have owed its existence to a woman evangelist. While such a suggestion expands our historical-theological imagination, it does not critically explore whether the androcentric text communicates patriarchal values and visions, and if so to what degree. It fails to consider that women also have internalized androcentric stereotypes and therefore can reproduce the patriarchal politics of otherness in their speaking and writing.

d. Historical studies of women in the Bible or that of Jewish, Greek, or Roman women are generally *topological* studies that utilize androcentric texts and archaeological artifacts *about women* as source texts. They understand these sources as descriptive data about women in the biblical worlds and as "windows" to and "mirrors" of women's reality in antiquity. Sourcebooks on women in the Greco-Roman world assemble in English translation literary documents as well as inscriptions and papyri about women's religious activities in Greco-Roman antiquity. However, such source collections are in a certain sense precritical insofar as they obscure that androcentric texts are ideological constructions. They must be utilized with a *hermeneutics of suspicion* and placed within a feminist model of reconstruction.

Recognizing the absence or marginality of women in the androcentric text feminist historians have sought to articulate the problem of how to write women back into history, of how to capture the memory of women's historical experience and contribution. The historian Joan Kelly has succinctly stated the dual goal of women's history as both to restore women to history and to restore our history to women.

Feminist/womanist historical interpretation conceptualizes women's historical agency, resistance, and struggles. Women have made sociocultural contributions and challEnged dominant institutions and values as well as wielded destructive power and collaborated in patriarchal structure.

Feminist/womanist scholars in religion have begun to open up many new areas of research by asking different historical questions that seek to understand the socioreligious life-world of women in antiquity. What do we know about the everyday life of women in Israel, Syria, Greece, Egypt, Asia Minor, or

Rome? How did freeborn women, slave women, wealthy women, or businesswomen live? Could women read and write, what rights did they have, how did they dress, or which powers and influence did they gain through patronage? Or what did it mean for a woman of Corinth to join the Isis cult, the synagogue, or the Christian group? What did imprisonment mean for Junia, or how did Philippian women receive Luke-Acts?

Although many of these questions need still to be addressed and might never be answered, asking these questions has made it possible for instance to rediscover Sarah, the priestess, or to unearth the leadership of women in Judaism as well as in early Christianity, or to locate the household-code texts in Aristotelian political philosophy. However, insofar as such sociohistorical studies do not problematize the descriptive character or the androcentric source text as reflecting sociohistorical reality, the cannot break through the marginalizing ideological tendencies of the androcentric text.

2. Ideological Inscription and Reception. Whereas feminist historical interpretation tends to be caught up in the factual, objectivist, and antiquarian paradigm of biblical studies, literary-critical studies insist that we are not able to move beyond the androcentric text to the historical reality of women. They reject a positivist understanding of the biblical text as a transparent medium as reflecting historical reality or as providing historical data and facts.

a. Their first hermeneutical strategy attends to the ideological inscriptions of androcentric dualisms or the politics of gender in cultural and religious texts. The relationship between androcentric text and historical reality cannot be construed as a mirror image but must be decoded as a complex ideological construction. The silences, contradictions, arguments, prescriptions, and projections of the androcentric text as well as its discourses on gender, race, class, or culture must be unraveled as the ideological inscription of the patriarchal politics of otherness.

Feminist literary studies-be they formalist, structuralist, or narratological-carefully show how the androcentric text constructs the politics of gender and feminine representation. By tracing out the binary structures of a text or by focusing on the "feminine" character constructs (e.g., mother, daughter, bride) of biblical narratives, structuralist and deconstructionalist readings run the risk of reinscribing rather than dislodging the dualistic gender politidcs of the text.

By laying out the androcentric bias of the text feminist literary criticism seeks to foster a hermeneutics of resistance to the androcentric politics of the canonical text. Such a feminist literary hermeneutics aims to deconstruct, debunk, and reject the biblbical text. However, by refusing any possibility of a positive retrieval they reinscribe the totalizing dynamics of the androcentric texts that marginalize women and other nonpersons or elminate them altogether from the historical record. Such a hermeneutics relinquishes the heritage of women be it cultural or religious, since not only the Bible but all cultural classics written in adrocentric language contain such an androcentric politics. A critical feminist reading can only break the mold of the sacred androcentric text and its authority over us when it resists the androcentric directives and hierarchially arranged binary opposisitions of the text, when it reads texts against "their androcentric grain."

b. A second strategy of feminist readings shifts the attention from the androcentric text to the reading subject. Feminist reader-reponse criticism makes conscious the complex process of reading androcentric texts as a cultural practice. By showing how our gender affects the way we read, it underlines the importance of the reader's particular sociocultural location. Reading and thinking in an androcentric symbol system forces readers to identify with what is culturally "male." This intensifies women's internalization of a cultural partriarchal system whose misogynist values alienate women from themselves.

The androcentric biblical text derives its seductive "power" from its generic aspirations. For instance, women can read stories about Jesus without giving any significance to the maleness of Jesus. However, theological emphasis on the maleness of Jesus reinforces women's male identification and establishes Christian identity as a male identity in a cultural masculine/feminine contextualization. Focusing on the figure of Jesus, the Son of the Father, when reading the Bible "doubles" women's oppression. Women not only suffer in the act of reading from the alienating division of self against self but also from the

realization that to be female is not to be "divine" or "a son of God." Recognizing these internalizing functions of androcentric Scriptural texts which in the liturgy are proclaimed as "word of God," feminist/womanist theologians have insisted on an inclusive translation of the lectionary.

Women's reading of generic androcentric biblical texts, however, does not always lead with necessity to the reader's masculine identification. Women's reading can deactivate masculine/feminine gender contextualization in favor of an abstract degenderized reading. Empirical studies have documented that so-called generic masculine language ["man," pronoun "he"] is read differently by men and by women. Whereas men connect male images with such language, women do not connect images with the androcentric text but read it in an abstract fashion. This is possible because of the ambiguity of generic masculine language. In the absence of any clear contextual markers a statement such as "all men are created equal" can be understood as generic-inclusive or as masculine-exclusive.

When women recognize their contradictory ideological position in a generic androcentric language system they can become readers resisting the *master-identification* of the androcentric, racist, classist, or colonialist text. However, if this contradiction is not brought into consciousness, it cannot be exploited for change but leads to further self-alienation. For change to take place, women and other nonpersons must concretely and explicitly claim as our very own the human values and visions that the androcentric text ascribes to "generic" man. Yet once readers have become conscious of the oppressive rhetorical functions of androcentric language, they no longer are able to read "generically" but must insist on a feminist/womanist contextualization of interpretation as a liberating practice in the struggle to end patriarchal relations of exploitation that generate "the languages of oppression" and are legitimated by it.

3. A Critical Rhetorical Paradigm of Historical Reconstruction. A third approach seeks to overcome the methodological split between historical studies that understand their sources as windows to historical reality and literary-critical studies that tend to reinscribe the binary structures and dualistic constructions of the androcentric text. It does so by analyzing the rhetorical functions of the text as well as by articulating models for historical reconstruction that can displace the dualistic model of the androcentric text. It does not deny but recognizes that androcentric texts are produced in and by particular historical debates and struggles. It seeks to exploit the contradictions inscribed in the text for reconstructing not only the narrative "world of the biblical text" but also the sociohistorical worlds that have made possible the particular world construction of the text.

a. Such a critical feminist reconstruction, therefore, does not heighten the opposition of masculine/feminine inscribed in the androcentric text but seeks to dislodge it by focusing on the text as a rhetorical-historical practice. Androcentric texts produce the marginality and absence of women from historical records by subsuming women under masculine terms. How we read the silences of such unmarked grammatically masculine generic texts and how we fill in their blank spaces depends on their contextualization in historical and present experience.

Grammatically masculine language mentions women specifically only as a special case, as the exception from the rule or as a problem. Whereas grammatically masculine language means both women and men, this is not the case for language referring to women. Moreover, the texts about women are not descriptive of women's historical reality and agency but only indicators of it. They signify the presence of women that is marginalized by the androcentric text. An historically adequate reading of such generic androcentric texts therefore would have to read grammatically masculine biblical texts as inclusive of women and men, unless a case can be made for an exclusive reading.

By tracing the defensive strategies of the androcentric text one can make visible not only what the text marginalizes or excludes but also show how the text shapes what it includes. Androcentric biblical texts tell stories and construct social worlds and symbolic universes that mythologize, reverse, absolutize, and idealize patriarchal differences and in doing so obliterate or marginalize the historical presence of the devalued "others" of their communities.

Androcentric biblical texts and interpretations are not descriptive of objective reality but they are persuasive and prescriptive texts that construct historical reality and its sources. Scholars have selected original manuscript readings, established the original text, translated it into English, and commented on

biblical writings in terms of their own androcentric-patriarchal knowledge of the world. Androcentric tendencies that marginalize women can also be detected in the biblical writers' selection and redaction of traditional materials as well as in the selective canonization of texts. It is also evident in the use of the Bible in liturgy and theological discourse. As androcentric rhetorical texts, biblical texts and their interpretations construct a world in which those whose arguments they oppose become the "deviant others" or are no longer present at all. The categories of orthodoxy and heresy reinscribe such a patriarchal rhetoric.

Biblical texts about women are like the tip of an iceberg indicating what is submerged in historical silence. They have to be read as touchstones of the reality that they repress and construct at the same time. Just as other texts so also are biblical texts sites of competing discourses and rhetorical constructions of the world. We are able to disclose and unravel "the politics of otherness" constructed by the androcentric text, because it is produced by an historical reality in which "the absent others" are present and active.

A feminist/womanist interpretation is able to unmask the politics of the text, because women participate not only in the androcentric discourse of marginalization and subordination but also in the democratic discourse of freedom, self-determination, justice, and equality. Insofar as this "humanistic" discourse has been constituted as elite "male" discourse the reality to which it points is at the same time already realized and still utopian. It has to be imagined *differently.* Such "imagination" is, however, not pure fantasy but historical imagination because it refers to a reality that has been accomplished not only in discourse but also in the practices and struggles of "the subjugated others."

b. The second strategy elaborates models of historical reconstruction that can subvert the androcentric dynamics of the biblical text and its interpretations by focusing on the "reality" that the androcentric text marginalizes and silences. One has to take the texts about women out of their androcentric historical source contexts and reassemble them like mosaic stones in a feminist/womanist model of historical reconstruction that does not recuperate the marginalizing tendencies of the text.

A critical feminist reconstructive model, therefore, aims not only to reconstruct women's history in early Christianity but seeks also a feminist reconstruction of early Christian origins. To that end it cannot limit itself to the canonical texts but must utilize *all* available texts and materials.

Another strategy questions androcentric models of interpretation that interpret early Christian origins, e.g., in terms of the split between the public and private spheres. This model renders women's witness to the resurrection and their leadership in the early Christian movements "unofficial" or distorts it to fit "feminine" cultural roles. Another strategy looks at economic and social status, at domestic and political structures, at legal prescriptions, cultic prohibitions, and religious organizations. However, reconstructions of the social world often uncritically adopt sociological or anthropological models of interpretation without testing them for their androcentric ideological implications.

The strategy of a "negative" mirror image which constructs early Christian women's history in contrast to that of Jewish women or Greco-Roman and Asian women in the first century is not only biased but also methodologically inadequate. Instead, a feminist reconstruction must elaborate emancipatory tendencies in Greco-Roman antiquity that made it possible for the early Christian movements to stand in critical tension to their dominant patriarchal society. It must identify institutional formations that have enabled the active participation of women and other nonpersons.

Finally, a critical feminist/womanist reconstruction does not take the texts indicating the gradual adaptation of the early Christian movement to its dominant patriarchal culture as descriptive of historical reality. Rather it understands them as rhetorical arguments about the patriarchal "politics of submission." They do not reflect "what really happened," but construct prescriptive arguments for what the authors wished would happen. This applies not only to biblical texts but also to those "parallel" texts that are cited for the "depraved status" of Jewish or Greco-Roman women.

In short, in a critical model early Christian history is reconstructed not from the perspective of the "historical winners" but from that of the "silenced" in order to achieve an historically adequate description of the social worlds of early Christian women and men. The objectivity and reliability of scientific historical reconstructions must therefore be assessed in terms of whether and how much they

can make present the historical losers and their arguments, how much they can make visible those who have been made "doubly invisible" in androcentric sources.

Feminist/womanist historiography, therefore, understands itself not as antiquarian science but as Engaged inquiry since it seeks to retrieve women's history as memory and heritage for the present and the future. Insofar as reconstructions of the past are always done in the interest of the present and the future, a critical reconstruction of early Christian history as the history of those who have struggled against hegemonic patriarchal structures seeks to enpower those who today Engage in the struggle to end patriarchy.

D. Theological Hermeneutics

Both sides in the often bitter struggles for ecclesial leadership and full citizenship of freeborn women, for emancipation of slave women and men, and for the survival of poor women and their children have invoked biblical authority to legitimate their claims. Consequently, a feminist theological hermeneutics has centered around the question of Scriptural authority.

Several hermeneutical positions have crystallized in confrontation with biblical authority claims. The first rejects the Bible because of its patriarchal character. The Bible is not the word of God but that of elite men justifying their patriarchal interests. The opposite argument insists that the Bible must be "depatriarchalized" because, correctly understood, it fosters the liberation of women. A middle position concedes that the Bible is written by men and rooted in a patriarchal culture but nevertheless maintains that some biblical texts, traditions, or at least the basic core, essence, or central principle of the Bible are liberating and stand in critique of patriarchy.

1. Biblical Apologetics. Historically and today the Bible has functioned as a weapon against women in their struggles for access to public speaking, to theological education, or to ordained ministry. In response a Christian feminist apologetics asserts that the Bible, correctly understood, does not prohibit but rather authorizes the equal rights and liberation of women. A feminist hermeneutics therefore has the task to elaborate this correct understanding of the Bible so that its authority can be claimed.

However, insofar as historical-critical scholarship has elaborated the rich diversity and often contradictory character of biblical texts, it has shown that taken as a whole the canon cannot constitute an effective theological norm. Therefore it becomes difficult to sustain the traditional understanding that the canon forms a doctrinal unity which in all its parts possesses equal authority and which in principle rules out theological inconsistencies.

Feminists who feel bound by this understanding of canonical authority propose three different hermeneutical strategies. A *loyalist* hermeneutics argues that biblical texts about women can be explained in terms of a hierarchy of truth. Whereas traditionalists argue that the household code texts require the submission and subordination of women or that Gal 3:28 must be understood in light of them, evangelical feminists hold that Ephesians 5 requires mutual submission and that the injunctions to submission must be judged in light of the canonical authority of Gal 3:28.

A second strategy is *revisionist.* It makes a distinction between historically conditioned texts that speak only to their own time and those texts with authority for all times. For instance, the injunction of 1 Cor 11:2–16 to wear a head covering or a certain hairstyle is seen as time-conditioned whereas Gal 3:28 pronounces the equality of women and men for all times.

A third approach is *compensatory*. It challEnges the overwhelmingly androcentric language and images of the Bible by pointing to the feminine images of God found throughout the sacred writings of Judaism and Christianity. It uncritically embraces the divine female figure of Wisdom or the feminine character of the Holy Spirit in order to legitimate the use of feminine language for God and the Holy Spirit today.

2. A Feminist Canon. Recognizing the pervasive androcentric character of biblical texts, other feminists isolate an authoritative essence or central principle that biblically authorizes equal rights and liberation struggles. Such a liberation hermeneutics does not aim to dislodge the authority of the Bible but to reclaim the empowering authority of Scripture over and against conservative, right-wing, biblical antifeminism.

A first strategy seeks to identify an authoritative *canon within the canon,* a central principle or *the* "gospel message." Since it is generally recognized that the Bible is written in androcentric language and rooted in patriarchal cultures, such a normative center of Scripture allows one to claim biblical authority while rejecting the accusation that the Bible is an instrument of oppression. Feminist biblical and liberation theological scholarship has not invented but inherited this search for an authoritative "canon within the canon" from historical-theological exegesis that recognizes the historical contingency and contradictory pluriformity of Scripture but nevertheless maintains the normative unity of the Bible.

Just as male liberation theologians stress God's liberating acts in history or single out the Exodus or Jesus' salvific deeds as "canon within the canon," so feminist liberation theologians have sought to identify God's intention for a mended creation, the prophetic tradition or the prophetic critical principle as the authoritative biblical norm. However, such a strategy reduces the historical particularity and pluriformity of biblical texts to a feminist "canon within the canon" or a liberating formalized principle.

The debate continues in feminist hermeneutics as to whether such a feminist normative criterion must be derived from or at least correlated with the Bible so that Scripture remains the normative foundation of feminist biblical faith and community.

Some would argue that the Bible becomes authoritative in the hermeneutical dialogue between the ancient world that produced the text, the literary world of the text, and the world of the modern reader. Yet such a position rejects any criteria extrinisic to the biblical text for evaluating the diverse, often contradictory biblical voices. Instead it maintains that the Bible contains its own critique. It points, for instance, to the vision of a transformed creation in Isa 11:6–9 as a criterion intrinsic to Scripture. The principle of "no harm"—"they shall not hurt or destroy in all my holy mountain"—is the normative criterion for assessing biblical texts. However, this approach does not critically reflect that it is the interpreter who selects this criterion and thereby gives it normative canonical status.

A second strategy recognizes that a feminist critical norm is not articulated by the biblical text. However, it insists that a *correlation* can be established between the feminist critical norm and that by which the Bible critiques itself and renews its liberating vision over and against corrupting deformations. Such a feminist hermeneutics correlates, for instance, the feminist critical principle of the full humanity of women with the prophetic-messianic critical principle or dynamics by which the Bible critiques itself. However, such a hermeneutics of correlation reduces the particularity and diversity not only of biblical texts but also of feminist articulations to abstract formalized principle and norm. It neglects biblical interpretation as the site of competing discursive practices and struggles.

A third hermeneutical strategy argues that feminists must create as a new textual base a feminist *Third Testament* that canonizes women's experiences of God's presence. Out of their revelatory experiences of agony and victimization, survival, empowerment, and new life women write new canonical stories. Such a proposal recognizes women's experiences of struggle and survival as places of divine presence. Just as the androcentric texts of the First and Second Testaments reflecting male experience, so also the stories rooted in women's experience deserve canonical status. However, such a canonization of women's stories rescribes cultural-theological male-female dualism as canonical dualism. Just like canonized male texts, so also are women's texts embedded and structured by patriarchal culture and religion. Consequently both must be subjected to a process of critical evaluation.

3. Critical Process of Interpretation. A critical feminist hermeneutics of liberation therefore abandons the quest for a liberating canonical text and shifts its focus to a discussion of the *process of biblical interpretation* that can grapple with the oppressive as well as the liberating functions of particular biblical texts in women's lives and struggles.

Such a critical process of feminist/womanist interpretation for liberation presupposes feminist conscientization and systemic analysis. Its interpretive process has four key moments. It begins with a *hermeneutics of suspicion* scrutinizing the presuppositions and interests of interpreters, and those of biblical commentators as well as the androcentric strategies of the biblical text itself. A *hermeneutics of historical interpretation and reconstruction* works not only in the interest of historical distanziation but also for an increase in historical imagination. It displaces the androcentric dynamic of the text and its

contexts by recontextualizing the text in a sociopolitical model of reconstruction that can make the subordinated and marginalized "others" visible.

A *hermeneutics of ethical and theological evaluation* assesses the oppressive or liberatory tendencies inscribed in the text as well as the functions of the text in historical and contemporary situations. It insists for theological reasons that Christians stop preaching patriarchal texts as the "word of God," and cease to proclaim the Christian God as legitimating patriarchal oppression. Finally, a *hermeneutics of creative imagination and ritualization* retells biblical stories and celebrates our biblical foresisters in a feminist/womanist key.

Since such a critical process of interpretation aims not just to understand biblical texts but to change biblical religion, it requires a theological reconception of the Bible as a formative root model rather than as a normative archetype of Christian faith and community. As a root model, the Bible informs but does not provide the articulation of criteria for a critical feminist/womanist evaluation of particular in the interest of liberation. Christian identity that is grounded in the Bible as its formative prototype must in ever new readings be deconstructed and reconstructed in terms of a global praxis for the liberation not only of women but of all other nonpersons.

Such a proposal does not abandon the canon as some critics have charged. It also cannot be characterized as extrinsic to the text, insofar as it works with the notion of inspiration. Inspiration is a much broader concept than canonical authority insofar as it is not restricted to the canon but holds that throughout the centuries the whole Church has been inspired and empowered by the Spirit. The NT writings did not become canonical because they were believed to be uniquely inspired; rather they were judged to be inspired because the Church gave them canonical status. Inspiration—the life-giving breath and power of Sophia-Spirit—has not ceased with canonization but is still at work today in the critical discernment of the spirits. It empowers women and others excluded from ecclesial authority to reclaim *as Church* their theological authority of biblical interpretation and spiritual validation.

The "canon within the canon" or the hermeneutics of correlation locates authority formally if not always materially in the Bible, thereby obscuring its own process of finding and selecting theological norms and visions either from the Bible, tradition, doctrine, or contemporary life. In contrast, a critical evaluative hermeneutics makes explicit that it takes its theological authority from the experience of God's liberating presence in today's struggles to end patriarchal relationships of domination. Such divine Presence manifests itself when people acknowledge the oppressive and dehumanizing power of the patriarchal interstructuring of sexism, racism, economic exploitation, and militarist colonialism and when Christians name these destructive systems theologically as structural "sin" and "heresy." For this process of naming we will find many resources in the Bible but also in many other religious, cultural, and intellectual traditions.

Understanding the act of critical reading as a moment in the global praxis for liberation compels a critical feminist hermeneutics to decenter the authority of the androcentric text and to take control of its own readings. It deconstructs the politics of otherness inscribed in the text and our own readings in order to retrieve biblical visions of salvation and well-being in the interest of the present and the future.

ELISABETH SCHÜSSLER FIORENZA

FERTILITY CULTS. As in many ancient cultures, so in the Near East the experience of the numinous was closely associated with natural phenomena. The elements of air, water, earth, and fire were universally recognized as possessing or manifesting divine qualities. As these early cultures developed, the numinous character passed from the natural elements to the constructs of society (temples, priesthoods, kingships, the state [Jacobsen 1971: 163–69]). But in the earliest cultures it is clear that nature and its manifestations dominated.

We have come to use the term "fertile crescent" as a description of the band of arable land from the mouth of the Tigris and Euphrates to the Upper Nile region. It is a region in which the struggle between the forces of nature and the human communities which settled there was constant and demanding. In story, legend, and myth the cultures of the crescent recalled and celebrated the growth of their culture and life as a result of or in spite of the primordial elements.

Since the success of agriculture and husbandry was the primary necessity upon which all else depended, it was natural that the earliest societies in the Near East associated the divine with the productivity of the land. In three main loci of Near Eastern culture, Egypt, Mesopotamia, and Canaan/Phoenicia, we find the earliest divinities associated with the fertility of the land. The association of the divine with the natural is, by definition, magic. And so, the earliest religions and rituals exhibit the qualities of magic with a strong belief in the effectiveness of symbols, either acts or words, to make things happen. Spells, incantations, extispicy, and necromancy are hallmarks of this early phase of the religions of the fertile crescent.

In ancient Egypt the fertility of the land was most obviously associated with the sun and the flood of the Nile.

> Hail to Thee, O Nile, That Gushest forth from the earth
> And comest to nourish Egypt!
> (*ANET*, 372)

Hail to Thee, Atum … thou carriest to him [Egypt] everything that is thee.
Thou carriest to him everything that will be in them.
(Breasted 1959: 14)

The sun is deified in Re (Atum, Horus, Khepri) and the Nile in Osiris. Osiris is identified not just with the water of the Nile, but specifically he is seen "as a source of fertility, water as a life-giving agency" (Breasted 1959: 20–21). Osiris is the power of life in the earth, the water, the soil, and the products of the earth. The story of Osiris' journey from life to death to renewed life is celebrated in the cult and myths. There is no evidence that the cultic practices of these fertility rites embraced the idea of human sacrifice, nor do we find in Egyptian religion the kinds of orgiastic excess that could mark fertility cults. Breasted notes that in Egypt "the Osiris myth expressed those hopes and aspirations and ideals which were closest to the life and the affections of this great people" (1959: 37).

Another major locus of the culture of the ANE is Mesopotamia. In the muddy silt at the ancient confluence of the Tigris and Euphrates rivers civilization has its origins. Almost all the older authorities on the Near East point to the great contrast between the cultures of Egypt and Mesopotamia. It may be romantic, but even the casual reader can discern the steady and optimistic character of Egyptian life and the much more enigmatic, troubled, and insecure character of life in Mesopotamia. Egypt's fertility did not depend on human initiative or creativity, only human cooperation and labor. But the fertility of Mesopotamia required the exertion of enormous human resources and ingenuity. The land between the rivers needed the constant and vigilant attention of its keepers to prevent its erosion, salinization, or denuding.

The principal focus for the religious experience of fertility in Mesopotamia is found in the god Tammuz (or Dumuzi) and his consort Inanna. The stories of the courtship of Inanna and Dumuzi, their subsequent marriage, his murder at the hands of evil agents of Hades, her lament over him, and his resurrection, comprise the oldest piece of Sumerian religious lore we have. Indeed, Jacobsen writes, "the earliest form of Mesopotamian religion was worship of powers of fertility and yield, of the powers in nature ensuring human survival" (Jacobsen 1976: 26).

The worship of Dumuzi and Inanna was centered on the ritual and cultic reenactment of the story of Dumuzi's death. Clear association is made between the rites and the continued fertility of the land. Just as in Egypt, there is little evidence that human sacrifice was a part of these rituals. But sacred prostitution was clearly a feature of the religion. The central symbol of the presence of the gods, the ziggurat, for example, had as one of its chief components a bridal chamber where the priestess went to "become the bride of the God, and by this mystic marriage to renew the fertility of the soil and the strength of the King's arms" (Smith 1952: 67). Tammuz is the power of fertility inherent in food and is, as such, the object of love but not himself an active lover. He receives love rather than gives it. As Jacobsen writes of Dumuzi/Tammuz:

The cult of Tammuz is thus of a piece, simple and direct throughout. At its center lies numinous experience undergone in specific situations, in the renewal of life and the abundance of the Mesopotamian spring."
(Jacobsen 1971: 101).

Israel's own religious ethos, at least what we know of it in the Bible, eschewed this kind of simple correlation between the divine and the natural: "When you raise your eyes to heaven, when you see the sun, the moon, the stars, and the array of heaven, do not be tempted to worship them and serve them" (Deut 4:19–20).

The most immediate religious expression available to the newly forming nation was the Canaanite cult. The high god of the Canaanite pantheon was El. Associated with him was his son Baal and the son's consort Anath. Asherah and Astarth, two other female gods, are also closely linked. The three ladies are seen in clearly sexual terms, and the stories of them closely associate their sexual prowess and delight with the productivity and wealth of the land.

Baal is the storm god, the bringer of rain and fertility. And even El, who is generally seen as an "inactive" god, is depicted in lusty and prodigious sexual activity. As a matter of fact, "fertility is the

main concern of the Ugaritic myths" (Gordon 1962: 170). This is evident even to the most casual reader. The Ugaritic tales of Aqhat, Keret, and the Baal cycle all devote significant attention to this aspect of the religion.

It is alleged in numerous sources that the western Phoenicians practiced human sacrifice, but there is no mention of it in the texts from Ugarit. The probable survival of human sacrifice at Carthage and in some other Punic cities leads one to suspect that the practice was probably found in the earlier stages of the culture as well (see CANAAN, RELIGION OF; PHOENICIAN RELIGION).

There was a clear revulsion against Canaanite religious practices in the Yahwistic religion of early Israel. It can be seen in numerous injunctions, prescriptions, and stories that either directly or indirectly impugn the practices of the "inhabitants of the land." That the religion of Canaan exercised a strong hold over many Israelites is also clear. It is really only in the prophetic movement and especially in the Elijah and Elisha stories that we get a close glimpse of the scope of the struggle. The Yahwistic religion of Israel came early on to define itself clearly as the opposite of the "way of Canaan."

The simple fact is that fertility cults are very much tied to the status quo. The fertility cult celebrates the cycles of life and death, and sees in them the very essence of the divine: pure, unchanging, timeless, and abstract from the historical. But Israel's religious experience of God as it is articulated in the Hebrew Bible was not based in the phenomena of nature, nor in a vision of an eternal cycle of life. Israel's faithfulness flowed from *events* and showed itself in events. The God Yahweh was the God of history, not because history was a cycle of eternally repeated acts, but just the opposite, because history happened and moved forward to an end. So the God of history is free to act where, when, and if God wills it. The status quo is always, therefore, vulnerable.

Israel denied the validity of any cult which bound its God to the present as if to the eternal. The Lord would be free and so the Lord always stood against the status quo, the predictable. Israel's religion more and more definitively removed the numinous from the natural to the historical, from the accidental to the conscious.

FESTAL GARMENT/ROBE. See DRESS AND ORNAMENTATION.

FESTIVALS, GRECO-ROMAN. The Greeks named the months of their calendars after important seasonal rituals celebrated for the gods of the city. Called *heortai,* these festivals were organized around communal sacrifices and banquets, and provided regular holidays from civil, business, and agricultural affairs. In Athens there were *heortai* of the city, *heortai* of the local demes, and *heortai* of various groups based on kinship (e.g., *gene*) or common identity (e.g., *orgeones*). In addition to *heortai,* there were many public sacrifices *(thysia)* performed for the gods of the city.

Some festivals, like the *Panathenaia,* included all of the city's residents (men, women, children, resident aliens, and slaves); others, like the *Thesmophoria* for women, were restricted by gender or social status. Some festivals were celebrated in the heart of the city, others, like the *Apatouria* for *Zeus Phratrios* and *Athena Phratria,* were celebrated by local groups (in this case, the *phratries,* male groups based on kinship) throughout Attica. Still others, including great public processions to outlying areas

(e.g., the *Eleusinian Mysteries* to Eleusis, the *Brauronia* to Brauron) or to the city from outlying areas (e.g., the *Dionysia,* from *Eleutherai* on the Boeotian border), served to mark the territory controlled by the city and to acknowledge an originally local ceremony incorporated earlier into the city's calendar.

At Athens there were more than thirty-five *heortai* and public *thysia* celebrated during the year. Some were agricultural festivals. The *Stenia, Thesmophoria, Skira, Haloa,* and *Proerosia* were celebrated in honor of Demeter to guarantee successful grain crops. The *Oschophoria* and *Anthesteria* were festivals of the grapevine and wine, celebrated for Dionysos, the god of wine. Other festivals or public ceremonies, like the *Thargelia* for Apollo or the *Kallynteria* for Athena, were concerned with various forms of ritual purification.

As the city developed, simple festivals organized around public sacrifice became more complex. Processions became more elaborate, public contests were added, and festivals became an opportunity for displays of spectacle, personal achievement, and the political prestige of the city. Athletic and poetic contests were grafted onto the *Panathenaia,* ship races in the *Piraeus* were added to the *Mounichia* for Artemis, and dramatic contests became part of the *Lenaia* and *Dionysia* for Dionysos. During the years of the Athenian Empire in the mid-5th century B.C. the Athenians required their allies and subjects to bring contributions to the Athenian *Panathenaia* and *Dionysia,* and these festivals became public displays of Athenian political success for the representatives of subject cities and for the Athenian city body itself.

All Greek cities participated in the great Panhellenic festivals at the great sanctuaries of Olympia, Nemea, Isthmia, Delphi, and Delos. During the Hellenistic period cities like Samothrace and Magnesia ad Sipylum vied with each other in establishing new Panhellenic festivals in order to increase the wealth of their sanctuaries and to enhance their civic reputations.

Rome's agricultural origin is reflected in the agricultural context of many of the city's festivals (e.g., the *Fordicidia, Vinalia, Robigalia, Floralia,* etc.). While each Greek city had its own calendar of festivals, Roman conquest of Italy led to the standardization of the Roman calendar and consequently of Roman state festivals, the celebration of which implied allegiance to and acceptance of the Roman state. Roman festivals were called *feriae,* "holidays," and were of two kinds: public festivals organized by the city and private festivals celebrated in the family. *Feriae* could include a variety of rituals, but the heart of the ceremony was always a sacrifice to a specific divinity. In addition to the public *feriae*, public games, *ludi*, were regular events recorded in the city's calendar (e.g., the *Ludi Romani* in September).

Some festivals celebrated in the countryside (e.g., the *Compitalia* in January, to mark boundaries between neighboring farms and to provide purification before the spring sowing) had their counterparts in the city (where the *Compitalia* were celebrated in local neighborhoods at points where streets intersected). Other festivals show traces of Rome's early administrative history. The *Fornacalia*, for instance, were celebrated in the meeting places of the Roman *curiae,* located throughout the city, long after the *curiae* ceased to be real instruments of political administration. Still other festivals were celebrated in the temples of the central area of the city and emphasized the unity and common identity of the Roman citizen body.

Some festivals were restricted to certain groups. On March 1 men sacrificed to the god of war, Mars (whose priests, the *Salii,* performed special dances), while their wives celebrated the *Matronalia* for Juno Lucina, a goddess of childbirth. Other festivals for women included the *Veneralia* in April, celebrated by married women, brides, and even prostitutes, for Venus and Fortuna, and the *Matralia* in June, for mothers.

Both Greek and Roman festival calendars could accommodate the addition of new festivals. During the Imperial period, for instance, local festivals in honor of the birthday of the emperor became a regular part of the religious life of the cities of the empire. In spite of the addition of new festivals for new divinities, however, the traditional festivals continued to be celebrated.

FESTUS, PORCIUS (PERSON) [Gk *Phestos* (Φεστος)]. Procurator of Judea (ca. 59–62 C.E.) who heard Paul's case with dispatch and, after consulting with Agrippa II, granted Paul's request to be sent to Rome for trial (Acts 24:27–26:32). Festus is known to us only from Josephus and the Acts of the Apostles.

A. In Josephus

Josephus is fundamentally positive in his evaluation of Festus, whom he contrasts sharply with both his predecessor Felix and his successor Albinus (*Ant.* 20.8.9–11 §§182–96; *JW* 2.14.1 §§271–72). When Festus arrived as procurator, the province of Judea was full of bandits *(lestes, sicarii).* In an attempt to restore order, Festus instituted a campaign against this "principal plague of the country." As a consequence, large numbers of bandits were captured, many killed. During his period in office, there was an uprising led by yet another savior figure who had gathered around himself a following; Festus sent troops against them and destroyed them. Josephus reports that after the Jews had constructed a wall in the Jerusalem Temple area to keep Agrippa from spying on Temple proceedings, Festus ordered its removal. At the Jews' entreaty, however, he agreed to allow them first to discuss the matter before Nero. This incident underscores the clearest impression one has of Josephus' portrayal of Festus—namely, his work against extremists and possible insurrection—while also demonstrating his desire to have good relations with the Jewish leadership.

B. In Luke-Acts

Porcius Festus inherited the responsibility of deciding Paul's case from Felix, and it is in the ensuing trial processes that the portrayal of Festus in Acts is developed.

Three days after his arrival in Judea, Festus travelled from his headquarters in Caesarea to Jerusalem, ostensibly to establish good relations with the Jewish leadership. During his visit, they raised again the question of Paul. He agreed to reopen the case, but refused to grant their request that Paul be transferred to Jerusalem for the hearing. According to the account in Acts, Festus was at this point nonprejudicial toward Paul, and even left open the possibility of Paul's exoneration. In the ensuing trial, however, Festus reverses himself. In an attempt to ingratiate himself with the Jewish officials, Festus proposes that the venue for the proceedings be shifted to Jerusalem. Festus' impartiality compromised, Paul appeals to Caesar.

In the subsequent narrative, Festus is portrayed as one interested in exonerating himself from any claim of his having mishandled Paul's case. After Paul appealed to Caesar, Festus arranged for Paul a further hearing before Agrippa II and Bernice. In his introduction to the proceedings, Festus presents himself as one who had acted fairly and responsibly in the face of difficult circumstances. His apology also serves to emphasize Paul's innocence: "I found he had done nothing deserving death," Festus asserted (Acts 25:25).

Paul, then, was able to present his defense again, during which Festus concluded Paul was mad. Nevertheless, even if Rome's representative was unable to understand the religious matters at issue between Paul and his Jewish opponents (Acts 25:19–20; 26:24; cf. Haenchen 1971: 672–73, 288), when measured against Roman law, Paul was found free from guilt (Acts 26:32). Because Paul had appealed to Caesar, however, he was sent on to Rome with other prisoners (Acts 27:1).

Sherwin-White has demonstrated the general historical veracity of the report of Paul's trial before Festus in Acts (1963: 48–70). At the same time, we should recognize that theological concerns have been woven into the overall portrait of Festus in Acts by its author. Thus, in addition to the apologetic motifs already noted, we may also draw attention to the significant parallels that exist between the trial of Paul in Acts 25–26 and that of Jesus in Luke 23:1–25 (O'Toole 1984: 68–71).

C. The Problem of Chronology

Both Josephus and Acts report that Festus followed Felix as procurator of the province of Judea. When this succession occurred is unclear, however, with a range of dates, from 55 C.E. to 61 C.E., finding support. More certain is the year in which Festus' governance was terminated by his death in office, at which time he was replaced by Albinus. According to Josephus, Jesus, son of Ananias, prophesied against Jerusalem, creating such a stir that he was brought before the procurator, Albinus. Since this happened "four years before the war," we may date the death of Festus and the appointment of Albinus to office in 62 C.E. (Joseph. *JW* 6.5.3 §§300–9; cf. 2.14.1 §§272–76).

Many who support an early date for the appointment of Festus follow Jerome's Latin version of the *Chronicle* of Eusebius. According to this testimony, Festus succeeded Felix in the second year of Nero—that is, 56 C.E. (see the detailed discussion in Ogg 1968: 151–55). However, this datum is rendered improbable by the collusion of evidence gleaned from Josephus and Acts regarding a would-be Jewish savior figure from Egypt. The incident involving this fanatic occurred during the reign of Nero—i.e., sometime after October 54 C.E. (Joseph. *Ant.* 20.8.6 §§169–72; *JW* 2.8.5 §§261–63)—and prior to Paul's arrest in Jerusalem (Acts 21:27–39). Because Paul was arrested approximately at the time of Pentecost (Acts 20:16) at least two years before Felix was recalled (Acts 24:27), the earliest Festus could have taken office would have been 57 C.E. Accordingly, Jerome's version of the Eusebian chronology is undependable.

Others have hoped to fix the date of Festus' appointment with reference to the assistance Felix received upon his recall to Rome by his brother, Pallas. Josephus writes that Felix was saved from disciplinary action under Nero by the intervention of Pallas, who at that time enjoyed favor with Nero (*Ant.* 20.8.9. 182). Since Pallas was removed from his post as financial secretary in 55 C.E. (Tacitus *Ann.* 13.14.1–2), and apparently was never restored to office, some have concluded that Felix must have been succeeded by Festus no later than 55 C.E. Aside from the fact that this chronology compresses the careers of Felix and Paul overmuch, this logic depends on a faulty assumption—namely, that Pallas could not have had influence with Nero subsequent to his dismissal from office. His wealth alone, estimated as high as 400,000,000 sesterces (Dio Classius 62.14.3; cf. Tacitus *Ann.* 12.53), guaranteed his continued power. His extended public favor is evidenced by his receiving the *praetoria insignia* and by the placing of a public monument fixed with a senatorial decree honoring him (Tacitus *Ann.* 12.53; Pliny, *Ep.* 8.6). Moreover, no evidence suggests Pallas left office on bad terms with Nero; rather, the reasons appear political and strategic, not personal. In the end, Nero poisoned Pallas "because he kept his vast riches to himself by a too protracted old age" (Tacitus *Ann.* 14.65). Clearly, then, even after his departure from office, Pallas could have interceded successfully on his brother's behalf.

There is therefore no reason to choose an early date for Festus' appointment, and several factors suggest a later one. Of the approximately ten years (i.e. 52/53–62 C.E.) that must be divided between the periods when Felix and Festus held office, most of this time must have been taken by Felix. Felix had held office "for many years" before Paul was first brought to him for trial (Acts 24:10), and Josephus devotes lengthy sections to the events that happened under Felix (*Ant.* 20.8.5–8 §§160–81; *JW* 2.12.8–13.7 §§247–70). Festus, on the other hand, receives comparatively little notice in Josephus (*Ant.* 20.8.9–11 §§182–96; *JW* 2.14.1 §271). Moreover, the coin issue of the fifth year of Nero may indicate the appointment of Festus prior to October 59 C.E.; indeed, it is more likely that the minting of new coins was the work of an incoming procurator than that of an outgoing one who had already minted a large issue (Reifenberg 1963: 27–28; Smallwood 1976: 269). Finally, in the Armenian version of the *Chronicle* of Eusebius, the sending of Festus to succeed Felix is placed in the tenth year of Agrippa II. If Caird is right (*IDB* 1: 599–607), and Eusebius wrongly reckoned Festus' accession from the year 45 C.E. rather than the year 50 C.E., when Agrippa II actually took office, then according to Eusebius' source Festus was appointed procurator in the summer of 59 C.E. We conclude, therefore, that Festus was procurator from 59–62 C.E.

FIG TREE. See FLORA.

FILIGREE [Heb *měšubbaṣîm* (מְשֻׁבָּצִים)]. A decorative treatment involved in the fabrication of ceremonial clothing (Exod 28:20). The Hebrew word is based on the root *šbṣ*, which apparently refers to making a fabric with a design or pattern in it, and is also translated "checker work" in the RSV (as Exod 28:4, 39).

As with many technical terms, the exact nature of this checker work cannot be established. Most of the references to it are in the context of the description of the ephod in the tabernacle texts of Exodus. See also EPHOD (OBJECT). Two symbolic onyx stones, each inscribed with the names of six Israelite tribes, were attached to the ephod. These stones, which were fastened to the ephod's shoulder piece, were secured in settings of gold filigree (Exod 28:11, 13, 20, 25; 39:6, 13, 16, 18). Since the Hebrew word for "settings" indicates something that surrounds or encloses, "filigree" designates golden frames or patches in which the onyx stones were set. Similarly, the stones that were part of the high priest's breastpiece were set in "gold filigree" (Exod 28:20). See also BREASTPIECE.

In addition to these references to the filigree frames or settings for the stones of Aaron's ephod and breastpiece, the coat or tunic *(ketōnet)* worn by the high priest was decorated with small patches or plates ("checker work," Exod 28:4). This detail was not present for the analogous robes worn by the other priests.

The filigree work is thus notable in its association with the garb of the high priest alone, in its role in attaching some of the most important symbolic elements (stones of the ephod and breastpiece) to that garb, and in its being made of gold. These features of the filigree work put it in the category of most holy items, according to the gradation of materials used in the tabernacle and in the fragments of the priesthood (Haran 1979: 158–74). The most elaborate and therefore holiest priestly apparel is for the high priest, who comes closest to Yahweh, the most holy of all. Aaron's clothing conceptually approximates the ritual garments used to clothe statues of the gods in Mesopotamian ritual.

One of the technological features of the richly decorated ceremonial vestments in ancient Mesopotamia was the use of a technique of attaching small metallic bracteates (round, square, or rosette-shaped metal plates) to the fabric (Oppenheim 1949). The various arrangements of these bracteates, particularly the square ones, relieved the monotony of plain fabric not only in terms of color and shape but also in terms of texture. This special and costly treatment of sacred garments may be related to the golden settings specified for the holiest of human apparel in Israel, the high priest's vestments. One human royal figure, a princess, also has sumptuous clothing with these special decorations (Ps 45:14 [—Eng 45:13]). The term rendered "filigree" or "checker work" would thus be more accurately translated "bracteates."

The metallic nature of the biblical bracteates is supported by a verse in 1 Kgs 7:17 describing part of the capitals of JACHIN AND BOAZ, which were made of metal, as being of "checker work."

CAROL MEYERS

FILLET [Heb *ḥāsûq* (חָסוּק)]. Sometimes translated "band" or "ring" in other English versions, this word refers to a fitting of the pillars used in the tabernacle court (Exod 27:10–18; 38:10–19) and at its doorway (Exod 36:38). The former were made of silver, and the latter were golden, in keeping with the principle of the material gradation in the fabrication of the tabernacle, whereby objects closer to the inner sanctuary were of increasingly precious materials and more costly workmanship. See also TABERNACLE.

CAROL MEYERS

FINGER. See WEIGHTS AND MEASURES.

FIR TREE. See FLORA.

FIRE, PILLAR OF. See PILLAR OF FIRE AND CLOUD.

FIREPAN [Heb *maḥtâ* (מַחְתָּה)]. A receptacle used to carry live coals to or from the altars of both the tabernacle and the Temple. Since it held burning coals, as did censers, it could be used as a censer when incense was sprinkled on the coals. The firepans that were part of the tabernacle's array of altar equipment were made of bronze (Exod 27:3 = 38:3; cf. Num 4:14). A similar listing of utensils for the Temple indicates golden firepans (1 Kgs 7:50; 2 Chr 4:22); but 2 Kgs 29:15 implies that they were bronze, and Jer 52:19 does not specify. The confusion with respect to these Temple vessels may lie in the fact that there were firepans of gold to service the golden incense altar that stood inside the *hêkāl,* the main room of the Temple, and also firepans of bronze to service the bronze courtyard altar, which is not listed in the description of Solomon's Temple but which almost certainly was a part of the courtyard furnishings.

CAROL MEYERS

FIRST AND LAST. See ALPHA AND OMEGA.

FIRST FRUITS [Heb *bikkûrîm* (בִּכּוּרִים), *rēʾšît* (רֵאשִׁית); Gk *aparche* (ἀπαρχε)]. In the OT, "first fruits" most often is used to refer to a literal portion of the agricultural harvest. Two Hebrew words are rendered "first fruits." The first is *bikkûrîm,* which specifically refers to first-ripe grain and fruit, which was harvested and offered to the Lord according to sacerdotal prescriptions. This term always appears in the masculine plural and it may refer generally to the first produce of the soil (Exod 23:16, 19; 34:26; Num 28:16; Neh 10:35; 13:31) or specifically to wheat (Exod 34:22) or the products of grain (dough, Ezek 44:30, or loaves of bread, Lev 23:17; 23:20), to fruits in general (Num 18:13; Ezek 44:30), to figs (Nah 3:12), or to grapes (Num 13:20); sometimes it simply indicates "early ripe" (Lev 2:14; 2 Kgs 4:42). The second is *reʾšît,* which is usually translated "first" or "beginning" of a series. In a special sense, it can mean "choicest"; the substantive based on this idea is translated "first fruits," with specific reference to processed produce rather than produce in the raw state. This term specifically refers to dough (Num 15:20, 21; Ezek 44:30; Neh 10:38 [37]) or grain (Lev 23:10; Deut 18:4; 2 Chr 31:5), to new wine (Deut 18:4; 2 Chr 31:5), to oil (Deut 18:4; 2 Chr 31:5), to honey (2 Chr 31:5), to "all the produce of the land" (2 Chr 31:5), to "the fruit of every tree" (Neh 10:38), and even to wool (Deut 18:4). In addition to its literal meaning, the word is figuratively applied to Israel, the first fruits of Yahweh's harvest (Jer 2:3). Several times (Exod 23:19; 34:26; Ezek 44:30), the two terms are used together, meaning something like "the first of the first fruits."

Because Yahweh is sovereign and because of his possession of all things, the first issue of man, beast, and soil were considered holy unto the Lord. Provision was made for the redemption of the firstborn of people and animals (Exod 13:2–16; Num 3:12–16). The offerings of first fruits provided the redemption of the harvest. The postexilic Jewish community acknowledged that the priests had to "bring the first fruits of our ground and the first fruits of all the fruit of every tree to the house of the Lord annually, and bring to the house of our God the firstborn of our sons and of our cattle, and the firstborn of our herds and our flocks as it is written in the law" (Neh 10:36, 37—Eng10:35, 36). These offerings were given to the

Lord as a thanksgiving offering and for the support of the priesthood, for the priests received the entirety of the first fruits, except for the cereal offering of Lev 14:14–16.

As a part of the celebration of Passover, Lev 23:10–14 (and Exod 23:16, 19) prescribes the waving of a sheaf of first fruits before Yahweh to acknowledge the dedication of the grain harvest; this was a public ceremony performed on behalf of the nation. This initial sheaf was of barley, for barley ripens earlier than wheat (cf. the Gezer calendar: "His month is barley harvest. His month is wheat-harvest and festival ["festival" refers to Pentecost]"; see further *ANET* 321). Flavius Josephus (*Ant* 3.10.5) affirms that this was indeed a sheaf of barley. No additional harvest work could be accomplished before this ceremony was enacted. The second public occasion involving first fruits occurred seven weeks later, at Pentecost, when the first fruits of the wheat harvest were presented, as specified in Exod 34:22. At this time, "the bread of the first fruits," which was made from the initial wheat harvest, was offered; in Num 28:26, Pentecost is designated "the day of the first fruits."

In addition to these public events, there were individual offerings, offered by the head of each family. Fairly detailed liturgical instructions for these individual offerings of first fruits in the land are given in Deut 26:1–11. The worshiper placed the first fruits in a basket. He then proceeded to the place prescribed by Yahweh, reporting to the officiating priest, "I declare this day to the Lord my God that I have entered the land which the Lord swore to our fathers to give us." At that point, the priest accepted the basket and placed it before the altar. Then the worshiper would avow, "My father was a wandering Aramaean, and he went down to Egypt and sojourned there, few in number; but there he became a great, mighty and populous nation. And the Egyptians treated us harshly and afflicted us, and imposed hard labor on us. Then we cried to the Lord, the God of our fathers, and the Lord heard our voice and saw our affliction and our toil and our oppression; and the Lord brought us out of Egypt with a mighty hand and an outstretched arm and with great terror and with signs and wonders; and He has brought us to this place and has given us this land, a land flowing with milk and honey." It would seem that the worshiper has at some point resumed possession of the basket, for he continues, "And now behold, I have brought the first of the produce of the ground which Thou, O Lord, hast given me." With these words, the worshiper himself presents the basket before the altar and worships with rejoicing.

Whereas OT occurrences of "first fruits" all refer to a literal offering or a portion of the harvest (except for the metaphorical usage in Jer 2:3), the NT usage of *aparche* ("beginning") is exclusively figurative. The figure is based on the agricultural or ritual fact. Just as literal first fruits are a harbinger and sample of the full harvest, the presence of the Holy Spirit with the believer is an indication of that which is to come (Rom 8:23), Christians are the first fruits of God's people (Jas 1:18 and probably 2 Thess 2:13), and those who follow the Lamb are the first fruits to God (Rev 14:4). Just as literal first fruits are first in sequence, Epaenetus is the first fruits of the Christians in Asia, and the household of Stephanus is the first fruits of the Christians in Achaia. Combining the ideas of the harbinger and first in sequence, Christ, in his resurrection, is the "first fruits of those that slept." Just as the ritual called for a heave offering of the "first fruits" of a batch of dough (Num 15:20) and the holiness of the first piece of dough assures the holiness of the entire lump, believing Jews are a sample pointing to a much greater yield (Rom 11:16).

FISH GATE (PLACE) [Heb *ša῾ar haddāgîm* (שַׁעַר הַדָּגִים)]. A gate of Jerusalem in the northern wall around the Temple Mount. It is first mentioned in connection with Manasseh's refortification program of Jerusalem that included the areas of the Fish Gate, the City of David, and the east side of the city. Subsequently, the Fish Gate and the surrounding area was spoken of by Zephaniah (1:10–11) and by

Nehemiah in his account of the dedicatory procession where the Fish Gate is located in the northern wall to the west of the Tower of Hananel and the Tower of the Hundred (Neh 3:3; 12:38–39).

This gate opened to a ridge that led from Mount Moriah and the Temple enclosure to the Benjamin Plateau to the north. It was via the Beth-horon road and the Benjamin Plateau that merchants from Tyre and the coast brought fish and other imports to Jerusalem. The fish markets that developed inside and outside the wall most likely gave the gate its name (Neh 13:16).

Until the extensive excavations of Jerusalem in the late 1960s, the majority view (Avi-Yonah being an exception, 1954: 242) placed the Fish Gate at the northern end (Simons 1952: 276) or on the northeast bank (Vincent and Steve 1954: 242–43) of the Central or Tyropoeon Valley near the present Damascus Gate. This assumed that this area was within the walled city during the First Temple period. However, Avigad's excavation of areas A (the Broad Wall), X-2 (the Gennath Gate?) and W (the Israelite Tower or the Middle Gate?) have shown that the northern wall of the Israelite city ran from the Corner Gate (near today's Jaffa Gate) east along the southern slopes of the Transversal Valley to the western wall of the Temple enclosure, and did not include the northern end of the Central or Tyropoeon Valley until after the Hasmonean period (possibly during the time of Herod). This archaeological evidence seems to affirm the view that the Fish Gate could not have been in the Tyropoeon Valley but above the valley on the northwest corner (the *Baris*) of the Temple Mount.

FLOOD. A catastrophic deluge recounted in Gen 6–9 and alluded to in other biblical passages. Traditions of a primordial flood existed among a number of ANE civilizations and are a feature of the ethnohistory of many other cultures. The Flood narrative of the Hebrew Bible was elaborated in later versions of the biblical text, and in Jewish and Christian literature and art.

A. Archaeological Disconfirmation

Scholars are agreed that archaeological evidence for a universal flood in the historical past is wanting. The silt layers noticed at Ur and Kish by Woolley and Langdon (and similar silting at Nineveh, Shuruppak, Uruk, and Lagash) are of differing dates, and lack convincing connection with the biblical narrative. Extremely old sites in Palestine, such as Jericho, have revealed no flood deposits. (Aquatic fossils found at mountainous elevations were once seized upon as evidence of a universal flood, but they may be more reasonably explained as resulting from geological upheavals than as evidence of a cataclysmic flood.) Claims that remains of the biblical ark have been found on the 17,000 foot Agri Dagh peak northwest of Lake Van in Turkey (traditional Mt. Ararat) are unconvincing; such claims ignore the text of the Bible, which does not mention a specific mountain but "mountains" (pl.), and are misguided in their certainty that Agri Dagh is the correct location. Carbon 14 dating of the wood allegedly found there dates the samples tested no earlier than A.D. 450, about the time Christian tradition began to center on this mountain. Claims formerly made of living persons who had seen remains of the ark, when examined, prove themselves incredible.

B. Mesopotamian Flood Stories

Sixty-eight different peoples are known to have flood legends. Philo of Alexandria and early Christian apologists knew of a Greek flood story in which Deucalion is the hero, and some identified Deucalion with biblical Noah. Berossus, a Babylonian priest of Marduk writing in Greek about 275 B.C., produced an account of a flood whose hero is Xisuthros. Though summarized by Eusebius (*Praep. Evang.* 9:11–12 [written A.D. 414–15]) from a work by Abydenus, no great attention was paid to the account until the identification by George Smith in 1872 of fragments of a Babylonian flood story touched off great interest because of its similarities to the biblical narrative.

Another, more-recently identified Mesopotamian flood legend is known by the name of its protagonist, Atrahasis. In this legend, the god Enlil decides to bring about a flood because the tumult of humanity is unbearable, disturbing the sleep of the gods. The hero Atrahasis is aided by the god Ea; by the latter's agency, the god Enki alerts Atrahasis to the impending flood and advises him to build a vessel in which he can survive. The vessel is roofed over and made secure with pitch. Atrahasis entered the vessel and shut the door; the storm raged 7 days and nights. The surviving text has not preserved the account of the conclusion of the flood, but after the flood Atrahasis sacrifices and the gods dispute over the outcome.

Better preserved is a later variant of the flood story known from the 11th of 12 clay tablets that together constituted the Epic of Gilgamesh from Ashurbanipal's library (*ANET*, 93–95). The hero, Ut-napishtim, warned in a dream by Ea that the council of the gods—incited by Enlil—is about to destroy the city of Shuruppak with no exception, was instructed to tear down his house and build a vessel. The vessel was a cube 120 cubits in each dimension, of 7 stories with 63 compartments, of unspecified wood presumably made waterproof with pitch.

Rather than warn his neighbors of the danger, Ut-napishtim was instructed to deceive them about the purpose of his boat if they asked him. He was to load into it "the seed of life of all kinds," his family, relations, and skilled craft workers, as well as beasts. They rode out a 7-day storm in which all the gods "cowered like dogs" (XI 115). The vessel came to rest on Mt. Nisir, and 7 days later Ut-napishtim sent out a dove, a swallow, and a raven. The raven did not return. Coming out of his vessel, he offered a sacrifice around which the gods, "having smelled the sweet odor," gathered "like flies" (XI 161). Enlil was angry that any humans had survived but was pacified by the other gods. Eternal life was bestowed on Ut-napishtim and his wife.

The story is known in several versions (Sumerian, Babylonian, Assyrian, and derivative traditions) and the hero has many names (Ut-napishtim, Atrahasis [see *ANET*, 104–5], and Xisuthros). A Sumerian version found at Nippur dates before 2000 B.C., and its hero is Ziusudra (*ANET*, 42–44). A fragment of the epic (though not of the flood portion) was found in 1956 on the slopes of Megiddo, indicating that the story was known in Palestine.

Many attempts have been made to demonstrate a literary dependency of the biblical Flood narrative on Mesopotamian prototypes, but consensus on the matter has not been reached. Claims of direct dependence

have been largely abandoned. Each form of the story has unique elements, and the differences from the biblical story are often more striking than the similarities. The ethical motivation and the monotheism of the biblical story are not elements of the Mesopotamian legends. In the biblical story, after the end of the flood Noah and his family replenish the earth; but Ut-napishtim and his wife are transformed into gods, making them immortal, and thus isolated from the general human condition. The Genesis story attests the mercy and the judgment of the Lord. Its religious interpretation of the cataclysm contrasts with the more obscure message of the Mesopotamian stories.

C. Biblical Flood Traditions

1. Genesis. The flood (Heb *mabbûl;* Gk *kataklysmos*) narrated in Gen 5:28–9:29 resulted from the Lord's decision to destroy all living creatures because of the great wickedness of man described in the phrases: "every imagination of the thoughts of his heart was only evil continually" (6:5); "the earth was filled with violence (Heb *ḥamas*)" (6:11); and "all flesh had corrupted their way upon the earth" (6:12). A period of grace of 120 years (6:3) was set.

Noah, the protagonist of the Flood narrative, was a son of Lamech (Gen 5:29; on his name, see NOAH [PERSON]). At the age of 500, Noah became father of Shem, Ham, and Japheth. In the midst of wickedness Noah was a righteous man *(ṣaddiq),* blameless *(tāmîm)* in his generation (6:9), who walked with God (6:9; cf. 5:22–24; note that later figures walk "before" God [Gen 17:1]). Noah's obedience is repeatedly stressed (6:22; 7:5, 9). The evil human heart (6:5) troubles God's heart (6:6).

The biblical narrative of the Flood proceeds as follows. At the Lord's instruction, Noah built an ark (Heb *tēbâ;* Gk *kibotos*) that was 300 × 50 × 30 cubits in size. (Allowing 18 inches for the cubit, the dimensions make a vessel 450 × 75 × 45 feet, with a displacement conjectured to be 43,300 tons.) The word *tēbâ* occurs elsewhere only for the craft in which the baby Moses was set adrift (Exod 2:3). Constructed of *goper* wood (Gen 6:14) and covered with pitch inside and out, the ark had rooms (Heb *qinnîm,* used in a rare sense), a roof (Heb *ṣohar,* used only here in MT, and in later tradition the subject of speculation), a door *(petaḥ),* and was of 3 stories. Two of every sort of animal were taken into the ark together with necessary stores. Noah took 7 pairs (Gen 7:2) of all clean animals.

Noah was 600 years old when, on the 17th day of the 2d month, he took his wife, his 3 sons, their wives, and the animals into the ark. The Lord closed the ark. After 7 days the flood came, with water both from the fountains of the deep (Heb *tehôm*) and the "windows of heaven" (Gen 6:11; cf. 2 Kgs 7:2, 19). The rain fell for 40 days and nights, and the water rose over the mountains to a depth of 15 cubits. Every living thing which had the breath of life died except for those in the ark; but God remembered Noah (8:1), made a wind pass over the earth, and the water abated.

The water was on the earth 150 days, but at the end diminished so that on the 17th day of the 7th month the ark rested (MT uses the verb *nwḥ,* associated with Noah's name) on the "mountains of Ararat" (8:4; cf. 2 Kgs 19:37; Jer 51:27). On the 1st of the 10th month the tops of the mountains were seen. After 40 days, Noah opened the window and sent forth a raven, which went to and fro until the waters were dried up. He then sent a dove, which returned. Seven days later he again sent the dove, and it returned with an olive leaf. On its 3d mission 7 days later the dove did not return.

On the 1st day of the 1st month of Noah's 601st year, the earth was dry, and Noah removed the covering of the ark. On the 27th of the 2d month the Lord ordered Noah out of the ark with the living creatures. Noah built an altar and offered a burnt offering of every clean animal and bird. The Lord smelled the pleasing odor (8:21) and promised never again to destroy every living creature as he had done.

Noah was ordered to multiply and fill the earth. He was promised that animals, birds, and fish would fear him (9:2). Flesh might be eaten, but the blood was prohibited. A reckoning would be required of all blood shed.

God made a covenant with Noah and the animals not to repeat the flood. This covenant is unilateral, initiated by the superior party and not dependent on the inferior party's acceptance or agreement. The sign of the covenant was the bow in the cloud. When God would see the bow in the clouds, he would

remember the covenant (9:14–16). From Noah's sons, Shem, Ham, and Japheth, the whole world was peopled.

2. Other OT Texts. Outside Genesis, biblical texts advert to a primordial flood and to isolated details of the Genesis narrative. Noah is listed in the 10th generation in genealogies (1 Chr 1:4; cf. Luke 3:36) and is noticed by Ezekiel as an exemplary righteous man who saved his children (Ezek 14:14, 20). The word *mabbûl* occurs outside of Genesis only in Ps 29:10, but the flood motif may be reflected in later sections of the Isaianic prophetic corpus. In the "little apocalypse," the declaration that *Yhwh* will lay waste the earth because the "everlasting covenant" has been violated (Isa 24:1, 4, 5) probably resonates with allusion to a flood narrative; the same is probably true of reference in the same context to the "windows of heaven" being opened and the foundations of the earth trembling (Isa 24:18). Also noteworthy is the motif of a few being preserved by entering their chambers until the divine wrath is past (Isa 26:20–21; note the reference to shed blood in v 21). Flood imagery is also detectable in Isaiah: the deep waters that do not overwhelm (Isa 43:2), and the concept of overflowing wrath (Isa 54:8). In Isaiah is also found a single direct reference to the Noah story: the divine oath not to repeat the Flood becomes the ground of a new oath not to continue the wrath which led to Judah's exile (Isa 54:9). "Great waters" become a figure of the tribulation of the righteous from which only God can save them (Ps 18:16; 65:5–8; 69:1; 89:9; 93:3).

In the Apocrypha, Noah becomes one who married a kinswoman (Tob 4:12). In contrast to the evildoers,

> Noah was found perfect and righteous; in the time of wrath he was taken in exchange; therefore a remnant was left to the earth when the flood came. Everlasting covenants were made with him that all flesh should not be blotted out by a flood (Sir 44:17).

The Wisdom of Solomon declares:

> When the earth was flooded because of him, wisdom again saved it, steering the righteous man by a paltry piece of wood (Wis 10:4).

3. Greek Versions. The Greek version of Genesis in LXX incorporated in its translation of the Flood story a variety of hermeneutical and traditional interpretations that reshaped the narrative for its Hellenistic Jewish and Christian readers. LXX varies from MT in chronology; among other differences, Noah remains in the ark 12 full months. The play on Noah's name (Gen 5:29) employs Gk *dianapauein* "give rest," implying Heb *nwḥ* rather than *nḥm,* on which MT's pun depends. The anthropomorphism of God's "repenting" implicit in the MT of Gen 6:6a (Heb *nḥm*) is nuanced by LXX's *enthymeomai* ("take to heart; be angry about").

Rare and uncertain words are variously handled. MT's *qinnîm* is etymologically rendered *nossiai* ("nests"), and the *goper* wood is translated *xyla tetragōna* ("squared wood"). Heb *ṣohar* becomes Gk *episynagōn* ("a gathering together"). "Because of the water" becomes "through *(dia)* the water" (7:7), and the "windows of the heavens" become *katarraktai* "waterfalls" (cf. 4 Kgdms 7:19; Mal 3:10).

In Aquila's translation, Heb *ṣohar* is (erroneously) glossed with Gk *mesēmbrinos* ("noon day"), and *synthēkē* is used for Heb *berith* "covenant" (6:19 [18]; Symmachus also uses *synthēkē*). Symmachus chose *hilasterion* "mercy seat" to render *tēbâ* ("ark"). The *qinnîm* are *kaliai* ("sheds"; Gen 6:15 [14]), and the *ṣohar* is *diaphanēs* ("transparent").

4. Targumic Renderings. The Aramaic targums are paraphrastic in nature, avoiding anthropomorphisms and supplying interpretations from rabbinic tradition. The ark is of "cedar wood," the *qinnîm* are "compartments," the *ṣohar* is a "light," the "windows of heaven" (7:11; 8:2) remain windows, and the landing place of the ark is in Cordyene at Mt. Kardu. In *Tg. Ps.-Jon.* the *ṣohar* is a sparkling gem and the "windows of heaven" become "latticed windows" (8:2).

With characteristic desire to avoid anthropomorphism, the Targum Neofiti I explains Noah's name as a consolation for "our evil deeds and from the robbery of our hands, from the curse of the earth …" Regret is before the Lord (6:6). The Targum adds "robbers" to the catalogue of antediluvian corruption (6:11, 13). The ark has a window.

The 7 days Noah spent in the ark prior to the flood were days of mourning for Methuselah (7:10). Instead of shutting Noah in, the Lord protects him in his good mercies (7:16), and at the end of the flood

the Lord "in his good mercies" remembers Noah (8:1), and "a spirit of mercies" passes over the earth. The ark rests on the mountains of Kardun (8:4). Noah opens the door of the ark rather than the window (8:6). The raven makes repeated trips (8:7).

Noah's altar is to the name of the Word of the Lord (8:20). Man is created in "a likeness from before the Lord" (9:6). The covenant is between the Word of the Lord and every living creature (9:16).

D. Flood Traditions in the Pseudepigrapha

Whether there was ever a pseudepigraphical book of Noah remains uncertain. No list of pseudepigrapha includes one. The *Book of Jubilees* attributes certain arts and halakic matters to Noah (*Jub.* 10:13–14; 21:10), and the Gk fragment of *T. Levi* 56–57 speaks of "the writings of the Book of Noah concerning the blood." Some scholars have projected that *1 Enoch* 6–11; 60; 65:1–69:25; 106–7 and a few other sections may have come from a Book of Noah; but the case is uncertain. A. Jellinek in his *Bet ha-Midrasch* projected a Hebrew Book of Noah back of fragments he published; however, folklore may be a better explanation of their origin.

The *Genesis Apocryphon* devotes considerable space to Noah. Noah's wife is *bt ʿnwš.* Noah becomes a planter on Mt. Lubar.

Pseudepigraphical writers found a homiletic value in the flood. Noah becomes an example of one who practiced asceticism in early life *(The Book of Adam and Eve/The Cave of Treasures).* The *Sibylline Oracles* furnish, in a sermon of Noah, a list of evil deeds of the guilty: fighting, murdering, and abandoning shame. Noah's contemporaries were tyrants, liars, unbelievers, adulterers, and slanderers (*Sib. Or.* 1:150–98). Numerous sources mention Noah's righteousness (*T. Benj.* 10:6; *Jub.* 4:33; *Book of Adam and Eve* 3:1). The ark is an example of the devout reason beset by the passions (*4 Macc.*15:30–32). *4 Ezra* (3:9–12) cites the pre-flood conditions as a stage of apostasy. Extended surveys of the flood are found in *1 Enoch* 37–71, *Jubilees* 4–5, *Sib. Or.* 1:151–375, and in the *Book of Adam and Eve*.

E. Hellenistic Jewish Literature

Philo of Alexandria dealt with the flood on 3 levels: as an event from the past in which Noah participated; as a source of moral lessons to be drawn from the episode; and as an allegory of spiritual realities. The treatments are to be found in *De Abrahamo, De Vita Mosis, Quod Deus immutabilis sit,* and in *Questions et Solutiones in Genesin.* Philo, equating Noah with the Greek hero Deucalion, reflects the concept of a relative righteousness on the part of Noah. He interprets the variation *kyrios* and *theos* in divine names in the Gk narrative as showing the judgment and mercy of God. Philo uses the Noahic material to expound virtues he has otherwise accepted. The allegorical Noah represents a preliminary state, higher than Seth but lower than Abraham, in the advance of any soul to the mystic vision. The flood becomes a flood of human passion bursting forth in wrongdoing; Noah ultimately escapes. The flood is elsewhere a cleansing of the soul. The ark is the body; and in coming out of the ark, Noah escapes from the body to higher things. He then falls back into a foolish deranged condition in his drunkenness. The details of the allegory are technical, repetitious, and inconsistent. Philo expounds the idea that most of the goals of human striving minister only to the body and are unworthy. However, the body must be used until the flood of passion has dried up and the individual comes forth like Noah (presumably to immortality, although Philo is not explicit on this point).

Pseudo-Philo in the *Biblical Antiquities,* written shortly after the destruction of the Temple in A.D. 70, reveals little in common with the genuine Philo. He has his own distinctive ideas, such as the notion that "rest" in the name of Noah involves relieving the earth of its wicked inhabitants; the age given for Noah at the birth of his sons; and the eschatological element (with resurrection, final judgment, hell, and the new heaven and earth), which he introduces into the post-flood blessing.

Josephus, claiming that Berossus the Chaldaean, Hieronymus the Egyptian, and Nicolas of Damascus also mention the flood, gives a simple paraphrase of Gk Scripture embellished from pseudepigrapha and folklore (*Ant* 1.3–4). He does not, however, homilize the story. He offers a chronology and tends to give place names which his reader would know. He mentions only one journey for the dove, and he notes that Berossus reports that the ark was yet in Armenia near the mountains of the Cordyaeans and that people carried away bitumen from it. Nicolas called the mountain Baris.

F. New Testament

NT writers thought of the days prior to the flood as a time in which life went on in its careless way until the destruction came; it was therefore as a fitting comparison to expected conditions at the time of the second coming (Matt 24:37–39; Luke 17:26, 27). A fall of the angels is echoed in 2 Pet 2:4; Jude 6) but is not specifically connected with the flood narrative. Noah was a preacher of righteousness (2 Pet 2:5) who with 7 others had been saved. His fate and that of his contemporaries illustrate God's rescuing the righteous and his punishment of the wicked. Noah is a model of faith. By faith he built his ark, condemned the world, and became the heir of righteousness (Heb 11:7). God's patience waited in the days of Noah. The flood becomes a typological figure of baptism (1 Pet 3:20, 21). Beyond baptism is newness of life (cf. Rom 6:4).

G. Rabbinic Sources

References to Noah and his flood are scant in the Mishna and Tosefta, but are fuller in *t. Sanhedrin*, and in the Midrash *Genesis Rabbah.* The treatment is not a single unified picture, but is a record from diverse periods of various opinions supported by the haggadic method of interpretation (on the interpretative principles involved, see HAGGADAH).

Some sages believed passages like Psalm 1 spoke of the righteousness of Noah and his sons, while Job 21, 24, and 36 expounded the sins of the flood generation. Noah, born circumcised, should have been called *Naḥman* to fit the play on the name in Genesis 5:29. He had neglected the command to multiply until an advanced age because of the wickedness of his generation. Small interest is shown in Noah's wife, but the *Midrash Haggadol* applies the phrase "woman of valor" (Prov 31:10) to her. Much speculation is devoted to what the sins of the flood generation were. Covetousness, licentiousness, whoredom, bestiality, and incest are all alleged. Robbery was thought to have been prevalent; justice was not done and mercy not shown. Even the prayers of the generation were to no avail.

It was debated whether the antediluvians would have a share in the world to come. While some argued that they would not rise or be judged, other rabbis argued that they would stand in the congregation of the wicked at the judgment. For some, the 120 years was a limit on available time to repent; others saw it as a reduction of the life span in general.

Aware that the narrative uses both *Yhwh* and *ʾĕlōhîm* in referring to God, the rabbis homilized. The tetragrammaton signifies the attribute of mercy, and *ʾĕlōhîm* that of judgment. Sin had turned mercy to judgment; therefore *Yhwh* decreed the flood (Gen 6:7). But Noah's feeding the animals turns judgment to mercy; hence, *ʾĕlōhîm* remembers Noah (Gen 8:1).

The rabbis struggled with the fact that God grieved, that the decree of destruction also included the animals, and that Noah was found righteous. While some exalted Noah, there is a tendency toward seeing even in him only a limited righteousness. R. Judah insisted that it was only in comparison with the wicked of his generation that he was righteous, but compared with Moses and Samuel, he would not have been righteous. Noah's faith was considered weak, and R. Johanan asserted that had not the water reached his ankles, he would not have entered the ark. Moses was considered the greater in that he saved his generation, not just his family. However, Noah was the one herald in his generation, calling harshly for repentance.

The proportions of the ark were considered to be normative for actual boat building. There were differences of opinion about the compartments in the ark and the arrangements for its occupants. "Gopher" wood was understood to be some sort of cedar. The *ṣohar* was considered a kind of skylight by some, but others thought of it as a gem which shone in the night. When completed the ark drew 11 cubits of water.

Some teachers argued that suitable foods were provided for each sort of animal; however, one insisted that all had only pressed figs to eat. Only the perfect young specimens of animals were accepted, and those which had been involved in sin were rejected. The *rĕʾîm,* an unusually large animal, was said by R. Nehemiah to have been tied to the outside of the ark.

God shut Noah in as a king might do for a friend he wished to protect when a general execution is decreed. At the onset of the flood the impenitent sought forcible entrance into the ark, but were killed by wild beasts.

Water not only had its ordinary destructive power, but the flood waters were boiling, fitting punishment for the inflamed sensuous behavior of sinners. R. Judah argued that the waters were not level but were 15 cubits anywhere measured. Some authorities argued that Palestine and the Garden of Eden were not covered. Fish were not included in the decree of destruction. Life in the ark was a trying experience; continence was demanded; but Ham, the raven, and the dog were transgressors, and each received a suitable punishment.

The details of the chronology of the flood were a point of debate. The ark landed on Ararat (which is in the mountain range of Cordyene). An argument between Noah and the raven is reported, when Noah was ready to send the raven out. Some were of the opinion that the dove got its olive branch from the land of Palestine; others, from the Garden of Eden. Little concern is shown for what later happened to the ark. One passage assumes that Sennacherib found a plank from it.

As Noah had been commanded to enter the ark, so he remained in it until ordered out. The idea that conjugal relations, suspended aboard the ark, were not immediately resumed by Noah, resulted from a comparison of Gen 8:16, where wives are mentioned apart from husbands, with 8:17, where wives are mentioned with Noah and his sons, and multiplication is alluded to. Instead of obeying, Noah planted a vineyard and suffered shame from his action.

From the number of clean animals, Noah deduced the need to build an altar. Though not as pleasing as the sacrifices later offered by Israel, Noah's sacrifice brought the blessing of God. The bow in the clouds was the response to Noah's lack of faith which demanded a further sign. Noah's covenant would be replaced by Abraham's.

Meat was permitted for food after the flood; but suicide was prohibited. Shedding blood impairs the image of God. Murder, slaughter of the embryo, and strangling were prohibited in keeping with the words of Scripture (*bā·ādām* "within man" Gen 9:6).

H. Christian Writers

Early Christian writers assumed the veracity of the flood story but were also influenced by earlier interpretations of the topos in the NT, Philo, and rabbinic traditions. There is little effort in the 2d century at systematic exegesis of the narrative. Righteous Noah serves the writers' moral purposes; he preached repentance and foretold the beginning of a new world (*1 Clem.* 7:6; 9:4). Theophilus of Antioch, Methodius, and Hippolytus all notice Noah's preaching. Justin (*Apol.* 2:5) lists the sins of the flood generation, and *1 Clem.* 9:4 has the animals to enter in concord into the ark.

Justin identifies Noah with the Greek hero Deucalion (*Apol.* 2.7.2), but Theophilus of Antioch, who rejected the value of Greek philosophy, rejected the identification (*Autol.* 2.30–31). Theophilus does indulge in a play on the Gk words *Deute* ("come hither") and *kalein* ("summon") which he alleges to have been used in Noah's preaching; the words permit a fanciful etymology of the name Deucalion.

Gnostics allegorized the 30 cubits of the ark's height to represent their Triacontad (Iren. *Adv. Haer.* 1.18.4) and the 8 persons in the ark to be their Ogdoad (ibid. 1.18.3). The Ophites had Ialdaboath to send the flood but Sophia to save Noah (ibid. 1.30.10). The Sethians had the mother (the power of all powers) to send the flood, but the angels saw to it that Ham and 7 others were saved so that the power of malice did not perish. Contributions to understanding Gnostic treatment of the flood have been made by the *Apocalypse of Adam,* the *Hypostasis of the Archons, Apocryphon of John,* and the *Concept of Our Great Power* from Nag Hammadi. The lower God destroys all flesh in the flood yet quiets his anger and saves Noah (who is called Deucalion; *Apoc. Adam* 79:2–17; 70:7–15). After the flood, Noah divides the earth among his 3 sons that they may serve the creator in slavery (*Apoc. Adam* 72:15–26). The coming Illuminator is to save the souls of those who have gnosis of the eternal God in their hearts and receive a spirit from one of the eternal angels (*Apoc. Adam* 76:8–27). In the *Hypostasis of the Archons* 92:5ff., the Archons decide to destroy man and beast, but the Archon instructs Noah to build a boat and take into it

his children and birds and beasts. Norea (wife of Noah), refused admittance, burns the ark and Noah has to build it again.

According to Marcion's idiosyncratic interpretation of the OT, Noah and other OT heroes rejected Jesus' preaching when he came to Hades, and thereby were lost (Iren. *Adv. Haer.* 1.27.3). Apelles, a disciple of Marcion, questioned how many animals were in the ark, how it would hold them all, and how they were fed (Origen *Hom. in Gen.* 2.2).

Justin, arguing that the law was given to the Jews as an extra burden because of their hardheartedness, insisted that Noah was uncircumcised and did not observe the food laws (*Dial.* 19:4; 46). Christian treatment of the flood is christological, with Christ closing the ark and the *logos* being Noah's pilot. Typology becomes a principal mode of interpretation of the flood. Christ, the cross, baptism, and the faith of Christians are all signified in the narrative (*Dial.* 134, 138, 140), as well as the times of the end (Iren. *Adv. Haer.* 5.29.2). The flood becomes a type of the expected flood of fire (Justin *Apol.* 2.7.2); Noah's blessing on Japheth is interpreted as a promise of the preaching of the Gospel to the gentiles.

Theophilus of Antioch eschewed allegory and expounded the flood as a historical event, stressing its universality and that it would not be repeated (*Autol.* 2.10). The flood is also surveyed by Irenaeus, *Demonstration of the Apostolic Preaching*.

That Christians found multiple meanings in Scripture is reflected in the spiritual exegesis of the flood after the 2d century. Christological and typological exegesis was carried to absurd lEngths. Chrysostom said, "The story of the deluge was a sacrament *(mysterion)* and its details a figure *(typos)* of things to come" (*PG* 48.1037). Noah was generally seen as a type of Christ, the end of one generation and the beginning of another. For most he was an exemplary righteous man, but Origen and Jerome reflect the midrashic doctrine that Noah was righteous only with respect to his own depraved generation. For Christians, the "rest" *(anapausis)* spoken of by Lamech (Gen 5:29) became a link with the rest promised by Jesus (Matt 11:28–29), making Noah a type of Christ. The ark may be a sepulchre, or its wood may typify the cross, a point which likely comes from the resemblance of the Gk letter *tau* (whose numerical value is 300) to a cross. The "mystery of the wood" becomes a commonplace. The Church is the ark of safety into which one must enter to be saved when the flood prevails. Each detail of the ark is allegorized; diverse animals represent the manifold character of the Church.

The raven is a type of the impure who are sent forth from the Church not to return. Under the influence of the gospel baptismal story, the dove becomes the type of the Holy Spirit, and the olive leaf a symbol of peace. Some find in the 3 trips of the dove a symbol of the Trinity, while others find an allegory of the Spirit abiding with the believer.

I. Flood Motifs in Art and Iconography

Noah and his ark became a favorite subject in both Jewish and Christian art. The exit from the ark is depicted in a 5th-century synagogue mosaic found at Jerash; and Jewish tombs in Palestine use representations of Noah. Coins from Apamea in Phrygia thought to show Jewish influence depict Noah and his wife with their heads emerging from the ark, pushing back the lid. The ark is a box floating in the water, and Noah in Gk spelling is written across the box. A dove sits on the lid while another with an olive leaf in its claw flies in.

There are 41 paintings in the catacombs and 33 representations on sarcophagi of Noah and his ark. These often show the ark as a box with a lid. The earliest is in the Domitilla catacomb and has the dove flying in the ark. The catacomb of Peter and Marcillinus shows Noah in a box with arms outspread to bring back the dove. The iconography reflects theological beliefs then current. It is not until the 4th century that an effort was made to show the ark from the side depicted as a boat.

FLORA. One hundred and twenty-eight different plants are mentioned in the Hebrew Bible and the NT. Certainly this does not constitute a complete inventory of every plant that grew in ancient Palestine. On the other hand, there are today 2,384 plant species in modern Israel, most of which have been introduced in recent centuries. For example, 2 of the more common floral types in modern Israel—the eucalyptus and the opuntia—obviously did not exist there in biblical times and were only recently introduced (from Australia and South America, respectively). This article, however, will discuss only species known or assumed to have existed in ancient Israel.

A. Plants of the ANE

It is impossible to obtain a clear picture of the flora of ancient Israel—much less to identify the plants mentioned in the Bible—without also considering the evidence from Israel's neighbors in Egypt and Mesopotamia. In this regard, it is worth noting that one of the earliest systematic studies of plants in the Near East was that of the Greek botanist Theophrastus (ca. 372–287 B.C.), a Peripatetic philosopher and student of Aristotle whose extant writings contain 2 works on the subject (*Caus. Pl.* and *Hist. Pl.*).

1. Egypt. Ancient Egypt, like modern Egypt, possessed a rich and diverse flora. The Red Sea desert, the Libyan desert, and the Nile valley each contained distinctive plant types, although cultivated plants were restricted to the Nile valley and delta. Some plant material has been found in tombs and can therefore be readily identified; however, the task of identifying plants that appear in inscriptions and on monuments has been more difficult. The texts name plants, but do not describe them; thus, these ancient names had to be connected with specific plants through linguistic and other studies. Because the hieroglyphic portrayal of plants became increasingly stylized through the centuries, efforts to identify plants on a visual basis must appeal to earlier-depicted forms.

The modern study of Egyptian flora began in 1775 with P. Forsskål, and during the Napoleonic expedition such studies by Delile (1813) connected modern with ancient Egyptian flora. The pioneering work on ancient Egyptian plants is that of Schweinfurth (1887–89), who spent 50 winters in Egypt and eventually identified 200 tomb plants while amassing a vast herbarium in Berlin-Dahlem (which was destroyed during the Second World War). These efforts have been continued by L. Keimer (1967), V. and G. Taeckholm (1973), and R. Germer (1985).

2. Mesopotamia. Even though this region is also vital for understanding biblical flora, a comparatively few of its ancient plants have been identified. The study and documentation of modern flora in this area is associated with the works of Boissier (1867–88) and Post (1883–84, 2d ed. 1933). However, it has been especially difficult to work through the varied textual and monumental remains of the many ancient civilizations of this area. The earliest study was that of Bonvaria (1894), and R. C. Thompson (1949) has prepared a dictionary of Assyrian botany. There has also been a recent survey of plants depicted in Assyrian monuments (Bleibtreu 1980), and efforts toward identifying and describing ancient Mesopotamian plants continue in the *Bulletin of Sumerian Agriculture.*

B. Plants in the Bible

In addition to the incongruence between the flora of modern Israel and that of ancient Palestine, the identification of plants mentioned in the Bible is complicated by 2 other factors. First, at the popular level, plants native to many other parts of the world have often been given biblical names, sometimes giving the incorrect impression that these plants existed in ancient Israel (see section C below). In fact, many such plants could not survive in the climate and soil of Palestine.

Second, at a much more academic level, the paucity with which biblical plants are described impedes confident identification. Frequently, plants mentioned in the Bible are only given broad and generic

descriptions from which it is difficult to draw accurate conclusions. For example, the Song of Songs (2:1–2) refers to certain spring flowers *(ḥăbaṣelet; šôšannâ)* that may have been akin to tulips, or anemones, or chamomile (tulips and other bulbous plants are known to have existed in the E Mediterranean in antiquity). Often, all we have is simply the name of the plant that exists in the original languages in the biblical texts, as well as in other languages which translate those texts. Obviously, both Jewish and Christian exegetes had to rely upon some more or less reliable oral tradition when identifying, for example, a Hebrew plant name with some Greek or Latin equivalent. The early rabbis particularly displayed an interest in biblical plants (see *m. Zer.* and *j. Talm. Zer.*). But later legends certainly could embellish such traditions, sometimes incorrectly (e.g., the identification of the "forbidden fruit" of Eden with the "apple").

The first book devoted exclusively to biblical botany was that of Levinus Lemmens in 1566, which was translated from the original Latin into English 21 years later by Thomas Newton, who added some supplemental material. The next century and a half saw the publication of a large number of studies, including the important *Hierobotanicon* by Celcius.

The modern systematic study of biblical plants, however, began with F. Hasselquist, a student of Linnaeus, the founder of modern botany. Hasselquist journeyed to Egypt and Palestine in 1747, and was the first naturalist to visit the land and acquire first-hand knowledge of its topography and plant life. P. Forsskål, whose botanical work in 1775 has been mentioned, undertook a similar exploration; he died when his guides abandoned him in the desert. These initial efforts were continued into the 19th century; best among these was the work of J. Smith (1878).

Immanuel Loew (1928) approached the subject differently, reviewing all known data pertaining to biblical plants, whether acquired from modern horticultural research or Jewish and Christian lore. His work not only discussed biblical plants, but also plants in later Jewish literature, particularly the Talmud. The British scholar G. E. Post provided a broad field study of modern plants in Palestine, Syria, Lebanon, and Jordan. More recent major treatments of the subject include those of A. and H. Moldenke (1952), M. Zohary (1982), and N. Hareuveni (1984). Today, articles on specific biblical flora and specific plants listed in the Bible can be found in any number of encyclopedias.

A number of modern gardens have attempted to recreate biblical flora and to present them to a contemporary audience. In Israel, these include the Biblical Botanical Garden of the Hebrew University (Jerusalem) and the Neot Kedumim (near Tel Aviv). In America, the Denver Botanical Gardens (Colorado) has a Scriptural Garden, and biblical gardens have been created at Rodef Shalom Temple (Pittsburgh) and St. John the Divine Cathedral (New York).

The following presentation attempts to provide a synthesis of the work of a number of scholars, among whom there is frequently disagreement. In only a limited number of instances can we be certain about the identification of a plant named in the Bible. In many instances biblical terms are used so rarely that the plants cannot be identified at all. Also, in many instances the traditions established by the Greek, Aramaic, and Syriac translations are helpful, although sometimes they are misleading.

The following presentation subdivides plants into broad areas (e.g., trees of the forest, fruit and nut trees and shrubs, grains and legumes, vegetables and fruit, etc.). Alphabetically within each subdivision are the common English names of plants that existed in antiquity, followed by the Latin name and genus. Following this is a discussion of the relevant Heb/Gk words alluding to the plants in question, including pertinent data about their appearance and use. See also AGRICULTURE.

TREES AND SHRUBS OF THE FOREST

ACACIA *(Acacia raddiana)* or another variety of acacia is associated with the Heb *śittîm* (Exod 26:15; Num 25:1; Josh 2:1; Isa 41:19; Mic 6:5; see Loew 1928, II: 377; Moldenke 1952: 24). Some modern versions and the KJV do not translate but simply transliterate "shittim." The tree is native to the Mediterranean and the term is used either for the tree (Exod 25:5, 10, ff.) or to designate desert places, mainly along wadis (Num 33:49; Joel 3:18). Four varieties are found in the Sinai. All are topped trees with prickly branches and small compound leaves. Flowers are yellow globular, followed by brown, twisted pods. The portable Tent of Meeting in the desert, as well as the furniture in it, was constructed of

its hard timber. Clamps on mummy coffins, fuel, hand tools, and posts were also made from its wood. The bark was used for tanning leather and its fiber for rope. The flowers, fruit provided fodder. One variety, *A. nilotica* produced gum arabic, widely used in Egyptian medicine for salve preparations.

ALOE: see also Eaglewood in this article.

ALOE *(Aloe vera, succotrina)* is the *aleo* of the NT (John 19:39); while the Eaglewood is the *ʾāhāl* of the Hebrew Bible (Ps 45:8; Prov 7:17; Cant 4:14; see Post 1884: 783; Moldenke 1952: 35; Zohary 1982: 204). The plant is native to Yemen and its extract was imported to ancient Israel; eventually this succulent was grown in Israel. *Aloe vera* produces a bitter juice. It is a small plant with succulent leaves and teeth along the edge. It produces spikes with yellow flowers and grows well in dry areas. *Aloe succotrina* is a similar succulent, but it produces red flowers on a spike and an aromatic juice which is extracted from the leaves. That juice was used for embalming in ancient Egypt and also as incense, perfume, and scented powder. Medicinally it found use as a purgative.

BOX *(Buxus longifolia)* is mentioned 3 times in the Bible (Isa 41:19; 60:13; Ezek 27:6; see Post 1884: 725; Loew 1928, I: 316; Moldenke 1952: 62); the identification of the Heb *tĕʾāśŭr* has been contested and the RSV translates "pine." The box grows in the Galilean hills as a hardy, long-living tree that reaches a height of 20 feet. The leaves of this evergreen are thick and leathery, green above and paler below. Yellow flowers are followed by a papery capsule fruit with small black seeds. The wood was used in ancient times for statuary, flutes, writing tables, combs, and spoons. It is exceptionally hard wood and is as durable as brass. When mixed with lye, the leaves were used for tanning. Other uses were as a hair dye, dried and in a powder to shine the coat of horses.

BRAMBLE or BLACKBERRY *(Rubus species)* is a thorny and prickly plant, identified with the Hebrew *ʾātād* (Gen 50:10, 11; Judg 9:14, 15; Ps 58:9; see Tristram 1884: 293; Loew 1928, III: 175; Moldenke 1952: 206; see also Crown of Thorns). This and other plants may also be identified as the Heb *bārqānim, sirpād, sir,* or *silôn.* This is a prickly climbing plant with a cluster of radiating canes; they are erect at first, then arch downwards. The leaves are finely hairy with 3 to 5 leaflets, and its flowers are white followed by the fruit of black druplets on older shoots. The fruit and young shoots were used as food and a juice was pressed from them. The tannin was used as astringent and tonic to treat dysentery and diarrhea. The leaf was chewed for bleeding gums and placed on burns. The flower and fruit were considered a remedy for venomous bites.

BROOM *(Retama raetam)* has been identified as the Heb *rôtem* (1 Kgs 19:4f; Job 30:3f; see Loew 1928, II: 469; Moldenke 1952: 201; Zohary 1982: 144) which grows principally in desert, hill, and rocky areas in Israel and the neighboring lands. There it is often the only source of shade. Usually it is a bush 4 to 12 feet high with a linear shape; the twigs bear small leaves and white, pea-like, fragrant flowers in spring. The roots are long and reach deep for water. The roots were used for charcoal.

CEDAR OF LEBANON *(Cedrus libani)* has always been identified with the Heb *ʾērez* (Num 24:6; Judg 9:15; 2 Sam 5:11; Isa 2:13; Ezek 17:3; Ps 29:5; Ezra 3:7). Solomon used it to build the temple in Jerusalem (1 Kgs 5:13ff). The large timbers were floated 200 miles down the coast to Jaffa and hauled another 25 miles across land to Jerusalem. With age (up to 3,000 years) the pyramidal form of this tree changes to widespread branches. The wood of this slow-growing tree is durable and fragrant; it takes a fine finish and is fungi resistant. The bluish-green needles are short. Male and female cones grow on separate branches. The wood was used for buildings and boats while the resin and oil were utilized for embalming and perfume.

CROWN OF THORNS *(Ziziphus spina-christi)* is one candidate for the bramble or thorn bushes (Judg 9:14f.; Matt 27:27; John 19:5; Moldenke 1952: 248; Zohary 1982: 154; see also Bramble), Heb *ʾātād.* It has traditionally been associated with the crown of thorns placed upon Jesus' head by the Roman soldiers and was named accordingly by Linneaus. It is common near the Dead Sea. This evergreen reaches up to 30 feet with an oval crown and leathery gray-green leaves. Its yellowish-green flowers bloom in summer. Mature fruit are edible and are marketed.

CYPRESS *(Cupressus sempervirens)* has been identified with *tĕʾāśŭr, bĕrôś,* and *gofer* (Isa 41:19; Eccl 24:13; Sir 50:10; see Loew 1928, III: 26; Moldenke 1952: 89; Zohary 1982: 106; see also Pine and Box).

The RSV usually translates *bĕrôś* as "cypress," but sometimes uses "fir." The cypress is native to Israel. It was one of the trees used by Solomon for building the temple (1 Kgs 5:22; 2 Chr 3:5) and may be the *gofer* of Noah's ark (Gen 6:14). The cypress has often been grown in cemeteries. The tree may have been named after the Island of Cyprus, where the tree was worshipped. This is an evergreen which grows to 80 feet. The small aromatic scale leaves are resinous. The fruit is a globe-shaped brown cone. The cypress has tiny nitrogenous nodules attached to its feeding roots and through them it improves the soil. The wood was used in the ANE for construction, shipbuilding, mummy cases, ancient idols, furniture, lances, musical instruments, doors. (The doors of St. Peter's Church in Rome, built of cypress wood 1,000 years ago, show no signs of decay.) The oil became a cosmetic and found medicinal uses.

FIR: see Cypress.

JUDAS TREE *(Cercis siliquastrum)* may be the tree on which Judas hanged himself (Matt 27:5; see Moldenke 1952: 73). The text mentioned no plant; legend has associated this plant, as well as the *Ficus carica, Populus euphratica,* or *Pistacia terebinthus,* with this story. This tree is native to Israel and the Mediterranean. The redbud is a N American variety of the same tree. The tree grows to 30 feet; it has small leaves and small red flowers whose flame-like colors may have led to the legend of its use by Judas (since they appear to "burn with shame").

JUNIPER, GREEK *(Juniperus phoenicea)* has been identified as the Heb *ʿarʿōr* (Jer 17:5f.; see Post 1884: 748; Loew 1928, III: 33; Zohary 1952: 117). The RSV translates the term as "shrub" while other translations use "heath," although most biblical scholars agree that this cannot refer to the true heath. *Juniperus phoenicea* berries were found in a 3d Dynasty Egyptian grave. The tree is a small pyramidical evergreen shrub with scale-like leathery leaves. Although a conifer, like all junipers, its fruit is not a true cone but a purplish-brown berry. The wood was used for construction. The berries provided flavoring and also a hair dye. Medicinally, the berries were used as a stimulant, expectorant, stomachic, poultice, and treatment for headaches. It was mentioned in more than 80 recipes in the *Ebers Papyrus*.

LAURESTINUS *(Viburnum tinus),* which has otherwise not been identified, may be the Heb *tidhār* (Isa 41:19; 60:13; see Zohary 1952: 112), which the RSV has translated as "plane" tree. Zohary provides this identification partially based on the Aramaic term *murneyon,* which is akin to the Arabic term for this plant. *Laurestinus* grows on Mt. Carmel. It is an evergreen which reaches a height of 10 feet. The flowers are white or pinkish followed by black fruit.

OAK *(Quercus ithaburensis, calliprinos)* is the Heb *ʾēlôn* or *ʾāllôn* (Gen 12:6; 18:1; Deut 11:30; Isa 6:13; Ezek 27:6); there is no agreement about the species, however (Post 1883: 737; Loew 1928, I: 621; Moldenke 1952: 193; Zohary 1982: 108). Some translations use "oak" and "terebinth" interchangeably. Individual specimens grow into mighty trees; oak forests existed in ancient Israel. This deciduous tree reaches a height of 60 feet and an age of 500 years, and it grows well below 1,500 feet. Deep roots enable it to survive fairly dry conditions, and it produces acorns abundantly. Its groves were considered sacred by the Canaanites. The dye produced from the *Coccus ilicis,* a small insect often found on this tree, was widely used; it was chiefly exported from Tyre and therefore called Tyrian crimson. The wood was used in construction and shipbuilding, and as tools. The acorns were used for tanning.

OLEANDER *(Nerium oleander)* is the rose, the Gk *rhododaphne* (Sir 24:14; 2 Esdr 9:26; Loew 1928: 206; Moldenke 1952: 151). It grows along stony riverbanks in Israel and as a shrub can reach a height of 12 feet. The leathery leaves are narrow and glossy. The clusters of white, pink, salmon, or red flowers appear at the top of the branches. All parts of the plant are poisonous. An extract from this plant was used against lice.

PINE, ALLEPO, JERUSALEM *(Pinus halepensis)* is one possible identification for the Heb *bĕrôś* (1 Kgs 5:22; Isa 41:19; Ezek 31:8; Ps 104:17; see Loew 1928, III: 40; Moldenke 1952: 173; Zohary 1982: 114), which has also been translated as "juniper" or "cypress" by RSV. This pine is native to the Mediterranean and large stands remain on Mount Carmel. This is a fast-growing, drought-resistant evergreen up to 80 feet in height, rich in resins. The spreading lower branches die back when overshadowed by the upper branches. It is two-needled, and the flowers are enclosed in short-stalked, woody cones with bean-winged seeds. The wood of this tree was used in Solomon's temple as floorings

and for doors and ceilings. It was utilized for shipbuilding and musical instruments. The bark was used for tanning.

POPLAR *(Populus alba)* provides dense shade. It is the *libneh* which Jacob used to influence the offspring of his flock (Gen 30:37; Loew 1928, III: 338; Zohary 1982: 132). It is a fast-growing tree which thrives near water along with willows. The undersides of the leaves are white. The wood was used for tools, roofing, and timber.

STORAX *(Styrax officinalis)* as the source of stacte, a resin, is associated with the Heb *natap* and *lôt* (Exod 30:34; Sir 24:15; see Post 1883: 518; Loew 1928, III: 388; Moldenke 1952: 224). This is a many-branched, small tree with rounded, shiny leaves, silvery white on the underside. Small, white, bell-shaped flowers bloom in June, followed by globular fruits. The resin, which is produced by old trees, was an ingredient of the holy anointing oil. Medicinally it was used to treat coughs and as an ointment for swellings. It also became an ingredient of perfume.

TAMARISK *(Tamarix pentandra)* is identified with the Heb *ʾeśel* (Tristram 1884: 250; Loew 1928, III: 398; Moldenke 1952: 227), which grows in sandy areas and may have been the source of the biblical manna. Scholars described manna as a sweet secretion of various insects such as *Trabulina mannifera*. The word *manna* may be derived from the Egyptian word *mennu*, "food," or *mâ hûʾ*, Heb for "what is it?" The Arabs called it *mann al samma*, "heavenly bread." Some modern scholars identify the manna as derived from lichen or allied species of plants found in Arabia and Yemen. The tamarisk (Gen 21:33; 1 Sam 22:6; 31:13) is a deciduous tree up to 20 feet in height with small, feathery leaves that excrete salt through special glands. Tamarisks have a high water requirement and may cause desert water resources to dry up. The pink flowers are followed by minute seeds. The wood was used for construction and as charcoal. The bark was used for tanning and the leaves as fodder.

WILLOW *(Salix alba)* or the Euphrates poplar *(Populus euphratica)* is the Heb *ʿărābāh* (Lev 23:40; Job 40:22; Ps 137:2; Isa 15:7; see Post 1884: 741, 744; Loew 1928, III: 322; Moldenke 1952: 216). Both trees grow along streams. Willow boughs are among the 4 species for the Feast of Sukkoth. This deciduous tree has oblong leaves and flowers arranged in catkins, male and female on separate trees. The minute greenish flowers are followed by many-seeded fruits. The wood was used for simple objects like troughs, sieves, tool handles, and small boats. The bark was an ingredient in tanning while the twigs were woven into baskets and twine. The galls on the leaves contained a dye used on veils, while the seeds were fabricated into an inferior grade of lamp wick. All parts of the plant found medicinal uses as well.

FRUIT TREES, NUT TREES, AND SHRUBS

ALMOND *(Amygdalus communis)* is the Heb *šāqēd* or *lŭz* (Gen 43:11; Eccl 12:5; Jer 1:11; see Loew 1928, III: 142; Moldenke 1952: 35; Zohary 1982: 66); the tree is native to the Mediterranean. Almonds are among the first trees to flower in spring. The Heb word means "diligence," and the flowers symbolize the awakening of spring. The *šāqēd* is mentioned 6 times in the Bible, while *lŭz* is sometimes a place name (Gen 28:19). The tree has been found in the Negeb and throughout the land. Almonds grow to 20 feet. Oblong leaves appear after the white or pink flowers bloom. The flower of the almond or of the sage-plant may have been used for the design of the candelabrum of the desert tabernacle. Almonds produce fruit after 5 or 6 years. The nut has been used for food and oil for flavoring. Iron Age remains of this specimen have been found at Bethlehem and at Tell el-Ful (Borowski 1987: 132). The gum found medicinal uses as a skin emollient and a mild laxative. The extract almond-milk was used to lower temperatures. The burned almond shell may have been used for kohl soot, so popular as Egyptian eye paint.

APPLE: see Apricot and Quince.

APRICOT *(Prunus armeniaca)* or the quince *(Cydonia oblanga)* have been identified as the Heb *ṭapuāḥ* (Joel 1:12; Prov 25:11; Cant 2:3ff.; see Loew 1928, III: 155; Moldenke 1952: 184). It is sometimes associated with the "apple" tree, but while domesticated apple trees are now found in Israel, wild specimens are not believed to have grown there in biblical times since it is a tree native to the N hemisphere. Apricots, however, grow in warmer climes and are native to China; they have long been abundant in Israel and most probably were introduced in biblical times. Apricots in Cyprus are still known

as "golden apples." The tree grows to 30 feet with a reddish bark. Pink flowers appear before its heart-shaped leaves. The fruit were consumed as food, fresh or dried, and also produced a beverage. The seed, if chewed for extended periods, is poisonous.

DATE PALM *(Phoenix dactylifera)* is among the very oldest cultivated fruit trees of the ANE, and is associated with Heb *tāmār* (Exod 15:27; Num 33:9; Judg 1:16; Ps 92:13; Cant 7:8; see Post 1883: 813; Loew 1928, II: 306; Moldenke 1952: 169; Zohary 1982: 60). Jericho was known as the "city of palm trees" (2 Chr 28:15), and some women bore the name of this tree, Tamar (Gen 38:6; 2 Sam 13:1; 14:27). Palm leaves are among the 4 species for the Feast of Sukkōth (Lev 23:40). This tall, feather palm can grow to 100 feet, and has large leaves. The white, fragrant flowers are followed by the date fruit. Plants are unisexual. The fruit onset is done by artificial pollination—branches with male flowers are cut off and fixed among bunches of female flowers. Only 1 male tree need be planted for the pollination of 50–100 females. Palms begin to bear when 35 years old and average about 125 pounds of fruit per tree annually. Palms are symbolic of peace and plenty. Iron Age remains have been found at Beersheba and Arad (Borowski 1987: 128). Every part of this tree found a use. The trunk was used for construction, fences, rafts, and fuel. The leaf provided a motif for ornaments of King Solomon's temple (1 Kgs 6:32), and later became an emblem of victory on coins. The leaflets were woven into mats, baskets, untensils, sails, and roof thatch. The fiber was fabricated into rope. Fibers from the base of the leaves were used by the Egyptians for wigs, ropes, matting, baskets, bags, brushes, and brooms. When the fiber was mixed with camel hair it was woven into cloth for caravan tents. The leafless midrib sticks were manufactured into cages, chairs, doors, and palm-stick torches. The fruit was a basic food consumed both fresh or dried, made into honey (over 60 percent sugar content). Many scholars think that the honey mentioned 49 times in the Bible refers to date honey—not the honey derived from bees (which is mentioned only 4 times). Some Arab tribes have subsisted for months on dates and milk alone. The fermented fruit produces alcohol and vinegar. The unripe green date produces a dye, and is a good substance for tanning. The sap of the crown contains a syrup used for wine and as a sweetener. The kernel has long provided animal fodder (especially for toothless camels). Oil may be pressed from it, but the kernel has also been used ornamentally in necklaces.

CITRON *(Citrus medica)* is not native to Palestine, but is believed to be the first of its genus to grow there. By 200 B.C.E. it was used as the "goodly tree," the *ʾetrôg* (Lev 23:40; see Loew 1928, III: 278; Moldenke 1952: 290; Zohary 1982: 123). This is a small evergreen tree with short spines and leathery leaves. The flowers are white inside and purplish outside. The yellow, thick-skinned fruit is fragrant and has a bitter taste. The fruit is one of the 4 species at Feast of Sukkoth: for this purpose, it must have its pistil intact to be kosher. The oil, distilled from the peel, is used as snakebite antidote.

FIG *(Ficus carica)* is the first fruit tree mentioned in the Bible (Gen 3:7) and refers to Heb *tĕʾēnāh* (Num 13:23; Judg 9:10; 2 Kgs 18:31; Prov 27:18; Matt 21:1; Mark 11:13; Rev 6:13; see Post 1884: 729; Loew 1928, I: 224; Moldenke 1952: 104; Zohary 1982: 58). Figs are among the 7 species of Israel (Deut 8:8). They have been found among tomb offerings in dynastic Egypt. In biblical imagery the fig tree symbolizes prosperity and peace (Mic 4:4). The palmately lobed leaves with wavy margins often appear after the fruit develops. The flowers are borne inside the fruit. Pollination is by the female fig wasp, which crawls through a small hole to reach the flowers. The purple, greenish-yellow fruit ripens in 80 to 100 days. Iron Age remains have been found at Beth-shemesh and appear in the Nineveh relief of the siege of Lachish (Borowski 1987: 116). The fruit, fresh or dried, could be made into cakes and wine, and the Assyrians used it as a sweetener. The leaves were woven into baskets, dishes, and umbrellas. Medicinally, the fruit proved an effective laxative and tonic, as well as a poultice. The fruit, pounded into a pulp, was used by King Hezekiah to cure a malignant swelling.

MULBERRY *(Morus nigra)* is a native of Persia and was later cultivated in Israel. The corresponding Gk term *sukaminos* is found only twice (1 Macc 6:34; Luke 17:6; see Moldenke 1952: 108; Zohary 1982: 71). It is of medium size with deciduous, heart-shaped leaves that are stiff and rough. Male catkins and female flower clusters appear before the leaves form. The fruit is black and contains sweet juice; its fruit was eaten fresh or dried and was used to make wine. The root and bark were used as a laxative. The fruit

was used to provoke elephants to fight in 1 Maccabees; this may have been the unripe fruit, which can cause hallucinations, nervous stimulation, and upset stomach. The bark provided tannin.

MYRTLE *(Myrtus communis)* is the *hădas* (Isa 41:19; 55:13; Zech 1:8ff.; see Post 1884: 318; Loew 1928, II: 257; Moldenke 1952: 143; Zohary 1952: 119) which grows on hillsides in Israel. Myrtle is symbolic of peace and divine blessing. The Babylonian term for this plant was also used to designate brides. It has traditionally been used for the Jewish festival of Sukkōth (Neh 8:11). An evergreen bush, it grows to a height of 6 to 8 feet with shiny green leaves. The white flower is followed by a blue-black berry. The wood has been used for walking sticks, furniture, and tool handles. The leaf provided spice, perfume, and bridal wreaths for virgins. The berry was used as an aromatic food flavoring, a wine-like drink, and as a breath sweetener. The oil from its leaf was a carminative.

OLIVE *(Olea Europeae)* has been cultivated for more than 6,000 years. The Heb *zayiṭ* is mentioned more than 50 times in the Bible (Gen 8:11; Deut 28:40; Judg 15:5; 2 Sam 15:30; Ps 128:3; Job 15:33; Rom 11:17; Rev 11:4; see Post 1884: 519; Loew 1928, II: 287; Moldenke 1952: 157; Zohary 1982: 56). Olive oil is symbolic of goodness and purity, and the tree is a symbol of peace and happiness (Hos 14:6). Many references to gardens in Scripture (including Gethsemane) seem to refer to olive groves (Exod 23:11; Josh 24:13; 1 Sam 8:14; Neh 5:11). Trees can continue to bear even after the gnarled trunk is hollow. This slow-growing tree can grow to an age of 1,000 years or more. It is difficult to kill because when the tree is cut down, new sprouts appear from the roots around the old trunk. The willow-like, grey-green leaves are followed by fragrant white flowers. The fruit is reddish-purple to black and has a bitter taste. Olives must be cultivated for 7 years before fruiting, and they reach maturity after 15 to 20 years. A full-sized tree produces 1/2 ton annually. Remains have been found in Israel from the Chalcolithic period onward (Borowski 1987: 117). The wood, which is richly grained, has been used in construction, for ornaments, and household utensils. The oil had sacred uses for anointing and sacrifices and was also utilized for cooking and lighting and as a leather softener. It could serve to ripen sycamore figs. The leaves were fabricated into wreaths and writing material. The bark found medicinal use as a vulnerary and the leaf as an astringent and febrifuge. The oil served as a laxative, and when combined with alcohol it functioned as a skin lubricant. It was also prescribed as an antidote for poison and a vermifuge.

PISTACHIO: see Terebinth.

POMEGRANATE *(Punica granatum)* has been cultivated in Egypt and Palestine from time immemorial. The corresponding Heb *rimôn* is mentioned frequently (Exod 28:33; 1 Sam 14:2; Joel 1:12; Hag 2:19; Cant 4:3; 2 Chron 3:16; see Post 1884: 319; Loew 1928, III: 80; Moldenke 1952: 189), and sometimes served as a proper name for places (Josh 15:32). The pomegranate was among the fruit brought back by spies sent out by Moses (Num 13:23). This is a deciduous shrub with glossy green leaves whose flowers are orange-red. The fruit is red, hard, thick-skinned, crowned with a persistent calyx. It contains many seeds. The flowers, bark, and rind produced a red dye particularly effective with leather. The calyx of the fruit later served as a pattern for the crowns of the Torah, called *rimônîm.* The fruit was used as a motif for the capitals of Solomon's temple (1 Kgs 7:18; Jer 52:22). The hems of the high priest's robes were embroidered with pomegranate designs (Exod 28:33). Iron Age remains have been found at Tell Qiri and Tell Halif (Borowski 1987: 117). The juice was often mingled with wine. The seeds were a symbol of fertility throughout the ANE. The seeds were prescribed medicinally against tapeworm; while the rind served as an astringent, for skin problems and diarrhea. Large doses of rind may, however, cause cramps and vomiting.

QUINCE *(Cydonia oblanga)* was first cultivated in N Persia but soon was found in Israel. It is a candidate for the Heb *ṭapuāḥ* (Joel 1:12; Prov 25:11; Cant 2:3ff.; see Loew 1928, III: 240; see also Apricot). The RSV prefers the translation "apple." The tree reaches a height of 20 feet; it produces rounded leaves, woolly underneath; its flowers are pink, orange, or white. The skin of the pear-shaped acid fruit is covered with fuzz. Its fragrance was highly regarded by the ancients; the fruit served as food and medicinally as an ingredient for skin lotions as well as a vermifuge.

RUSSIAN OLIVE *(Elaeagnus angustifolia)* is sometimes called "wild olive"; it has no botanical relationship to the true olive and is the Heb *ʿēṣ śemen* (1 Kgs 6:23; Isa 41:19; Mic 6:7; see Tristram 1884:

404; Loew 1928, I: 590; Moldenke 1952: 97). This little tree may reach 20 feet. It has small deciduous leaves, greyish-green above and silvery and scaly beneath; the greenish-yellow flowers appear in clusters in the leaf axils. The fruit is bitter, but was used for food and fodder. The wood, hard and fine-grained, was used for carved images. The oil is inferior.

SYCAMORE FIG *(Ficus sycomorus)* identified as the Heb *śiqmāh* (1 Chr 27:28; 2 Chr 9:27; Ps 78:47; Isa 9:10; see Post 1884: 730; Loew 1928, I: 274; Moldenke 1952: 106; Zohary 1982: 68) is similar to the fig tree (*Ficus carica;* see above), but reaches a greater height, up to 60 feet (Luke 19:4). The leaves are evergreen and the tree fruits several times annually; the fruit is inferior in taste and sweetness to the true fig. Amos knew the importance of pricking each fruit at the right stage in its development to make it edible (Amos 7:14). It is pollinated much like the true fig. The wood is light and porous, and was used by Solomon (1 Kgs 10:27; 2 Chr 1:15); it is also found in Egyptian sarcophaguses, mummy coffins, furniture, boxes, and doors. The fruit served as food for the poor. The leaf was used as a dressing for wounds; the fruit was a vermifuge and laxative.

TEREBINTH or PISTACHIO *(Pistacia lentiscus, atlantica)* are among several species of terebinth found in Israel (Post 1883: 206; Loew 1928, I: 190; Moldenke 1952: 177; see also Oak). The tree is not named in the Bible; it is the later Heb *ʾēlāh.* The nut is the Heb *bŏtnim* (Gen 43:11). The pistachio nut tree originated in Central Asia and was introduced to the Holy Land later; it is a deciduous tree up to 30 feet in height. The leaves are compound and are composed of 3 to 5 lanceolate and elliptical leaflets; there are inconspicuous flowers. The small globular stone fruits have an acrid odor of turpentine. Remains of the nut have been found in Iron Age strata at Beersheba and Arad (Borowski 1987: 133). The nut was usually roasted; the galls were an ingredient in dyes and were used for tanning; the gum was prescribed as ointments.

WALNUT *(Juglans regia)* is native to W Asia and has spread to many countries. It is the Heb *ʾĕgôz* (Cant 6:11; see Loew 1928, II: 29; Moldenke 1952: 119; Zohary 1982: 64), though the RSV does not identify it specifically. This is a wide-branched tree with brownish-grey bark. The leaves are coppery brown as they unfold, and are made up of 9 oval leaflets; the flowers appear before the leaves. The male flowers are catkins, the female flowers terminal spikes. The plum-shaped fruit is yellowish-green and contains the nut. The wood found use in construction, shipbuilding, and furniture; the leaves in tanning; the nuts as food. Remains have been found from the Chalcolithic period in Israel (Borowski 1987: 133). The oil was used as a wood polish and for lighting and cooking. The green husk contains a yellow dye; it was utilized cosmetically and medicinally as a laxative. The leaf was prescribed as an astringent.

GRAINS AND LEGUMES

BARLEY *(Hordeum vulgare)* has been grown in Egypt since 5000 B.C.E. The Heb *šaʿărāh* was important in Israel throughout the biblical period (Exod 9:31; Lev 27:16; Deut 8:8; Ruth 1:2; 2 Kgs 4:42; John 6:9; Rev 6:6; see Loew 1928, I: 707; Dalman 1932: 250; Moldenke 1952: 111; Zohary 1982: 76). The grain played a major economic role and was included in the tribute exacted from the Ammonites (2 Chr 27:5). Samples have been found in an Iron I stratum at Afula and in Iron II stratum at Khirbet Abu Tabaq among other sites (Borowski 1987: 92). It is able to survive heat and drought better than any other cereal, and it ripens in a shorter season than wheat. Barley grows to a height of 2 to 3 feet; the whiskery ears nod as they mature. The shallow roots develop faster than wheat, and the leaves are wider than those of many other grains. It was used only once in the sacrificial rituals (Num 5:15). The grain was rarely used alone in bread, but was mixed with millet, spelt, or pea meal. Malt syrup for beer was derived from it; this was particularly important in ancient Egypt where beer was an important drink. The stalk was used as fodder. Necklaces made from barley seed have been found on mummies. The seed was also used medicinally; barley water was prescribed as a demulcent, cooked barley as a poultice. Among numerous other Egyptian medicinal uses was that of a pregnancy test.

BEAN *(Vicia faba)* was mentioned only twice, as Heb *pôl* (2 Sam 17:28; Ezek 4:9; see Loew 1928, II: 481; Dalman 1932, II: 265; Moldenke 1952: 101; Zohary 1982: 84). Carbonized seeds have been found in the Iron I stratum at Afula and from a later period at Lachish (Borowski 1987: 95). It is among the first vegetables harvested in spring. This erect annual grows to 5 feet. The hollow stem is branched mainly in

the upper part. The ovalish leaves are divided into 2 to 6 pairs. The small, white, sweet pea-like flowers are marked with a purple spot, followed by large green pods. Beans were consumed fresh, boiled, dried, or roasted. They were mixed with wheat for flour and were also used as a meat extender. In Egypt they were made into cakes and used both as human food and as animal fodder (the stems were camel fodder).

CAROB *(Ceratonia siliqua)* is found in the coastal plains and the Galilee; it is common throughout the Mediterranean basin. It is often called "St. John's Bread" because in the wilderness John the Baptist ate the pods of this tree. It is the *keration* of the NT (Luke 15:16; see Loew 1928, II: 393; Moldenke 1952: 72; Zohary 1982: 63). Carob beans have been found at the Cave of the Pool in the Roman level (Borowski 1987: 131). The pods were primarily used as animal fodder, but in times of famine humans could also eat them; when ripe the pods are sweet. The seeds of the carob were used as a standard weight and are the source of the term "carat." The carob is an evergreen with rounded top which reaches 30 feet. The small flowers, either yellow or red, are found on the previous year's branches. Pods ripen in spring, and are 6 to 10 inches long and bear small pea-like seeds.

CHICK-PEA *(Cicer arietinum).* The Heb *ḥāmiṣ* (Isa 30:24), which is similar to the Arabic *ḥumus,* may refer to this plant (Loew 1928, II: 411; Dalman 1932, II: 271; Zohary 1982: 83). The RSV translates this simply as "provender." It has been found as early as Pre-Pottery Neolithic B Jericho (Borowski 1987: 96). The plant is a 2-foot-high annual with small leaves and white or reddish flowers followed by a two-seed pod. The peas are consumed fresh, dried, boiled, and roasted or prepared as flour. The plant provides maximum nourishment for a minimum of expenditure with yields up to 1,000 pounds per acre. Humus, a popular dish in the modern Middle East, is made from the peas. The whole plant was used as fodder.

EMMER *(Triticum dicoccum)* is the Heb *kūsêmêt,* for which the RSV prefers "spelt" (Exod 9:32; Isa 28:25; Ezek 4:9; see Loew 1928, I: 767; Moldenke 1952: 231; Dalman 1932, II: 246). It originated in the Israel-Jordan region and has been found in the Chalcolithic site of Horvat Beter and later (Borowski 1987: 91). It was used as porridge and for fodder.

LENTIL *(Lens esculenta, culinaris)* is associated with Heb *ʿădāšāh,* Jacob's pottage (Gen 25:34). This plant grew in fields (2 Sam 17:28; 23:11; see Dalman 1932, II: 264; Moldenke 1952: 128; Zohary 1982: 82) and has been found in Neolithic Jericho (Borowski 1987: 95), in Sumer, and in 12th Dynasty tombs in Egypt. This is a multi-branched annual growing to 18 inches high. The leaves are pinnate; its small white flowers are succeeded by short, flattened pods, each containing 1 or 2 green, greenish-brown, or reddish seeds. Flour for bread and pottage, as well as animal fodder, came from this plant. Medicinally, the seed provided a remedy for constipation, and a hot poultice was prepared for ulcers.

MILLET *(Panicum miliaceum)* is the Heb *dōḥan* (see also Sorghum); it is mentioned only once (Ezek 4:9; see Loew 1928, I: 743; Dalman 1932: II: 260; Moldenke 1952: 166; Zohary 1982: 77) to symbolize the difficult times that were approaching. This inferior grain was used mainly for fodder. It is an annual grass which reaches a height of 2 feet; the leaves are flat and hairy. The flowers and seeds grow in a compound, are branched and have nodding panicles. The Latin name *miliaceum* was an allusion by Linnaeus to its "thousands of seeds," from which we have the word "millimeter." Porridge and bread, as well as an alcoholic beverage, was prepared from this plant.

SORGHUM, GREAT MILLET *(Sorghum bicolor)* is another possibility for the Heb *dōḥan* (Ezek 4:9; see Loew 1928, I: 740; Dalman 1932, II: 258; Zohary 1982: 77). The RSV prefers the translation "millet." It has been cultivated since 2000 B.C.E., though no samples have been found in ancient Israel. The plant grows to 9 feet. The leaves are flat and the panicles are many-branched, producing globular, whitish grain used as flour, syrup, and to prepare alcoholic beverages. Medicinally it was used as a diuretic and as a demulcent.

SPELT: see Emmer.

WHEAT *(Triticum durum)* was a major field crop in Israel throughout the biblical period, associated with Heb *ḥittāh* (Gen 12:10; Job 5:26; Ezek 27:17; Matt 18:6; Mark 2:23; 1 Cor 9:9; Rev 18:13; see Loew 1928, I: 776; Dalman 1932, II: 243; Moldenke 1952: 2312; Zohary 1982: 74). Remains of wheat have been found at Afula in Iron I and at Tell Qiri in Iron II, as well as many other sites (Borowski 1987: 90). Wheat is one of the 7 species of the Holy Land (Deut 8:8). It was used in the sacrificial ritual (1 Chr

21:23), in export trade (1 Kgs 5:11), and was consumed in many different ways (Exod 29:2; Lev 23:14; 2 Kgs 4:42; Ezek 4:9). The Gezer Calendar speaks of its harvest in the 6th agricultural season, which fell in May. The first harvest was a temple offering at Pentecost (Exod 34:22). This annual grass grows to a height of 4 feet. The lower leaves are hairy, usually with 2 ears. The numerous varieties are divided into (a) spring and winter wheat; (b) hard and soft wheat; (c) red and white wheat; and (d) bearded and non-bearded varieties. In biblical times the parched grain was consumed or used as a meal offering; flour for bread as well as starch and beer were prepared from it. The stems were used as fodder, animal bedding, compost, mulch, and fertilizer. They were also woven into hats, baskets, chair seats, and bee-hives. The starch was used medicinally as an emollient.

VEGETABLES AND FRUITS

CUCUMBER: see Muskmelon.

ENDIVE *(Cichorium endivia)* is a candidate for Heb *mărôr* (Exod 12:8; Num 9:11; see Loew 1928, I: 415; Moldenke 1952: 74; Zohary 1982: 100; Dalman 1932, II: 312). This may be an annual or a perennial plant, which produces a dense rosette of leaves. Flower stems reach a height of 3 feet with blue flowers. The leaves were used in a culinary fashion.

GARLIC *(Allium sativum)* is the Heb *śûm* (Num 11:5, 6; see Loew 1928, II: 125; Dalman 1932, II: 276–77; Moldenke 1952: 32; Zohary 1982: 80); it has been grown in Egypt and the Near East since earliest times; remains have been found in the Cave of the Pool (Borowski 1987: 139). This is a hardy perennial with strap-like leaves to 2 feet with tiny sterile, pink flowers. The single bulb is composed of a number of bulblets, called cloves, which are wrapped together in a pinkish-white, papery skin. Garlic was consumed fresh, dried, or powdered, and was fed to the pyramid workers of ancient Egypt. The juice was prescribed to treat intestinal infections, respiratory ailments, snakebites, melancholy, and hypochondria.

GRAPES: see Vine below.

LEEKS *(Allium porrum),* the Heb *ḥāṣîr* (Num 11:5, 6; see Loew 1928, II: 131; Dalman 1932, II: 277; Moldenke 1952: 34; Zohary 1982: 80) may be the true leek or fenugreek *(Trigonella foenum-graecum).* Fenugreek seeds have been found at Tell Halaf in Egypt and an Iron Age sample was found at Lachish in Israel (Borowski 1987: 138). It was one of the foods the Israelites craved in the desert. The Heb *ḥāṣîr* literally means "herbs." It has always been the food of the poor in the Near East and was regarded as the food of humility. Leeks, unlike onions, do not have a bulbous base. The leaves are broad and flat. Leeks are biennial whose white flower appears in the second year in a ball-like cluster. The greens possess the same properties as garlic, but to a lesser degree. The leaf has been used medicinally as a disinfectant.

MUSKMELON *(Cucumis melo)* has been identified as the Heb *qiśû᾽îm* (Num 11:5; Isa 1:8; see Loew 1928, I: 535; Moldenke 1952: 80; Zohary 1982: 86); the wild species was introduced from E Africa (Zohary). It includes forms with long and narrow fruits, resembling the garden cucumber. The cucumber *(C. sativus),* which is the translation of the RSV, is native to S Asia. Muskmelon is an annual with hairy, kidney-shaped leaves. The flowers are yellow. The yellow or green fruit varies in size and shape. Aside from the fruit, the leaves can be eaten raw or steamed. The seeds provide an edible oil. Medicinally it was prescribed as a demulcent, diuretic, and emetic.

ONION *(Allium cepa)* is called the Egyptian onion; it is the Heb *bāṣāl* (Num 11:5; see Loew 1928, II: 125; Dalman 1932, II: 276; Moldenke 1952: 32; Zohary 1982: 80). It is among the more than 500 species of onions, some edible and some ornamental. Onions are represented in many Egyptian tomb paintings, and were found in breasts of mummies, while onion peels were found on ears and eyes of mummies. Onions were considered a necessity for the workers building pyramids. Remains have been found in the caves of Nahal Mishmar in Israel (Borowski 1987: 138). This is a perennial herb whose large bulbs produce hollow leaves, terminating in umbels of pink or white flowers. Aside from its use as a food, the skin of the bulb produced a dye. It was prescribed medicinally as a laxative, vermicide, and antiseptic.

VINE *(Vitis vinifera)* was the first cultivated plant mentioned in the Bible (Gen 9:20). The Heb *gepen* or the large number of other terms connected with its cultivation and use appear hundreds of times (Gen 40:9; Num 13:23; Deut 8:8; Judg 9:12; Jer 2:21; Ezek 15:2; Cant 6:11; Ps 78:47; Matt 9:17; Luke 1:15; John 2:3; Rev 14:8; see Loew 1928, I: 48; Dalman 1932, IV: 291; Moldenke 1952: 239; Zohary 1982:

54). Remains from the 3d millennium have been found at Jericho and Arad (Borowski). The cultivation of vine was mentioned in the Gezer Calendar. It was used as a symbol for Israel (Jer 2:21; Ezek 15:6; Hos 10:1) and of peace and prosperity (1 Kgs 4:25; Mic 4:4). The vine is a fast-growing climbing shrub with long tendrils. The lobed leaves are deciduous. The minute, greenish, clustered flowers are followed by berries. The fruit, grapes, may be consumed fresh or dried into raisins and currants. Its juice may be produced into wine or vinegar. The leaves are edible and the remainder of the plant has been used for fodder and tannin. Wine was used as an anaesthetic and to reduce the anguish of capital punishment.

WATERMELONS *(Citrullus vulgaris)* were grown in Egypt and Israel. This is the Heb *ʾābattîaḥ* (Num 11:5; see Loew 1928, I: 550; Zohary 1982: 85), which the Israelites longed for in the desert. The plant is 90 percent water, and so it is invaluable in the desert. The opened plant was also used for plant propagation. This tropical trailer plant with hairy, deeply lobed leaves produces a yellow flower about 1 inch across. The fruit is often ellipsoidal, 10 inches or more in diameter, with white, yellow, or red flesh. The fruit is eaten raw; the seeds are eaten either raw or roasted. Oil can be pressed from the seeds. Medicinally the fruit was used as an antiseptic, laxative, and vermicidal.

SPICES, INCENSE, DRUGS, AND CONDIMENTS

BALM *(Balanites aegyptiaca)* is the Heb *ṣôrî* (Gen 37:25; Jer 8:22; 46:11; 51:8; see Moldenke 1952: 55) which is native to Egypt. It grew on the hot plains near Jericho and the Dead Sea. The RSV sometimes translates *ṣôrî* as "spices" (1 Kgs 10:10; 2 Kgs 20:13; Isa 39:2) and at other times as "balm" (Ezek 27:17). The plant grows to a height of 12 feet with woolly leaves and thorny branches. The oil of the fruit was used medicinally. Moldenke also suggested identifying the *Pistacia lentiscus* with the *ṣ̌rî* (see Terebinth). The balm tree reaches a height of 3 to 10 feet with leathery leaves and a gummy sap. The fruit was fermented into an alcoholic beverage. It was used as a breath sweetener; medicinally it was prescribed as a stomachic and astringent.

BAY LAUREL *(Laurus nobilis)* or Sweet Bay is the Heb *ʾezraḥ* (Ps 37:35; see Post 1883: 708; Loew 1928, II: 119; Moldenke 1952: 122; Zohary 1982: 120), which the RSV translates "cedar." This tree grows on rocky hillsides. The Romans named it from the word *laudare,* "to praise," for it was thought to be worthy of the highest honors. This is a slow-growing evergreen tree which reaches a height of 40 feet. The leaves are leathery, oblong with wavy edges. Male and female yellow flowers are borne on separate trees. It fruits in the fall and produces a red-blue berry which contains an oily seed. The wood was used for light carpentry. The leaves were used to form wreaths; when dried they became a spice. A perfume was extracted from the fruit. The berry served as a stomachic, astringent, and carminative.

BURNET, THORNY *(Sarcopoterium spinosum)* is the Heb *sîrîm* (Hos 2:6; Eccl 7:6; see Zohary 1982: 156), which the RSV translates as "thorns." This 1-foot-high shrub is densely branched and produces tiny flowers and a small fruit. The leaflets of the plant have been used as a pot-herb.

CAPER BUSH *(Capparis spinosa)* is the *ʾăbiyônāh* (Eccl 12:5; see Post 1883: 106; Loew 1928, I: 322; Zohary 1982: 98), which the RSV translates as "desire." This is a spiny shrub with thick leaves which spreads over rocks much like ivy. The flowers are white or pinkish, open in the evening and wilted by morning. The many-seeded berry hangs on long stalks. The unopened flower bud is pickled as capers; the young fruit were considered an aphrodisiac.

CASSIA *(Cinnamonum cassia)* is the Heb *qiddāh* (Exod 30:24; Ezek 27:19; Ps 45:8; see Loew 1928, II: 113; Moldenke 1952: 75; Zohary 1982: 203) which was imported via the ancient caravan routes; it was considered inferior to true cinnamon. This is a medium-sized tropical tree with leathery leaves native to India and Sri Lanka. The inner bark is used for the spice; incisions are made in the bark, which is then dried. The bark serves as a spice and incense. Sometimes it is used to adulterate pure cinnamon.

CASTOR OIL *(Ricinus communis)* may be associated with the *qîqāy̆n,* the plant which shaded Jonah (4:6ff.; see Post 1883: 727; Dalman 1932, II: 297; Moldenke 1952: 203; Zohary 1982: 193), often translated as "gourd." Seeds have been found in a 6,000-year-old Egyptian tomb. It grows wild in Israel. This tropical shrub may reach 15 feet or more. The hollow, green, red, or violet stems become woody with age. Palmate leaves have veins usually the color of the stem. The male yellow and female pink flowers are arranged in racemes and lack petals. The fruit is a 3-celled capsule covered with prickles.

Each capsule contains 3 smooth, mottled, poisonous seeds. The seed capsules are poisonous; the oil is pressed from the seed. Small seeds are richer in oil than large seeds. The Egyptians used the oil for lighting; they also used it as poultices for headaches and blended it with some fat to stimulate luxurious hair growth and as a base for unguents. It was also utilized as a cream for opthalmic preparations, as an antifungal, and as a laxative.

CHICORY *(Cichorium intybus)* is a candidate for the Heb *mărôr* (Exod 12:8; Num 9:11; see Loew 1928, I: 415; Dalman 1932, II: 312; Moldenke 1952: 74; Zohary 1982: 100) of Passover. This is a perennial which reaches a height of 3 feet with tough stems and long, lobed, basal leaves. The bright blue flowers close at noon. After ripening, the heads close and conceal the fruit. Rain forces the heads to open and to disperse the seeds. The leaf is used as a pot-herb and for fodder; the root is an ingredient in seasoning. The leaves have also been used as a sedative and laxative, while the dried root has been used as a diuretic and tonic.

CINNAMON *(Cinnamonum zeylanicum)* is the Heb *kināmôn* (Exod 30:23; Prov 7:17; Cant 4:14; Rev 18:13; see Loew 1928, II: 116; Moldenke 1952: 76; Zohary 1982: 202). The plant was imported; it is native to Sri Lanka where the evergreen tree may reach 40 feet. Its aromatic green leaves are 5 to 7 inches long. The flowers are white and the fruit is a dark purple berry. Cinnamon is obtained from the inner bark in the shape of quills. The bark provides oil, incense, perfume, and food flavoring. The leaf is used for wreaths.

COLCHICUM *(Colchicum autumnale)* is the Heb *hăbaṣelet* (Isa 35:1; Cant 2:1; see Post 1883: 808; Loew 1928, II: 156) and is mentioned in the Ebers Papyrus of 1550 B.C. as a drug plant. The RSV translates this as "crocus." This poisonous cormus plant has dark-green leaves produced in the spring, followed by purple flowers in the fall. The fruit is a capsule with polished, whitish seeds. The cormus and seed were used as a sedative and cathartic.

CORIANDER *(Coriandrum sativum)* is the Heb *gād;* the seed was mentioned in the desert (Exod 16:31; Num 11:7; see Tristram 1884: 400; Loew 1928, III: 441; Moldenke 1952: 86; Zohary 1982: 92). The plant is an annual 1 to 3 feet in height with leaves deeply incised and umbels of pale mauve flowers. All parts of the plant have a strong odor. The seeds are used for flavoring food and beverages, and also as an ingredient in perfumes. Medicinally the seeds were prescribed as a stimulant and carminative. If eaten in excess, they had the harmful effect of a narcotic.

CUMIN *(Cuminum cyminum)* is the Heb *kamôn,* whose seeds (Isa 28:25, 27; Matt 23:23; see Loew 1928, III: 435; Moldenke 1952: 89; Zohary 1982: 88) have been found in an Egyptian grave of the 18th Dynasty, but not in archaeological excavations in Israel. This is a powerful aromatic, similar to caraway seed but larger, with a disagreeable taste. This annual herb reaches a height of 2 feet. The leaves are divided into a few thread-like segments. Small, white flowers are followed by the small oblong, aromatic fruit. The seeds are mixed with flour in bread; the oil was used medicinally as a disinfectant.

CUMIN, BLACK *(Nigella sativa)* is the Heb *keṣāh* (Isa 28:25, 27; see Moldenke 1952: 152; Zohary 1982: 91); in some versions it has been translated "fitches," and the RSV prefers "dill." Fragments have been found at Tell Goren in Stratum V from the end of the Israelite period (Borowski 1987: 97). This is an annual which grows to a height of 1 foot with fennel-like leaves and white or blue buttercup-like flowers. The fruit is a 5-celled pod with many black, pungent seeds. It is an ingredient for bread and cakes. Medicinally it was used as a vermifuge.

DANDELION *(Taraxacum officinale)* is a candidate for the Heb *marôr* of Passover (Exod 12:8; Num 9:11; see Loew 1928, I: 434; Moldenke 1952: 74). This common perennial has toothed oblong leaves. The yellow flowers open in the sun. The leaves are used as food and fodder, and also medicinally.

DILL *(Anethum graveolons)* is the Gk *anethon* which has long been widely grown as a flavoring herb (Matt 23:23; see Loew 1928, III: 466; Dalman 1932, II: 290; Moldenke 1952: 46; Zohary 1982: 88; see also Cumin, Black). This hardy, low annual produces small yellow flowers and aromatic seed. The seed was used as food flavoring, an aromatic, and a breath sweetener; medicinally, it was prescribed as a carminative.

EAGLEWOOD *(Aquilaria agallocha)* is the Heb *ʾāhāl* (Ps 45:8; Prov 7:17; Cant 4:14; see Loew 1928, III: 411; Moldenke 1952: 47; Zohary 1982: 204; see also Aloe). The tree is native to N India and grows to a height of 120 feet with a trunk 10 feet in circumference. The tree secretes an aromatic resin when old. It was imported to Israel and was used for incense, perfume, embalming, and fumigation.

FRANKINCENSE *(Boswellia sacra)* is the Heb *lĕbônāh,* an important ingredient for incense (Exod 30:34; Lev 2:1; Num 5:15; 1 Chr 9:20; Cant 3:6; Matt 2:11; Rev 18:13; see Loew 1928, I: 312; Moldenke 1952: 56; Zohary 1982: 197). It was imported by caravan from Arabia and E Africa; it did not grow in Israel. Various species of this plant were used. This is a medium-sized shrub with small white or green flowers. The aromatic gum is obtained through incisions from the stem. The gum was used for incense, perfume, holy ointment, and as a fumigant.

GARDEN ROCKET *(Eruca sativa)* is the *ʾôrôt* which was collected as a pot-herb by bedouins and that is the context for *ʾōrōt* (2 Kgs 4:39f.; see Loew 1928, I: 491; Dalman 1932, II: 296; Zohary 1982: 101). It is found in Upper Galilee, the Jordan Valley, and the Dead Sea area. The RSV translates it "herbs." The plant was also called vesper flower, due to its fragrance at night. This is an annual with lower leaves divided into lobes. The flowers are creamy-yellow or white. The seeds were used as a substitute for pepper. The leaf is edible.

HYSSOP, SYRIAN *(Origanum syriacum, aegyptiacum)* is the most likely identification for *ʾēzôb* (Lev 14:6; Num 19:6; 1 Kgs 4:33; Heb 9:19; see Post 1883: 615; Loew 1928, II: 83; Moldenke 1952: 160; Zohary 1982: 96) which was tied into bunches and was used as a brush to sprinkle blood on the doorposts in Egypt (Exod 12:21–22). The Samaritans have continued to use the Syrian hyssop in their Passover ritual. The plant, also known as marjoram, is found in dry places, growing among rocks. Its hairy leaves can absorb liquids. It has no relationship to the *hyssop officinalis* of Europe. This is a strong, multi-stemmed shrub with ovate, hairy, gray leaves. The small white flowers are grouped in spikes. The fruit is a small nutlet. The leaves were used as a spice and medicinally as a tonic, carminative, and digestive aid. It was used for the purification of lepers.

LETTUCE *(Lactuca sativa* var. *longifolia)* is a candidate for the Heb *marôr* of Passover (Exod 12:8; Num 9:11; see Post 1883: 486; Loew 1928, I: 424; Dalman 1932, II: 284; Moldenke 1952: 74). It is a plant picked before it is fully grown. When allowed to mature, lettuce develops a tall stem with alternate leaves and pannicled heads of yellow flowers. The leaf was used as a food and the seed for oil. Lettuce was a symbol of fertility in ancient Egypt and was used for impotency.

MADDER *(Rubia tinctorum)* is only mentioned as the proper name, Puah (Judg 10:1; see Post 1883: 379; Loew 1928, III: 270; Moldenke 1952; Zohary 1982: 191). This is a perennial creeping herb which grows to a height of 4 feet. The leaves grow in whorls of 4 to 6; the flowers are greenish-yellow. Its red berries turn black. The root, about the thickness of a quill, is collected in the third year, freed from its outer covering, and dried. The root was used as a red dye and medicinally as an astringent; the leaves provided fodder.

MALLOW *(Malva sylvestris)* is the Heb *ḥalômut* (Job 6:6, 7; see Loew 1928, II: 227; Zohary 1982: 99), which the RSV translates "purslane." It is an annual herb which grows to a height of 3 feet with lobed leaves. The flowers are rose-purple with darker veins. The fruit, leaf, and seed were used as food. The leaves were prescribed as a demulcent and laxative.

MANDRAKES *(Mandragora officinarum)* are the *dudāʾ* (Gen 30:14ff.; Cant 7:13; see Post 1883: 559; Loew 1928, III: 363; Moldenke 1952: 137; Zohary 1982: 188) found in stony places. The root resembles a human figure, which led to its association with fertility rites. The mandrake is a stemless perennial related to the potato. The dark-green, oblong, wrinkled leaves form a rosette; from this rises a flower stalk bearing a bluish-violet, bell-shaped flower followed by a yellow plum-sized berry. The fruit was used as food; the root possesses narcotic properties for which it was esteemed. The plant is slightly poisonous.

MINT *(Mentha longifolia)* is the Gk *heduosmon* (Matt 23:23; Luke 11:42; see Post 1883: 614; Loew 1928, II: 75; Dalman 1932, II: 291; Moldenke 1952: 139; Zohary 1982: 88) which is fragrant due to its oils. This common plant has been widely used for flavoring. It is a rapidly spreading perennial herb with small, greenish-gray leaves and grows to a height of 2 feet in well-watered areas. The leaves, aside from

flavoring, have been used as a carminative, stimulant, emollient, ingredient for enema, and general pain remedy.

MUSTARD SEED *(Brassica nigra)* is the Gk *sinapi* which grew along the Sea of Galilee and so is appropriate for the parable of Jesus (Matt 13:31; 17:20; Mark 4:31; Luke 13:19; 17:6; see Loew 1928, I: 519; Moldenke 1952: 59; Zohary 1982: 93). This is a plant long cultivated for its flavoring. This annual herb with varieties from 2 to 6 feet in height has leaves which grow at the base of the stem, and it produces a large number of small yellow flowers. The seeds were used for mustard oil, a flavoring.

MYRRH *(Cistus incanus, creticus)* is the Heb *lōt* (Gen 37:25; 43:11; see Post 1883: 115; Moldenke 1952: 77; Zohary 1982: 194). It is not the tropical myrrh, but a resinous substance obtained from these plants. A shrub with hairy green leaves and pink flowers followed by small capsuled fruits, it is widespread in Gilead. The soft, dark-brown or black, gummy exudation is collected by drawing a bunch of leathery thongs through the plant to which the gum sticks, or by combing out goats' beards (to which the gum adheres); it is sold in golden spiral pieces. The stem and leaves were used to prepare perfume and incense, a use which continues in Eastern churches today. Medicinally the extract served as a salve, stimulant, and expectorant.

PURSLANE: see Mallow.

REICHARDIA *(Reichardia tingitana)* is a candidate for the Heb *marôr* eaten at the Passover Seder (Exod 12:8; Num 9:11; see Loew 1928, I: 131; Zohary 1982: 100). The poppy-leaved *Reichardia* is a desert plant. The flowers are yellow with a dark purple base. The leaf was used for seasoning.

RUE *(Ruta chalepensis)* is the Gk *peganon* which has been widely used for flavoring and as an ornamental (Luke 11:42; see Post 1883: 197; Loew 1928, III: 317; Moldenke 1952: 208; Zohary 1982: 90). It is a tough herb which grows under difficult conditions and reaches a height of 2 feet with strong-smelling leaves and yellow flowers. The leaves were used as a condiment. Medicinally prescribed against insect and snakebites.

SORREL *(Rumex acetosella)* is a candidate for the Heb *marôr* of the Passover (Exod 12:8; Num 9:11; see Loew 1928, I: 358; Moldenke 1952: 74). The plant is common throughout the Near East. It is invasive; only a few inches high, it grows to a length of 1 foot in a spreading pattern.

SPIKENARD *(Nardostachys jatamansi)* is the Heb *nerd* (Cant 1:12; Mark 14:3; John 12:3; see Loew 1928, III: 482; Moldenke 1952: 148; Zohary 1982: 205) which was imported from the mountains of India. It is also translated as "nard." This small perennial herb grows at high altitudes. The entire plant may be used for its aromatic oils as cosmetics and perfume. Medicinally it was prescribed as a stimulant.

SUGAR CANE *(Saccharum officinarum)* is a candidate for the Heb *qāneh* (Isa 43:24; see Post 1883: 849; Loew 1928, I: 747; Moldenke 1952: 214; see also Reed, Common; Sweet Flag; Giant Grass; Lemon Grass). It no longer grows wild anywhere in the world, so we are uncertain of its origin. Sugar, a tall grain, requires a tropical climate. The solid-jointed stalks are filled with soft, long fibers. The arching leaves have rough edges. The plume-like tassels contain hundreds of tiny, soft, lavender-to-dark purple flowers. The canes produce a dark brown, slightly acid juice. This juice is extracted and boiled, after the leaves have been removed. Medicinally it was also used as a laxative.

SWEET FLAG *(Acorus calamus)* is another candidate for *qāneh* (Isa 43:24; see Loew 1928, I: 696; Moldenke 1952: 40; see also Sugar Cane; Giant Grass; Lemon Grass; Reed, Common); it has been identified with the sweet cane. This plant grows well near water and reaches a height of 5 feet. The root was used for perfume and medicinally as a stomachic.

WATERCRESS *(Nasturtium officinale)* is another candidate for the Heb *marôr* of Passover (Exod 12:8; Num 9:11; see Loew 1928, I: 510; Dalman 1932, II: 289; Moldenke 1952: 74). This small plant spreads rapidly, and its flowers are abundant.

WORMWOOD *(Artemesia herba-alba)* is the Heb *laʿănāh* (Deut 29:18; Prov 5:4; Jer 9:15; Amos 5:7; Matt 27:34; Rev 8:11; see Post 1883: 440; Loew 1928, I: 379; Moldenke 1952: 48; Zohary 1982: 184). This is a small shrub. Most species of wormwood have grey, fragrant foliage with insignificant fragrant flowers. The leaves are used in beverages and as fodder; medicinally it was prescribed as a tonic, antiseptic, and expectorant.

GRASSES

GIANT GRASS *(Arundo donax)* may be the Heb *qāneh* or *sup* (but see RED SEA) and the Gk *kalamos* (Gen 41:5; Isa 19:6; 35:7; Ezek 40:5; Matt 11:7; Mark 15:19; Luke 7:24; Rev 11:1; see Post 1883: 875; Loew 1928, I: 662; Moldenke 1952: 50; see also Reed, Common; Sugar Cane; Sweet Flag; Lemon Grass). It was also known as the "Persian reed" and is common throughout Israel, particularly near the Dead Sea and the Jordan Valley. It grows to a height of 18 feet with hollow, strong canes 2 to 3 inches in diameter at the base. The plume-like flowers are similar to pampas grass. The canes were used for roofing, arrows, fences, basketry, walking sticks, and flutes. Egyptian beehives were made from these reeds.

LEMON GRASS (Cymbopogon citratus) may have been referred to by the Heb *qāneh* (Exod 30:23; Jer 6:20; Ezek 27:19ff.; see Loew 1928, I: 692; Zohary 1982: 196; see also Sugar Cane; Sweet Flag; Reed, Common; Giant Grass). RSV translates this as "calamus." There are many species of aromatic grasses which were imported and were discovered in Egyptian tombs of the 20th and 21st Dynasties. This tropical perennial grass grows to 6 feet. The spike-like racemes grow in pairs at the ends of short branches. The leaf blade, sheath, and husk produced an oil used for flavoring, cosmetic, and perfume.

FLOWERS, DECORATIVE PLANTS

IVY *(Hedera helix)* is the Gk *kesos* (2 Macc 6:7; see Post 1883: 377; Loew 1928, I: 219; Moldenke 1952: 111; Zohary 1982: 121). Ivy was introduced by the Greeks and reflects their influence during the Maccabean period. It is an evergreen perennial that spreads rapidly with a dense matting of leaves. The plant is now found throughout the world, but is rare in its wild state in Israel.

The spring field flowers of ancient Israel cannot be identified with certainty. We have listed only some of the candidates below. See also Waterlily; Iris, Yellow Flag.

ANEMONE *(Anemone coronaria)* may be the Gk *krinon* (Matt 6:28; Loew 1928, III: 118; Moldenke 1952: 41). The plant develops from rhizomes with the flowers growing on 10-inch stalks. Flowers are usually scarlet though other colors are found.

CHAMOMILE *(Anthemis nobilis, tinctoria)* may be the Heb *śôśān* (Hos 14:5; Sir 39:14; see Post 1883: 430; Loew 1928, I: 375; Moldenke 1952: 41; Zohary 1982: 172). It is a spring flower of the field whose bright colors carpet the countryside. This flower is daisy-like with numerous species found in the area. A spreading perennial, it flowers profusely.

CROWN DAISY *(Chrysanthemum coronarium)* may be the Heb *niṣanîm* (Cant 2:12; James 1:10; see Post 1883: 438; Zohary 1982: 174). The plant blooms profusely in spring, but the flowers also fade swiftly.

CROWFOOT *(Ranunculus asiaticus)* is also a candidate for the Heb *śośān* (Hos 14:5; Sir 39:14; see Post 1883: 38; Loew 1928, III: 124; Zohary 1982: 174). It grows in many areas extending into the semi-desert areas.

LILY *(Lilium candidum)* is yet a third candidate for Heb *śôśān* (1 Kgs 7:26; Cant 2:1; Matt 6:28; Luke 12:27; see Loew 1928, II: 160; Moldenke 1952: 114; Zohary 1982: 176), though there is much scholarly debate. The water lily *(Nymphaea caerulea)* and lotus *(Nymphaea lotus)* are other candidates. As a symbol of fruitfulness, purity, and resurrection, it appears frequently in Christian art as the "Madonna lily." The plant grows from a bulb to a height of 3 feet with large white flowers. Either this variety or *Lilium chalcedonicum,* which produces a showy red flower, may be native to ancient Israel.

NARCISSUS *(Narcissus tazetta)* is yet another candidate for Heb *śôśān* (1 Kgs 7:26; Cant 2:1; Matt 6:28; Luke 12:27; see Loew 1928, II: 203; Moldenke 1952: 147; Zohary 1982: 178). This plant grows throughout the land into the Negeb and blooms profusely in spring. This bulb produces clusters of white flowers with a yellow trumpet.

POPPY *(Papaver rhoeas)* is another candidate for the Heb *niṣānîm* (Cant 2:12; James 1:10; see Post 1883: 50; Loew 1928, II: 363; Zohary 1982: 172). This annual produces beautiful red flowers which close each evening. The opium poppy is somewhat taller with greyish leaves.

SEA DAFFODIL *(Pancratium maritimum)* may also be the Heb *śôśān* (1 Kgs 7:26; Cant 2:2; Matt 6:28; Luke 12:27; see Post 1883: 776; Loew 1928, II: 205; Zohary 1982: 178). This white-flowered bulb

grows along the seashore. The fragrant white flowers are followed by linear leaves; the flowers live one night. The fruit capsules contain many black seeds.

STERNBERGIA *(Sternbergia lutea, clusiana)* may also be the Heb *śôśān* (1 Kgs 7:26; Cant 2:2; Matt 6:28; Luke 12:27; see Post 1883: 775; Moldenke 1952: 117). This bulb produces one-foot leaves and a yellow autumn flower.

TULIP *(Tulipa montana)* may also be the Heb *niṣanîm* (Cant 2:12; James 1:10; see Post 1883: 805; Moldenke 1952: 235; Zohary 1982: 180). The date of the ancient introduction of this plant to the Near East is not known. The bulbs produce single flowers on a stem up to 4–10 inches in height.

WATER PLANTS

CATTAIL *(Typha sp.)* may be the Heb *sup* (Exod 2:3; Isa 19:6; Matt 27:29; Mark 15:19; see Post 1883: 814; Moldenke 1952: 235; Zohary 1982: 136), which the RSV translates as "bullrushes." While it grows in many places, huge colonies grow along the Nile and along fresh and brackish waters, where it reduces soil salinity. This 6-foot perennial has stout stalks crowned by ridged, cylindrical, flowering spikes to 8 feet. Each spike contains hundreds of minute flowers—male flowers above, female flowers below—in the form of bristles without petal or sepal. The fruit is a small, hairy grain. The stalk was woven into articles, chair seats, caulk, sandals, and thatching. The seeds were used as cattle feed; their floss was used as tinder. Cattail was also used for dressing burns.

IRIS, YELLOW FLAG *(Iris pseudacorus)* may be the Heb *śôśānāh* (Hos 14:5; Sir 39:14; 50:8; see Post 1883: 766; Moldenke 1952: 117; see also Flowers and Decorative Plants above); it is translated "lily" by the RSV. This plant grows along waterways and marshes. The beardless water iris is a perennial with large, stout, fibrous roots. The sword-shaped leaves grow to 5 feet; flower stalks rise to 7 feet with yellow flowers.

LOTUS: see WATERLILY.

PAPYRUS *(Cyperus papyrus)* is the Heb *gōme›* (Exod 2:3f.; Isa 18:2; 35:7; Job 8:11; see Post 1883: 830; Loew 1928, I: 559; Moldenke 1952: 92; Zohary 1982: 137). RSV sometimes translates this "papyrus," other times as "bullrushes." Our word "paper" has its origin from the word *papyrus.* In ancient Egypt, the papyrus represented the symbol of Lower Egypt, while the lotus represented Upper Egypt—knotted together the 2 formed the sign of the union under one sceptre. Because the merchants of the Phoenician port of Byblos supplied the Greeks with Egyptian papyrus, which was used as paper, the word "Bible" was derived from that port city. The plant grew in Lake Huleh and in Egyptian swamps. While almost extinct in Egypt, it still grows in the Sudan and Uganda. Papyrus is a perennial with each stem to 10 feet, and umbels of thread-like leaves. The stalks were used to fashion paper, boats, sandals, ropes, wrapping paper, bridges, mats, lamp wicks, sieves, chairs, pillows, boat caulking, baskets, boxes, sails, cloth, and paintbrushes (from frayed stalk ends). The root served as fuel and for carved utensils; the rootstock was chewed for the sweet juice resembling licorice, or it was boiled or baked. The umbels were woven into garlands, and umbel impressions were used on handles of mirrors and other household furnishings. The *Ebers Medical Papyrus* prescribed papyrus in 8 or 9 recipes.

REED, COMMON *(Phragmites communis)* may be the Heb *qāneh* or *›agmôn* (1 Kgs 14:15; Isa 9:14; 58:5; Matt 27:29; see Post 1883: 875; Moldenke 1952: 285; Zohary 1982: 134; see also Sugar Cane; Sweet Flag; Lemon Grass; Giant Grass). It is a bamboo-like, creeping cane growing up to 10 inches high; the woody-jointed stems are hollow. The brownish tassels develop in late summer. The canes served such varied uses as Egyptian sarcophagi, containers for lipsticks and eye shadows (mascara), pens, measuring rods, mats, flutes, walking canes, sandals, thatch, and fuel. The seed was ground into flour. The plant may have provided the motif for Egyptian columns.

RUSH *(Juncus effusus)* is a candidate for the Heb *›oḥu* (Gen 41:2; Job 8:11; see Post 1883: 810; Loew 1928, I: 572; Moldenke 1952: 120; see also Flowering Rush below). The RSV prefers the translation "reed." This is a tufted perennial up to 4 feet in height, bearing soft, pithy, rounded, yellowish-green stems and sheathed with grasslike leaves. The small flowers are greenish or brownish. The stalks were used for fodder, mats, and chair bottoms. Marsh tribes still erect villages on artificial islands built up on

reeds and mud, which are the oldest architectural styles in history. The pith was used as wicks for oil lamps.

RUSH, FLOWERING *(Butomus umbellatus)* is a candidate for the Heb *ʾoḥu* which grows in the Nile as well as in Israel (Gen 41:2; Job 8:11; see Post 1883: 821; Loew 1928, I: 572; Moldenke 1952: 62; see also Rush above); it sometimes grows together with papyrus. RSV prefers the translation "reed." The Heb term comes from an Egyptian word. This is a tall, showy reed plant with rose-colored flowers on terminal umbels. It spreads rapidly along streams and in bogs. The entire plant was used as fodder.

WATERLILY *(Nymphaea caerulea)* and LOTUS *(Nymphaea lotus)* may have been the Heb *śôśān* (1 Kgs 7:19ff.; 2 Chr 4:5; see Post 1883: 48; Loew 1928, II: 280; Moldenke 1952: 154; see also Flowers and Decorative Plants above, also Iris, Yellow Flag). They were depicted on the capitals and decorations in Solomon's temple, and were also known in ancient Egypt. The *N. caerulea* is an aquatic plant that grows well in semi-still water and produces spectacular blue flowers. Medicinally the flowers were used as a headache remedy, while the rhizomes and leaves were prescribed as an enema and liver treatment.

FIBERS

COTTON *(Gossypium herbaceum)* is the Heb *karpas* (Esth 1:5, 6; Loew 1928, II: 235; Dalman 1932, II: 299; Moldenke 1952: 109; Zohary 1982: 79). It was cultivated very early in the Indus valley and Mesopotamia. Cotton is an annual growing up to 8 feet with deeply lobed leaves and yellow or pink flowers. Its fruit is a capsule surrounded by 3 or 4 heart-shaped bracts; these contain several seeds densely covered with long, white, fluffy hairs. The seed produced fiber for thread, cloth, mummy wrappings, lamp wicks, stuffing, and carpets. The seeds were also pressed for cooking oil and fodder, the stalks were used as a fuel and the hulls for fodder; the flower petals were a source of yellow and brown dye. Medicinally, it was used as a surgical dressing.

FLAX (LINEN) *(Linum usitatissimum)* is the Heb *piśtān* (Gen 41:41; Exod 25:4; Lev 6:10; Deut 22:11; 1 Sam 2:18; Isa 42:3; Matt 27:59; Mark 15:46; John 19:40; Rev 18:12; see Post 1883: 181; Loew 1928, II: 208; Dalman 1932, II: 298; Moldenke 1952: 129; Zohary 1982: 78); it is one of the world's oldest textiles, grown extensively in Egypt. It was mentioned in the Gezer Calendar. Seeds have been found at Tell el-Areini in the EB Stratum IV (Borowski 1987: 98). The plant grows to a height of 3 feet, has small narrow leaves and blue flowers with five petals. The fruit is a capsule containing several oleiferous seeds. When flax is grown for fiber, the seeds are sown close together so that stems grow straight, with as few branches as possible. Linen fibers are prepared by retting and scrutching the stems; the stems are soaked in water to separate the tough fibers and soft tissue. After combing, the fibers are spun. The stalks were used for fiber, sails, cloth (Israelite priests wore linen garments), curtains, wicks for lamps, mummy wrappings, cartonnage (linen and papyrus) used for mummy masks, and thread. The seed produced linseed oil, an edible oil when cold-pressed. Medicinally, the seed were prescribed as a demulcent, emollient, and laxative; it was also used as a remedy for burns.

DYE

HENNA *(Lawsonia inermis)* is the Heb *kōper* (Cant 1:14; 4:13; see Post 1883: 320; Loew 1928, II: 218; Dalman 1932, II: 301; Moldenke 1952: 124). It has been discovered in Tutenkhamen's tomb. Henna dye is considered to have religious, utilitarian, mystical, and seductive powers. This shrub reaches a height of 25 feet. The leaves are elliptical, greyish-green. The flowers are white and fragrant, and the fruit is a capsule. The leaves and twigs produce a bright yellow, orange, or red dye used on hair, palms of hands, soles of feet, nails, mummy wrappings, horse tails, and fabrics. The flowers provided an astringent and stimulant.

SAFFLOWER *(Carthamus tinctorius)*, also known as "Bastard Saffron" or "False Saffron," is one possibility for the Heb *karkôm* (Cant 4:14; see Post 1883: 320; Loew 1928, I: 394; Dalman 1932: 300; Moldenke 1952: 87; see also Saffron). It has been used since 2000 B.C.E. in Egypt for dyeing grave-clothes of mummies red and yellow; its flowers also have been found as garlands on mummies. This is an annual plant which reaches a height of 4 feet, its branched, smooth stems becoming woody during the ripening period. The leaves are mostly oblong-lanceolate. The orange-yellow flowers with leafy bracts are

followed by oblong fruits. Aside from the dye, the young shoots were used as food; the seed produced a cooking oil; and the stem was used by the Egyptians for spindles.

SAFFRON *(Crocus sativus)* is a candidate for the Heb *karkôm* (Cant 4:14; see Post 1883: 770; Loew 1928, II: 7; Dalman 1932: 301; Moldenke 1952: 87; Zohary 1982: 206; see also Safflower). A yellow dye is obtained from the stigmas of this crocus. An Egyptian papyrus dated as early as 2000 B.C.E. mentions this plant. It is the world's most expensive spice because it requires the stigmas of 4,300 flowers for 1 ounce of saffron. It is a bulbous plant which blooms in fall; the grassy leaves appear at the same time as the stemless lilac or purple flower. The stigma produced a dye, flavoring, and incense. Many Jews in the Middle Ages were spice merchants; they were called "saffron merchants," and over the ages the yellow color of the spice has been used to mock Jews (cf. the yellow "Star of David" that the Nazis required Jews to wear). Medicinally, the plant was used to prepare tinctures, gastric and intestinal remedies, and a carminative.

WEEDS, BRIER, THORNS, BRAMBLES, NOXIOUS PLANTS

ACANTHUS, SYRIAN *(Acanthus syriacus)* is used in a description of the table on which the Showbreads were displayed (*Letter of Aristeas* 70; see Post 1883: 606; Loew 1928, I: 45; Moldenke 1952: 26; Zohary 1982: 165). This thorny plant produces long spikes and large flowers with spines.

BRAMBLE *(Rubus sanguineus)* is the Heb *ṣinim* (Num 33:55; Prov 22:5; Luke 6:44; see Post 1883: 304; Loew 1928, III: 175; Zohary 1982: 157). RSV translates this simply as "thorns." This evergreen which grows to a height of 25 feet has dense prickly branches. It produces a small flower and edible black berries.

DOVE'S DUNG, STAR OF BETHLEHEM *(Ornithogalum umbellatum)* is the Heb *ḥiryôn* (2 Kgs 6:25; see Post 1883: 801; Loew 1928, I: 601; Moldenke 1952: 162). This plant grows profusely on the hills of Samaria, and the white flowers look like bird droppings. It is a small, bulbous plant with umbels of flowers. The bulbs are poisonous, unless roasted or boiled; then they may be ground into meal.

NETTLE *(Urtica dioica)* grows in abandoned places; it is probably the Heb *ḥarul*, which some botanists consider to refer to any shrub growing in the desert wastelands (Loew 1928, III: 478; Moldenke 1952: 237; Zohary 1982: 162). Because of its sting, the plant was used widely in metaphors (Isa 55:13; Job 30:7; Zeph 2:9). This is a perennial which grows to a height of 2 to 6 feet with dull-green leaves, armed with prickles; the flowers are also green. The leaves of young plants were cooked as a vegetable. A beer and a green dye were also derived from this plant. The dried leaves were used as fodder.

NIGHTSHADE, GRAY *(Solanum incanum)* is the Heb *ḥedêq* (Mic 7:4, 5; Prov 15:19; see Post 1883: 566; Loew 1928, III: 376; Moldenke 1952: 221; Zohary 1982: 164). The RSV prefers the translation "briar" or "thorn." The Hebrew term is akin to the Arabic word for this plant. This multibranched bush is limited to the lower Jordan and Dead Sea areas. It is spiny and gray, its flowers are lilac, and its berries are yellow.

POISON HEMLOCK *(Conium maculatum)* or "wormwood" may be the Heb *rôš* (Deut 32:32; Lam 3:19, 20; Matt 27:33, 34; see Post 1883: 335; Loew 1928, III: 440; Zohary 1982: 186), which is given various translations in the RSV. The Gk name *conium* means "stimulating dizziness". This is an annual or perennial herb found in waste places. The hollow stems are marked with reddish spots. The leaves are pinnately decompound, the leaflets are feathery, and the white flowers grow in umbels. When bruised, the fresh plant has a disagreeable, mousy odor. The leaves and seeds were used as a painkiller. In classical times, a drink prepared from this plant was a standard method for the execution of criminals; Socrates was among those required to drink it.

TARES, DARNEL *(Lolium temulentum)* is the Gk *zizania* (cf. Matt 13:24, 25; see Post 1883: 896; Loew 1928, I: 723; Moldenke 1952: 133; Zohary 1982: 161). It is a troublesome weed since it is very similar to wheat and can only be easily identified when ripe; if harvested and ground together the flour is spoiled. The plant also is host to a poisonous fungus. This annual grass-like weed, which grows to a height of 4 feet, is still widespread in the Near East.

THISTLE *(Scolymus hispanicus, maculatus)* is the Heb *ḥôâḥ* (Isa 34:13; Cant 2:1, 2; Job 31:39, 40; see Post 1883: 474; Moldenke 1952: 153; Zohary 1982: 160). It is a noxious weed which crowds out other plants. This tall annual with its spiny branches produces a bright yellow flower.

THISTLE, GLOBE THYSTLE *(Echinops viscosus),* SYRIAN THISTLE *(Notobasis syriaca),* HOLY THISTLE *(Silybum marianum),* SPANISH THISTLE *(Centaurea iberica)* are all candidates for the Heb *barkānîm* (Judg 8:7f.) and *dārdar* (Gen 3:17, 18; Hosea 10:8; Matt 7:15, 16; see Post 1883: 445, 448, 456, 458; Loew 1928, I: 405, 406, 412; Moldenke 1952: 153, 171; Zohary 1982: 158, 159). These plants grow among shrubs and are common in Samaria and parts of Israel. They are perennials with stout, spiny stems and globular, spiny flowers of various colors.

ZILLA, SPINY *(Zilla spinosa)* may be the Heb *silôn* (Ezek 28:24; see Zohary 1982: 166), which the RSV translates as "briar." This is a spiny desert perennial which grows to a height of 3 feet. It produces a large pink flower. The mature plants tumble through the desert.

A number of plants not mentioned in the Bible and in addition to those listed above have been discovered at archaeological sites. This number will grow as more careful studies are undertaken. Among the plants are bitter vetch *(Vicia ervilia)* and fenugreek *(Trigonela graecum),* as well as the following weeds: *Galium tricorne, Cephalaria syriaca,* and *Echium judaeum* (Borowski 1987: 95, 97, 162).

C. Plants with Biblical Names

The practice of naming plants after biblical subjects began early as a pious way of remembering Scripture in daily life. It is manifested in the writings of some Church Fathers, in the Talmud, and in the art of Church and Synagogue from the 3d century onward. This may be seen in the Dura Europos synagogue and others, as well as in the mosaics of the great churchs in Ravenna which depict NT settings with Italian plants. Most medieval and later Christian art used either local (mostly European) flora known to the artist or composite flora (drawn largely from one's imaginative speculation about biblical flora).

Many medieval monasteries had small gardens, where medicinal plants were often grown. However, some attempts to replicate biblical plants were made. Because the monks possessed no first-hand knowledge of biblical flora, they identified local plants which seemed appropriate or resembled some biblical person, object, or motif, and linked it explicitly with the Bible by name. Such identifications have often remained and become part of plant lore. The love of Scripture shared by subsequent generations led to similar identifications by laymen. Usually the source of these links is difficult or impossible to trace with any degree of accuracy. In modern times some hybridizers have continued to provide such designations for plants, continuing this old tradition. A partial list is provided here so that this love for Scripture will not be confused with actual biblical flora.

Aaron's beard	*Hypericum calycinum*	*Hyperiacaceae*
Adam and Eve	*Arum Maculatum*	*Araceae*
Adam's needle	*Yucca gloriosa*	*Agavacea*
Burning bush	*Euonymous compacta*	*Celastraceae*
Gilead, balm of	*Populus candicans*	*Salicaceae*
Jacob's rod	*Asphodeline lutea*	*Liliaceae*
Jericho, rose of	*Anastacia-hierochumtica*	*Crucifera*
Jericho, rose of	*Silaginella lepidophylla*	*Selaginellaceae*

IRENE JACOB
WALTER JACOB

FLORILEGIUM (4QFlor). This set of 27 fragments from Qumran Cave 4 was discovered in 1952 and purchased for the Palestine Archaeology (Rockefeller) Museum. Preliminary editions of the fragments were published by J. M. Allegro (1956: 176–77; 1958: 350–54) before they were fully presented by him labeled as *4Q174* in DJD 5 (1968: 53–57, pls. xix–xx); that edition of the fragments was thoroughly reviewed by J. Strugnell (1970: 220–25), and by G. J. Brooke (1985: 80–278), and is being researched by A. Steudel of Göttingen University.

The fragments of 4QFlor belong to the 1st century C.E. 4QFlor contained at least 5 columns of 19 lines each. Because the fragments include extracts from various biblical books, notably 2 Samuel, Psalms, and Deuteronomy, Allegro entitled them *Florilegium* (anthology). More properly, the whole document or part of it may be generically categorized as Qumran midrash: the quotation and interpretation of the Psalms together are labeled *midrāš* (1:14), and each section of the interpretation of the Psalms is introduced with technical formulae including the word *pēšer;* this enables 4QFlor to be distinguished categorically from the later rabbinic midrashim.

The whole work is constructed in a very organized manner. In the interpretation of the base texts (2 Sam 7:10–14; Pss 1:1; 2:1; and Deut 33:8–11, 12[?], 19–21) supplementary texts are included with formulaic introductions (Exod 15:17 and Amos 9:11 for 2 Samuel 7; Isa 8:11 and Ezek 37:23 for Psalm 1; Dan 12:10 for Psalm 2). These supplementary texts are linked through catchword *(gĕzērâ šāwâ)* to the base text and sometimes to each other. The text-type of these quotations differs slightly from the MT and from all known versions. The citation of Amos 9:11 almost certainly corresponds to the *Vorläge* of the same text as quoted in Acts 15:16; some minor variants in 4QFlor, such as the ambiguous spelling of *swkt*

(Amos 9:11 in 1:12) and the abbreviation of 2 Sam 7:11–14 (1:10–11), may have been introduced for exegetical purposes. There are also allusions to other biblical texts.

Among the Qumran scrolls 4QFlor has some affinity with 4QCatena [a], which contains interpretation of Psalms, especially on the basis of their opening verses, and with 11QMelch, which includes the exegetical use of Isa 8:11 (11QMelch 25). 4QFlor also shares much with CD: both speak of "the Interpreter of the Law" (CD 6:7; 7:18); both use Amos 9:11 (cf. CD 7:16) and Isa 8:11 (cf. CD 8:16 = 19:29); both speak of "the sons of Zadok" and identify them with the chosen ones of Israel; together with some of the pesharim both use the phrase "the latter days." Like 4QFlor frags. 6–7, 4QTest 14–20 cites Deut 33:8–11. The subject of the nature of the Temple means that comparison with 11QTemple especially 29:7–10, is significant.

The interpretation of 2 Samuel 7 underlines the difference between the historical Temple(s) of Israel and that of the future. The exclusive purity of the eschatological Temple (alluding to Deut 23:3–4) is stressed. In addition to the physical Temple, either of the Solomonic or postexilic period (or both), 4QFlor speaks of a sanctuary promised by God, a *miqdāš ʾādām.* Some scholars argue that this refers to a "man-made sanctuary," probably that of Solomon (Schwartz 1979: 88), but most understand it as "a sanctuary of men," and argue that it is a substitute for the eschatological building. But nowhere does 4QFlor deny the hope for the final physical Temple building which God himself will provide, so the "sanctuary of men" is better understood as its anticipation (Brooke 1985: 178–93): a present temporary substitute for the priesthood of the Temple in Jerusalem or some aspect of their practice (Dimant 1986: 184–89).

In this respect, 4QFlor differs from the complete spiritualization of the eschatological Temple mentioned in the NT (e.g., 1 Pet 2:4–8). Yet 4QFlor has similarities with other NT passages. The combination of 2 Samuel 7 and Psalm 2 occurs in Heb 1:5 and may lie behind Acts 13:33–37; in both places the texts are used christologically. 2 Samuel 7, Ezekiel 37, and the figure of Belial occur in both 4QFlor and 2 Cor 6:14–7:1.

Two eschatological figures are mentioned in 4QFlor: the shoot of David and the Interpreter of the Law. The former is universally recognized as the Davidic messiah (cf. 4QpIsa[a] frags. 8–10, line 17; 4QPBless), the latter is widely held to be the priestly messiah of Aaron, though the identification is not confirmed directly in any other place. With its use of 2 Samuel 7, Exodus 15, and Psalm 2, and its explicit Davidic messianism, 4QFlor asserts forcefully that God is king, will rule through his messiah, and receive obeisance through his own divinely ordained cult in which the community responsible for the text no doubt hoped to have a part as priests (Dan 12:10; 4QFlor 2:1–5).

D. Folklore and the Biblical Text

———

A. Terminology

Coined in 1846 by William John Thoms (1803–85) who proposed "folklore" as a substitute for "Popular Antiquities or Popular Literature" (Thoms 1846: 862). In spite of his claim for originality (Duncan 1946: 372), folklore is a translation of the German term *Volkskunde* that Josef Mader (1754–1815) used already in 1787. As in other German compounds—such as *Volkslied* that Johann Gottfried Herder (1744–1803) employed in 1778, and *Volksmärchen* that Johan Karl August Musaus (1735–87) introduced in 1782—at the core of *Volkskunde* is the concept *das Volk*, "the people," that derives from Herder's thought and writings (Simpson 1921; Schütze 1921: 115–30). *Volkskunde* connotes the traditions that peasants and lower classes represent in language, narratives, songs, and sayings. So does folklore. For Thoms folklore refers to "the manners, customs, observances, superstitions, ballads, proverbs, of the olden times." In subsequent use the term has expanded its field of reference to include a broader range of verbal, visual, and musical forms, such as tales and legends; myths and riddles; artifacts, whether plain or decorated, religious or secular; and vocal and instrumental music. Similarly, festivals and rituals, the belief system that sanctions them, and the symbols that people use in their celebrations are elements of folklore.

In most current definitions of folklore 2 main features stand out: orality and traditionality (Bauman 1989; cf. Ben-Amos 1971). Consequently, oral tradition is the quintessence of folklore. As such, folklore thrives in nonliterate societies, whereas in literate cultures it functions through interdependence with and interreference to the literacy of the educated groups. While in nonliterate cultures, folklore is traditional ipso facto, the literate classes attribute to it the value of traditionality.

Whenever and by whomever edited, the OT text was prepared to fulfill the role of the central canon in the Israelite society. It embodies the religious and ethical values, beliefs and facts, tales and poems that validated the Israelite leadership. Some of the OT texts could have circulated orally prior to their commitment to writing. Yet that oral tradition contained some additional themes and narratives which conflicted with the canonic religious, political, and ethical doctrines and were therefore excluded from the OT.

Consequently the folklore of the era was relegated to a position of an extracanonic tradition. It was deliberately left out of the text in the transition from oral to literary tradition. Hence while not all folklore was in conflict with the OT text, all that conflicted with it remained only folklore. Occasionally, however, the oral ideas and images were an integral part of the Israelite culture and continued to resonate in the OT in metaphors, allusions, and fragmentary narratives.

The earliest scholarly association between folklore and the Bible occurred in print in 1884 in the title of the book *Bible Folk-Lore: A Study in Comparative Mythology* by James Edwin Thorold Rogers (1823–90). The book applies to the OT a kind of philological analysis that interprets figures and objects as representations of bodies in the solar system, and events as their motions, following the principles proposed by Max Müller (1823–1900). The book was inconsequential in either folklore or biblical studies, though similar interpretations that had been proposed earlier by Ignaz Goldziher (1850–1921) were very influential in biblical studies at the end of the 19th century (Rogerson 1974: 33–44).

By and large, 4 conceptions of the relations between folklore and the OT have prevailed in scholarship.

First is the notion that folklore is the historical antecedent of the OT. Early suggestions of such an idea appeared already in theological writings during the 16th and the 17th centuries (Knight 1975: 39–54). However they reached their clearest formulation during and after the Romantic era, in particular at the later part of the 19th century. Paradoxically, Julius Wellhausen (1844–1918), who most systematically formulated the documentary hypothesis, also stated unambiguously that oral folklore existed before the writing of each of the 4 documents. For him oral folklore preceded literature and history, though it was historically unreliable, formulaic rather than precise, and artistically incohesive. Cognizant of these attributed limitations, indeed because of them, he rejected any possibility of their having any historical and aesthetic value, and appraised the documents in terms of their distance from this oral period. (*WPHI*, 296, 334–35, 336–37, 341).

Second, there is an assumption of evolutionary relations between the oral tradition and the written text. Accordingly, folklore does not simply antedate the biblical text, but also evolves into scripture. This process of literary evolution has distinct principles. Following the propositions made by Robert Lowth (1710–87) and further developed by Herder, the assumption was that poetic forms were primary and oral; in their evolution into a written text they transformed into prose narration and commanded historical credibility. In their oral stage, biblical narratives were episodic, brief, and primitive. Their evolution into biblical literature involved the integration of the tales into complex and cohesive narrative cycles, cast in a refined language. Nevertheless, some of the biblical texts still bear the earmarks of their oral literary origin. Hermann Gunkel (1862–1932) offered the basic formulation of this proposition that was later explored from diverse perspectives (Gunkel 1964, 1987; Knight 1975: 71–176; Rogerson 1978: 69–72; Warner 1979).

The attribution of primitivity to the OT plays a major role in the third view, reducing the OT to folklore, in practice if not in theory. The very comparison of OT themes, motifs, actions, and even laws, to similar narratives and practices found among our "contemporary savages," positions the OT society on the evolutionary stage of early man. Since the same evolutionary approach would regard the monotheism that the OT advocates as a mark of high cultural attainments, the magical practices and savage laws that are in the OT could be but survivals of earlier evolutionary stages. In this scheme it is not literature but mankind that evolves, yet he cannot completely shed beliefs and practices from earlier stages. These prevail and are found throughout the text. The most prominent expositor of this view is J. G. Frazer (1854–1941) who in his *Folk-Lore in the Old Testament* (1918) equates folklore with cultural survivals, and interprets the OT itself as being folklore.

Fourth is the view that the OT, as a text that has been formulated in a society of restricted literacy (Haran 1988), contains numerous allusions to, and representations of, ideas and performances of folklore forms in social life. Accordingly, the OT has a documentary value for the reconstruction of the dynamics of folklore of land, the people, and the period. The OT in itself is not folklore, neither as a survival nor as a literary representation of oral forms. Rather it is a written text that has been subject to all the strictures and normative values applicable to writing, yet at the same time reflects the oral society and culture in which it has been formulated. Such a view maintains clear boundaries between orality and literacy, recognizing the qualities and the potentialities of each mode of communication. Yet the very permanence of written text enables it to document oral forms, and refer to their performances. On the basis of these references it is then possible to partially reconstruct the use of folklore in OT life and society. There is no single scholar who has advocated this view; however, it underlies numerous attempts to reconstruct life in the ANE, which respectively and in combinations effected the formulations of different theories and interpretations employed in either the comparative or the ethnographic methods.

B. Comparative Method

By analogy and through inference, comparison serves as a method for the reconstruction of folklore in the OT era (Talmon 1978). In each particular case the basic assumptions may vary, depending upon the compared language, literature, culture, or genre and their historic or geographic relations to the OT.

1. Comparison with Ancient Cultures. The archaeological discoveries in Nippur, Ras Shamra (Ugarit), and other cities have brought to light literary traditions that parallel themes, figures, and forms of

the OT. Though obviously in one script or another, this literature in the languages of the ANE drew upon oral traditions that were widespread in the region. In part they shared them; in part they knew but did not accept them as their own. These parallel traditions are reflected in the OT to a variable degree, in different ways, and in distinct biblical books and literary forms.

Accounts of the creation of man (Gen 1:26–27) and the flood narrative (Gen 6:9–8:14), for example, occur in Akkadian and Old Babylonian epics and hymns (*ANET*, 68a, 99b–101a; Lambert and Millard 1969; see also Dundes 1988). The deities that have central roles in the pantheon and the epics of Ugarit, such as Baal and E1 (Pope 1955; Oldenburg 1969), have been known to the Israelites. While references to the former occur throughout the OT, the latter is rarely used as a proper name for a deity (*CMHE*, 13–75). Other Canaanite deities and supernatural forces such as Rahab, Yam, Tanin, Leviathan, and the mythical Serpent, all associated with the sea, are mentioned by Isaiah, Job, and in Psalms as forces that God subdued (Rahab: Isa 51:9; 89:11; Job 9:13; 26:12; Yam: Isa 51:10; Ps 74:13; 89:10; Job 7:12; Tanin (im): Gen 1:21; Isa 27:1; 51:9; Ps 74:13; 148:7; Job 7:12; Leviathan: Isa 27:1; Ps 74:14; 104:26; Job 3:8; 40:25; Serpent: Isa 27:1; Job 26:13). The comparative study of these references in Ugaritic epics and the OT text has prompted the suggestion that, by analogy, there could have also existed a Hebrew epic as part of the prebiblical oral tradition (Cassuto 1975: 2.69–109; *CMHE*; Jason 1979). However, so far there is no clear evidence for a text of a Hebrew oral epic, only indications that Canaanite epics and their themes and heroes were known in Israelite society (Conroy 1980; Talmon 1981).

The OT, however, shares other verbal forms with neighboring traditions. Narratives in prose about human beings occur in Egyptian literature (*ANET*, 18–31; Simpson 1972). One of them in particular, "The Tale of Two Brothers," shares central narrative episodes with the OT Joseph story (Redford 1970), and at the same time enjoys worldwide distribution in oral tradition (Aarne and Thompson 1961: type 318 "The Faithless Wife").

Proverbs and fables occur in Mesopotamian, Egyptian, and Canaanite literatures (Alster 1974, 1975; Falkowitz 1980; Gordon 1959; Lambert 1960; Lipiński 1983; *ANET*, 405–30; Simpson 1972: 159–79). Since these forms serve as rhetorical devices of persuasion, as they do in the OT (Fontaine 1982; Thompson 1974), whether they appear in catalogue format or in a narrative context, they have been part of the oral tradition of the ANE.

2. Comparison with Postbiblical Literatures. The OT includes, in a succinct style, only a fraction of the tales told orally in ancient Israelite society. Many stories have been lost, while others were passed along to successive generations throughout oral transmission. These historic survivals of ancient traditions recurred in the apocrypha and the pseudepigrapha *(OTP*), in the writings of Josephus (Feldman 1984, 1986), and in the interpretations that accompanied the ritualistic reading of the scriptural text in the synagogues (Gerhardsson 1961; Mann 1940). Later rabbis compiled these biblical exegeses into books of midrash. Midrashic literature relates primarily to postbiblical Jewish society. Most of its narratives, metaphors, proverbs, and fables—whether concerning biblical themes and figures (Ginzberg 1909–38) or not—have their particular literary history and thematic transformation, and are grounded in postbiblical religion, literature, languages, and society (Bloch 1954; *DBSup* 5: 1263–81; Heinemann 1974). Since by that time the religious and political conditions of the OT period no longer prevailed, postbiblical narrators were able to verbalize oral traditions that had been deliberately excluded from, or subdued in, the OT. A comparison between the midrashic literature and the OT narratives could uncover some of those traditions, and expose the dynamic folklore concerning (a) the formation of Israelite tradition, (b) the mythology of the ANE, (c) the historic-political narratives, and (d) sub-ethical themes in terms of OT standards.

The formation of the OT tradition has been a selective process, the goal of which has been the establishment of a literary covenant between God and the people of Israel. Consequently, internal conflicts, apparent inconsistencies, and evidence of syncretism have been subdued in the OT, although some have reappeared in the midrash. For example, the biblical narrative of the sacrifice of Isaac (Genesis 22) concludes with the substitution of a ram for the first-born child. In religious law (Exod 13:1,13,15; 34:20; Num 18:15) a similar substitution prevails, sanctified by the Passover narrative. However in

midrashic tradition references to "the blood of Isaac's sacrifice" (*Mek.* R. Ish. 7.12) suggest the existence of an alternative tradition where no substitution occurred (Spiegel 1981: 51–59).

During the biblical period the Canaanites threatened the monotheistic belief that the writers of the OT espoused. Therefore any mention of mythological creatures or deities in the OT has been tendentiously negated or limited to vague metaphors or, at most, casual allusions. However, in the postbiblical period, when the Canaanite religion posed no threat to Judaism, narrators were freer to articulate earlier religious conceptions. For example the references to Leviathan occurs in the prophecy and poetry of the OT (Isa 27:1; Ps 74:14; 104:26; Job 40:25). It is a creature God defeats. In Canaanite myths, Leviathan serves the same role, being overcome by Baal and Anat (*UT* I:1–3; III:35–39; Oldenberg 1969: 33–34). However, the postbiblical literature includes descriptions of the full extent of his monstrosity, might, and wonder (Ginzberg 1909–38: 1.27–28;5.41–43), as it could have been known in the folklore of the OT period.

The historic-political narrative in the OT anachronistically supports the centrality of the Davidistic dynasty, describing its rise and fall. Yet within a society consisting of several tribes vying for a dominant position, there are likely to be rival traditions concerning ruling families. In spite of editorial attempts, some narrative incongruity has survived in the text. For example, Samuel's nativity legend is replete with nouns and verbs that could have generated Saul's rather than Samuel's name (1 Sam 1:17, 20, 27, 28). The word play on Saul's name is indicative that originally the birth story related to the king rather than the prophet. However, only in a late midrash, the confusion comes full circle, when Samuel is described in terms commonly reserved for Saul. The written text thus ensures the supremacy of Samuel, but oral tales—clues to its existence appear in both the biblical text and the midrash—suggest a tradition upholding Saul as the judge-king (Seeligmann 1952: 199–200; cf. Zakovitch 1980).

The ethical standards of the OT writers guided them to exclude bawdy tales. The narration of sexual matters, whenever it occurs, concerns more with political history than with sex. For example, the account of the rape of Tamar (2 Samuel 13) traces the rift between David and Absalom back to its very beginning. However, midrashic literature has been more lax in its ethical standards and more freely records popular narratives, even those that were likely told in the OT period. For example the story of Jael and Sisera appears twice: first as an historical account in prose (Judg 4:14–23), and second in a poetic rendition that alludes to the former version (Judg 5:24–30). However, the poetry hints at more than the prose version narrates, emphasizing by repetition that Sisera fell and laid between Jael's legs (Judg 5:27). Midrashic literature expounds in full the popular sexual imagination to which the OT only suggests but censors (Ginzberg 1909–38: 4.37–38; 6.198; Zakovitch 1981b).

3. Comparison with Islamic Cultures in the Near East. Comparisons between the OT and the Islamic societies in the Near East and their folklores have taken 3 directions: (a) The use of oral tradition in nomadic society as a model for its use in OT times. (b) The conception of current Islamic culture and folklore as a survival from antiquity that reflects OT customs, rites, and beliefs. (c) The search for historical survivals of OT folklore in current Islamic culture.

The documentary hypothesis that has dominated biblical research for so many years, introduced into scholarship not only workable paradigms but also complicating paradoxes. According to this hypothesis the formation of the OT took place in postexilic times on the basis of written sources that were prepared in the preexilic period. But such documentation assumed extensive literacy which was not part of the ancient Israelite society. In an attempt to resolve such a paradox Sigmund Mowinckel, and more emphatically Henrik Nyberg proposed that the OT was transmitted orally rather than through literate means; the OT itself is thus regarded as part of the oral tradition of Israelite society and therefore part of its folklore. They based their oral tradition hypothesis on the orality of pre-Islamic and nomadic societies in the Near East. They focused in particular on the prophets, whose texts were created orally while in ecstasy and passed along to successive generations by means of oral transmission.

The debate that ensued (Knight 1975: 215–399) was concerned, among other things, with the validity of the model, rather than its application. That is to say, the exclusiveness of oral transmission in Islamic and pre-Islamic societies is brought into question and, by implication, the oral nature of OT society (van der Ploeg 1947; WidEngren 1948, 1959). These are issues with no clear resolution. First, the documentary

and the oral traditional hypotheses have respectively drawn their evidence from different sources: the Pentateuch, the poetry of the Psalms, and the prophets. Second, in the broad cultural range of the Near East and East Africa, it is possible to find models for either propositions. In Somali, for example, poets compose orally, and their admirers commit their verses to memory for future recitation (Andrzejewski 1964: 44–46), a model that would support the hypothesis of oral tradition. On the other hand, the existence of literacy in a society, restricted as it might be, effects tradition, literature, and education dramatically (Street 1984).

The use of Islamic cultures in the Near East and Arabia as a model for ancient Israelite society began systematically in the 18th century, with an expedition planned by Johann David Michaelis (Rogerson 1974: 3–5; Hansen 1965). While verbal folklore was not the focus of this research, the expedition set to explore, in addition to the fauna and flora of the region, the customs, rituals, and religious practices of the inhabitants. Theoretically Michaelis' approach set the foundation for the reconstruction and interpretation of the culture and folklore of the ancient Israelites on the basis of the assumed conservatism of desert societies, a trend that expanded in subsequent years (Smith 1889; *AncIsr*).

While Islamic society of recent centuries, with all its assumed conservatism, does not necessarily reflect ancient Israelite culture, the Arabs of Palestine have preserved in their folklore elements that have survived transmission through oral tradition during the long history since antiquity. In particular, the geographical features of the land, be they mountains, springs or hills, have served as stable pegs upon which place names and local legends have been attached and preserved (Canaan 1927).

4. Cross-cultural Comparison. The rationalism of the enlightenment is the basis of the cross-cultural comparison of the OT. Such a method abrogates the OT from its position as the singular manifestation of monotheistic religious belief, turning it into a text comparable with narratives that are found in the stories of polytheistic religions the world over. Studies such as those of Bauer (1802) involved theological, philosophical, and historical considerations, comparing OT narratives to Greek and Roman, and even Indian and Persian myths (see Hartlich and Sachs 1952: 79–87; Rogerson 1974: 8–9). In later works there was a shift from philological to cultural evolutionary frameworks, and from comparisons with classical, Indian, Islamic, and ancient Semitic mythologies to comparisons with the religions of peoples scholars deemed primitive. In the transition, comparisons based on names and language shifted into comparisons of thoughts and action. Employing the method of comparative mythology as formulated by Max Müller, Goldziher (1877), and Rogers (1884) derived from the names of biblical figures solar, stellar, and climatic meanings, for which they found corroboratory comparisons (Rogerson 1974: 33–44; Yassif 1987: 4–5). The philological cross-cultural comparisons offer an allegorical interpretation of heroes and events, the significance of which resides in cognate words and names in related or unrelated languages. Allegedly, the method exposes meanings that were lost in time through linguistic change, diffusion, and misinterpretation.

The purpose of the cultural evolutionary comparison, on the other hand, is the identification of savage survivals in the OT. In *Folk-Lore in the Old Testament* (1918), J. G. Frazer, the champion of this method, compares biblical themes such as the creation of man (Gen 1:26–28; 2:7), the mark of Cain (Gen 4:15), and the flood (Gen 6–8) with similar stories found not only in the Near East and the Classical world, but more significantly among "primitive" tribes in South and North America, Africa, and Asia (see also Gaster 1969). For him, the existence of parallel narratives is a demonstration that the OT teemed with survivals from an earlier stage of the intellectual evolution of man. Frazer conceived of this evolution in 3 stages: magic, religion, and science. As the creation of an individual great mind, the OT represents the religious state of man, but the occurrence of numerous customs, tales, and superstitions that are characteristic of magical thought, as represented by tribal folklore, demonstrates that in large measure the OT itself is a survival of thoughts conceived by the savage mind (see Ackerman 1987: 180–96, 271–77; Rogerson 1978: 46–85; Yassif 1987: 10–11).

5. Comparison of Forms. The comparative study of narrative forms, known as form-criticism, is a method designed to infer from the OT text its antecedent oral tradition, and to examine the place of its respective forms in the communal life of ancient Israelite society. Since the OT offers neither complete

oral narrative texts, nor sufficiently detailed descriptions of their oral use, any necessary conclusions must be reached by analogy to themes and forms that are available in other oral cultures. The method hence rests, first, upon the assumption of the universality of oral literary forms and their use, and second, the universality of the principles that govern the transition from oral to written literatures. The major proponent of this method was Hermann Gunkel (1862–1932). He sought to identify the oral forms that preceded the OT through analogy with the narrative genres of European, particularly German, folklore such as myth, legend (*Sage* and *legende*), and folktale *(Märchen).* Myth is a story about deities; the legend is assumed to have historical validity; and the folklore, in contrast, is fictive (Bascom 1965). Gunkel's conception of the narrative context was similarly influenced by the available image of storytelling among European peasants: "In the leisure of a winter evening the family sits about the hearth; the grown people, but more especially the children, listen intently to the beautiful old stories of the dawn of the world, which they have heard so often yet never tire of hearing repeated" (Gunkel 1964: 41). Later Gunkel proposed to conceive of these genres as forms of primitive literature, detectable in the OT with the aid of the epic laws formulated by Axel Olrik (1909).

Accordingly, among the features that distinguish oral narratives are opening and closing formulas, triple repetition of episodes, and the occurrence of only 2 characters in a scene. These as well as the lEngth of the narrative served for Gunkel as a measure for recovering the oral strata in the OT text (Knight 1975: 71–83; Rogerson 1974: 57–65; 1978: 69–72; Warner 1979; Wilcoxen 1974). The inference through comparison of forms, problematic as it is, has been a potent method in the exploration of folklore in the OT, mostly revolving around the traditions of the Pentateuch and the Hexateuch (Hayes 1974). Following Alt (1929), von Rad (1938, 1957) and Noth (1948) consider these traditions to evolve not around family entertainment, but within differentiable cultic circles, either as narratives or ritual recitations. A basic problem, yet unresolved, is the logical possibility of projecting, a posteriori, literary formal concepts that evolved in Europe after the Enlightenment, such as myth (Detienne 1986; Feldman and Richardson 1972; Hartlich and Sachs 1952), legend [*Sage*] (Gerndt 1988), and folktale [*Märchen*] (Fink 1966; Anthony 1981) into the world of the ANE (cf. Ben-Amos 1976).

6. Morphological Studies. The morphological method shares a goal with form criticism, namely, the discovery of the types of oral literature that preceded the OT text. However, it differs from it in one fundamental assumption. While form criticism accepts the narrative types as given, the morphological method regards their formal description as a primary analytical goal, the attainment of which is essential before the inception of any other study, either historical or cultural. The morphological study of the folktale emerged within the theoretical paradigm of Russian formalism (Erlich 1965; Steiner 1984). Following some preliminary exploratory essays (Nikiforov 1975), V. Propp (1895–1971) formulated the methodological concepts and procedure for the morphological description of the folktale. Initially his aim was to discover the historical roots of the folktale, but upon embarking upon his project he became aware of the absence of an adequate morphological definition of the folktale. He proposed to describe the folktale as a whole, and thus he considered it as "any [narrative] development proceeding from villainy or a lack, through intermediary functions to marriage" (1968: 92). For descriptive purposes, Propp discerned in the tale distinct analytical units—he termed them "functions"—which are actions predicated upon a specific narrative role that follow each other in a specific sequential order. Repeatable functions that are logically or narratively connected constitute a move. Among the tale's dramatis personae Propp distinguished 7 roles: hero, false hero, villain, dispatcher, donor, helper, and princess.

Propp analyzed morphologically only Russian tales. The application of his method and model to biblical tradition is significant because of 2 reasons. First it demonstrates the occurrence of the folktale morphology already in antiquity; second, the comparative dimension of this approach evidences that other cultures have the same form in their oral traditions. In the OT only David's early biography could be reconstructed to fit the morphological model to the folktale. If David is the hero, Jesse is the dispatcher (1 Sam 17:17–19), Samuel is the donor (1 Sam 17:11–13), Goliath is the villain (1 Sam 17:23), and Michal is the princess whom the hero marries (1 Sam 18:17–23). The sequence of functions approximates Propp's morphology, spanning the entire range of the model up to the hero's difficult task and its

resolution before the marriage (1 Sam 18:25–27) (Jason 1979: 42–43). Other tales fit only a specific sequence of functions such as Jacob's struggle with the angel (Gen 32:23–33) (Barthes 1974; Couffignal 1975; Durand 1977; Greenwood 1985: 41–61; Milne 1988: 125–41); Jacob's biography in Gen 25:19–50:14 (Blenkinsopp 1981), Ruth (Sasson 1979: 200–15); Daniel 1–6 (Milne 1988: 199–262), and the book of Tobit (Blenkinsopp 1981).

Propp's *Morphology* offers not only a formal model for the folktale but also a methodology. Applying the latter and not the former, it has been possible to discern in the OT narrative themes that bear similarity in their formal exposition such as stories of deception (Gen 12:10–20; 20:1–18; 26:1–17), deceptive murders (Judg 3:12–31; 4:17–24); romantic encounters at the well (Gen 24:10–14; 29:1–14; Exod 2:15–21) and tales of miraculous curing (i.e., 1 Kings 17–24; 2 Kgs 4:18–37). The patterned exposition of such themes, which is the earmark of oral narratives, strongly suggests that these narratives circulated orally in ancient Israelite society before they were committed to writing (Culley 1974; 1976: 33–115; Niditch 1987: 23–125; Rofé 1988).

7. Poetic Comparison. As a method, comparative poetics could reveal, by analogy, the features of oral literature that the OT text retained. The occurrence in the OT of poetic features that commonly appear in texts that have been recorded from oral singers and narrators is indicative of these texts being rooted in oral performance, or at least its impact upon their literary rendition. In other comparisons with Near Eastern cultures (i.e., van der Ploeg 1947; WidEngren 1959; see also Ong 1982; Goody 1986, 1987), oral tradition is conceived as an ideal and abstract concept. Comparative poetics, on the other hand, draws an analogy between the OT and oral poetry on the basis of recording and analysis of performance-generated texts. In such a comparison 2 features that have become distinctive of oral poetry stand out: (a) formula and (b) parallelism. These 2 poetic features are a function of oral performance and therefore their occurrence in the OT is indicative of the residue in, or the impact on, the OT of poetry that was performed orally in ancient Israelite society in a variety of religious and political contexts.

Originally defined as "a group of words which is regularly employed under the same metrical conditions to express essential ideas" (Parry 1930: 80) the formula has been regarded to be instrumental in the oral composition of poetry. M. Parry (1930) and A. Lord (1960) isolated such formulas in the texts of oral singers in the Balkan, and since they identified similar verbal patterns in the Homeric epics they inferred that Homer was an oral poet. This conclusion stimulated worldwide research (Foley 1985, 1988), confirming the use of formulas by oral poets, and more controversially, reconstructing the oral base of ancient and medieval epics. In a somewhat modified and expanded definition, R. Culley (1967) has applied the concept to the OT, identifying such phrases as "incline your ear to me" (Ps 31:3; 71:2; 102:3) or "hide me in the shadow of your wings" (Ps 17:8; cf. Ps 36:8; 57:2; 63:8) and many others as formulas (Culley 1967: 32–101), and inferring therefore the origins of the Psalms, and other OT parts in which formulas occur, in oral composition (Watters 1976: 2–19).

Word pairs such as "ground/dust" and "ever/all generations" and many others have been recognized as particular formulaic parallelism that the OT shares with Canaanite myths (Avishur 1984; Cassuto 1975: 60–69; Watters 1976: 20–38). The recognition of parallelism as a characteristic of OT poetry is one of the points that marked the inception of modern research in the 18th century (Lowth 1753; Watters 1976: 92–95), and has continued to exert its influence on scholarship (Dahood *Psalms 3* AB, 101–50; Kugel 1981). Modern field research among partial or nonliterate societies increasingly demonstrates that parallelism is a characteristic of oral poetry (Fox 1977, 1988).

Neither formula nor parallelism are the exclusive features of oral poetry; they do occur in written poetry as well (Finnegan 1977; Jakobson 1966; Watters 1976). However their position in oral poetry and ancient recitations of myths that antedate writing indicates that even when they appear in written texts they resonate the oral voice in poetry.

C. Ethnographic Method

The ethnographic method is descriptive. Its purpose is a reconstruction of the process of folklore communication in OT society. Toward this goal, folklore is conceived not as an aggregate of verbal forms but as an artistic process of communication that is performed in oral culture, in face-to-face situations, in

a society that shares language, themes, symbols, and cultural meanings (Bauman 1977; Bauman and Sherzer 1974; Ben-Amos 1971; Briggs 1988). In order to achieve a descriptive adequacy the ethnographic meaning refrains from comparative analysis with other cultures; while comparisons have illuminated various aspects of folklore, at the same time they introduce into the description either a different cultural system that is not necessarily congruent with the OT society, or a theoretical model that could constrain the description. So far the ethnographic method of folklore cannot claim to be part of a single school in OT research; Gandz (1935) and Eissfeldt (1965: 9–127) have made important contributions in this area, yet both were still historically associated with comparative methodology. At the same time the entire spectrum of OT research provides a foundation for this method. Other directions in OT research purport to reconstruct either the social life and structure or the social and political history of OT society, or to explore the history of Israelite language, literature and religion; by contrast, the method of historical ethnography in folklore aims at reconstructing the themes and forms of folklore, their social conception and function, their uses and users as they manifest themselves in the OT. The OT is admittedly a limited and tendentious text, documenting folklore only partially and doing that from the perspectives of its writers and editors who focused on the central institutions of authority, royalty, priesthood, and law. This limitation is an inherent part of the documentary value of the OT and has to be accounted for in any attempt at historical reconstruction. Furthermore, as a text that has been formulated over a long historical period, some of the ethnographic information that pertains to folklore is relevant to one era and not the other. The possibility of historical changes in folklore during the OT period is significant, yet at the moment cannot be discussed systematically.

Though written, the OT contains traditions on an oral culture. In the accounts of the Patriarchal period, even commercial and legal transactions resorted to eye witnessing or monumental testimony (Gen 21:30–33; 23:10–17; 31:44–52). The first reference to writing is associated with Moses (Exod 17:14; 24:4; 34:27; Deut 31:9–19). However, even in the stories of a later period, monumental testimony was used for historical commemoration (Josh 4:6–7), or in conjunction with writing for legal purposes (Josh 24:25–27).

1. Themes and Figures. The hallmarks of folklore in society are thematic repetition and variation, patterned accounts, and recurring allusions to distinct events and figures. When these features characterize a corpus of written literature, there is a greater likelihood that these literary sources draw upon oral sources that were historically available. This approach is applicable to the OT. It is true that the OT text attributes events and characteristics to historically grounded, distinct personalities; yet the recurrence of themes, their patterned presentation, and the allusions that subsequent generations made to them in poetry and prophecy, evidence their circulation in oral tradition and the familiarity of the community with them.

The OT accounts the history of the Israelites as a clan and a people through unfolding stories concerning family matters and magical acts that touch upon basic human needs of nourishment, health, and individual and collective freedom. These themes occur repeatedly. For example, female barrenness, a threat to the family future, has been attributed to Sarah (Gen 16:1), Rachel (29:31), Samson's mother (Judg 13:2–3), and Hannah (1 Sam 1:5). The acts of magical infliction of disease, even death (Exod 7:19–12:30; 2 Kgs 2:24; 5:27), and their opposites, stories about magical nourishment, cure, and revival (1 Kgs 17:17–24; 2 Kgs 4:8–37) have been an integral part of the prophetic narratives. The magical acts that the OT attributed to Moses affected the entire nation, whereas those attributed to Elijah and Elisha affected individuals.

The variability of specific stories, either mythological or historical, is also indicative of their basis in folklore. The creation of Eve, from earth like Adam (Gen 1:27) or from Adam's rib (Gen 2:21–23), represents a basic variation in the mythology of the OT. Among the historical tales, the introduction of the young David to King Saul is subject to two incompatible OT versions. According to the first (1 Sam 16:14–23), David is brought to play the harp before the depressed king, while according to the second he is the hero of the battle against the Philistines (1 Samuel 17). The killing of Goliath itself is attributed to another hero, Elhanan the son of Jaare-oregim, a variation that can reflect either suppressed oral tradition or a scribal error (2 Sam 21:19; 1 Chr 20:5).

Variations in details do not preclude similarity in plot patterns. Some of the morphological studies (see above) have demonstrated that different OT stories of magic and family matters share similar discernible patterns thereby suggesting their basis in oral tradition.

But the themes of oral traditions are not limited to family affairs and concerns with food and health. Rather, throughout the poetry and prophecy of the OT resonates the central historical theme of the Israelites: the exodus and the wandering in the desert. The recurrent references to this subject suggest that this tradition was familiar to all Israelites, particularly since the knowledge of these traditions has been reinforced in the ritual celebration of the Passover ritual.

2. Genres. In personal interaction and artistic performances, oral communication is clearly dominant. Verbal communication is a framed activity, conveyed within verbal forms that the members of a culture name, or at least recognize, in terms of their textual features and the social contexts of their performance (Ben-Amos 1976: 215–42). The following are the genres that function in folklore communication.

a. Poetic Genres. *Šîr* is the term for the general category of poetry as contrasted with prose. It encompasses songs, either a cappella or with instrumental accompaniment (Amos 6:5), recitation (Judg 5:12), and popular songs or cultic songs (Ps 137:4). In Psalms the term occurs with the generic modifier *mizmôr* (i.e., Ps 30:1; 48:1) which also occurs independently (i.e., Ps 100:1; 110:1). The 2 terms *šîr* and *zmr* partially overlap, and partially relate to each other as the general to the particular: *mizmôr* and *zmr* appear to represent the more melodious subcategory, while *šîr* marks the basic distinction between prose and poetry. *Šîr* is also a category of verbal expression of joy that contrasts with *qînâ,* lamentation (Amos 8:10), though *qînâ* could be a subcategory of *šîr* as well (2 Chr 35:25). Within court and cult organization there were professional singers. In the preexilic period, the OT refers to singers of both genders: *šārîm* and *šār̃t,* who were part of the royal personnel (2 Sam 19:36; cf. Eccl 2:8). Postexilic references mention mainly cultic male singers *měšōrĕrîm* associated with Temple worship (i.e., Ezra 2:41; Neh 12:28). Singing, together with music making and dancing was an integral part of joyous occasions, ranging from the celebration of war victories (1 Sam 18:6–7) to romantic love as represented in Canticles.

A subcategory of *šîr* is *šîrâ.* This form is a commemorative song that commits to verse events of historical significance, in particular the deliverance from a powerful enemy. Thus the "Song of the Sea" (Exod 15:1–19) and David's song (2 Samuel 22; Psalms 18) are both designated in the title as *šîrâ.* The song of Deborah and Barak the son of Abinoam (Judges 5) lacks a generic designation; nevertheless the OT employs the verb *šîr* to describe their performance. In all 3 cases the OT attributes the song and the singing to the leader, even though, in the case of the "Song of the Sea," Miriam is said to have repeated the song in a dance (Exod 15:20–21).

The introduction to the "Song of Moses" (Deut 32:1–43) illuminates a literary rather than oral perception of the genre of *šîrâ.* Before reading the song aloud *(dbr)*—the same verb that preceded David's song—Moses instructed the people to write down his song so that it would serve as a historical monument, a testimony for the covenant between God and the Children of Israel (Deut 31:19–23). From a literary perspective, the *šîrâ* serves the same function as the monument Joshua erected (Josh 24:25–27).

The interchangeability of the verbs *šîr,* sing, and *dbr,* speak, in describing the *šîrâ* mode of performance may be indicative of historical change; the possibilities available for singers simultaneously; or a rhythmic delivery that can be perceived as either singing or speaking (cf. Judg 5:12). In all cases except one, the *šîrâ* is performed by an individual, with possible choral response (Exod 15:1). The exception is the "Song of the Well" (Num 21:17–18). The writer introduces the song with the same formula employed in the opening of the "Song of the Sea" (Exod 15:1), albeit the singer is a collective entity: Israel. Isaiah employs the term, in the construct state, *šîrat,* indicating a further possible extension of its meaning. He refers to a known genre, albeit in a mocking fashion, reversing its meaning from a song of victory to a song of defeat. This occurs in the song to the vineyard that brought forth wild grapes (Isa 5:1–2) and the song of the harlot (Isa 23:15). Isaiah admonishes Tyre, which is compared to a harlot, "Take a harp, go about the city, though harlot long forgotten; make sweet melody, sing many songs, that thou mayest be remembered" (23:16). Possibly by his time the term *šîrâ* referred also to individual recitations

accompanied by musical instruments performed by female singers who were wandering around urban areas (cf. Ezek 33:31–32).

The Heb term, *qînâ* (pl. *qînôt*), lament or funeral dirge, is an oral poetic genre that contrasts socially and thematically with *šîr* and *šîrâ:* it conveys a message of defeat and loss (Amos 8:10). While *kinot* could be recited at any funeral, the OT reports them mostly after death in combat (2 Sam 1:17–25; 3:33–34). The information about the oral *qînâ* is meager and appears to be contradictory. The two complete *qînôt* texts are either literary quotations (2 Sam 1:18) or obvious literary compositions as the acrostic form of Lamentation clearly indicates. Both share a structure in the opening formula and the *leitmotif* phrase that begins with question marker "how?" (Lam 1:1; 2 Sam 1:19, 25, 27). In spite of the literary nature of both *qînôt* they may replicate the oral *qînâ*, inasmuch as David's fragmentary lament for Abner (2 Sam 3:33–34) similarly opens with a question that is the verbal equivalent to "how."

The information about the *qînâ* performance is similarly ambivalent. While Jeremiah refers to women as *qînâ* singers (Jer 9:16), and another text suggests a mixed choral group (2 Chr 35:25), the available texts are attributed to individual males—a king and a prophet. The discrepancy may reflect either historical development or different phases of the funeral ritual: choral singing and individual oration. Only the latter offers significant texts quoted by the OT.

The most prominent of the poetic genres in the OT is "the word of Yahweh" *(dĕbar YHWH),* a term designating prophecy in the preexilic and postexilic periods (i.e., Jer 1:4; Ezek 1:3; Hos 1:1; Joel 1:1; Mic 1:1; Zeph 1:1; Hag 1:1; Zech 1:1), alternating with such terms as *ḥāzôn,* vision (Isa 1:1; Obad 1:1) or *maśśāʾ* (Nah 1:1; Hab 1:1). The term *nĕbûʾâ,* prophecy, is postexilic, occurring in the OT only 3 times (Neh 6:12; 2 Chr 9:29, 15:8). The OT narrators, speakers in the biblical tales, attribute to the speakers of the word of Yahweh the role of a prophet, *nābîʾ*, a term which the prophets themselves rarely proclaim (Jer 1:5) and in fact occasionally deny (Amos 7:14) or even denounce (Zech 13:2–5). The word of Yahweh is a divinely inspired speech, uttered in OT poetic forms, in various degrees of ecstasy, in public places, mostly places of worship. The prophets often Engaged in verbal duels and open debates with each other and other religious personnel (Amos 7:10–17; Jeremiah 28). The OT describes prophetic speaking as a common occurrence in urban public life, though it has retained, and thereby canonized, only the texts of Yahweh-inspired prophets from the 8th century B.C.E. onward. Although occasionally the prophet committed their words of Yahweh to writing (Jer 25:13; 30:2; 36; Nah 1:1), their speeches were an integral part of the public oral poetic discourse revolving around ethical, religious, and political subjects.

b. Prose Genres. The paucity of generic terms for prose narratives in the OT may be surprising in light of the rich scholarship of the form criticism school. The debates over definitions and categorization of one OT narrative or another—whether it is a myth, saga, legend, folktale, or novella—rarely incorporate the perception and conception of these tales by the OT narrators and writers. Rather, from their perspectives, as manifested in their textual accounts, the entire narrative of OT history from creation to exile of the king of Judah, is a trustworthy account, the veracity of which cannot be doubted, and which has the same validity as far as their faith is concerned. The story of creation (Gen 1–3), the sacrifice of Isaac (Gen 22), the story of Joseph (Gen 37, 39–50), the accounts of the beginning of the Davidic dynasty (1 Sam 16:2–18:13), and the destruction of the Temple (2 Kgs 25:8–21; 2 Chr 36:15–21), had the same historical-religious validity in ancient Israelite society, regardless of their scholarly classification as either myth, legend, folktale, or saga. In that respect the absence of generic terms is as significant as their abundance in other societies. Furthermore, except for rare cases the OT narrators do not offer a literary, generic metacommentary. There is hardly any report of narrating which would give room for the use of the names by which storytellers refer to the oral literary forms they distinguish.

One exceptional case is the account of the confrontation between the anonymous man of God and King Jeroboam (1 Kgs 13:1–10). The tale has all the earmarks of a miracle tale and a story of an encounter between secular and religious authorities (cf. Rofé 1988). The OT text relates the retelling of these events by the son of an old prophet to his father, employing the term *maʿăśēh.* In postbiblical and medieval Hebrew this lexeme had become a term for a genre that includes tales of this kind. In the present use,

ma‹ăśēh could refer either to the acts or to their narration. In other uses *ma‹ăśēh* refers to human or divine craftsmanship, work, or action (Exod 26:36; 28:6,11; 37:19; Josh 29:31; Isa 60:21).

As in the present example, nouns that are predicated upon the verb *spr*, to tell, are likely to be names of oral literary forms. Prominent among these is the term *niplā›t*, wonders, which always occurs in plural form. The term designates both actions and their narration; the former are predicated upon the verb *‹āśāh*, to do (Ps 78:18; 86:10; 98:1), whereas the latter, the generic term, upon the verb *spr*, to tell (Ps 9:2; 26:7; 71:17; 75:2; 105:2; 119:27; 145:5). Most of these usages of *niplā›ôt* appear in Psalms where poetry offers a possibility for commentary upon the narrative tradition and requires terms for references. Occasionally, the same term occurs in the same function elsewhere (Judg 6:13). The term refers to stories about historic, cosmic, and ethical actions of Yahweh, as he reveals himself to his people. The generic terms themselves are indicative of the theological and religious views of ancient Israelite society.

c. Conversational Genres. Conversational genres are those forms of oral literature that require the active participation of 2 speakers or those that are interspersed within a conversation or speech making. Among those the *māšāl* appears in the OT to be the most enigmatic. On the one hand it is part of a paradigm consisting of an insult, a taunt, and a curse (Jer 24:9; cf. Deut 28:37; 1 Kgs 9:7; 2 Chr 7:20). On the other hand the form is the epitome of wisdom, as represented in the book of Proverbs. Furthermore, it appears to parallel the riddle (Ezek 17:2; Ps 78:2), but its literary form is either a parable or an epigram. However, this apparent diversity of forms share a unity of use that provides them with a single generic categorization. The *māšāl* is a self-contained proposition that cannot be contradicted by its own terms; hence it represents wisdom. In its appropriate application there is a correspondence between the proposition and the situation to which the *māšāl* is applied, further reaffirming the notion of wisdom. Inappropriate application conveys stupidity (Prov 26:7, 9). The relevance of the proposition to a particular situation can be enigmatic, hence the riddling quality of the *māšāl.* Finally, since the principle of correspondence is the main feature of the *māšāl,* it is possible to establish it between a real situation and either terms in a proposition, or figures in a narrative, that then becomes allegorical.

The *māšāl* speakers are known as *mōšlîm* (Num 21:27) or *mĕmaššēl mĕšālîm* (Ezek 21:5). Referring to his allegory, Ezekiel uses the term in a derogatory sense, but the attribution of 3,000 proverbs to King Solomon is a clear mark of his wisdom (1 Kgs 5:12). While the ability to speak in proverbs and parables could distinguish an individual, in the OT there are several narrative episodes in which figures, known for their other qualities, quote proverbs to resolve situations of conflict. David cites an ancient proverb to diffuse the tension between him and King Saul (1 Sam 24:14), and without offering generic designation Gideon (Judg 8:2), the Midianite chiefs (Judg 8:21), and Ahab (1 Kgs 20:11) employ proverbs during conflicts. A proverb is also used in the story of the anointment of David (1 Sam 16:7), replicating oral discourse. In speech making, orators and prophets use the *māšāl* as either strings of epigrams (Num 23:7–10, 18–24; 24:3–9, 15–24), or as parables (Ezek 17:2–10). As in other societies (Briggs 1988; Fontaine 1982) proverbs serve as quoted speech. Jeremiah (31:29) and Ezekiel (18:2) quote the same proverb, "The fathers ate sour grapes; But it's the children's teeth that rasp," and both choose to dispute the value it conveys. This proverb, as others, has been quoted from a set of culturally available propositions that speakers could apply to various situations. They bear the authority of tradition as the abstract voice of the community, encapsulating cultural values, ideas, and even legal principles for the guidance of social conduct.

In contrast to proverbs that appear in the OT relatively in abundance, the reports about riddles (*ḥîdâ,* pl. *ḥîdôt*) and riddling situations are rather scarce. The Psalmist ascribes to them, along with proverbs, the attribution of antiquity (78:2); but in riddles, novelty is required for the form to have any rhetorical effect. In Proverbs they are conceived as belonging to the same paradigm with proverbs, metaphors, and the words of the wise (Prov 1:6; cf. Hab 2:6). Indeed in use they serve as tests of wit and wisdom (Judg 14:12–18; 2 Kgs 10:1; 2 Chr 9:1). In these cases the riddle context is an exchange between the genders or, as in the case of Samson's wife, her representatives.

Least of all, the OT offers information about humorous texts and behavior. The OT, particularly the book of Proverbs, conveys a negative attitude toward humor and jovial behavior. However, the righteous

condemnation of conviviality is a strong testimony of its central position in social life. Merrymaking was a social affair (Prov 1:22), part of urban life (Prov 29:8) often associated with drinking (Prov 20:1). Individually (Jer 20:7) and collectively (2 Chr 30:10) those who advocated righteous behavior conceived of the reaction toward them as ridicule. They were subject to the people's humorous songs (Lam 3:14), the texts of which have not been preserved.

3. Transmission of Tradition. The Israelite oral tradition and literature in OT times were heterogeneous, multigeneric, and multipurpose. They served the needs and goals of several tribes and of different segments of the society. However, the writers and editors of the OT preserved and documented mainly those oral traditions that they perceived to be central to their conception of Israelite religion and history. Similarly in their references to the modes of transmission they continuously referred to the central institution of oral transmission. Stories of defeat and victory were told on the city streets (1 Sam 1:20), at the city gates and on the road (Judg 5:10–11), but the main institution of oral transmission to which there are repeated references is the passing on of cultural heritage from father to son (Exod 12:26; 13:8, 14–15; Deut 6:20–23; Judg 6:13; Ps 44:2; 78:3). Probably there were several informal occasions to pass on traditional knowledge, but the formal situation has been *lêl šĕmûrîm*, night of watching, a term that likely refers to an all-night storytelling. The midrash in the Passover Haggadah about the rabbis telling Exodus stories all night, could be a record of a cultural historical survival which they try to explain through exegesis of the OT text. For the Israelite society the exodus and the Sinai experience, including its narrative and laws, have been the core of the national tradition, and it was transmitted within the family.

D. Folklore and the Biblical Text

The comparative and the ethnographic methods complement each other in reconstructing the folklore of the OT; neither can be exclusive. Rich as it is, the OT offers only a glimpse into the oral traditions of biblical society. Only a few of the tales, songs, proverbs, and riddles that were an integral part of the ancient Israelite society have survived the sieves of history and literacy. What has remained rarely reflects the changes in folklore within the different historical periods that constitute the OT era. Many themes and characters have been forgotten, leaving their traces in metaphors and allusions. The comparative method, particularly the examination of other cultures in the area, their literatures, languages and religions, supplement and illuminate the narratives, metaphors, and beliefs of the OT and the historic and heroic figures around which the biblical stories revolve.

The relation of an oral theme or form to the OT, whether it is included, omitted, or allusively mentioned, is a function of the very process of canonization through literacy. In their act of committing a text to script, the writers and editors of the OT were motivated by a desire to sanction and commemorate a specific version of a story—to render permanent those texts that serve the writer's ideas, beliefs, and conception of history and nation. Literacy is not value free; hence any examination of the folklore in the OT must also account for the nature of the OT itself as a literary and religious canon.

Stylistically, literacy imposes its own constraints upon oral tradition. The lEngth of a text and its rhetorical features can attest neither to its authenticity nor its antiquity. Short fragments are not necessarily oral and older; longer texts are not essentially literate and younger. Oral tradition has many of the capabilities literature possesses, and literature can imitate many of the qualities of oral performance. The texts that are available to us in the OT do not duplicate precisely the whole range of features of oral tradition for the simple reason that they are in a book. They can only echo the voices of a distant past.

FOOTWASHING. The washing of the feet of guests before a meal seems to have been a sign of welcome in the ANE, as reflected in the Yahwist's account of Abraham and the heavenly visitors in Gen 18:4. But in Exod 30:19 the washing of the feet is required of those who are to come before the presence of God at the Sanctuary. Philo's comments on these passages (*Quaes Gen* IV.5, 60, 88; *Quaes Ex* I.2; *Vit Mos* II.138; *Spec Leg* I.206–7) show that, within the Hellenistic synagogue, footwashing may have been the object of some discussion in connection with its ritual performance. Apparently it was thought that it provided sanctification by the divine spirit, and/or the opening up of the soul to manifestations of the divine. Discussion of the validity of this ceremonial practice seems to have continued for some time in some Christian communities, as reflected in Pap. Oxyrh. 840. This 4th century Christian document tells of a Pharisaic chief priest who challenged Jesus' right to walk on the sacred pavement of the temple "without having bathed yourself and your disciples not having washed their feet." The text goes on to contrast exterior vs. interior washing. For our purpose it is important to note the association made between disciples with washed feet and their right to stand on the pavement of the sacred precinct.

Within the early Christian communities there was an oral tradition about the washing of the disciples' feet on the part of Jesus. Apparently different Christian communities adopted the practice, but gave to its performance different meanings. Within the more ecclesiastically organized communities of the Pastoral Epistles the ritual became something that established the position of "widows" as servants of the community (1 Tim 5:10). The exact circumstances under which widows were supposed to wash the feet of disciples, or the meaning attached to this ritual performance escapes us now due to the lack of further contemporary evidence.

In the more egalitarian Johannine community the ritual seems to have gone through different stages of signification prior to the final redaction of the gospel of John. A form critical analysis of the passage (John 13:4–20) reveals that within the Johannine community the original account consisted of 13:4, 5, and possibly 12–15. These texts set the basic scene of Jesus washing the disciples' feet. The scene itself, however, seems to have been influenced by synoptic sayings of Jesus recorded in Mark 10:42–44 and par. This observation causes some scholars to suggest that the scene may represent a traditional elaboration of the synoptic sayings in narrative form. Verses 12–15, it is to be noticed, do not actually illumine the meaning of the action described in 4, 5. They only establish the *mandatum* that the disciples must follow the example of the Master, and that the one who did the washing was none other than their Master and Lord. That this command is recorded here would indicate that the ritual was part of the liturgical

celebrations of the Johannine community. In this connection it must also be noticed that the washing of the disciples' feet in the context of a communal meal, where Judas the traitor is identified, replaces the institution of the eucharistic elements in the Johannine narrative. This fact argues most strongly for the unusual importance attached to the footwashing in the Johannine community, and is another indication of the community's sectarian characteristics.

Verses 6–11 and 16–20 represent two separate elaborations on the scene done within the Johannine community, since they have the obvious marks of Johannine composition. Verses 6–11 give meaning to the scene by the well-known Johannine technique of a dialogue in which the interlocutor misunderstands. Verses 16–20, on the other hand, are a Johannine compilation of sayings of Jesus with synoptic parallels which begins and ends with "amen, amen" statements. No consensus has been reached among scholars as to which of the two interpretative elaborations on the story was introduced first into the gospel. It is generally agreed, however, that these two interpretative elaborations represent different compositional stages of the gospel, and reflect different circumstances in the life of the community. The structural similarities between the Jesus-Peter dialogue in 13:6–11 with the Jesus-Peter dialogue in 21:15–19 suggests that vv 16–20 may have been the earlier explication of the footwashing ritual, and that vv 6–11 were introduced into the story at the same time when chap. 21 was added to the gospel. If this is the case, vv 6–11 serve to intensify the meaning assigned to the footwashing in 16–20. In their synoptic setting the sayings found in 16–20 set forth the cost of discipleship within the context of persecutions. Moreover John 13:16 is repeated in 15:20 with the addition "if they persecuted me, they will persecute you." It would seem, then, that the disciples' identification with their Lord and Master, actualized by the footwashing ceremony had within the Johannine community a persecution context, since the humility with which the disciples identify themselves is humility unto death. In their synoptic settings these sayings also require of the disciples willingness to face up to death.

Verses 6–11 represent an elaboration of 13:17: "If you know these things, blessed are you if you do them." The Jesus-Peter dialogue contrasts the one who has knowledge of what he is doing with the one who doesn't. It also establishes that being "clean" is the condition for receiving a portion of the inheritance. As 15:3 makes clear cleansing is not achieved by ceremonial purifications (John carries on a polemic against ritual cleansings), but by the abiding words of Jesus. Those who are clean and bear much fruit are those who in total identification with their Master and Lord bear testimony when "their hour" comes.

It may be that to a large degree the exact meaning of the footwashing in the Johannine community is hidden within the inner resonance of the language of the Fourth Gospel. Still enough of the meaning of this highly metaphorical literary piece is open to us to allow us some indication of the significance the community gave to its footwashing ritual.

HEROLD WEISS

FOREIGNER. The OT employs a number of largely synonymous terms to designate the "foreigner," i.e., the person who, in the perspective of the writer or the audience, is irreducibly "other," the non-belonger in some respect: *zār, ben nēkār, nokrî.* In most instances, the connotations attached to these terms are negative, although occasional neutral or even positive usages occur. (The OT's treatment of the "sojourner," the *gēr,* i.e., the non-Israelite who in virtue of his status as a semi-permanent resident in Israel enjoys many protections as well as inclusion in the community's religious life, is quite different.) The OT's references to foreigners may be classified according to the particular sort of otherness/non-belongingness attaching to the persons so designated.

1. Particularly in the prophets, the terms cited above designate in generalizing and indeterminate fashion the other nations with whom Israel comes in contact. Frequently, these are cited as the actual or potential devastators or exploiters of Israel (Isa 1:7; 62:8; Jer 5:19; Lam 5:2; Hos 7:9; 8:7; Obad 11) who as such, however, function as Yahweh's punishing agents (Ezek 7:21; 11:9). Israel's involving itself with other nations is reprehensible (Isa 2:6; Jer 2:25; 3:13; Ezek 16:3; 44:7), above all because of the danger of apostasy to "foreign gods." Rather, Israel should separate itself from the nations to the extent possible (Neh 9:2). In the future it is hoped that foreigners' subjugation of Israel will be eliminated (Isa 25:2, 5; Jer 30:18; Joel 4:17), and that Israel itself will attain to domination over foreigners (Isa 60:10; 61:5). In the same line are the legal prescriptions denying to those who are ethnically foreigners various Israelite prerogatives, whether political (Deut 17:15), economic (Deut 15:3; 23:21), or cultic (Exod 12:43; Lev 22:25; Ezek 44:9). On the other hand, a few texts do allow for some degree of participation in Israel's worship by individual well-disposed foreigners (1 Kgs 8:41, 43; Isa 56:3, 6; cf. 66:18–21). Finally, in the prophetic oracles against the nations, "foreigners" are peoples other than—and hostile to—the particular non-Israelite nation (Babel, Tyre, Egypt) against whom a given oracle is addressed (Jer 51:2; Ezek 28:7, 10; 30:12, 31:12).

2. In other contexts, the persons designated by the relevant terminology are not necessarily non-Israelites in the ethnic sense. Their "foreignness," for example, consists rather in their not belonging to one's own extended family or household (Deut 25:5; 1 Kgs 3:18; Job 15:19; 19:15; Ps 69:8; 109:11; Qoh 6:2). The non-family member likewise seems to be the person the book of Proverbs has primarily—if not exclusively—in mind when it warns against entanglements with "foreign women," i.e., the wives of other Israelites (Prov 2:16; 5:3, 17, 20; 6:24; 7:5; 22:14; 23:27) or giving surety for "foreigners" (Prov 6:1; 11:15; 20:16; 27:13). Throughout this body of material, the depiction of the persons concerned is largely negative. They represent threats to a family's prosperity, good name, and survival over time. It is best then not to become intimately involved with such "foreigners," above all not with "foreign women" whom Proverbs characterizes as morally deviant (6:23; 23:27) in their advances to men other than their husbands.

In a further intensification of this usage, foreigner-terminology is used to designate the nameless (presumably Israelite) persecutors tormenting the psalmist (Ps 54:3; 144:7, 11). Also to this category pertain the prescriptions of the Priestly tradition prohibiting the arrogation of Levitical and/or Aaronide prerogatives by "foreigners," i.e., Israelites not belonging to the two clerical divisions (Exod 29:33; 30:33; Lev 22:10, 13; Num 1:51; 3:10, 38; 17:5; 18:4, 7—here the term used is always *zār*). These passages attest to a sharp dichotomy within the people of Israel itself as to degrees of holiness and cultic competencies. Finally, in a few instances "foreigner" is simply a circumlocution for the non-self (Job 19:27; Prov 27:2).

3. Like the OT, the NT employs a variety of equivalent terms for the "foreigner": *allogenēs, allophulos, xenos, allotrios.* It does not, however, give the same prominence to such terminology as does the OT—primarily because through the work of Christ ethnic-religious divisions within humanity have been, in principle, overcome (see esp. Eph 2:11–21). Reminiscent of the OT, "ethnic" usages are passages where "foreigner" designates those who are not by birth members of the people of Israel (Luke 17:18; Acts 10:28; Eph 2:19; Heb 11:34) or of some other people (Acts 17:21). The faithful of OT times lived on the earth as "foreigners" in exile from their heavenly homeland (Heb 11:9, 13). The duty of hospitality to fellow Christians who are "foreign" in the sense of not being personally known to one is strongly inculcated (Matt 25:35ff.; 3 John 5).

CHRISTOPHER T. BEGG

FORERUNNER [Gk *prodromos* (προδρομος)]. In Greek literature *prodromos* ("forerunner"), used as a noun (the adjective means "running before"), designates someone or something which goes in advance

and normally implies that others are to follow. The term is applied to messEngers, to the front-runner in a race, to advance military parties (especially scouts or guides), and to a kind of picket ship which leads others into port. The military usage seemingly predominates. Northerly winds, preceding the annual summer Mediterranean winds, are called *prodromoi* by Aristotle and Theophrastus. *Prodromos* is used metaphorically of first fruits, specifically, of early figs in Theophrastus (*Hist. Pl.* 5.1.5) and Pliny (*HN* 16.113).

A. Septuagint

In the LXX, *prodromos* occurs in Num 13:21; Wis 12:8; and Isa 28:4. It is used twice in the metaphorical sense and translates the Heb *bĕkûrâ.* In Num 13:21, springtime is poetically described as a time of first grapes (lit. "the forerunners of grapes"), while in Isa 28:4 the first-ripened figs (lit. "the forerunner of the fig,"), considered to be delicacies and therefore quickly picked, are used to symbolize the impending attack against Samaria (cf. Nah 3:12, where a similar image is used [with *bĕkûrâ* in the Hebrew, but without the corresponding *prodromos* in the LXX], of the destruction of Nineveh).

The military sense of *prodromos* is exploited in Wis 12:8 where wasps or hornets function as an advance party for God's army. For the sage, this first attack upon the Canaanites (cf. Exod 23:28; Josh 24:12) is seen as a first skirmish and a warning. Thus, time is allowed for repentance before the definitive battle.

B. Christian Literature

"Forerunner" is frequently used in Christian literature of John the Baptist, whose image is developed in the synoptic tradition by means of biblical motifs (Isa 40:3–11; Mal 3:1) in such a way that John is considered to be one who prepared the way for Jesus.

However, the NT does not explicitly use the term *prodromos* in reference to the Baptist. The sole occurrence of "forerunner" in the NT is in Heb 6:20. There, used in reference to Jesus, its presence is sometimes deemed to be part of an anti-Baptist polemic.

This unique description of Jesus as a forerunner (Heb 6:20) is one of a series of particular christological epithets found only in Hebrews (e.g., "apostle," Heb 3:1; "perfecter of faith," Heb 12:1). It belongs to a complex of terms (e.g., "pioneer," Heb 2:10; 12:2; "cause of salvation," Heb 5:9) which describe the human Jesus who has completed his journey and who has the capacity to secure a similar status for those who follow him. As such, the forerunner image is part of Hebrews' unique and variegated portrayal of Jesus.

The forerunner notion embodies elements of continuity and of discontinuity. Specifically, the notion of Jesus-forerunner belongs to the author's theopoetic vision of Jesus, the high priest, and serves to differentiate the priesthood of Jesus from the Aaronic priesthood. Only the latter entered into the Holy of Holies, but Jesus enters so that others might follow him into the presence of God. Jesus enters into the inner sanctuary "on our behalf" (Heb 6:20b): the prepositional phrase (*hyper hēmōn*) qualifies the entrance as such; only rarely does the manuscript tradition speak of Jesus as "our forerunner" (*prodromos hēmōn;* e.g., minuscule 489). The idea that Jesus has entered into the sanctuary on our behalf is further developed in Heb 7:18–10:18, where the author expounds upon Jesus functioning as priest on our behalf within the inner sanctuary. Ultimately, the motif of Jesus-forerunner functions as an expression of Christian hope. For further discussion see *TDNT* 8:235 and *ISBE* 2: 337–38.

RAYMOND F. COLLINS

FOREST OF EPHRAIM. See EPHRAIM, FOREST OF.

FOREST OF LEBANON, HOUSE OF THE (PLACE) [Heb *bêt ya‹ar hallĕbānôn* (בֵּית יַעַר הַלְּבָנוֹן)]. Part of Solomon's palace complex (1 Kgs 7:2–5). It was probably a separate building (Heb

bêt) not attached to the building whose compartments were the Hall of Pillars, the Hall of the Throne (or Hall of Judgment), and the private living quarters of the royal family (vv 6–8). See also JUDGMENT, HALL OF. The House of the Forest of Lebanon was approximately the size of the temple. Not only is the name of this building quite unusual, but its description is very problematic, containing some Hebrew words (*šĕqupîm; meḥĕzâ*) that cannot be translated with confidence. Its most prominent feature, however, is reasonably clear: the 3 (following; MT reads "four") rows each containing 15 cedar pillars. The 45 pillars aligned in a building 150 feet long by 75 feet wide would mean the 15 pillars in each row had to be spaced no more than 10 feet apart: the net effect was probably of a densely packed forest. Although no similar building has yet been discovered archaeologically, Ussishkin (1973: 92–94) notes a resemblance to the column-building at Altintepe in E Anatolia, a building of the 8th–7th centuries B.C.

GARY A. HERION

FORGIVENESS. Forgiveness is the wiping out of an offense from memory; it can be affected only by the one affronted. Once eradicated, the offense no longer conditions the relationship between the offender and the one affronted, and harmony is restored between the two. The Bible stresses both human forgiveness and divine forgiveness: The latter is the divine act by which the removal of sin and its consequences is effected. This entry consists of 3 articles surveying the concept of forgiveness as it is presented in the OT, in early Judaism, and in the NT.

OLD TESTAMENT

The basic term for forgiveness in the OT is *slḥ,* occurring some 50 times: the verb *sālaḥ* occurs 46 times in the active *Qal* (33) and passive *Nip*ʿ*al* (13). The remaining 4 uses of the root comprise the noun *sĕlîḥâ* (3 times) and the adjective *sallaḥ* (once). The agent effecting forgiveness is the deity: This usage is consistent both for the *Qal,* where the subject of the verb is always God, and for the *Nip*ʿ*al,* which functions as a divine passive (e.g., *wnslḥ lw* = "and it shall be forgiven him [by the deity]"). The verb in the *Qal* takes as object both the person to be forgiven and the sin, expressed by the nouns *ʿāwôn* ("iniquity, guilt") *ḥăṭāʾâ* ("sin"), and *pešaʿ* ("rebellion, transgression").

An appeal to God for forgiveness is a regular feature of intercessory prayer. The first Pentateuchal usage of the verb *slḥ* (Exod 34:9) is in a context of intercessory prayer by Moses, for the sinful behavior of his people. Moses bases his appeal for forgiveness on the creedal statement in Exod 34:6–7 in which the character of God is described and in which his mercy and his willingness to forgive are confessed. (Forgiveness in this text is identified with God's continuing presence with and guidance of the people.) In Num 14:19–20, Moses' appeal ("Forgive the iniquity of this people") is based on the repetition in Num 14:18 of the creedal statement of Exod 34:6–7.

Another appeal to the deity for forgiveness is that of Solomon, in whose Temple prayer the verb *slḥ* occurs 5 times (1 Kgs 8:30, 34, 36, 50 = 2 Chr 6:21, 25, 27, 30, 39). Human repentance ("turning to God" in 1 Kgs 8:33 and "turning from sin" in 8:35) and divine mercy (v 50) are associated with forgiveness in Solomon's prayer; the same linkage of repentance and forgiveness appears in the divine promise to Solomon in 2 Chr 7:14.

In Amos 7:2 the verb *slḥ* is employed in a prophetic intercession for forgiveness. And the noun (*sĕlîḥôt*) is employed in Ezra's penitential prayer in which he appeals for forgiveness in the words of the confessional formula in Exod 34:6–7 and Num 14:18. In Daniel's intercessory prayer for forgiveness of the people, the noun (*sĕlîḥôt*) appears in Dan 9:9, linked with mercy; relying on God's abundant mercy (9:18), Daniel prays, "O Lord, hear! O Lord, forgive!" (9:19).

In addition to these prayers for forgiveness of the people, the *Qal* (active) form of the verb *slḥ* appears 6 times in Jeremiah (5:1, 7; 31:34; 33:8; 36:3, 50:20). In the 2 instances in chap. 5 the possibility of forgiveness is questioned or denied because of the worship of foreign gods (Deut 29:19, 2 Kgs 24:4). In 36:3 forgiveness is a possibility if the people repent ("turn": cf. 1 Kgs 8:33–36). The remaining occurrences in Jeremiah contain the positive divine promise of forgiveness. Similarly Isa 55:7 confesses God as merciful and rich in forgiveness.

There are 4 instances of the root *slḥ* in the Psalter: The verb occurs in Pss 25:11 and 103:3, the adjective *sallāḥ* in Ps 86:5, in a context that echoes Exod 34:6–7 (cf. Ps 86:15), and the noun in Ps 130:4 (note the similarity of Ps 130:3–4 to Amos 7:2). The assurance of forgiveness in the lament of Psalm 130 is countered by a lament which denies the possibility of forgiveness (Lam 3:42).

The remaining instances of active *slḥ* are Num 30:6, 9, 13, which deal with the divine release from sin, and the 2 occurrences in 2 Kgs 5:18 in which Naaman asks for forgiveness for future participation in non-Yahwistic rites. The 13 instances of the passive of *slḥ* (10 in Leviticus and 3 in Numbers) are all part of the priestly legislation regulating the cult. The *Nipʿal* (passive) of *slḥ* (*nislaḥ*) is linked with the verb *kippēr* in the stereotyped expression "The priest shall make atonement/expiation on his behalf and it shall be forgiven him." As mentioned above, *nislaḥ* is a divine passive, and so the agent effecting forgiveness is God, through the intercession of the priest; the passive verb makes the point that forgiveness does not inhere in the priestly rites, but in the action of God. The sins forgiven in these texts are in most cases identified as inadvertent (Lev 4:20, 26, 31, 35; 5:16, 18; Num 15:25, 26, 28). Lev 5:10, 13 (and Lev 5:6, where the passive *nislaḥ* is not used, but the formula abbreviated to "and the priest shall make atonement on his behalf because of his sin") concern sins of omission which are "hidden" (*nʿlm* in Lev 5:2, 3, 4) from the sinner, i.e., which the sinner has forgotten. Only in Lev 5:26 and 19:22 are atonement rites performed and divine forgiveness granted to deliberate sinners.

Synonyms of *slḥ:* In this section will be considered synonyms of *slḥ*, usually metaphorical expressions for the removal of sin that appear either in parallelism with or in contiguity to *slḥ;* the survey will be completed by mentioning usages of these expressions for forgiveness without connection to *slḥ*.

1. *nśʾ:* With the nouns *ʿwn* ("iniquity, guilt"), *ḥṭʾh* ("sin"), and/or *pšʿ* ("transgression") as objects, *nśʾ* can mean "to bear (iniquity, sin, transgression)," i.e., to bear away, to remove sin and its effects (including punishment) by taking it away, and thus to forgive or pardon. While the commonest of these expressions *(nśʾ [b] ʿwn)* occurs 35 times in the OT, the concern here will be with 7 occurrences (Exod 34:7; Num 14:18; Pss 32:5, 85:3; Isa 33:24; Hos 14:3; Mic 7:18) where God is the subject of the verb and forgives the sinner by taking away human sin. Several scholars have argued that the nuance of *nśʾ ʿwn* in at least some of these 7 texts (e.g., Exod 34:7, Num 14:18) is not so much "to take away iniquity" but "to bear (i.e., tolerate) iniquity": God forbears to punish, postponing or deferring the consequences of sin. This temporary forbearance or deferment of punishment or retribution is provoked by repentance (2 Kgs 20:16–19; 22:19–20). Noting this possibility, we will accept the more common understanding of this idiom as meaning "forgive iniquity/guilt."

The verb *nśʾ* occurs in connection with *slḥ* in three cases. In Exod 34:7 God's self-description (*nśʾ ʿwn wpšʿ wḥṭʾh:* "taking away iniquity, transgression, and sin") is followed in 34:9 by Moses' plea (*wslḥt lʿwnnw wlḥṭʾtnw:* "forgive our iniquity and sins"). In Num 14:18 a shorter version of the phrase in Exod 34:7 (without *ḥṭʾh,* "sin") is followed in 14:19 by Moses' plea, "forgive the iniquity (*slḥ nʾ lʿwn*) of the people in accord with your great kindness, as you have pardoned (*nśʾth,* "taken [sin] away") this people from Egypt until now." More distantly, Ps 25:11 (*wslḥt lʿwny,* "forgive my iniquity") is matched by v 18 (*wśʾ lkl ḥṭʾ wty,* "take away all my sins").

The texts where *nśʾ* occurs without connection to *slḥ* are Exod 32:32, where Moses intercedes for the removal of the people's sin of constructing the golden calf (and note v 30, where Moses describes his prayer as "making atonement" [*ʾkprh*]). In Ps 99:8, the intercession of Moses, Aaron, and Samuel is directed to a "forgiving God" (*ʾl nśʾ*). Two other instances of intercession for forgiveness are Exod 10:16–17, where Pharaoh confesses his sin and appeals to Moses for forgiveness (*w ʿth śʾ nʾ ḥṭʾty,* "and now take away my sin"), and 1 Sam 15:24–25, where Saul uses the same words in his plea to Samuel for forgiveness. While these last 2 instances might at first sight seem to deal with human forgiveness, Moses and Samuel are acting here not as themselves the bestowers of forgiveness but as intercessors for divine forgiveness (cf. Jer 15:1). In Josh 24:19 the successor of Moses warns the people that God "will not take away their transgressions and sins" (*lʾ yśʾ lpšʿkm wlḥṭʾ wtykm*) if they abandon him for the service of other gods.

Two instances of *nś*› occur in Ps 32: in v 1 the psalmist uses the passive of *nś*› in describing the happiness of the one "whose transgression is taken away" (*nśwy pš*‹), and in v 5 confession of transgression is followed by the assertion "you have taken away the guilt of my sin" (*w*›*th nś*›*th* ‹*wn ḥṭ*›*ty*). Psalm 85:3 employs the same phrase as in Ps 32:5 (*nś*›*t* ‹*wn* ‹*mk,* "you have taken away the guilt of your people") and parallels it with "you have covered all their sin" (*kyst kl ḥṭ*› *tm*), just as "whose transgression is taken away" in Ps 32:1 is paralleled by *kswy ḥṭ*›*th* ("whose sin is covered").

There are 3 prophetic texts employing *nś*› for the removal of sin. Isa 33:24 promises to the inhabitants of Zion that "their iniquity will be taken away" (*nś*› ‹*wn*). Hos 14:3 is an appeal for repentance in which the prophet urges Israel to return to Yahweh with the prayer "remove all sin" (*kl tś*› ‹*wn*). Mic 7:18 confesses God as "taking away iniquity" (*nś*› ‹*wn*) in a passage reminiscent of Exod 34:6–7. (The three other expressions for forgiveness in the Micah text will be treated below.)

Finally, mention should be made of Lev 16:22, where the scapegoat bears away the iniquity of the people, and Isa 53:12, where the same role is assigned to the servant of Yahweh.

2. *rp*›*:* There is one instance of *rp*› ("heal") in parallelism with *slḥ* ("forgive"), a usage that reflects the common biblical view of the connection of sin and sickness (Ps 38:4; John 9:3): Ps 103:3 (*hslḥ lkl* ‹*wnky hrp*› *tḥl*›*yky,* "he forgives all your iniquities; he heals all your diseases"). Perhaps 2 Chr 7:14 can be mentioned here as well; in that text God promises Solomon that, if the people repent, "I will forgive their sin and heal their land" (*w*›*slḥ lḥṭ tm w*›*rp*› ›*t* ›*ṛṣm*).

Other passages where *rp*› occurs without connection to *slḥ* but still probably describes God's removal of sin include Ps 41:5 ("Yahweh, be gracious to me: heal me [*rp*›*h npšy*] for I have sinned against you"). See also Jer 3:22, Isa 57:17–18 (and perhaps Isa 53:5), and more distantly Pss 107:20 and 147:3.

3. *l*› *zkr*: God's not remembering sin is once found in parallelism with *slḥ*, in Jer 31:34: "I will forgive their iniquities and their sins I will no longer remember" (*ky* ›*slḥ l*‹*wnm wlḥṭ*›*tm l*› ›*zkr* ‹*wd*). Other texts containing *l*› *zkr* without connection to *slḥ* include Ps 25:7, where "the sins of my youth and my transgressions do not remember" is preceded in v 6 by the positive counterpart "remember your mercy, O Yahweh." The same connection between God's not remembering iniquities and his mercy appears in Ps 79:8. In Isa 43:25 the divine assurance "your sins I will not remember" is balanced by another metaphorical expression for removal of sin ("your transgressions I will erase"), to be treated below. In Isa 64:8 the penitential prayer that God be not angry is completed with "do not forever remember iniquity." Finally, a similar expression may be mentioned here; instead of God's not remembering sin, Ps 32:2 prays, "happy the one to whom Yahweh does not impute iniquity" *(*›*šry* ›*dm l*› *yḥšb yhwh lw* ‹*wn*), an expression in parallelism with "not remember" in 1 Sam 19:20.

4. *rḥm:* The connection of divine mercy with forgiveness has been pointed out several times already. In 2 texts it is linked with *slḥ:* 1 Kgs 8:50, where "forgive" (*slḥt*) is followed by "give them mercy" (*wnttm rḥmym*), and Isa 55:7 where "[Yahweh] will show him mercy" (*wyrhmḥw*) is in parallelism with "he is rich in forgiveness" (*ky yrbh lslwḥ*). In Ps 103:12–13 God in his mercy forgives transgressions by putting them far away. In Mic 7:19 divine mercy is connected with 2 unique metaphors for divine forgiveness: God's treading iniquities under foot and God's casting sins into the depths of the sea. These instances of the connection between divine mercy and forgiveness call to mind the similar connection between God's forgiveness and his *ḥesed* (steadfast love), which has the sense of deliverance or forgiveness in the creedal confession in Exod 34:6–7 and the texts dependent upon it (Num 14:18–19; Pss 86:15, 103:8, 145:8; Joel 2:13; Jon 2:4; Neh 9:17).

5. *ṭhr:* There is one instance of the parallelism of "forgive" (*slḥ*) and "purify, cleanse" (*ṭhr* [piel]) in Jer 33:8 ("I will purify them of all their iniquities … and I will forgive all their sins"). In Lev 16:30, the Priestly legislation for the Day of Atonement, atonement (*ykpr*) involves purification from all sin. God's purifying his people from iniquity and sin is mentioned in Ezek 36:25, 33; 37:23; the divine refusal to do so is found in Ezek 24:13.

In the great prayer for forgiveness in Psalm 51, *ṭhr* occurs twice, in vv 4 and 9, where God's act of purification is paralleled by *tḥṭ*›*ny* ("decontaminate me, remove sin from me"), a usage that has its origins in the cult (e.g., Num 19:19), and by another cleansing metaphor (*kbs,* "wash"), also employed in Jer 2:22

and 4:14. On the basis of *kbs* as a metaphor for cleansing of sin, some commentators have suggested emending *ykbš* ("tread under foot") in Mic 7:19 to *ykbs* ("wash"); see below.

6. *mḥh:* Nowhere connected with *slḥ* but close to the notion of "purify, wash, cleanse" is *mḥh* ("erase, wipe away" [transgression]"), an expression found in Ps 51:3; it occurs as well in Isa 43:25, in parallelism with not remembering sin. The negative counterpart of this expression (i.e., the request that God remember iniquity and not wipe away sin) is found in Ps 109:14. Cf. Isa 44:22, Jer 18:23 (where "wipe away, erase" is in parallelism with *kpr* ["atone, expiate"]) and Neh 3:37 (where it is in parallelism with *ksh* ["cover"]).

7. *kpr:* Several passages speak of the removal of sin as "expiation, atonement," a concept drawn originally from the cult. The verb *kippēr* ("expiate, atone") occurs in Jer 18:23 (*kpr ʿl ʿwn,* "expiate, forgive iniquity"), in Ps 79:9 (*kpr ʿl ḥṭ›h,* "forgive sin"); also worthy of note are *kpr pšʿ* ("forgive transgression") in Ps 65:4, and *kpr ʿwn* ("forgive iniquity") in Ps 78:38. Note finally Ezek 16:63, and Isa 27:9 (where the expiation of iniquity [*ykpr ʿwn*] is paralleled by the removal [*hsr*] of sin; cf. Isa 6:7).

8. *hʿbyr:* The verb *heʿĕbîr* ("make pass by") is found in several passages (2 Sam 12:13, 24:10; Zech 3:4; Job 7:21; and a related expression in Mic 7:18). With such objects as sin, iniquity, or the like, the verb has been understood as a figurative expression for the divine removal of sin; forgiveness is effected when God "makes (the sin) pass by," i.e., when the sin is put away, at a distance. However, it has also been suggested that the idiom does not merely express metaphorically the removal or the forgiveness of sin; rather, it means that God has transferred one's sin (understood both as act and consequence) to another, i.e., God has made (the consequences of) the sin pass (to another). In this understanding, Nathan in 2 Sam 12:13 does not give to David assurance of divine forgiveness; he declares God's intention to expiate David's sin of adultery by the death of his child. Similarly in 2 Sam 24:10–17 David's sin (the census) is expiated by its transfer to the people, 70,000 of whom die by pestilence. This understanding of the expression is similar to the suggestion recorded above that *nś› (ʿwn)* means the deferral or postponement of the consequences of a sin; God does not acquit the guilty but rather "carries on" the sin from one generation to another, until expiated.

9. Infrequent or unique expressions: We can conclude our discussion of forgiveness by noting a number of infrequently occurring expressions. In Ps 103:12 forgiveness is expresssed as "putting (sin) far away, at a distance" (*hrḥyq*). Cf. also Prov 4:24 (where it is paralleled by *hsr,* "remove"), Job 11:14 and 22:23. Another figurative expression is God's "covering" (*ksh*) of sin, in Pss 32:1, 85:3, and Neh 3:37 (in parallelism with *mḥh,* "wipe away"); the expression "do not cover (*w›l tks*) their iniquity" in Neh 3:37 appears in a variant form in Jer 18:23, as "do not expiate (*tkpr*) their iniquity." Twice forgiveness is expressed by God's throwing away (*šlk*); in Isa 38:17 God "casts" sins behind his back, and in Mic 7:19 he "casts" them into the depths of the sea. The image of God treading sin underfoot (*kbš*) occurs only once in the OT (Mic 7:19). While some have suggested emending this unique expression to *kbs* ("wash"), Akkadian parallels adduced by Gordon counsel against this emendation. And finally, equally unique is God's "hiding (*hstyr*) his face" so as not to see sin, as an expression of forgiveness in Ps 51:11.

JOHN S. KSELMAN

EARLY JUDAISM

The study of forgiveness in pre-70 Palestinian Judaism is an unfortunately neglected area of research. Some important insights, however, are subsumed under discussions of redemption (Urbach), salvation (Neusner), and atonement (*ROTT* 1: 262–71; *AncIsr;* Elbogen, Gaster, Safrai).

Jewish scholars, until recently, have tended to read rabbinic ideas back into pre-rabbinic times, and have been insensitive to the vast differences between pre-70 Judaism (or Judaisms) and post-70 Rabbinic Judaism. After 70, when the Temple was burned by the Roman soldiers, the type of Judaism that survived was reshaped so that it could succeed without Temple and cult, and without possession of the land promised as an inheritance. Also, terms and concepts like "forgiveness," "redemption," "faith," "salvation," and "Savior" were defined in western culture as if their only use was the one developed over the centuries in Christianity; hence, their presence and use in pre-70 Judaism was often unperceived.

Christian scholars, under the influence of the NT authors, especially Paul, have frequently disparaged or been blind to the concept of forgiveness in Early Judaism (ca. 250 B.C.E. to 200 C.E.). Historians attempting to understand the rise and success of Christianity, even while trying to correct the excesses of polemics, tended to stress the uniqueness of Jesus and the creative qualities of Paul. The doctrine of the atonement, and the claim that forgiveness was won for all sinners by the passion of Jesus Christ, caused a failure to ask objectively how "forgiveness" was perceived in Early Judaism and what methods were devised to obtain it. All too often pre-70 Judaism was portrayed as legalistic. E. Schürer, the author of the voluminous and major reference work on Judaism "in the time of Jesus" at the end of the 19th century, in a marred attempt to describe accurately the historical climate in pre-70 Palestinian Judaism, claimed the following:

> Such external formalism is, as all can see, very far removed from true piety. The latter certainly might even under such a burden still continue to maintain a bare existence; but when besides this even *prayer* itself, that centre of the religious life, was bound in the fetters of a rigid mechanism, vital piety could scarcely be any longer spoken of (*HJP*[1] 2/2: 115).

The discovery of manuscripts written and used by pre-70 Palestinian Jews, the new perspectives found in the Dead Sea Scrolls, and especially a refined interconfessional methodology now cumulatively help us to see more clearly into the vibrant culture of Early Judaism.

An examination of forgiveness in Early Judaism may be organized in numerous ways; here the discussion will be brief, moving from the perception and expression of *need* to the cultic, personal, and national means employed by early Jews to obtain forgiveness from a "Forgiving Father," not a vEngeful demanding judge (all translations are by the author).

Need. The early Jews were not sinners, unperceptive of the need for God's forgiveness. The Temple was not destroyed because of a sinning people, as the Jewish author of *2 Baruch* claimed. The generation of Jews who lived just before the destruction of 70 C.E., as Neusner states, "was *not* a sinning generation, but one deeply faithful to the covenant and to the Scripture that set forth its terms, perhaps more so than many who have since condemned it" (Neusner 1975: 25).

Despite the distorted descriptions of Early Judaism caused by the claims that Jews were self-righteously proud of their obedience to God's Law (due to the denigration of "Pharisaism" in the gospels and the misinterpretations of the parable of the Pharisee and the Tax Collector (Luke 18:9–14). The early Jews themselves stressed a perception of unworthiness and sinfulness (see e.g., Philo, *Vit Mos* 2.147), and frequently claimed that God alone can forgive humans, and render them righteous. Note, for examples, the following:

> And I, if I totter,
> God's mercies (are) my salvation for ever; …
> He has justified me by his true justice
> and by his great goodness he will forgive (*kpr*) all my iniquities. (1QS 11.11–14)
> And I, I know that righteousness (is) not of humankind, and perfection of the way (is) not of an individual. (1QH 4.30)

The early Jews did not claim to be sinless; sinlessness was sometimes attributed to the great biblical heroes of old (Sir 44), especially to Abraham (*Apoc. Ab.*, T. Ab.) and Joseph (*T. 12 P.*). The study of forgiveness in Early Judaism must not be centered on the Heb (*sĕlîḥâ*) and Gk (*aphesis*) nouns for "forgiveness" and verbs "to forgive" (Heb: viz. *kāpar, nāsă, sālaḥ;* Gk: viz. *apoluō, charixomai, aphiēmi*); it must derive from the full, perceptive, and sensitive readings of all pertinent documents. Aseneth, for example, is described as an Egyptian (and former pagan) who knows that the Lord will "forgive me every sin" (*Jos. Asen.* 11:18, cf. 13:11–13; also cf. *4 Ezra* 7:105 and *2 Bar.* 84:10).

Religious Jews throughout Palestine before 70 C.E. memorized and recited daily the *Amidah* or *Tefilah* (18 Benedictions). They probably knew the 6th benediction in a form similar to the one preserved in the early Palestinian (Cairo Geniza) version:

Forgive us, our Father, for we have sinned against you.
Erase and blot out our transgressions from before your eyes,
For you are abundantly compassionate.
Blessed are you, O Lord, Redeemer of Israel.

Cultic. The Jews who lived just before the destruction of 70 C.E. inherited cultic traditions, rituals, liturgies, and customs that were approximately 1,000 years old (*ROTT,* 1: 262–71; *AncIsr*). The means for offering gifts, burning incense, bringing agricultural produce, and sacrificing animals (from pigeons to bulls) was elaborate. One of the reasons for offering these up to God is the need to obtain forgiveness; and that entails perception of sin, confession of sin, and the understanding that God desires to and will forgive the sinner seeking forgiveness. Cultic means for forgiveness was centered in the Temple; but it flowed also over into the daily prayers, weekly Sabbath services in synagogues, and the periodic festivals.

Personal. Devout Jews in face of the absolute demands of the Torah and especially the Decalogue experienced the need for forgiveness. To seek to be obedient to God, as revealed in the Written and Oral Torah, meant to confess the need for God's help in being obedient to him. Within a century before the destruction of 70 a Palestinian Jew, who was devout and introspective, wrote under the name of Manasseh the following:

> And now I bend the knee of my heart, beseeching you for your forgiveness.
> I have sinned, O Lord, I have sinned, and I know my transgressions.
> I earnestly beseech you, forgive me, O Lord, forgive me.
> (*Pr. Man.* 11–13)

National. At the beginning of each new year Jews, together as the nation of Israel, and through the priesthood, especially the High Priest, focused at Yom Kippur (The Day of Atonement; see Lev 16:30) on the need for purgation and forgiveness. It is enlightening, and an essential perspective for an understanding of the perception of and need for forgiveness in Early Judaism to comprehend that the nation, the priesthood, *and* the High Priest were acknowledged to be sinful and in need of God's forgiveness. The central purpose of forgiveness was for the benefit of the nation and humankind (see Philo, *Spec Leg* 1.190). The Mishnah does reflect the needs and social setting of 2d century Rabbinic Judaism, generally reliable, in its intent but not wording, is the confession attributed to the High Priest on the Day of Atonement:

> O God, I have committed iniquity, transgressed, and sinned before you, I and my house. O God, forgive (*kpr*) the iniquities and transgressions and sins which I have committed and transgressed and sinned before you, I and my house … (*m. Yoma* 3.8)

NEW TESTAMENT

The existence of forgiveness takes for granted the fact of human sin as an offense against God's holy law or against another human being; forgiveness is the wiping out of the offense from memory by the one affronted, along with the restoration of harmony. Forgiveness is not simply "the remission of penalties; what is remitted is sin" (Taylor 1948: 3).

———

A. Terminology
B. Forgiveness by God
C. Forgiveness by the Son of Man
D. Forgiveness in the Cross
E. Forgive Others as God Forgives You
F. Remission of Sins by the Apostles
G. The "Unpardonable Sin"

———

A. Terminology

The NT and Apostolic Fathers used the word *aphiēmi* ("to forgive") and *aphesis* ("forgiveness," "release"). These terms frequently have the sense of remission of financial debt; they were also used of forgiveness prior to the NT (e.g., Lev 16:26 LXX). But while it is thus hardly likely that the NT authors chose the words to give an economic flavor to God's pardon, Jesus did evoke the picture of release from debt as a metaphor of forgiveness. Another frequent synonym is *charizomai,* which usually takes the meaning "to give (freely)" (always with that meaning in the LXX, but "to show oneself gracious" in *Ep. Arist.* 38: 229; see Conzelmann and Zimmerli *TDNT* 9:389). A number of times in Pauline literature it means "to forgive" (e.g., 2 Cor 2:7, 10; Col 3:13; cf. Luke 7:42–43). Since this the NT application is without precedent, it may have been coined by Paul to denote God's free pardon (Martin 1981: 30; Barth *Ephesians 4–6* AB, 523–24). At any rate, it does not appear in later literature with that meaning except perhaps in Euseb. *Hist. Eccl.* 5.1.45 and Joseph. *Ant* 6, 144. Luke seems to use *apoluō* ("to loose from, dismiss, pardon") in Luke 6:37 as a synonym for *aphiēmi:* "forgive, and you will be forgiven." Matt 18:27 contains the same word used with its financial force: "the lord … forgave him that debt." Apart from this stock of vocabulary, the concept of forgiveness is implicitly present in other passages (e.g., Luke 15:20–24).

B. Forgiveness by God

The calamity of sin is perhaps the major concern of the NT. Offense against God is defined so broadly that mortals cannot by themselves avoid God's condemnation. So Matt 5:20: "Unless your righteousness exceeds that of the scribes and Pharisees, you will never enter the kingdom of heaven." Whether they will admit it or not, all find themselves needing to pray "God, be merciful to me a sinner" (Luke 18:13; cf. Rom 2:3–4).

Divine forgiveness is dependent on the loving nature of God. But while offered to all, pardon is not given to all. Impediments to forgiveness include stubborn unrepentance (Mark 4:12), unbelief (implicit in Acts 2:37–38, 40), denial of wrongdoing (1 John 1:8, 10), and refusal to forgive other people (Matt 6:14–15). There is scarce NT support for the universal remission of sins. Rather, forgiveness is the exception to God's wrath which will fall upon all but the pardoned (Kümmel 1973: 41–46).

The parable of the prodigal son (Luke 15:11–32) is a paradigm of the forgiveness of the sinner. One of its main features is the Father's eagerness to restore the one who humbly returns to him. Those whom Jesus receives and forgives are like the prodigal: Whether crushed by illness (Mark 2:3–4) or guilt and

social ostracism (Mark 2:15; John 8:11), those who have felt the yoke of shame can find freedom in God's forgiveness.

"Forgiveness of sins" becomes a synonym of salvation in Lukan literature. The disciples are to preach it (Luke 24:47), and in Acts it is announced to those in need of it (Acts 2:38, 5:31, 10:43, 13:38, 26:18). This forgiveness is offered in the context of initial repentance and conversion to Christ; it is the cleansing which issues from the suffering, death, and resurrection of Christ in accordance with the OT prophets. Forgiveness as a metaphor of conversion is also found in Rom 4:7–8, Eph 1:7, Col 1:14, 2:13, and probably Col 3:13.

In other NT texts, forgiveness is offered to those who are already believers: Jesus taught his disciples daily to pray "forgive us our debts" (Luke—"forgive us our sins"; Marshall *Luke* NICNT, 460–61). So in 1 John 1:7–10, rather than deny their sins, the disciples must confess them to God and be cleansed anew. God is "faithful and just," and forgiveness is part of his nature; but it is based on Christ's atoning sacrifice.

One of the ongoing debates within the Christian Church has been the relation between baptism and forgiveness. The Lukan accounts of the preaching of John the Baptist (Luke 3:3) and Peter (Acts 2:38) contain the urging of baptism "for the forgiveness of sins" (see also Acts 22:16, Rom 6:1–11, 1 Cor 6:11, Col 2:11–12, 1 Pet 3:21). With the overarching importance of baptism in the emerging Catholic Church of the next century, remission of sins and the removal of the taint of original sin came more and more to be associated with the sacrament (Kelley gives an index to the theology of baptism held by the Church Fathers). The spectrum of views on the meaning of baptism and the validity of infant baptism reflect differing approaches to its efficacy in removing sins (Beasley-Murray 1962: 263–305). The Fathers are deeply interested in the issue of postbaptismal sin, and prescribe often rigorous systems of repentance and reconciliation (Redlich 1937: 217–61; Telfer 1959: 46–48); it is also known that some delayed baptism until late in life, so that it would absolve them from all of life's sins.

C. Forgiveness by the Son of Man

One of the innovations in the Gospels is Jesus' claim that the Son of Man can forgive sins. The pericope of the healing of the paralytic is the fullest example of this (Matt 9:1–8 = Mark 2:1–12 = Luke 5:17–26): Jesus offers the man divine pardon and heals him "that you may know that the Son of Man has the authority on earth to forgive sins." Marshall has observed that Jesus' ministry was centered on his teaching which called men to repent and believe in the Gospel and to accept its spiritual blessings; he did not wish to perform physical healings which could become incomplete ends in themselves, and thus fail to be seen as symbolic parts of a greater whole (*Luke* NICNT). To be sure, Higgins theorizes that the Church created the saying that "the Son of Man has authority on earth to forgive sins" in order to justify its own practice of forgiving sins. But this skirts the evidence of the NT, which does not confirm that the Church aspired to invest its leaders with the authority to remit sins. Jesus was accused of blasphemy, because he forgave sins committed against God, and not against himself personally.

The point in the Son of Man sayings as presently written is that Jesus himself is the Son of Man on earth, and as such will be the eschatological judge (Matt 25:31–46, Mark 8:38, John 5:22). Thus he is able in advance to pronounce acquittal and to pronounce judgment (Matt 11:20–24 = Luke 10:13–15, among others).

In other passages, Jesus affirms God's forgiveness without directly claiming personal power to forgive: in Luke 7:47, "her sins, which are many, are forgiven"; in Luke 19:9–10, "today salvation has come to this house … For the Son of Man came to seek and to save the lost"; and in John 8:11, "Neither do I condemn you; go and do not sin again."

The Gospels claim for Jesus not a common human ability to forgive others, but the right to speak for God in matters of judgment and forgiveness; if he possesses this delegated authority, then Jesus is neither usurping the divine prerogative nor blaspheming.

While Jesus does not speak often of the atoning sacrifices of the temple, the repentant publican probably refers to his propitiatory sacrifice in Luke 18:13. Otherwise, in some heavily contested sayings he refers to his own death as a ransom (Matt 20:28 = Mark 10:45; Matt 26:28).

D. Forgiveness in the Cross

The ancient hope of the OT was for a New Covenant; the prophets were burdened down with Israel's perennial disobedience to the Law of Moses, which led inevitably to God's punishment. The solution would be a covenant in which God forgives and changes his people from within: "For I will forgive their iniquity, and I will remember their sin no more" (Jer 31:34); "I will sprinkle clean water upon you, and you shall be clean from all your uncleannesses, and from all your idols I will cleanse you" (Ezek 36:25; cf. Heb 9:12–14).

The ministry of Jesus brings unprecedented forgiveness of sins. He pardons sins as a part of the inbreaking of the kingdom of God; other kingdom blessings include exorcism, healing, and salvation (see Luke 4:16–21). All of the versions of the Last Supper mention the establishment of the (New) covenant. Matt 26:28 goes so far as to say: "This is my blood of the covenant, which is poured out for many for the forgiveness (*aphesis*) of sins." That is why the preaching of the Church according to Acts typically contained the promise of God's forgiveness in Christ.

Far from denying the OT demand for blood sacrifice for forgiveness, the NT authors consistently point to Christ as the ultimate sacrifice, and the fulfillment of the Mosaic system (Heb 9:22—"without the shedding of blood there is no forgiveness of sins"). According to Heb 10:12–18, "Christ had offered for all time a single sacrifice for sins" and "by a single offering he has perfected for all time those who are sanctified." Thus, there is no longer any need for the temple cult.

Paul speaks of divine pardon always in terms of God's work in Christ. Even in Ps 32:1–2, Paul finds that sin is forgiven through faith (Rom 4:7–8), and in this age, through faith in the God who raised Jesus from the dead. Justification is God's declaration that the sinner is righteous; the linchpin of this transaction, and that which keeps God's declaration of innocence from being unwarranted, is the atoning death of Jesus: "They are justified by his grace as a gift, through the redemption which is Christ Jesus, whom God put forward as an expiation by his blood, to be received by faith" (Rom 3:24–25).

The consistent witness of the NT authors is that God offers forgiveness, not just because he is merciful, but because of the atonement in the cross. "God was in Christ reconciling the world to himself, not counting their trespasses against them" (2 Cor 5:19). So, appeal must now be made not simply to God's mercy, but to God's mercy in Christ.

E. Forgive Others as God Forgives You

Forgiveness is not merely the end of human anger against an offender; it also effects the renewal of fellowship (Goppelt 1981: 134). The NT consistently teaches that the imperative to forgive one's fellows is based squarely on God's gracious forgiveness: The parable of the unmerciful servant in Matt 18:23–35 is a vivid reproof against those who draw on God's mercy and offer none of their own; indeed, the parable threatens a rekindling of God's anger: "So also my heavenly Father will do to every one of you, if you do not forgive your brother from your heart." Other texts include Matt 5:7, 6:12, 14–15, Matt 18:15–17, 21–22, Luke 6:37, 11:4, 17:3–4, Eph 4:32, Col 3:13, all of Philemon.

When the Christian prays "and forgive us our debts" he or she must also be able to say "as we also have forgiven our debtors" (Matt 6:12). This kind of gracious response to offense undergirds Paul's advice to strong Christians in Gal 6:1–2, who are to offer loving and humble help to those who fall into sin. An unforgiving spirit is the evidence of stubborn pride, which is not the attitude with which to approach to God for mercy. "Forgive and you will be forgiven" (Luke 6:37; also Mark 11:25, Sir 28:2). Jesus is also credited with the instruction that one should not ask for forgiveness if another is angry at him for some cause (Matt 5:23–24). The command to seek reconciliation is given to the offended and to the offender both.

While the NT emphasizes human forgiveness more than the OT, there is a clear line of development from Judaism. The Psalms with their stern imprecations were concerned with those who have sinned against God and the author but have shown no remorse. In that case, the psalmists put forward the choice of siding with evil or siding with God; the righteous choice was to condemn those whom God condemns.

Likewise, in many NT texts, forgiveness is commanded to be given those who regret their offense. This is not far off from contemporary Judaism: "Love one another from the heart, therefore, and if anyone sins

against you, speak to him in peace … If anyone confesses and repents, forgive him" (*T. Gad* 6:3–4). Unlike the NT, it goes on to say that if someone denies his guilt, one should not press the matter; he will come to realize his wrong, and will not do it again. The Lukan version of Jesus' teaching gives this condition: "if your brother sins, rebuke him, and if he repents, forgive him; and if he sins against you 7 times in the day, and turns to you 7 times, and says, 'I repent,' you must forgive him." The Matthean parable of the unmerciful debtor makes the two debtors humbly ask for release from debt. Matt 18:15–17 includes the exhortation to approach the sinning brother to "tell him his fault"; reconciliation comes "if he listens to you."

On the other hand, Jesus' teaching was rich with exhortations to love one's enemies; taking vEngeance is forbidden, as is harboring resentment (Matt 5:39, Luke 6:35; see Rom 12:14–21). The disciple must be forgiving in spirit even if the offender is hardhearted. Again, this ideal is not absent from Judaism; again, *T. Gad* 6:7 provides a parallel: If the offender does not repent at all "forgive him from the heart and leave vEngeance with God." But whatever the parallels, the concept springs into life in Luke 23:34—"Father forgive them; for they know not what they do." Jesus forgiving of his own executioners is mirrored by Stephen (Acts 7:60), and by a number of later victims of Roman persecution.

F. Remission of Sins by the Apostles

According to John 20:23, Jesus appeared to 10 of the apostles and promised, "If you forgive the sins of any, they are forgiven; if you retain the sins of any, they are retained." The Catholic Church has taken this as Scriptural warrant for Auricular Confession and the absolution of sins by a priest (Beasley-Murray *John* WBC, 382–84). Protestant interpreters generally understand the authority to be that of the preaching of the gospel (as in Luke 24:47), or the right to give or withhold baptism. It seems that from earliest times the whole congregation was involved in disciplining and forgiving (Matt 18:17, 1 Cor 5:1–13, 2 Cor 2:5–11, James 5:16, 1 John 5:16), although an authoritative figure may have been involved in giving an official declaration of guilt or pardon (Matt 16:19, 18:18, Acts 5:3–4, 9; 8:20–24; 1 Cor 5:3–4).

G. The "Unpardonable Sin"

Later generations of Christians would take Mark 3:28–29 (= Matt 12:31–32 = Luke 12:10) and interpret "speaking against the Son of Man" as sins of ignorance committed by non-Christians, while "blasphemy against the Spirit" was deliberate sin by the baptized (Higgins 1964: 130–31; Marshall *Luke* NICNT, 516–19). Tertullian, following Montanism, taught that the 7 "mortal sins" are unforgivable if committed by Christians (Telfer 1959: 71). Biblically, the sin which will not be forgiven (*aphiēmi*) is "blasphemy against the Spirit" (Matt 12:32 adds: "speaks against the Holy Spirit"). In the accounts of Matthew and Mark, the saying is given when Jesus' opponents credit his exorcism to Beelzebul. In that context, the unpardonable sin is an obstinate rejection of the Spirit's work in God's kingdom, and thus a rejection of God himself. Redlich (1937: 167) interprets the warning and the reference to the possibility of eternal punishment to mean that the unpardonable sin is a life of rejecting the Spirit, and not necessarily a specific act. Similar language is used to speak of a complete rebellion against Christian light in Heb 6:4–8, 10:26–29 (cf. the "mortal sin" in 1 John 5:16).

There is a close parallel to the "unpardonable sin" in *Jub.* 15:34. There is no forgiveness for those who commit the eternal error of not circumcising their sons. The sin is called a "blasphemy" against God in the face of his Law. This passage was current in Jesus' day, and it probably provides the foundation for his counterproposal: It is not the failure to circumcise, but the rejection of the Spirit which constitutes the unpardonable sin. If it is analogous to the traditional sin, thus blasphemy of the Spirit is indeed a perpetual state rather than a single act.

FORM CRITICISM. This entry discusses an important method of biblical study that arose early in the 20th century and that has continued to have a major impact on biblical criticism. The entry consists of 2 articles, one covering how this method has been employed in OT studies, and the other covering how it has been utilized by NT scholars.

OLD TESTAMENT

In the OT, form criticism is a method of study that identifies and classifies the smaller compositional units of biblical texts, and seeks to discover the social setting within which units of these types or literary genres were originally used.

A. History and Development
B. Stages of Form Critical Analysis
1. Form
2. *Gattung*
3. *Sitz im Leben*
4. Form and Function

A. History and Development

OT form criticism is usually held to have begun with the work of Hermann Gunkel (1862–1932), who wrote major studies of the stories in Genesis (Gunkel 1964) and of the Psalms (Gunkel 1967). Earlier work on the oral literature of other nations formed the basis of Gunkel's work. He was the first to suggest that it was possible to penetrate behind even the earliest-written source material in the Pentateuch to a preliterary stage at which the individual stories were transmitted by word of mouth. Many of them, he suggested, owed their origins to the need to explain particular local customs, institutions, or natural phenomena, and so were *aetiological legends.* For example, the story of Jacob's dream at Bethel (Gen 28:10–17) was originally a legend explaining the existence of a sanctuary there ("Bethel" = "house of El") taken over by the Israelites from the Canaanites. In his study of the Psalms, Gunkel proposed that the present Psalms derived from earlier prototypes which were not (as he believed the present Psalms to be) personal lyric poems, but liturgical texts actually used in the cultic life of Israel. Gunkel's classification of the Psalms into 5 basic types (hymns, communal laments, royal psalms, individual laments, and individual songs of thanksgiving) is the basis of all modern study of the Psalter.

Sigmund Mowinckel developed Gunkel's theories about the Psalms further and simplified them by proposing that many of the Psalms in the present Psalter were themselves cultic texts (Mowinckel 1962). With the aid of comparative material from other Near Eastern cultures he then sought to reconstruct the worship of the preexilic Temple by suggesting occasions on which the Psalms might have been used, adding rubrics to the Psalms to account for the changes of form within a single Psalm (see below) and hypothesizing an annual "Festival of Yahweh's Enthronement" as the setting for many Psalms. Subsequent scholarship has been skeptical of the more speculative parts of Mowinckel's work (see Kraus 1966). For example, it is not clear that all the Psalms can be fitted into a single festival; while many of Mowinckel's suggestions rest more on comparisons with other cultures of the ancient Near East than on form criticism, in any case. But OT scholars have continued to accept the general working hypothesis that form criticism can establish a *Sitz im Leben* (see below) for many Psalms in the worship of preexilic Israel.

Gunkel's work on the Pentateuch led directly into the traditio-historical researches of Martin Noth (1972), and Gerhard von Rad (1966), who accepted the basic premise that the preliterary forms of the stories of the Israelite ancestors could be reconstructed. They tried to show that many of the cycles into which these stories had coalesced, even before being fixed in writing, had their *Sitz im Leben* in the cultic life of the Israelite covenant-league before the monarchy. The demise of Noth's theory of an Israelite

"Amphictyony" has to some extent weakened this position. But most OT scholars still accept the view that the stories in the Pentateuch rest on oral prototypes, and that these prototypes can to some extent be reconstructed, though in some quarters there has been a return to Wellhausen's view that the Pentateuch was a literary document from the beginning. This has been argued particularly by Van Seters (1975) and Schmid (1976).

Form criticism has been particularly fruitful in the study of legal and wisdom material. Albrecht Alt's pioneering work on Israelite law (Alt 1966) established the essential distinction between apodeictic law (commands) and casuistic law (case law), which continues to be widely used, though his assertion that apodeictic or categorical law (of the unconditional kind represented best by the Ten Commandments) was peculiar to Israel has had to be abandoned. Form-critical study of the wisdom literature has made comparison with the wisdom books of other Near Eastern cultures more precise, and perhaps represents the least controversial area of form critical work (see Crenshaw 1981).

In the case of the prophets, form critics were for a long time impressed with the number of primarily cultic forms to be found in prophetic texts, and a number of scholars, notably A. R. Johnson in Britain and H. Graf Reventlow in Germany, argued the case for seeing the great classical prophets as cultic functionaries, at least partly on the strEngth of these similarities (see Johnson 1962; Reventlow 1962). G. Fohrer, however, warned against jumping too readily to this conclusion. He argued (see Fohrer 1961) that prophets could use cultic forms (or forms from any other sphere of Israelite life) because of their high degree of literary skill: it did not follow from this that they were themselves cultic officials. We shall return to this argument (see below under **Form and Function**). This has been widely accepted, and though it does not of course demonstrate that the prophets were *not* cultic functionaries, it does reduce the grounds for believing that they were.

Form criticism is no longer in the center of interest in OT studies, as REDACTION CRITICISM and literary approaches (STRUCTURALISM, semiotics, READER-RESPONSE THEORY) have focused attention on the finished form of the text, rather than on preliterary stages of the text's growth. Nevertheless, form criticism remains an indispensable tool for the historical study of the OT (see Tucker 1971; Koch 1969; Barton 1984).

B. Stages of Form Critical Analysis

Whereas "Source Criticism" analyzes books which are the work of several *authors* into their component parts, form criticism is concerned with texts that contain material belonging to different *genres*, whether or not they are by a single author. For example, prophetic books often contain passages belonging to different genres within a single chapter. Thus Isaiah 5 begins (vv 1–7) with a poem which is generically a love song, but then continues with several oracles beginning "Woe to …," which are probably modelled on funeral dirges. In vv 24–5 the text shifts to a proclamation of divine judgment, and in vv 26–30 it concludes with a poetic description of the Assyrian army. To understand this chapter, it is obviously essential first to break it up into its separate parts and then to identify the genre of each.

The word "genre" perhaps suggests to a modern reader the categories of *written* literature (novels, lyric poems, etc.); but many of the genres we can identify in the OT, though now fixed in writing, probably go back to a time of *oral* composition, as Gunkel was among the first to recognize (see above). In any culture where literature is transmitted by word of mouth, different genres have different social contexts: Indeed, this is still true even in our own society of such genres as the sermon, the political speech, and the popular song. In societies such as ancient Israel, many types of utterance were strictly tied to particular settings, and followed highly stereotyped patterns. Consequently it is sometimes possible to learn about the social and religious life of ancient Israel by paying attention to the various oral and literary forms of speech encountered in OT texts. It is a feature of the OT, however, that one genre is often embedded in another. In the example from Isaiah, a poem in the form of a love song is set within the larger context of a collection of oracles, and this collection in turn forms part of a prophetic book. Detailed critical work may be needed before the various genres to be studied can be disentangled. Furthermore, even the term "genre" is too imprecise. Form critics distinguish 2 categories, known by the German terms *Form* and

Gattung. Analysis of a text begins by identifying each *Form* within it, grouping them together to identify the *Gattung,* and then asking about the text's *Sitz im Leben* and its function.

1. Form. Confusingly, the English word "form" is used to render 2 of these technical terms of German form criticism, *Form* and *Gattung.* The first, the "form" properly so called, is the structure or shape of an individual passage or unit, as in this may be described without regard to the content of the passage. For example, in studying the Psalms we can begin by describing each Psalm in terms of its meter, the number of stanzas or strophes it contains, whether the speaker is singular or plural, whether it is addressed to God or (as in Psalm 37) to the reader, and so on. Formal description at this level is an important method of breaking a text up into its component parts, and is essential in studying the OT because as it now stands the text lacks the kind of section divisions we are familiar with in modern books.

In a prophetic book such as Hosea, for example, a reader who tries to read the text as a coherent and continuous whole is soon frustrated by the lack of overall shape, and begins to feel that the book needs to be broken up into shorter sections. Modern translations indicate such divisions by leaving blank lines, and sometimes by introducing subheadings. The criteria for these divisions are often connected with *formal* features of the text: for example, a change of speaker (e.g., between Hosea 5:15 and 6:1); a new start with a different audience addressed (5:1); a shift from a prediction of judgment (13:16) to an exhortation to repentance, introduced with an imperative (14:1).

In the same way the Psalms sometimes "change gear" in a disconcerting way, but the change can be precisely described in formal terms. Thus in Psalm 118, vv 1–18 are a hymn of praise, but v 19 is a request ("open to me the gates of righteousness"); v 25 a prayer for deliverance ("Save us, we beseech thee, O Lord"); v 26 a blessing ("We bless you from the house of the Lord"); and v 27b perhaps a rubric ("Bind the festal procession with branches up to the horns of the altar") in imperative form. Formal description at this level does not tell us much that is new about the text, but it does help us to analyze it and, in some cases, to understand at a more theoretical level why it is intuitively puzzling.

2. *Gattung.* Once a number of passages have been analyzed from a formal point of view, it may be possible to see them as belonging to a general class or genre, and it is for this that the German term *Gattung* is used. Thus there is a large number of Psalms that begin with a call to worship God and go on to extol God's mighty acts (e.g., Psalms 29, 33, 47, 66, 96, 98, 100); there are many laws in the Pentateuch that begin "If a man …" (e.g., Exod 22:1, 5, 7, 10, 14 [Heb 21:37; 22:4, 6, 9, 14]); there are many prophetic oracles that run "Because … therefore thus says the LORD …" (e.g., Isa 7:5–8; 29:13–14; Amos 1:3–5). Having discerned the presence of such repeated structures and phrases, we are justified in concluding that Israel's literature (written or oral) included such stereotyped forms as standard types of which the particular cases we encounter in the OT are examples.

Once scholars are convinced that a passage they have analyzed formally belongs to a more general class, they usually devise a shorthand title for the *Gattung,* and this results in many technical terms. In Psalm-study, common *Gattungen* are the hymn, the lament, and the thanksgiving, all of which may be further subdivided (individual laments, thanksgiving for victory in battle, etc.); legal sections of the Pentateuch yield "apodeictic" and "casuistic" laws (see above); wisdom literature contains proverbs, riddles, fables, and rhetorical questions; and prophetic books are made up of such forms as the oracle of judgment (*Drohwort*), the accusation (*Scheltwort*), the "woe," and the taunt.

There is obviously a danger in inferring the existence of a *Gattung* from very few examples, since it is always possible that a single text is anomalous. If the book of Psalms contained only one "lament," it would be hazardous to say very much about laments in general. Nevertheless, a culture which values tradition more highly than creativity is likely to be very conservative in the way it uses its traditional forms, and so even a few examples of a *Gattung* may give us quite a clear impression of the conventions governing its composition. For instance, the OT records only a few cases of legal procedures, but they are enough to give us some idea of the conventional formulas used in the practice of law—for example, acquittal was probably accomplished by the stereotyped formula "He/she is righteous (*ṣaddiq*)" (see Gen 38:26; Psalm 51:5; Isa 41:26).

Already in moving from *Form* to *Gattung* considerations of content begin to arise. Though form critics have sometimes maintained that form criticism should appeal only to strictly formal features (grammatical, syntactical, and metrical features of the text), most, in practice, regard the subject matter as relevant in establishing the *Gattung* to which a text belongs. In some cases, for example the category "royal psalms," subject matter is expressly the criterion used; more often, however, subject matter is one among a number of factors. Oracles of judgment in the prophets can be identified *both* by formal features (e.g., first person address by God, often with "Thus says the LORD" or "oracle of the LORD" attached) *and* by their distinctive content, concerning the future of Israel or of other nations. This mixture of form and content as criteria for assigning a text to a particular *Gattung* is no different in principle from what happens in classifying modern literature, where to call a work a tragedy, for example, is to say both that it has the formal features of a play—with acts, scenes, dialogue, and so on—and that it has a certain kind of theme and plot.

3. *Sitz im Leben.* In saying that a text belongs to a particular *Gattung* we are already saying something about the context in the life of Israel in which the text originated. If a text is a hymn, then people must have sung hymns, and there must have been occasions on which hymns could be sung; if there are laws in the OT, then Israel must have had a legal system of some kind in which these laws were used. The occasion or social setting for a given form is known as its *Sitz im Leben* (German, "setting-in-life"), a term for which no adequate English equivalent exists.

The *Sitz im Leben* must be carefully distinguished from the *historical* occasion that may have led to the production of any particular text. Thus, it is possible that certain Psalms can be dated to a particular period in Israel's history, perhaps even to a space of a few years—Psalm 74, for instance, seems to reflect the situation of Israel in the early years of the Babylonian Exile (6th century B.C.). The *Sitz im Leben* of the Psalm, however, is not the *period*, but whatever context (presumably a liturgical context) it was composed to be used in. In the nature of the case, a *Sitz im Leben* is a general, and in principle repeatable occasion, not a single historical event. In the study of the Psalms, form criticism has been particularly useful, since the Psalms are the clearest case in the OT of texts intended for public use on many repeated occasions. Psalm 74 is rather an exception in being dateable to one particular period. Most of the other lament Psalms are so general in their description of the plight of the worshippers that they could come from almost any period. Indeed, the essential form-critical insight is that the question of their date is in many ways less interesting and important than the question of their intended use as conventional liturgical texts on any and every occasion of public lamentation. (See above for an outline of form-critical work on the Psalms by Gunkel and Mowinckel.)

Although liturgy is one of the clearest examples of the kind of *Sitz im Leben* the form critic can reconstruct, other spheres of Israelite life also had their distinctive forms, and by paying attention to them we can understand many OT texts better, and in turn derive from the texts more information about the spheres concerned. An example already mentioned is the law court. The OT provides only one clear account of proceedings in court, in 1 Kgs 21 (the trial of Naboth), though there are frequent passing allusions to the institution. Form criticism, however, can throw considerably more light on the subject. For example, the prophets frequently use a form in which God (or his prophet) is portrayed as pleading a case in court (e.g., Isa 1:2; Mic 6:1–5)—the so-called *rîb* or controversy form—and they also describe visions of courtroom scenes in the heavenly world which are probably modelled on earthly legal processes (e.g., Zech 3:1–5). From these it is possible to form a fair idea of procedures in the courts: for example, to infer that Israelite courts knew of counsel for the plaintiff and for the defendant, and that cases were heard by a panel of judges. These conclusions in turn help us to understand such passages more clearly—to see that God is cast variously in the role of judge (Zech 3), plaintiff (Isa 1), and defendant (Micah 6), thereby gaining a sharper focus on these important texts.

Other spheres of life which form criticism can illuminate have proved to be education, commercial practice, and the life of the royal court. Interest in recent years in the sociology of ancient Israel will both contribute to and benefit from form-critical studies of OT texts.

4. Form and Function. Form criticism of the prophetic books raises some particularly interesting issues. As we have just seen, some of our information about certain spheres of life in Israel—for example, the procedures in law courts—derives from the use of legal forms by the prophets; but this use is at one remove from the primary or original use of legal forms, since the prophets are deliberately adopting forms from a sphere of activity other than their own in order to communicate their message more vividly. Whereas descriptions in the first person of a vision (as in 1 Kgs 22:19–23 or Amos 9:1–4) may be regarded as characteristically prophetic forms, with their *Sitz im Leben* in public prophesying, forms from the law court, the world of the popular singer (Isa 5:1–7), or the priestly call to worship (Amos 4:4) represent a deliberate use (or rather *mis*use) by the prophets of forms from other spheres of life. Amos, in effect, *pretends* to be a priest in order to utter sentiments that no priest would have accepted: that God no longer requires the worship of the sanctuaries. A form-critical study, by showing us the original and proper function of the forms used by the prophets, helps us to see more sharply the originality with which they contradicted the people's expectations.

This does not in any way diminish the historical value of form criticism in elucidating Israelite institutions; for the prophets' words can only have been effective if the forms they used did indeed have a proper sphere of life in which they were completely familiar to people at large. But it does urge us to be cautious in thinking that form criticism can tell us exactly how a given text was actually used in ancient Israel; for clearly it would be illegitimate to argue from Amos 4:4 that the prophet was a priest, or from Isa 5:1–7 that Isaiah was a popular singer, simply because they use forms properly belonging to these spheres. The form of the popular song could not have existed to be exploited by Isaiah if no one in Israel sang songs; but it does not follow from this that any given text which we can classify as belonging to the *Gattung* of the popular song really was used as one, and Isa 5:1–7 provides a clear example of one such text that is transparently *not* a real song.

This has implications also for the form criticism of the Psalms. Once certain genres of text exist, it is always possible for them to be imitated in a purely literary way, or even parodied—and parody is perhaps the best description of the use made of a variety of forms by the great prophets. The fact that a form has a proper or normal function in a particular society must not be allowed to lead us to the hasty conclusion that any given example of the form represents a primary case: It may be a secondary imitation or use of the form for some other purpose.

JOHN BARTON

NEW TESTAMENT

In NT studies, form criticism may be defined as "a systematic, scientific, historical, and theological methodology for analyzing the forms, and to some extent the content, of the primitive Christian literature, with special reference to the history of the early Christian movement in its reflective and creative theological activities" (Doty 1972: 62). The method developed as a means of analyzing and interpreting

the Synoptic Gospels, but its application broadened during the 1970s and 1980s through the influence of aesthetic and rhetorical criticism.

B. Aesthetic Form Criticism
C. Rhetorical Form Criticism
D. Conclusion

———

A. Traditional Form Criticism

Hermann Gunkel's *Genesis* (1901) [*The Legends of Genesis*] suggested that biblical literature was a product of combined traditions that had circulated orally before they were written down by various writers. Julius Wellhausen's *Das Evangelium Marci* (1903), *Das Evangelium Matthaei* (1904), *Das Evangelium Lucae* (1904), and *Einleitung in die drei ersten Evangelien* (1905)—building on David Friedrich Strauss's observation in *Das Leben Jesu* (1835–1836) [*The Life of Jesus Critically Examined*] that the Gospels must be compared unit by unit—used Gunkel's insight to break with the traditional explanation of the Gospels as products of written sources and to discuss the Synoptic Gospels as literature written by authors who used oral traditions. Karl Ludwig Schmidt, in *Der Rahmen der Geschichte Jesu* (1919), distinguished the editorial framework, which established a chronological and geographical scheme, from the units ("forms") that had been transmitted orally. He also described a stage between oral transmission and gospel writing in which similar kinds of forms existed in collections.

Martin Dibelius' *Die Formgeschichte des Evangeliums* (1919) [*From Tradition to Gospel*] launched form criticism in the NT by differentiating 6 kinds of materials: sermons, paradigms, tales, legends, passion story, and myth. The sermon created the sociological setting (*Sitz im Leben*) for the tradition as a whole and represented for Dibelius the "constructive" base for discussing Synoptic Gospel forms. Paradigms functioned as examples for early Christian preaching and were edifying and religious, not "worldly." Tales (*Novellen*) present "secular" events, motivated by a need for propaganda and a model for Christian miracles. They abound in details and conceal the epiphany of god's messenger. Legends cast a religious hero into a stereotyped mold as a man of piety. They exhibit manifold interests and portray secondary things and persons without clear focus. The passion narrative represents the story of Jesus' death, burial, and resurrection known by all Christians. Myth relates the cosmic significance of a cult hero and leaves few traces outside the baptism, temptation, and transfiguration of Jesus in the Synoptic Gospels. The writers of the Gospels worked as compilers or redactors rather than as authors—their contributions were limited to grouping and reworking traditional materials.

Rudolf Bultmann's *Die Geschichte der synoptischen Tradition* (1921) [*The History of the Synoptic Tradition*] used an "analytical" approach that started with the synoptic texts rather than the Christian sermon. He expanded the aims of form criticism by seeking to determine the original form, secondary additions and forms, and the results for the history of the tradition. As a correlate, Bultmann's concern was to determine the sociological setting at any particular time for each passage under discussion. Bultmann divided the synoptic tradition into "sayings" and "narratives." Under sayings were 2 categories: (a) apophthegms (sayings in a situation), divided into controversy and school dialogues, and into biographical apophthegms; (b) dominical sayings (1 or 2 sentences long), divided into logia, prophetic and apocalyptic words, legal sayings and church rules, "I"-sayings, and similitudes and similar forms. Under narratives were 2 categories: (a) miracle stories (demonstrating Jesus' messianic authority or divine power), divided into miracles of healing (including demon healings) and nature miracles; (b) historical stories and legends (religious and edifying stories arising out of messianic hopes and institutions), divided chronologically: from baptism to triumphal entry, passion narrative, Easter narratives, and infancy narratives.

Vincent Taylor, in *The Formation of the Gospel Tradition* (1933) gave life to form criticism within British scholarship by interweaving it with source criticism. In 2 instances he modified conventional terminology: (a) by using "pronouncement story" for Bultmann's apophthegms and Dibelius' paradigms,

which Eric Fascher, in *Die Formgeschichtliche Methode* (1924), had called *Anekdoten* (anecdotes) and Martin Albertz, in *Die synoptischen Streitgespräche* (1921), had called *Streitgespräche* (conflict dialogues); and (b) by using "stories about Jesus" for narratives previously called legends or myths. In addition, he discussed passion narratives, sayings, parables, and miracle stories.

After the phase in which comprehensive terminology was established for forms in the synoptic tradition, contributions focused on individual forms. C. H. Dodd, in *The Parables of the Kingdom* (1935), and Joachim Jeremias, in *Die Gleichnisse Jesu* (1947) [*The Parables of Jesus*], gave special attention to the parables of Jesus, distinguishing parable from allegory, differentiating eschatology from apocalyptic, and establishing a history of the parables from their authentic form on the lips of Jesus to their theological and christological functions in the Gospels. Ernst Käsemann, in "Sätze heiligen Rechtes im NT" (1954–55) isolated "sentences of holy law," among which Richard A. Edwards identified "eschatological correlatives"—a form which D. Schmidt subsequently called "prophetic correlatives."

H. C. Kee (1977), incorporating work on collections prior to the written Gospels and importing some new terminology, presented a list of gospel forms within Bultmann's earlier two-division scheme. The first division is constituted by the sayings tradition, with 3 subtypes: (a) aphorisms; (b) parables; (c) sayings clusters with topical and formal groupings. The second division is constituted by narrative tradition, with 5 subtypes: (a) anecdotes; (b) aphoristic narratives; (c) wonder stories; (d) legends, consisting of biographical and cultic legends; (e) passion narrative. The use of the terms aphorism and aphoristic narrative reveal the influence of aesthetic criticism on forms in the Gospels (see Crossan 1983).

Since traditional form criticism emerged during a phase when historical issues dominated the discussion of biblical literature, a major issue for debate concerned the historicity of various NT forms. Dibelius and Taylor considered Bultmann's approach too skeptical concerning possible historical reminiscences within many of the forms. Intensifying this concern, Harald Riesenfeld, in *The Gospel Tradition and its Beginnings* (1957), attempted to show that the gospel tradition derived from Jesus himself and that the tradition was passed down carefully as was the rabbinic tradition. Birger Gerhardsson, in *Memory and Manuscript* (1961), tried to support Riesenfeld's thesis through detailed analysis based on rabbinic tradition as a model. Research both by Morton Smith and Jacob Neusner has systematically challenged the use of rabbinic tradition by Riesenfeld and Gerhardsson to argue that historical reminiscence dominates, since rabbinic tradition is even less interested in historical information than the gospel tradition. These concerns, however, have been perpetuated by Heinz Schürmann, who posits a collection of sayings used by disciples of Jesus during Jesus' lifetime, and E. Earle Ellis, who argues that gospel traditions were probably transmitted in written form during Jesus' earthly ministry.

One of the major weaknesses of traditional form criticism has been its reconstruction of underlying oral forms with a scribal method developed for text and source criticism. In other words, form critics have not used data that specialists in oral literature have systematically gathered and analyzed to understand the production and transmission of oral literature. Instead, form critics have attempted to reconstruct oral forms with the same procedures critics use to reconstruct early manuscript readings and early written sources. Thus, at this point in time it is not clear that interpreters ever will be able to get an accurate picture of oral activity in early Christianity. Yet it may be possible, as discussed below, to shed much more light on the symbiotic relation between oral and written composition in early Christianity.

Another weakness has been the absence of detailed work in contemporary literature written in Greek, the language of the NT, to display the dynamic relationships between written and oral composition in Mediterranean society. This has led to an unwillingness to entertain the possibility that early Christians could have used oral speech in conventional situations in which other people spoke in the Mediterranean world. Thus the major situations envisioned have been baptism, eucharist, catechism, and preaching rather than challenge-riposte, argument, performance of witty caricatures, and storytelling. Also, it has led to a one-sided discussion of writing, in which interpreters with a negative view of form criticism have used a model of writing that existed in later rabbinic Judaism, but in which form critics have not used models from Hellenistic education and writing that spread throughout the Mediterranean world in the 3d and 2d centuries B.C.E.

Yet another weakness in form criticism has resulted from the presupposition that the passion stories existed as a uniform narrative within a few years after Jesus' death. This presupposition prevented serious form-critical analysis of units recounting Jesus' arrest, trial, death, and burial. Recently the units in the passion narratives have become a subject of lively analysis and debate, aided substantially by inclusion of the *Gospel of Peter* in the discussion (see Kelber 1976; Mack 1988; Crossan 1988).

Historical debate about traditional form criticism often has detracted from its major contributions to NT research and interpretation. The strEngths of form criticism include: (a) acceptance of significant limitations within historical research; (b) an unwillingness to import extrinsic data about authors into the intrinsic data in a NT document; (c) an intrinsic interest in forms of speech and narrative; (d) a search for a dynamic model to analyze transmission and adaptation of linguistic formulations; (e) an interest in social aspects of literature. These strEngths give form criticism a vitality and importance that has perpetuated it beyond its original literary-historical frame of reference into aesthetic and rhetorical forms of analysis and interpretation.

B. Aesthetic Form Criticism

A circle of interpreters in the United States have broadened and reformulated traditional form criticism with aesthetic criticism. To a great extent, these modifications have built on the strEngths of form criticism mentioned above. Aesthetic criticism is especially concerned with dynamics of language, imagery, and modes of perception. Amos N. Wilder, in *The Language of the Gospel* (1964), gave birth to aesthetic form criticism in NT studies with analysis of dialogue, story, parable, and poem. He observed that all the written forms in the NT lie outside the formal categories within the culture of the time. A major reason, he posited, is that the forms in the NT began in oral speech and still lie close to living speech. This means that one must appreciate and illumine special modes of language, newly created expressions and phrases, image, symbol, and myth in these forms. Robert W. Funk (1966, 1982) carried the work forward by interpreting parables as metaphors; by joining form criticism with style criticism to analyze letters; and by inaugurating research groups on parable, pronouncement story, miracle story, letter, and apocalypse in the Society of Biblical Literature. Dan O. Via, Jr. (1967) used an aesthetic-literary approach to analyze 8 narrative parables according to their tragic or comic plot structure and existential mode. William A. Beardslee (1970) joined the ranks with analysis of proverb, gospel, history, and apocalypse. Robert C. Tannehill continued the approach by identifying "the focal instance" and highlighting "the antithetical aphorism" in the Gospels (1975). Then he continued his work with the pronouncement story, which he divided into 6 types: (1) corrections; (2) commendations; (3) objections; (4) quests; (5) inquiries; and (6) descriptions.

John Dominic Crossan has used aesthetic criticism in tandem with traditional form criticism, reconstructing an earlier form with traditional source-, form-, and redaction-critical techniques before applying aesthetic criticism to the reconstructed form. His work has focused on parable, aphorism, and passion narrative.

Aesthetic criticism began with an emphasis on the relation of existing texts to the living voice. Yet attention naturally moved to the written form of the text present to the reader. Thus, most aesthetic form critics are interested in the form on the written page. A notable exception has been Crossan, who reconstructs an earlier text to which he applies aesthetic interpretation.

C. Rhetorical Form Criticism

Rhetorical criticism is concerned especially with dynamics among speaker, speech, and audience. When applied to written literature, it focuses on implied authors; narrators and audiences enunciated in literature; and readers. Rhetorical form criticism in NT studies is characterized by interaction with 3 other kinds of analysis and interpretation: (a) aesthetic criticism; (b) traditional form criticism; and (c) social analysis of NT literature. For this reason, rhetorical form criticism in NT studies may function in any one, or a combination, of 3 modes.

One kind of rhetorical form criticism has aesthetic criticism as its frame of reference. Wilder's aesthetic study of forms carried the subtitle *Early Christian Rhetoric*, and Tannehill's work on sayings and pronouncement stories in the Gospels is a type of rhetorical analysis. Likewise, Beardslee's studies of the

proverb focused on their rhetorical function. Thus, some aesthetic form criticism incorporates a type of rhetorical criticism.

Another kind of rhetorical form criticism uses Hellenistic rhetorical treatises, theories, and categories in an environment of traditional form criticism. Hans Dieter Betz gave birth to this kind of criticism by using categories from Hellenistic rhetoric to analyze Pauline letters in a manner akin to traditional form criticism. Subsequently, he moved to the Sermon on the Mount as an epitome of Jesus' teaching. Betz has maintained traditional historical interests in the mode of Bultmann's reconstruction of the history of the tradition, and he has carried traditional form-critical interests into rhetorical analysis that is focused primarily on genre (*Gattung*) and arrangement (*taxis*) in NT literature.

A third kind of rhetorical form criticism uses insights from investigation of Hellenistic rhetorical treatises, theories, and categories with interests that move toward social analysis. Klaus Berger has contributed most comprehensively to form criticism with social interests by his virtually exhaustive analysis of NT forms (1984a; 1984b). He begins with collections of forms that include parables, allegories, maxims, chreiai, and apophthegmata, as well as types of argumentation (e.g., diatribe) and ways of rewriting scripture (e.g., midrash). Then he proceeds to symbouletic (advisory) forms: 27 forms, including various types of parenesis, vice and virtue catalogs, woes, domestic codes, and community rules. Next he discusses epideictic forms (praise or censure): 40 forms, such as acclamations, doxologies, hymns, reports of visions and auditions, travel reports, encomia, and narratives of the suffering and rescue of the righteous. Last he presents dikanic (judicial) forms: 6 forms including apologetic texts and speeches of indictment and accusation. With this classification system, Berger moved away from traditional and aesthetic form criticism—which favors forms that appear to be close to the living voice or to symbolic communication—to rhetorical forms as they function in different social locations for different social purposes. To traditional form critics, therefore, many of Berger's forms appear to be almost formless. The reason is that speech and writing receive their rhetorical form on the basis of their function within a social setting rather than on the basis of a historically or aesthetically conceived situation of creative speech or writing. What may not appear as a striking literary or aesthetic form may, however, be a sufficient and successful form within its conventional social setting.

Contemporaneous with Berger's revisioning of form criticism, various studies of individual forms have produced a circle of NT interpreters Engaged in rhetorical form analysis with an interest in social environments. Stanley K. Stowers' analysis of diatribe as a teaching activity and of letter as communication in particular social locations has played an informative role for this kind of rhetorical form criticism. Analysis of household codes also has played a role, since directions for household management are so obviously social in import (see Stowers 1986; Aune 1988; Malherbe 1988). Rhetorical analysis of Paul's defense speeches in Acts has contributed to this kind of analysis, since the envisioned social location is a court trial, one of the 3 major social environments for speeches discussed by ancient rhetoricians (see Veltman 1978; Long 1983). Studies of the rhetorical chreia are also part of this movement, since they explore the environment of Hellenistic education and argumentation as an aspect of the social location of the Gospels within various early Christian groups (Aune 1988; Mack 1988, 1989; Mack and Robbins 1989; Robbins 1989).

D. Conclusion

Form criticism remains a central discipline in NT studies. A major reason is the existence of discrete segments of text with perceptible form in the Synoptic Gospels. Another reason may be that almost every document in the NT displays notable formal features or discrete forms are embedded in it: speeches in Acts; diatribes and household codes in letters; letters themselves; apocalyptic forms of various kinds. Form criticism in NT studies appears to persist beyond the literary-historical framework in which it began. For this reason, it has a significant place in aesthetic criticism in its various forms and in rhetorical criticism in its various forms.

FORNICATION. See SEX AND SEXUALITY.

FORTIFICATIONS (LEVANT). Fortifications are the most important component of an ancient urban settlement, aimed at preventing hostile elements from entering the settlement, as well as serving to demarcate the limits of the city. The impact of new weapons on the shape of a city's fortifications was much less decisive than has been assumed by some scholars. Yadin's attempts to associate the use of a battering ram directly with the appearance of earthen ramparts in the Middle Bronze Age II and with a solid type of city wall in Iron Age II (Yadin 1963) is not supported by the factual evidence (see below). As part of the urban matrix, fortifications share both military and civic functions and their structure usually reflects a compromise between these conflicting roles. For example, the optimal defensive requirements such as maximal width and height of a city wall or depth of its foundations were limited by socioeconomic considerations. Similarly the number of gates in a city could be determined only as a compromise between the contrasting demands of security (a single narrow entrance) and everyday convenience (several wide openings). The history of alterations in shape, structure, and building materials of fortification systems demonstrates the shifts in priorities made by the community within the scope of a military-civic continuum.

A. Neolithic and Chalcolithic Periods

The surprising appearance in Pre-Pottery Neolithic Jericho of a city wall, built of brick and including a huge round tower predating any other similar example by thousands of years puzzled scholars ever since its discovery. A satisfying solution is finally offered by Bar-Yosef (1986) who interprets the elements not as fortifications but as a retaining wall against floods and a tower for ceremonial purposes.

Only toward the end of the 4th millennium did actual fortifications first appear in the Levant. The concept, if locally developed, could have originated from the enclosure walls of the temenoi of the Ghassulian culture such as those in Tulleilat Ghassul and En-gedi.

B. Early Bronze Age

The earliest fortifications so far uncovered in Israel belong to EB I (Kempinski 1987). At Tel ’Erani, in the S coastal plain, a city wall 3.00 m wide, an outer glacis, and 2 towers were exposed in a limited area, contemporary with a public building inside the settlement. From about the same time (late 4th millennium) an elaborate fortification system is found at Habuba Kabira in Syria. It consisted of a city wall 3.40 m wide constructed on the W side of the city in a straight line of about 600 m. Rectangular towers were spaced at regular intervals of 14.00 m and in front of them a thin (0.70 m) outer wall was added. There were 2 city gates of identical plan in the main wall, each with 2 towers and 2 doorways, and an additional outer gate through the outer wall (StrommEnger 1979).

Toward the end of EB I more sites were evidently fortified: Jericho with a 1.1-m-wide city wall and semicircular towers, Tel Shalem protected by 2 parallel walls (inner wall 4.5-m-wide and outer wall 2.80 m), and Aphek with a 2.90-m-wide city wall. The first phase of the fortification systems at Tell el-Far‘ah (north) and ‘Ai is attributed by some scholars to the late EB I and by others to EB II. At Tell el-Far‘ah a 2.20 m city wall is joined to a remarkable city gate. It consists of two huge towers projecting 7 m outward from the wall, each about 8.00 m wide. The towers commanded the 4-m-wide approach-way which narrowed to a 2.00-m entrance. The gate was closed by double doors, as evident from the 2 door sockets found *in situ.* At ‘Ai the first city wall (C), 5.00–5.50 m thick, was built of large stones and strEngthened by semicircular towers. Two narrow (only 1.00 m wide) passages were uncovered but no main gate has been found so far.

In EB II, fortified cities became common all over the Levant (Richard 1987). In addition to the above-mentioned sites, fortified cities were found at Beth-yerah, Megiddo, Taanach, Kh. Makhruk, Dothan, Tel ’Erani, Tel Yarmut, Arad, and Bab edh-Dhra’. A typical feature of most of these sites is the attempt to increase the strEngth of the city walls by making them very thick and by erecting additional parallel walls with fills in between. These cumulative fortification systems of walls and fills reached unusual width (and apparently considerable height): up to 15.00 m at Tell el-Far‘ah, and over 10.00 m at ‘Ai (walls C and B). However, the wall at Arad is only 2.00–2.50-m thick. In some cases, i.e., Megiddo and Jericho, the city wall was constructed in sections about 20.00 m long with narrow gaps of about 0.2 m between them, presumably to prevent the total collapse of the wall during an earthquake.

The cities of EB II are also characterized by the existence of more than one gate (Herzog 1986: 12–23). Each city had at least one large gate (more than 2.00 m wide), like the main gates at Tell el-Far‘ah and Arad, through which fully laden beasts of burden could pass. In addition many cities had several narrow passages, only 0.80 to 1.00 m wide, often called postern gates. This duality reflects the attempts to counterbalance the conflicting military and civilian requirements of very large cities inhabited mostly by agriculturalists. Multiple passages saved the farmers from having to travel a distance of several kilometers in order to reach their fields. Their vulnerability was minimized by making the secondary gates as narrow as possible, so that they could be quickly blocked in an emergency or effectively defended from the top of the ramparts.

Additional efficiency of the system was provided by towers projecting outward from the wall, thus allowing flanking fire. Most common are semicircular towers attached to the wall incorporating a narrow doorway, like those in Arad, built at intervals of 25.00 to 40.00 m. In some cases the towers were rectangular, such as the ones depicted on Narmer's pallette. An interesting innovation is a massive bastion, attached to the city wall at Tel Yarmut, measuring about 25.00 m in lEngth and 13.00 m in width. A similar structure (18.00 by 8.00 m) at Arad dominated the water reservoir inside the city.

At several sites, such as Tell el-Far‘ah (north), Kh. Makhruk, and Jericho, the slopes around the city walls were reinforced by a composition consisting of alternate layers of different kinds of soils, called a glacis. The glacis served to prevent erosion, to force the attacking enemy to climb a slippery ascent, and to make any attempt to undermine the city wall more difficult. The bastion at Tel Yarmut is surrounded by an imposing stone glacis at least 6.00 m wide.

The EB III people exploited the fortifications of the previous period with few alterations. Basically the technique was to increase the width of the former city walls; addition of wall A at ‘Ai created a complex of fortifications 17.00 m wide, and wall 4045A at Megiddo doubled the width to 8.50 m. At Tel Yarmut the fortifications in EB III reached a total width of 36.00 m. Rectangular towers in this phase were a typical feature. The bastions incorporated into the circumference of the city wall became more popular at this time. They were constructed of heavy walls with inner rooms, some of which were narrow stairwells, leading to upper stories. Such bastions are found at Jericho (16.00 by 7.00 m), Tell Hesi (18.00 by 9.00 m) and Ta'anach (10.00 by 10.00 m). In the absence of fortified palaces or acropolises, these bastions also served as power bases for the military elite of the city.

The city gate in stratum XV at Megiddo had a ceremonial rather than a military function. Two wide, straight parallel gateways with stairs led up to the temple area, between 3 rectangular units. Stairs also led down into the city of Beth-yerah between 2 solid towers.

During the EB IV period urban settlements did not exist in Israel, the population being rural or nomadic. However, in Transjordan there were fortifications attributable to this period, specifically at Khirbet Iskander. Here a 2.50-m-wide perimeter wall with reinforced corners and a 2-chambered gate was uncovered (Richard 1987).

C. Middle Bronze Age

Fortified cities reappeared in the Middle Bronze Age I, at first along the coastal plain and the internal valleys (Kochavi, Beck and Gophna 1979). Fortification systems included city walls, city gates, towers, glacis, and earthen ramparts. The walls were made of sun-dried bricks above stone foundations with a moderate width of about 2.00 m. In some cases, such as Megiddo and Aphek, the wall was reinforced by pilasters on the outer side. The common use of bricks as the main constructional material stimulated the wide introduction of the glacis, which protected the bottom of the city wall on its outer side and the slope immediately below it. The elaborate MB I glacis at Tel Gerisa is composed of several courses of bricks (up to 13 in one spot) laid on the slope of the mound and covered by a layer of crushed sandstone. This is a clear improvement over the earthen glacis of the EB Age.

In addition to fortified cities built on hills or tells, large settlements surrounded by earthen ramparts were erected outside the tells in the lowlands. These ramparts were built by different techniques: with or without a stone core, with internal box-like brick constructions, or most commonly, with sloping layers of alternating soil types. In not a single case was a city wall found incorporated within the rampart. The absence of a defensive wall means that these earthen ramparts cannot be interpreted as fortifications against military attack. They were not designed to prevent the access of chariots nor could they provide an answer to the battering ram, allegedly introduced at that time. It is more likely that the earthen ramparts were an easy and quickly constructed means of demarcating the city limits of unusually large communities during peaceful times (Herzog 1986a). These communities could erect an earthen rampart within a few months with their own hands, and without the need to invest in professional builders and expensive materials. Such enclosures are known at the huge sites of Qatna and Tell Mardikh in Syria and at Hazor, Yavneh-Yam, Qabri, Tel Dan, and Akko in Israel. They were erected over areas of 20–100 hectares during the MB Age I-II. Incorporation of city gates within the earthen ramparts does not

contradict the demarcation function but rather supports it. The gates were not attached to any city wall; they were merely anchored to the rampart by short walls (as for their function see below).

City gates in the MB I period present several different styles (Herzog 1986; Kempinski 1987a). A gate with an approach-way erected at right angles to the gateway was found at Megiddo Stratum XIII, forming a bent entrance, which was easier to defend than a straight entrance. The stepped approach-way to the gate indicates that only pedestrians or pack animals could enter the city.

A second gate type is found at Tel Akko. It consisted of a gate chamber (8.25 by 7.00 m) with a 10.00-m-long corridor, almost on the same axis. The narrow (1.75 m) entrance and 2 steps in front of the corridor also prevented the use of wagons or chariots.

The long, stepped approach-way leading to the gate at Tel Dan points to similar constraints, but the plan of the gatehouse is different: it is a roughly square building (15.45 by 13.50 m) divided into 4 large rooms, 2 on each side of the gateway. The gate, including the front arches and half-barrel roof (all made of mudbricks), is exceptionally well preserved, due to the fact that it was intentionally and totally buried by the builders of the slightly later earthen rampart. The MB I gate at Dan has a striking resemblance to the 4-room gate type of Iron Age II. See Fig. FOR.01, and Fig. DAN.01.

The 4th type of gate, which developed in Syria (Tell Mardikh) and was introduced into Israel (Yavneh-Yam) in the MB I period, is the 6-pier gate, a type that became dominant in the MB II period. See Fig. FOR.02. City gates in this group are composed of formidable pairs of towers flanking straight gateways, which are narrowed by 3 piers on each side. The thick walls (2.00 m or more) of the towers point to their considerable height, with rooms on several floors. Some of these rooms served as stairwells, others were probably used as barracks for the city guards and storage areas for their equipment and food. The gates of this type had wide, straight entrances (between 2.80 to 4.00 m) and no stairs in the approach-way or gateway. This clearly indicates the usage of wheeled transportation.

Functional interpretation of the 6-pier type of gate is based on the location of the door sockets at both the front and rear ends of the gatehouse (Herzog 1986: 62–66). This proves that the gate passage was closed off by 2 sets of doors, one set towards the exterior of the passage and the other on the city side. The dual-closure system converted the gate into an independent defensive unit, a kind of fort, that was vital in cities enclosed by earthen ramparts without proper city walls. This fort controlled the wheeled transportation in and out of the city and could serve as the only defensible structure for the local elite. In fortified cities, the gate with the dual-closure system may indicate internal social tension and the attempt of the ruling class to protect itself against attack from within the city as well as from without.

City gates of the 6-pier type are known in Syria, in addition to that at Tell Mardikh (14.70 by 22.00 m), at Qatna (36.00 by 29.00 m), Carchemish (25.00 by 18.00 m), and Alalakh (23.00 by 17.00 m), all of which are cities enclosed by earthen ramparts. In Israel such gates are found attached to the earthen enclosures at Yavneh-Yam (25.00 by 18.00 m) and Hazor (20.60 by 16.20 m). They were also adapted for use in walled cities: at Megiddo (18.00 by 10.00 m), Shechem (17.00 by 19.00 m), Gezer (22.00 by 14.00 m), Beth-shemesh (16.50 by 12.40 m), and Tell el-Far‘ah (south; 21.60 by 18.00 m). Bastions incorporated into the city wall, which like the glacis seem to revive a tradition from MB III, are another typical component of MB II fortifications. Bastions of moderate size (10.00 by 5.00 m) are found at Tel Zeror, Tel Poleg, and Megiddo, while large bastions were uncovered at Gezer (26.00 by 16.00 m) and Tell Mardikh (65.00 by 30.00 m).

D. Late Bronze Age

The people of the LB Age for the most part reused the fortification systems of the previous period and seldom erected new elements. One of the exceptions is in the newly built city at Tell Abu Hawam with a 2.00-m-wide city wall. Usually, when the former walls were destroyed, cities—Megiddo, for example—were surrounded solely by a belt of houses around the perimeter and not by an independent city wall. It seems that the Egyptian accounts and reliefs referring to captured cities in Canaan relate in many cases to the king’s palace rather than to a fortified city (Herzog 1976: 80; 1986: 73).

In the S coastal plain of Israel a series of forts or “governors’ palaces” evidently served the Egyptian administration in Canaan (Oren 1984). These solid square structures, measuring about 20.00 by 20.00 m,

are found from Tel Mor to Deir el-Balah, in addition to the one at the Egyptian center at Beth-shean. These forts or palaces are usually isolated structures and are not incorporated into any fortification system. This indicates that not only the Canaanites but also their Egyptian overlords refrained from constructing fortified cities, perhaps to prevent their potential use as bases for revolt against Egypt.

E. Iron Age

Real fortification systems are absent in Iron Age I. The new settlements of the 12th–11th centuries adapted the principle of a peripheral belt of houses, creating either an enclosed settlement (with an empty central courtyard) like ʾIzbet Sartah Stratum II and Beer-sheba Stratum VII or as a settlement village (with dwellings filling the inner space) like ʿAi and Beth-shemesh.

The earliest city wall seems to be at Ashdod Stratum X belonging to a Philistine city of the late 11th century. The city has a 4.50-m-wide brick wall adjoining a 4-room gate, which is protected by 2 solid towers. At Megiddo Stratum VIA, a simple 2-room gate was incorporated in the belt of dwellings that encircled the city at the time.

Regarding the Iron Age II fortifications, Yadin developed a theory of chronological-typological attribution. He assumed that only casemate walls and 6-room gates were used in the 10th century during the reign of Solomon and that they were without exception replaced by solid walls and 4-room gates in the 9th century during the reign of Ahab (Yadin 1963: 322–24). However, the wide variety of fortification systems observed in every century of Iron Age II disproves Yadin's schematic approach (Herzog 1987).

1. Tenth Century. A peripheral belt of houses was still used at Megiddo stratum VA, Gezer Stratum VI and Lachish level V. A casemate city wall unconnected to the dwellings was found at Hazor Stratum X and apparently at En-gev Stratum IV. Casemates integrated with dwellings were attributed to this phase at Tell Beit Mirsim Stratum B3. Simple solid walls encircled the cities at Ashdod Stratum IX, Beer-sheba Stratum V, and eventually at Tel Dan. An offset-inset city wall was built at Megiddo Stratum IVB, while a solid wall with towers protected Lachish Level IV and Gezer. All 3 types of city gates were used in the 10th century. Six-room gates were used at Ashdod Stratum IX, Hazor Stratum X, Gezer Stratum VI, Megiddo Stratum IVB, and Lachish Level IV. See Fig. FOR.03. Four-room gates were used at Beer-sheba Stratum V, Megiddo Stratum IVA, and eventually at Dan. See Fig. FOR.04. Two-room gates were found at Megiddo Stratum VA and at Tell Beit Mirsim Stratum B3. See Fig. FOR.05. Four-room gates were popular also in N Syria dated from the 10th century and onwards and exposed at sites such as Carchemish and Tell Halaf.

2. Ninth Century. A casemate city wall integrated with dwellings was built at Beer-sheba Stratum III and casemates filled with earth at Samaria Stratum II and Hazor Stratum VII. A solid wall with towers is found at Tell en-Nasbeh attached to a 4-room city gate at an early stage, and to a 2-room gate in the final stage. A 4-room gate was erected also at Beer-sheba Stratum III.

3. Eighth and Seventh Centuries. During this period only solid city walls were constructed. Simple solid walls are found at Jerusalem. Tel Batash Stratum III and Lachish Level II, while a solid wall with towers was built at Hazor Stratum VA. The 6-room city gate reappeared in the 8th century at Tel ʿIra, a 2-room gate was erected at Tell Beit Mirsim Stratum A2 and in the Assyrian city of Megiddo Stratum III. A gate complex in the form of an elaborate fort is represented at Lachish II.

4. Fortresses. Military units in Iron Age II were mainly fortresses erected along border or trade lines. While the architects in Judah preferred rectilinear forms at the S end of their kingdom, the round type of fort seems to have been chosen at the E front of the Kingdom of Israel. A sequence of 6 square forts (ca. 50.00 by 50.00 m) dating from the 10th through the 6th centuries B.C.E. was uncovered at Arad. Periods of shorter use (8th to 6th centuries B.C.E.) are ascribed to the rectangular fortresses at Kadesh-barnea (60.00 by 40.00 m) and Horvat ʾUza (51.00 by 42.00 m). All these units had elaborate fortified walls with towers and gates, systems for water supply and storage, and at Arad even a royal temple. Unlike their S counterparts, the circular forts of the N Kingdom—like the one at Khirbet Makhruk—were much smaller, only 19.50 m in diameter (about 300 square m). The small space was filled by 3 concentric walls, leaving room only for a few soldiers and their equipment. They date to the late 10th or 9th centuries B.C.E.

5. Functional Interpretation. The diversity of the types of fortifications in Iron Age II as described above proves that no single factor was responsible for all of them. Rather, it seems plausible that the decision as to which type of defensive system was suitable for a certain city was dictated by the general economic conditions of the state, by the role of the city within the hierarchy of the royal administration, and by the location of the city as related to the overall defense lines of the state. These considerations affected the choice between the economical enclosure by a belt of houses, or the casemate wall with its savings in space and construction costs, or the more costly—but much stronger—type of solid city wall. Similarly they influenced the decision between 2-, 4-, or 6-room gates and the use of cheap mudbricks, fieldstones, or ashlar masonry as materials of construction.

Complexity of roles is very clear in city gates which had to serve daily as civilian entrances into the city. Along with the variety of forms, Iron Age II city gates show also uniformity in a basic feature: deep rooms open to their full width onto the passageway. This characteristic is particularly striking in comparison to MB II gates, the rooms of which were closed inside the towers and where only short piers projected into the passageway. Another important difference in the Iron Age is the presence of a single pair of doors closing off the entrance into the city from the outside only, and allowing free access into the gatehouse from the city side. These characteristics indicate that, in contrast to MB II gates, Iron Age gates had civilian functions above and beyond their purely military-defensive role. This conclusion is further supported by several installations in or next to the gates. Large plazas adjoining the gate inside the city that could accommodate large audiences or serve as a market place were found at every site. Water reservoirs outside the gate (such as at Megiddo and Beer-sheba) served mainly caravans and travelers. Ceremonial installations (Megiddo and Dan) testify to cult activities conducted near the gate, and benches built into some of the side rooms (Dan, Gezer, and Beer-sheba) outfitted them for the use of merchants, judges, and prophets.

ZEEV HERZOG

FORTUNATUS (PERSON) [Gk *Phortounatos* (Φορτουνατος)]. A Corinthian Christian who was part of a delegation, along with Stephanas and Achaicus, which traveled from Corinth to see Paul in Ephesus (1 Cor 16:17). The name Fortunatus (Latin meaning "blessed" or "lucky") was common among freedmen and slaves at this time. The reference to the household of Stephanas immediately before the names Fortunatus and Achaicus has been interpreted by some as implying that the latter two were members of that household, and thus were numbered among Paul's first converts in Achaia (16:15). (Such an interpretation is supported by some manuscripts from the Western tradition which read "and Fortunatus and Achaicus" in 16:15; this reading, however, is undoubtedly an assimilation to v 17). Although Fortunatus and Achaicus may belong to Stephanas' household this is not certain because (1) household

members are normally not singled out by name apart from the global reference and (2) the Corinthians would probably send to Paul delegates from more than one household to provide a broader representation of the community.

Upon arriving in Ephesus the three Corinthian members made up, as Paul puts it, for the "lack of you" (*humeteron husterēma*) which he keenly felt (16:17). Was this "lack" the physical absence of the community experienced by Paul (cf. most commentators) or an obligation felt by the Corinthians to labor along with Paul in the mission field (Ollrog 1979: 97–98)? The text does not specify the matter. Paul also remarks that their presence refreshed his spirit (16:18), evidently because they personally renewed the bond between the Apostle and his community and perhaps because they alleviated some of his worries about the local church in Corinth. However, if Stephanas, Fortunatus, and Achaicus brought with them the letter with disturbing reports (see 7:1), then Paul still had reason to be concerned about certain incidents in the community.

Finally, Paul exhorts the Corinthians to "recognize these people" (16:18), meaning Stephanas, Fortunatus, and Achaicus. This concluding appeal suggests that they were among "Paul's people" at Corinth (cf. 1:12). It may further indicate that they brought 1 Corinthians back with them to the community. See CORINTHIANS, FIRST EPISTLE TO THE.

According to *1 Clement* 65:1 a certain Fortunatus from the Roman church was a messEnger to the Corinthians. This person, however, is probably not to be identified with the one mentioned in 1 Cor 16:17 because there is a difference of 5 to 6 decades between the 2 letters and because the Fortunatus of *1 Clement* was from Rome where this name was common. See STEPHANAS; ACHAICUS.

FORUM. See CITIES (GRECO-ROMAN).

FORUM OF APPIUS (PLACE) [Gk *Appiou Phoron* (Ἀππιου Φορον)]. Market town in Latium located along the Appian Way 43 Roman miles (39.5 U.S. miles) S of Rome (*CIL* 10.6824–25). Christians from Rome met Paul here soon after he landed in Italy at the harbor city of Puteoli (Acts 28:15). It was a 1-day journey from Rome for ambitious travelers, although Horace preferred a "lazy" 2-day trip (Hor. *Sat.* 1.5). The town may have been founded at the time of the construction of the road from Rome to Capua in 312 B.C. by Appius Claudius Caecus. The Forum of Appius was located at a strategic point where a canal was located parallel to the highway (PW 2: 242). Many would travel down the canal by night on a boat pulled by a mule while they slept (Str. 5.3.6). Horace vividly describes the irritations he experienced during his trip. He mentions that the Forum of Appius was "crammed with boatmen and stingy tavern-keepers." The poor drinking water of the town made Horace ill and this coupled with the gnats, frogs, and a lazy boatman made Horace's canal journey quite unpleasant (Hor. *Sat.* 1.5.3–6).

JOHN D. WINELAND

FOUNDATION GATE (PLACE) [Heb *ša‹ar* (שַׁעַר) *hayĕsôd* (הַיְסוֹד)]. An inner gate of Jerusalem in the N or NW quadrant of an enclosure that surrounded the Temple precincts and the royal residences. Jehoiada the priest stationed troops at this gate as a part of the security arrangements for the coronation of Josiah against his grandmother Athaliah (2 Kgs 11:6; 2 Chr 23:5). These troop deployments were in close proximity to the Temple and the royal residence; this suggests that the Foundation Gate was a gate of an inner perimeter (Avi-Yonah 1954: 240, fig. 1), similar to the Mifqad or Muster Gate on the E side of the Temple (Neh 3:31).

The name "Foundation Gate" is only one of several names that are used to refer to this gate. The earliest account of Josiah's coronation (2 Kgs 11:6) refers to this gate as the Sur Gate (Heb *ša‹ar sûr,* the gate of "turning aside" or "departing") and is translated in the LXX as the "Gate of the Ways." These descriptive names most likely came from the busy intersections near the Fish Gate in the NW corner of the outer defensive perimeter of the city. This exit from the city led to several ridge routes that continued to the

coast, to Ephraim in the N and to Judah and Egypt in the S. The later parallel account in 2 Chr 23:5 refers to the "Foundation Gate" but is called the "Middle Gate" in the LXX. The name "Middle Gate" may allude to the gate being between an inner and outer perimeter. This is consistent with Jeremiah's reference to the princes of Babylon who, after having breached the N outer defenses of Jerusalem, met together at the Middle Gate (suggested by some to be between the Corner Gate and the Temple mount; see Simons 1952: 276 and Avigad 1980: 59) before their penetration of the inner defenses of the city.

DALE C. LIID

FOUNTAIN GATE (PLACE) [Heb *ša*ʿ*ar* (שַׁעַר) *hā*ʿ*ayin* (הָעַיִן)]. A gate of Jerusalem about 85 m (275 feet) SE of the present-day "Pool of Siloam" at the S end of the City of David. The Fountain Gate figures in Nehemiah's nocturnal inspection (2:14), reconstruction (3:15), and dedication (12:37) of the walls of Jerusalem.

"The "Fountain Gate," the "stairs that go down" from the City of David (Neh 3:15; 12:37) and several water canals were excavated by Weill in 1923–24 (1947: 57–96). It was then discovered that the overflow from the Pool of Siloam at the end of Hezekiah's tunnel was channeled outside the E wall of the City of David (Weill 1947: 57–73) with canal IV exiting under the Fountain Gate and apparently giving the gate its name (rather than its association with En-rogel). This canal has been dated to the period of Hezekiah and presumably terminated in a pool (possibly the predecessor of the pool excavated in 1977 by David Adan 1979: 100) outside the Fountain Gate (Ussishkin 1976: 91). The seeming difficulty (according to some scholars) in the order of Nehemiah's account (locating the King's Pool to the N the Fountain Gate) may have been reconciled by the discovery of Adan's pool outside the city wall and to the N of the Fountain Gate just as it is recorded by Nehemiah.

Although the Fountain Gate exited into something of a corridor at the joining of 2 sections of the city wall (at the N end of the wall excavated in 1894–97 by Bliss and Dickie), the Fountain Gate should not be equated with the "Gate between the Two Walls" (2 Kgs 25:4; Jer 39:4; 52:7) which is to be found still further S at the end of the Central or Tyropoeon Valley.

FRAGMENT, MURATORIAN. See MURATORIAN FRAGMENT.

FRANKINCENSE [Heb *lĕbōnâ* (לְבֹנָה)]. Designates the resin of trees of the genus *Boswellia* of the family *Burseraceae.* At present 2 species of frankincense trees are recognized in S Arabia and N Somalia: *Boswellia sacra Flückiger* in eastern S Yemen (Ḥaḍramaut and Mahra-Land), in the Dhofār-Province of ʿOmān, and in N Somalia; and *Boswellia frereana Birdwood* in N Somalia. According to recent botanical investigations, all Arabian frankincense trees belong to one single species: *Boswellia sacra Flückiger,* also known as *Boswellia Carterii Birdwood.* Only in the middle part of the coastal region of S Arabia, on the island of Socotra, and in N Somalia are rainfall, temperature, and condition of the soil in a harmony which enables the growth of the frankincense tree. The resin which is gathered from the 2 species of the

genus *Boswellia* growing in S Arabia and in Somalia is the most highly valued frankincense and almost the only sort which is put on the market.

Due to its pleasant odor as well as other qualities, frankincense belonged in antiquity together with myrrh in almost all countries of the Near East and the Levant among the most-demanded and most-expensive of spices. Frankincense was not only indispensable for sacrifice in divine worship, but was also burnt at funerals, profane festivities, and in honor of living persons; it was used also to a great extent as *materia medica.* See also INCENSE.

The Hebrew word for frankincense, *lĕbōnâ,* as well as similar words in other ancient Semitic languages have most probably their origin in an Old South Arabic form **libān.* This is not only proved by the Gk loan-words *libanos* and *libanōtos,* but also by the surviving form *libān,* attested in the Arabic dialect of the frankincense region Dhofār and also recorded for other parts of S Arabia, and by various words in different languages of Ethiopia, which likewise can be derived from a S Arabic *libān.* The word *libān* belongs to the Semitic root *lbn* in the meaning "white, to be white" and designates originally "milk-like (resin)," since bright frankincense was most highly esteemed and was considered to be the best.

In Jer 6:20, Sheba is mentioned as the country from which frankincense comes, and in Isa 60:6 we learn that Sabeans imported the valuable resin by camel caravans to Palestine. Behind the description of a procession in Cant 3:6, which is compared to something coming up from the wilderness like a column of smoke perfumed with myrrh, frankincense, and all the fragrant powders of the merchant, lies perhaps the picture of a rich and joyfully expected caravan loaded with spices.

Pure and unmixed frankincense was the essential ingredient of the incense which was used in the worship of the Lord in the Temple (Exod 30:34). The use of frankincense and the holy incense compound for cultic purposes other than those specified in the priestly legislation was forbidden, and any profanation of it was considered a capital crime deserving death (Exod 30:38). When Antiochos IV Epiphanes desecrated the Jewish worship it was felt to be a sacrilege that frankincense was burnt before the doors of the houses and in the streets (1 Macc 1:55). The difficult passage in Isa 66:3 where a memorial offering of frankincense is in parallel to the blessing of an idol might give a hint at the usage of frankincense in the cult of pagan deities.

Frankincense and oil were added to the cereal offering, *minḥâ* (Lev 2:1–2); the priest used to take the fine flour, put on it the oil and frankincense, and then burned it on the altar (Lev 2:15–16). Pure frankincense as fragrant offering was also placed by the priest with each row of the loaves of the bread of the presence before the Holy of Holies (Lev 24:7). Explicitly forbidden, however, was the addition of frankincense to an offering for sin (Lev 5:11) and to an offering of jealousy (Num 5:15). Each kind of *qĕṭōret,* the incense compound, seems to have consisted to a great extent of frankincense. In the Temple of Jerusalem chambers are mentioned in which frankincense was stored (Neh 13:5.9), over which Levites were appointed (1 Chr 9:29). From these passages it can be concluded that the frankincense necessary for the sacrifice could be acquired in the Temple in case the ingredients for the offerings, including frankincense, were not brought by the pilgrims to the Temple, as it is described in Jer 17:26 and 41:5. It is reported (Bar 1:10) that the Jews in Babylon collected money and sent it to Jerusalem to buy sacrifices and frankincense in order to offer it on the altar of the Lord.

The mountain of myrrh and the hill of frankincense which occur together in Cant 4:6 are probably a picture of the two breasts of the beloved one, and in Cant 4:14 frankincense wood is mentioned among the precious and valuable spices enumerated as metaphors of her beauty. In Sir 24:15 the personified wisdom which appears in the cult is compared to various aromata and finally to the vapor of frankincense in the holy tabernacle.

The Wise Men from the east offered to the infant Jesus in Bethlehem gold, frankincense, and myrrh as gifts (Matt 2:11). In Rev 18:13, where the merchants of the earth weep and mourn since the fallen Babylon does not buy their cargo any more, frankincense is also mentioned.

FREEDMEN, SYNAGOGUE OF THE [Gk *synagōgē ton Libertinōn* (συναγωγη τον Λιβερτινων)]. A synagogue in Jerusalem whose members argued with Stephen and then initiated the proceedings which led to his execution (Acts 6:9). The synagogue was named for Jews who had been liberated from slavery. Because the synagogue bore the Latin name *Libertinos* (transliterated into Greek), instead of the Gk *apeleutheros* it seems likely that its members descended from the Jews who had been captured and enslaved by the Roman general Pompey in 63 B.C.E. (Philo *Gaium* 155). The precise ethnic composition of the Synagogue of the Freedmen remains hotly debated because of Luke's vague phrasing of Acts 6:9. Four other groups are mentioned in addition to the freedmen: Cyrenians, Alexandrians, Cilicians, and Asians. Did all of these national groups attend the Synagogue of the Freedmen or did one or more of them have their own separate synagogues in Jerusalem? Any number of synagogues, from 1 to 5, is possible. The syntax of the verse favors two synagogues, one composed of Freedmen, Cyrenians, and Alexandrians and the other composed of Jews from Cilicia and Asia (Robertson 1934: 788). Yet there is no convincing explanation why only Cyrenians and Alexandrians would have attended a synagogue named for freedmen (Lake and Cadbury 1933: 66). Goodspeed (1945: 127–30) solves the difficulty by suggesting that *Libertinōn* is a textual corruption from an original reference to Libyans, *libystinōn.* Because the Armenian version provides the only manuscript support for this reading, his suggestion has not won wide support. Among those who accept "Synagogue of the Freedmen" as the original reading, Bruce (*Acts* NICNT, 133), Haenchen (*Acts* MeyerK, 271), and Conzelmann (*Acts* Hermeneia, 47) all favor the hypothesis that Luke was referring to one synagogue which was attended by Jews from each of the 4 areas mentioned.

Two Jerusalem synagogues described in ancient sources might possibly be identified with the Synagogue of the Freedmen. One was the Synagogue of the Alexandrians, which was purchased by Rabbi Eleazer ben Zadok ca. 100 C.E. (*t. Meq.* 3.6 [224]). The other was a synagogue rebuilt by Theodotus which included a guest house specifically intended for Jews traveling from abroad (*IDB* 4: 480). Without more evidence, however, neither can be positively equated with the Synagogue of the Freedmen.

Luke's theological purpose in the narrative is to show that the members of the Synagogue of the Freedmen could not defeat Stephen in honest debate so they set up false witnesses to testify against him before the Sanhedrin (Acts 6:9–15). Thus, Stephen's arrest and martyrdom paralleled that of Jesus. Furthermore, Luke shows how an initial opposition by Jews from Cyrene, Alexandria, Cilicia, and Asia is overwhelmed by a gospel message carried by Christians from each of these same areas (11:20; 18:24; 9:11; 19:10) (*ISBE* 2: 361). See also SYNAGOGUE.

FREEDOM [Heb *ḥupšâ* (חֻפְשָׁה)*;* Gk *eleutheria* (ἐλευθερια)]. In both the OT and the NT freedom is liberty as opposed to slavery. More importantly, in the NT freedom is achieved through Jesus Christ.

B. Greek World and Hellenism
C. Ancient Judaism
D. The New Testament
1. Paul
2. The Rest of the NT

A. The Old Testament

The OT knows of freedom almost exclusively only as a social state: The free stands in opposition to the slave. Thus the Hebrew terms for "free" and "freedom" *(ḥōr, ḥupšâ, ḥopšî, dĕrôr,* and the verb *ḥāpaš*), which are not witnessed very frequently, often occur in discussions of slavery and manumission (Exod 21:2, 5, 26–27; Lev 19:20; Deut 15:12–18; Jer 34:8–17; Ezek 46:17; Job 3:19). In these texts, mainly *ḥopšî* is used to designate someone merely freed from slavery. The word *ḥōr,* in contrast, is an independent term for the noble (1 Kgs 21:8, 11; Isa 34:12; Jer 27:20; 39:6; Eccl 10:17; Neh 2:16, 4:8, 13, 5:7, 6:17, 7:5, 13:17). Though the redemption of Israel from slavery in Egypt is cited in support for the manumission of Hebrew slaves in the 7th year (Deut 15:15), the OT does not develop a theology of freedom on the basis of the Exodus. Rather, Israel was ransomed in order to be God's servants (Lev 25:42; cf. Deut 6:20–25), and the language used to describe this event is primarily that of "redemption," not of "freedom." On the other hand, the tradition of a year of "freedom" (Lev 25:10) was subject to some theological development (Isa 61:1).

Difficult passages (e.g., Ps 88:6—Eng 88:5; 1 Sam 17:5) and problems of the background and evolution of OT usage are discussed, with reference to the literature, by Lohfink (*TDOT* 5: 114–18).

B. Greek World and Hellenism

The further development of "freedom" in Judaism and early Christianity may be understood only when due attention is given to the cardinal role that this concept played in the Greek, Hellenistic, and Roman world. *Eleutheria* (Gk "freedom") first became a central value in connection with Greek resistance to the Persians. Particularly Herodotus's history promoted the understanding of the Persian War as a defense of freedom and law against despotism. Euripides then illustrated through his dramas the personal sacrifice demanded to defend such liberty. The subsequent history of this concept cannot be traced here even in its broadest outlines. Indeed, such summary presentations, especially those by theologians (Schlier *TDNT* 2:487–496, Niederwimmer 1966: 1–68), run the risk of being too sweeping to allow for the details necessary to illustrate exactly how Greek and Roman ideas influenced Judaism and Christianity, and thus they often fall prey to the standard theological bias that portrays Hellenistic thought only as a foil against which the Jewish and Christian tradition gains its contours. It is best here simply to refer to several eloquent and arresting expositions of Greek and Roman freedom (Pohlenz 1966, Nestle 1967, Stylow 1972, and Wirszubski 1950) and to mention only select major points; details pertaining to the influence of Greek ideas on the Jewish and Christian tradition will be included in the following sections.

Though the precise content and implications of *eleutheria* and *libertas* (Latin "freedom") were always subject to discussion in the Greek and Roman world, there was one clear, standard definition of "freedom" at the latest since the time of Aristotle. According to this definition, freedom is equivalent to "doing whatever one wants" (*to ho ti an boulētai tis poiein,* Arist. *Pol.* 5.9.1310a; [*libertas,*] *cuius proprium est sic vivere, ut velis,* "[liberty,] the distinctive characteristic of which is to live precisely as you wish," Cic. *Off.* 1.70; Epict. *Diss.* 4.1.1; Dio Chrys. *Or.* 14.13, 17). That such a definition might lead to conflicts with the law was not overlooked. Rather, this seeming contrariety of freedom and law was discussed ever anew by philosophers, historians, and legal experts (the classic treatments are Hdt. 7.103–4 and Thuc. 2.35–46). Stoic dialectics resolved the debate in a spirit concordant with the rest of the Hellenistic and Roman world when they asserted that since the law (of nature) is good and since no one desires to do what is bad, the only person who is truly free and does what he wants is the one who does what is good and thus follows the law (see, for example, Cic. *Parad.* 34 and Epict. *Diss.* 4.1.1–5, 158). Of course, this clarification did not put an end to the discussions but rather only focused attention even more on the question of what the true law is and how it relates to existing laws. The theory that the true law can be recognized only by the rugged individual in a struggle against vulgar opinions (including laws established merely by humans) was advanced especially by the Cynics. This theory coincided with the rise of the ecumene, in place of the city, as the framework for human life, and a notion of an internal, individualized freedom, dissociated from any particular political system or social standing, became prevalent in the Hellenistic age. The relationship of state structures and freedom did not, however, fail to

attract its own discussion, and "freedom" was frequently employed as the central slogan in political propaganda.

The connection of freedom and God also has a long tradition in the Greek and Roman world and extends back at least to the Persian War, when *eleutherios* (Gk "liberating") became a particularly popular epithet of the gods. This tradition was later adopted by the Romans in their cult of Iuppiter Libertas (see Stylow 1972: 5–8). The notion that piety toward God brings freedom was further developed in Stoicism, where God was closely associated with the true law (Sen. *Vit. Beat.* 15.7; Epict. *Diss.* 1.19.9, 4.1.131, 4.7.17; Max. Tyr. 36.5a), and in more personal religious cults (Apul. *Met.* 11.15).

C. Ancient Judaism

In the light of the central position "freedom" assumed in Greek and Roman thought, it is no wonder that Judaism gradually picked up elements of this tradition and molded its own heritage to fit or complement this vibrant stream of thought (compare Heiligenthal's presentation [*TRE* 11: 498–502] with the following).

Philo is perhaps the most eloquent example of this tendency. His *Quod omnis probus liber sit* ("That Every Good Man Is Free") is nothing other than a Stoic tractate on freedom in which the problem of the identity of the true law is resolved by its equation with the Jewish law. Philo elsewhere uses the glorious terms of freedom to describe the Exodus (e.g., *Vita Mos* I.71, 86), something not yet done in the LXX. The connection of freedom and God generally receives great emphasis. The type of freedom that Philo usually intends is the internal freedom of the mind, which God alone can enable (e.g., *Sacr* 127, *Quod Omn* 42, *Conf* 93, *Heres* 124).

Though in the translation of the Hebrew writings the LXX shows little initiative in introducing the concept of freedom (Prov 25:10 LXX) and *aphesis* ("forgiveness") is used in the translation of passages referring to the year of freedom (also in Isa 61:1 LXX), the struggles of the Maccabees are depicted in terms of freedom (1 Macc 14:26; 2 Macc 2:22). Josephus similarly describes the Maccabees as fighters for freedom and projects the contest for liberty not only into the Exodus but also into several other stages of Israel's history. In his portrayal of the first war against Rome, "freedom" is a leitmotiv, and it is not least in this point that Josephus is indebted to Greek and Roman historiography. That the war was actually fought under the slogan of freedom is, however, confirmed by coins from the revolt's second and third years that bear the inscription "freedom of Zion." *JW* 2.13.4 §259 reveals that certain Jews had employed the motto of freedom to connect religious motifs with political insurgence. Similar eschatological and apocalyptic hopes of freedom seem to be reflected in *4 Ezra* 7:96–98, 101, 13:25–26, 29, and the eschatological hope is clearly present in the 10th request of the Eighteen Prayers and in the targum to Lam 2:22. Much closer to the Stoic understanding of (internal) freedom, in contrast, are *4 Macc.*14:2 and *m. ʾAbot* 6:2. As regards the social freedom of Jews, a Hellenistic tradition that ascribed a servile nature to the Jewish people evidently gave rise to an emphasis both on Jewish love of freedom (e.g., Josephus *Ant* 2.13.2 §281) and on the freedom of the Jewish patriarchs (*T. Napht.* 1:10; *B. Qam.* 8:6).

D. The New Testament

The NT statements on freedom must be ordered into some relationship to the background sketched above. Research is split between a camp that broadly affirms the Hellenistic origin of the NT remarks and a party that expends itself in denying the so-called "Stoic derivation" of the NT concept of freedom. Each side has its peculiar shortcomings. The Hellenistic explanation has generally failed to trace out the precise lines of Hellenistic influence, and this has fostered its being attacked under the misnomer "Stoic derivation." Those who deny Stoic influence have themselves been unable to produce a coherent, convincing alternative. (A survey of research is offered in the first chapter of Jones's study [1987], the bibliography of which lists a considerable portion of the sizeable literature.)

1. Paul. Paul's letters contain the first certain witness to an understanding of Christian faith as freedom. Paul's thought on the subject is habitually discussed in the categories freedom from the law, freedom from sin, and freedom from death (*TDNT* 2:496–502 and *BTNT* 1: 330–52 are largely responsible for this tendency). However, this trifold schema is based less on an examination of the passages on freedom than on the assumption that since law, sin, and death are the main enslaving entities in Paul's thought, freedom

must consist of the inverse of these elements. The texts disclose a different picture. These passages are worth considering in detail, for Paul is by far the most vocal advocate of freedom in the entire Bible. The following will discuss the texts in their most probable chronological order.

The freedom of the Christian is first mentioned in 1 Cor 7:22, a wordplay in which Paul describes the Christian slave as a freedman of the Lord and the Christian freeman as a slave of Christ. The dialectic employed here to comfort the Christian slave (for the order of the assertion could be inversed) is strongly reminiscent of a broad spectrum of Hellenistic statements and discussions that dismissed external social status as decisive for true (internal) freedom (already clearly present in Euripides, e.g., *Fr.* 831 and a standard starting point for Cynic and Stoic discussions of freedom, e.g., Bion in Stob. *Flor.* 3.2.38; Dio Chrys. *Or.* 14, 15; Epict. *Diss.* 4.1; that external freedom was not decisive for salvation was general early Christian tradition; cf. in the NT Gal 3:28; Col 3:11; Eph 6:8; Rev 6:15; 13:16; 19:18). 1 Cor 7:22 imagines (in juristically correct terminology) Christ as the liberator of Christians from slavery to a third party and thus as the slave's patron. The identity of the third party is not explicitly indicated, but in view of the warning not to become slaves of humans in v 23 and in the light of the Cynic and Stoic parallels to the discussion, it is most likely that the third party should be understood as human opinion *(doxa)*, which places great value on external social status. It was precisely for this sort of freedom that the Cynic Diogenes had fought (e.g., *Ep.* 7.1), and there can be no doubt that when Paul speaks of *internal* freedom, he clearly stands under the influence of the great Hellenistic traditions concerning freedom. Parallel to Paul's statement that Christ is the liberator of Christians are similar assertions by Cynics with regard to Diogenes (e.g., Crates Theb. *Ep.* 8; Lucian *Vit. Auct.* 8) and by Epicureans with regard to Epicurus (e.g., Cic. *Tusc.* 1.48; Lucian *Alex.* 47, 61).

The discussion of sanctified meats in 1 Cor 8:1–11:1 presents two distinctive conceptions of freedom. In the excursus, chap. 9, Paul argues that he is free from everyone because he does not accept money for his proclamation. Instead, by preaching free of charge and enslaving himself to all he preserves his integrity and authority in the gospel and can thus win more converts (1 Cor 9:19). Though scholarship has only recently recognized the type of freedom that Paul here has in mind, there are numerous parallels to precisely such a conception of *eleutheria* in the Hellenistic tradition.

Socrates was the most famous example of a teacher who refused to accept payment, and it is noteworthy that Xenophon uses the same words as Paul when describing Socrates' attitude: *eleutheria* ("freedom") and *misthos* ("reward," "payment"); see Xen. *Mem.* 1.2.5–7, *Ap.* 16. Muson. *Fr.* 11 (Hense 59.9–11) witnesses to the survival of this tradition at the time of Paul, and an entire treatise by Lucian, *De mercede conductis potentium familiaribus* (Eng title: "On Salaried Posts in Great Houses"), is devoted precisely to the subject of loss of *eleutheria* through acceptance of a *misthos.* What is particularly striking in 1 Corinthians 9 is the secular nature of Paul's freedom; Here it is not a gift of Christ or God but rather something Paul himself acquires by waiving financial support, even though he knows that Christ had commanded the opposite (1 Cor 9:14).

Paul's attempt to heighten and glorify his freedom by reference to his self-denial is reminiscent of another Hellenistic tradition that stretches back to the plays of Euripides. Euripides had emphasized the need of individual self-sacrifice for preservation of the freedom of the community. Euripides' presentation of this motif had a strong influence on writers of the Hellenistic and Roman eras, and it is doubtless of influence on Paul here, though the precise channels through which these ideas reached Paul still deserve further investigation.

1 Cor 10:29, in contrast, reflects an understanding of freedom that is specifically Christian. Certain Corinthians maintain that they are free to eat sanctified meat (1 Cor 10:29) because Christian faith had convinced them that the gods do not exist (1 Cor 8:4). They thus consider themselves free in contrast not to Jews (i.e., this is not "freedom from the Jewish law") but rather to gentiles who had not yet accommodated this new monotheistic knowledge (1 Cor 8:7). The background for this view of freedom is best found among Cynics, some of whom maintained a monotheistic faith and harshly criticized other religious beliefs as superstition. Cynics were notorious for their indiscriminate eating habits, and at least sometimes they founded this practice in their monotheistic views (Diog. Laert. 6.73) and connected it

with their slogan "freedom" (Porph. *Abst.* 1.42). In other words, it seems that Cynic views influenced certain Corinthians in their understanding of Christian faith and led to an assertive notion of Christian liberty. Since Paul tries to correct this understanding of freedom by introducing a completely different conception of the term (1 Corinthians 9) and since Paul's concept, in contrast to that of certain Corinthians, does not have a clear basis in Christian faith, it is most likely that these Corinthians first introduced the concept of Christian freedom into the discussion with Paul. Paul does not reject this new understanding of Christian faith but rather draws on other Hellenistic concepts of freedom known to him in order to promote an internalized view of freedom (1 Cor 7:22, 9:19, 10:29). Later in the discussion Paul again speaks positively of Christian freedom (2 Cor 3:17) and notably introduces yet another Hellenistic tradition on the topic. Here *eleutheria* is equivalent to *parrhēsia* or freedom to speak forthrightly (see v 12); in Hellenistic writings the two words are frequently synonymous (e.g., Lucian *Demon.* 3, *Peregr.* 18; Philo *Quod Omn* 95).

The observation that none of these views of freedom has anything to do with the conventional schema "freedom from law, sin, and death" sheds new light on Paul's use of the concept of freedom in Galatians. It can no longer be simply presupposed that Paul had preached "freedom from the law" in his initial proclamation to the Galatians (or to any of his other congregations), for such an understanding of *eleutheria* is nowhere reflected in the Corinthian correspondence. Instead, Paul is probably first introducing the term "freedom" into the discussion with the Galatians as he writes the letter. Furthermore, it should be noted that the phrase "freedom from the law" is not witnessed even in this letter. Indeed, when Paul speaks of the upper Jerusalem as free in Gal 4:26, "free" rather means free from corruption (cf. Rom 8:21), and in Gal 5:1 the freedom of the Christian includes at least also freedom from service to the elements. The rhetorical effect that Paul was trying to create by employing "freedom" is most apparent in the political imagery evoked in Gal 2:4. Paul claims "freedom" for his version of the gospel and brands his opponents as spies and enemies of freedom. Since the opponents' goal is to subject the free Christians *to themselves* (Gal 2:4–5), it is clear that Paul is not operating here with a well-defined concept of "freedom from the law." "Freedom" is more probably being employed in accord with the standard Hellenistic definition as "freedom to do what one likes." This meaning fits Gal 5:13, for in this passage the condition of slavery is described as not being able to do what one wishes (Gal 5:17), the inverse of the standard definition of freedom. That freedom carries anti-legalistic overtones in Galatians may be readily admitted, for this aspect had long been associated with the word in Greek and Roman tradition. Nevertheless, Galatians contains no evidence for a sharply defined concept of freedom as "freedom from the (Jewish) law."

In Romans, Paul is much more reserved in his employment of the notion of "freedom." Thus in Rom 6:18–22 words of freedom are strikingly used in an absolutely neutral way to describe both Christian and non-Christian existence; vv 18 and 22 ("having been freed from sin") are counterbalanced by v 20 ("you were free with respect to righteousness"). Rom 7:2–3 finally presents the phrase "free from the law," but the context strongly emphasizes the new bond of the Christian. A comparison of these verses with the marriage regulation of 1 Cor 7:39–40 discloses the actual evolution of the phrase "free from the law" in Paul's writings and thus again provides concrete evidence that this term was not a central concept in Paul's earlier thought. Rom 8:2–4 states that the free Christian will fulfill the law and is thus thoroughly parallel to certain Stoic statements about the relationship of true freedom and the law. The context again witnesses to the standard Hellenistic definition of freedom or its inverse (7:15, 16, 19, 20). Finally, Rom 8:21 transfers freedom totally into the future by reliance on an apocalyptic tradition (freedom from corruption; cf. Gal 4:26 and see the parallels in Jewish apocalyptic mentioned above). Paul's restraint and qualifications in his use of "freedom" in Romans is doubtless owing to his suspicion that the Romans had heard blasphemies of his teaching as libertine (Rom 3:8, 6:1, 15).

2. The Rest of the NT. The rest of the NT contains only scattered references to freedom, and thus the adoption of the concept by other NT authors cannot be traced in as much detail as is possible in the case of Paul. Though some scholars have thought that the appearance of the notion of freedom in the other NT writings must be attributed to Pauline influence (so, e.g., Pohlenz 1966: 170), it is much more likely that

the widespread Hellenistic concept of freedom entered the NT not only via Paul's usage but also through several independent channels (cf. the case of some Corinthians, above). It should be noted that precisely the passages that mention freedom have often played a decisive role in the question of the literary influence of Paul on the various NT writings.

1 Pet 2:16 is just such an instance. While this passage might seem to recall Gal 5:13 and 2 Cor 3:15–18, Paul never advances to the paradox that one is free while being a slave of God, whereas this idea is found in other writings (Sen. *Vit. Beat.* 15.7; Apul. *Met.* 11.15; Philo *Quod Omn* 20; Sext. *Sent.* 264b; *Hom. Clem.* 17.12.1). Since 2 Peter knows 1 Peter (see 2 Pet 3:1), the mention of corrupt preachers of freedom in 2 Pet 2:19 has perhaps been influenced by 1 Pet 2:16 (cf. also Rom 8:21). Still, the reality of such corrupt Christians and their promise of freedom seems to have been the major factor leading to the formulation of the verse. The proclamation of these Christians with respect to freedom may well have been affected by certain Pauline passages concerning freedom (see 2 Pet 3:16).

When the Letter of James speaks of the "perfect law of liberty" (Jas 1:25, cf. 2:12), there can be no doubt that Hellenistic ideas about the true law that leads to freedom and that is kept by the truly free human have been of decisive influence, though the author probably received these ideas via other Hellenistic Jewish thinkers. In any event, the notion cannot be adequately explained on the basis of some supposedly pure OT and Jewish background (contra Fabris 1977).

John 8:31–36 reflects at least two different conceptions of freedom. The Jews who have believed in Jesus refer to Abraham as evidence of their freedom (see above under "Ancient Judaism"), while the Johannine Jesus is speaking rather of true freedom (v 36), which consists of not sinning. This last notion of freedom could possibly be a development of Rom 6:18–22 (so, e.g., Weiss 1902: 34 and Pohlenz 1966: 170), but it could also have been independently developed from the Stoic tradition, where the truly free human always does what he wants and thus never "sins" (e.g., Epict. *Diss.* 2.1.23). It is hardly plausible that this passage on freedom ultimately derives from Jesus himself (contra Lindars 1984). Indeed, the contrast of social freedom with another sort of true freedom is strongly reminiscent of the standard progression of Stoic discourses on freedom (e.g., Dio Chrys. *Or.* 15; Philo *Quod Omn* 17–19; Cic. *Parad.* 35; Epict. *Diss.* 4.1).

The pericope on the temple-tax, Matt 17:24–27, apparently arose before the year 70 C.E., but it is unlikely that any part of it goes back to Jesus himself. The reappearance here of the connection of "sons" and "freedom" (cf. John 8:31–39; Gal 4:21; Rom 8:21) is particularly noteworthy. In this case, "free" has the specific meaning of "free from taxation," and the use of the word is to be explained on the basis of Hellenistic and Roman practice in taxation (see, for example, Josephus *Ant* 13.2.3 §15; cf. *HJP*² 2: 93 and the literature mentioned there; cf. also 1 Sam 17:25).

FULLER'S FIELD (PLACE) [Heb *śĕdēh kôbēs* (שְׂדֵה כוֹבֵס)]. An open area approximately 0.5 km (ca. 1/4 mile) S of Jerusalem near the juncture of the Hinnom and the Kidron Valleys adjoining the former spring, En-rogel (M.R. 172130; Josh 15:7; 18:16; 2 Sam 17:17). Because of the occasional surplus of water from the Spring of Gihon (via the Pool of Siloam) and the available water at En-rogel (presently Bir Ayyub), fullers cleaned and processed shorn wool, hence the name "Fuller's Field."

It is first mentioned (Isa 7:3) in connection with a roadway and a water conduit that passed N to S along the E side of Jerusalem in the Kidron Valley and continued S to the Fuller's Field. It was on this roadway near the water conduit that Isaiah and his son met with Hezekiah (Isa 7:2–4) and where the emissaries of Sennacherib stood as they attempted to intimidate the rulers and people of Jerusalem (2 Kgs 18:17; Isa 36:2). It is this roadway and En-rogel that helps most in establishing the location of the Fuller's Field.

En-rogel, being an important water source for Jerusalem (fullers included), was no doubt the terminus of a well-traveled roadway between it and the city. In addition, En-rogel would have been the preferred and adequate source of water outside of Jerusalem for Sennacherib's troops and emissaries, and at the same time it would have given them access to the rulers and general population of Jerusalem from outside the walls.

Since the 1st century C.E. (Smolar 1983: xvi–xvii), En-rogel has been associated with the Fuller's Field as suggested by the Targums' rendering of En-rogel as the "fountain of the fuller" (*Tg. Ps.–J.*, Josh 15:7; 18:16; see Smolar 1983: 112–13), with Rashi and Kimchi (Josh 15:7) attributing *rōgēl* to the Heb *regel* (meaning foot) "because he (the fuller) treads woolen clothing with his feet."

G

GAAL (PERSON) [Heb *gaʿal* (גַּעַל)]. The son of the Canaanite Ebed and apparently a native of the city of Shechem during the time of Abimelech, the half-Israelite, half-Shechemite son of Gideon (Judg 9:26–42). Abimelech had appealed to the Shechemites for rulership on the basis of his "superior" relationship over the 70 sons of Jerubbaal (Judg 8:31; 9:1; cf. *EHI* 801 for the view that Jerubaal and Gideon are different persons). There is no biblical record of Shechem's conquest by Joshua nor any archaeological evidence of destruction for that period (*EHI* 800), though it was designated as one of the cities of refuge (Josh 20:7). Thus, while the city was substantially Canaanite, Israelites lived in the surrounding area, with perhaps some in the city as well (*EHI* 638–39). Abimelech appointed Zebul as his personal representative to rule over the city while he lived in nearby Arumah. Into this complex and unstable political situation came Gaal, whose name means "beetle" or "dung-beetle" (*IPN* 230; *HALAT* 192). Josephus' use of *gualēs* suggests a Heb *gōʿal.* He is sometimes seen as simply a leader of a mercenary band of ruffians (Reviv 1966: 255), and he identifies himself with the Shechemites (Judg 9:28; cf. *Judges* AB, 177; *Judges* OTL 185). During an agricultural thanksgiving festival for the city's god, Baal-berith ("Baal or Lord of the covenant"), Gaal makes a drunken claim for the city's loyalty based upon his "purer" blood—the exact same ethnically based argument as Abimelech had made earlier!

The nature of the polity of Abimelech's rule and Gaal's challenge of it is a matter of some debate. Judg 9:28 seems to indicate Shechem is a protectorate with Abimelech as an overlord, and Shechem did have a tradition of having no king, like the Gibeonite cities (*EHI* 639, 800). Others take Judg 9:6 to imply the establishment of a monarchy which provoked resentment in Shechem (*Judges* OTL 169). At the most it can be said that Abimelech claimed kingship over Shechem and its environs only (*Judges* AB, 183). Word of Gaal's boast of supremacy over Abimelech reaches Zebul who advises his master to take immediate action. During the confrontation the next morning, Gaal led the Shechemites in battle against Abimelech and was defeated. Zebul subsequently denied Shechem to Gaal as a base to continue his seditious activities.

KIRK E. LOWERY

GAASH (PLACE) [Heb *gaʿaš* (גַּעַשׁ)]. Mountain in the hill country of Ephraim, somewhat S of Timnath–serah (Josh 24:30; otherwise known as Timnath-heres, Judg 2:9). The exact location of the mountain is uncertain but, given its approximate relationship to Timnath-serah, is probably some 20 miles (30 km) SW of Shechem. One of David's 30 bodyguards (Hiddai, 2 Sam 23:30; var. Hurai, 1 Chr 11:32) is said to have come from the "brooks" of the mountain, a region of ravines which would become watercourses in the rainy season. LXXB of Josh 24:30 reads "Gilead" in place of "Gaash," though this variant is clearly in error since Gilead is a district to the E of the Jordan while Ephraim is to the W.

ELMER H. DYCK

GABAEL (PERSON) [Gk *Gabaēl* (Γαβαηλ)]. 1. Ancestor of Tobit, described as a member of the tribe of Naphtali and mentioned in the opening genealogy of the book by the same name (Tob 1:1). Appealing to the Hebrew text of Tobit published by Fagius (HF), Simpson (*APOT* 1:202) suggests that Gabael (Heb *gĕbāhʾēl*) might be read Gabriel (Heb *gabrīʾel*). The HF, however, is a free rendering of the story and of late origin (16th century), whereas by contrast the vast majority of the primary and secondary texts support the usual reading (Zimmerman 1958: 35, 44–45). A number of the names attributed to the relatives of Tobit are word plays, anticipating the deliverance from suffering which awaits him (Nickelsburg 1981: 40 n. 37). It may be, therefore, that the choice of the name Gabael, which means "El is

lofty," is likewise intentional and symbolic (McKenzie 1965: 291). Inasmuch as Tobit repeatedly admonishes his son Tobias to honor God, whatever the circumstances, the choice of the name Gabael may be a deliberate attempt to reinforce yet another of the narrative's themes. As more than one writer has noted, the author emphasizes the "transcendent majesty of God" (Pfeiffer 1949: 282–83; Metzger 1957: 37–38; Nickelsburg 1981: 34).

2. A man of Rages, a city in Media, in whose care Tobit left 10 talents of silver (Tob 1:14) and to whom he sent his son Tobias for its recovery (4:1, 20). Described as the brother of Gabrias, Gabael returned the money in sealed bags to the angel Raphael and then attended the wedding feast held for Tobias and Sarah (9:2–5). At the wedding, Gabael is said to have "blessed" the couple (9:6) and, although some Greek manuscripts read "And Tobias blessed his wife," most scholars believe it was Gabael who gave the blessing in the original version of the story (Bückers 1953: 228 and Zimmerman *APOT* 1: 99).

FREDERICK W. SCHMIDT

GABATHA (PERSON) [Gk *Gabatha* (Γαβαθα)]. Var. BIGTHAN. One of the eunuchs who conspired against King Ahasuerus, according to the Greek Additions to Esther (Add A; 12:1). The name Gabatha appears in the LXX in passages where the MT has BIGTHAN (Esth 2:21; 6:2). The variants Gabbathan and Bagathan (appearing respectively in the Cambridge and the Vulgate) are apparently due to metathesis. The JB considers the identification of Gabatha with Bigthan so normal that the name of Gabatha has been replaced.

JOHN MCKENNA

GABBAI (PERSON) [Heb *gabbay* (גַּבַּי)]. Benjaminite and a postexilic resident of Jerusalem, cited along with Sallai in Neh 11:8. The use of the phrase "after him," the absence of a conjunction between the names, and the lack of parallels has suggested to some scholars that the text is corrupt. Those who accept this view argue the text should be amended in order to read "his kinsmen, men of valor" (Brockington *Ezra, Nehemiah, Esther* NCBC, 189–90; Williamson *Ezra, Nehemiah* WBC, 343). Others argue that the reference to Sallai in 12:20 indicates that the text should read as it stands (Myers *Ezra, Nehemiah* AB, 184).

FREDERICK W. SCHMIDT

GABBATHA (PLACE) [Gk *Gabbatha* (Γαββαθα)]. The place where Jesus stood before Pilate in Jerusalem (John 19:13). The derivation of the original Aramaic term *Gabbatha,* of which this is a transliteration, is uncertain but it probably means "elevated," and is used only here in the NT. John reveals that the place was well known by both the Aramaic term and a Greek term *(lithostroton)* meaning "stone pavement," each conveying a different perspective of the site. According to John, the judgment seat or tribunal (Gk *bema*), on which the Roman official sat to speak to the people was located here. Matthew says that Pilate "*sat* on the judgment seat" (*bema;* 27:19) when Jesus appeared before him.

It must have been on this same tribunal in Jerusalem that Pilate sat when Jews "surrounded him" and protested his spending sacred money on the construction of an aqueduct (*JW* 2.175). Pilate also stood on a tribunal set up in the stadium in Caesarea and addressed protesting Jews during a demonstration in that city, according to Josephus (*Ant* 18.57; *JW* 2.172;). Paul appeared before the proconsul Gallio at such a tribunal in Corinth (Acts 18:12–17).

The tribunal, called a *rostrum* in Latin, was usually set up in the forum (marketplace) of a Roman city. Examples have been found, among other places, in the forums in Rome, Philippi, Pompeii, Athens, and

Corinth. The location of the one in Jerusalem has been disputed. However, it was most likely situated in the upper forum, adjacent to the E side of the palace of Herod (just S of the modern Jaffa Gate).

Herodian foundations of a large stone podium have been recently found in the Armenian quarter, indicating that the palace of Herod stretched from the Citadel (Jaffa Gate) on the N, along the W modern Turkish wall to its S extremity, which turns E. Thus the podium, on which a stone pavement once stood, was built almost 12 feet higher than the previous Hasmonean building foundations. It was approximately 1,100 feet long N–S, and 200 feet wide E–W. Nothing of the superstructure has been found by M. Broshi who excavated the area.

Philo, a contemporary of Jesus, wrote that Pilate was living in Herod's palace during one of the Jewish feasts (*Gaium* 38). He describes it as "the residence of the prefects." Gessius Florus lived here just before the destruction of the Temple by Titus, beginning in A.D. 66. Florus became prefect in A.D. 64. Mark states that the soldiers "led him (Jesus) outside the palace, which is the praetorium" (15:16). The PRAETORIUM, i.e. residence of the Roman authority, must have been in the Herodian palace, and the large podium Broshi found must have been that on which Jesus stood before Pilate.

The stone pavement beneath the modern Sisters of Zion Convent could not have been the Gabbatha, because the pavement, now determined by archaeologists to have been contemporary with the ceiling vaults of the Struthion pools beneath, was not yet built when the Romans moved their siege machines "through the pools" in A.D. 70 (*JW* 5.467).

JOHN MCRAY

GABRIAS (PERSON) [Gk *Gabrias* (Γαβριας)]. Described as the brother of Gabael in Tob 1:14, but as his father in 4:20. Gabrias is referred to as Gabri in the Sinaiticus text of the Book of Tobit. Comparing the relationship between Huri (1 Chr 5:14) and Ben Hur (1 Kgs 4:8), Zimmerman conjectures that Gabri may have the same relationship to Geber (1 Kgs 4:13). Although possible, however, Zimmerman provides no evidence to suggest that there is anything more than a formal similarity between the 2 names.

FREDERICK W. SCHMIDT

GABRIEL (ANGEL) [Heb *gabrî·ēl* (גַּבְרִיאֵל)]. Gabriel (whose name means "God is my warrior") is one of two angels named in the Hebrew Bible (Dan 8:16; 9:21), the other being Michael (Dan 10:13, 21; 12:1). Along with Michael, Gabriel regularly figures as one of the 4 archangels (see *1 En.* 9:1; 40:9; 54:6; 71:8; *Apoc. Mos.* 40:2; 1QM 9:14–16; *Num. Rab.* 2:10; etc.). In the book of Daniel, Gabriel is preeminently an angel of eschatological revelation. He is sent to Daniel to explain a vision of "the time appointed for the end" (8:15–26) and again to reveal the hidden meaning of the words of Jeremiah that Daniel is reading (9:20–27). Gabriel is implicitly the angel who appears to Daniel in Daniel 10–12.

Gabriel's functions are more varied in *1 Enoch.* In the Book of the Watchers (*1 Enoch* 1–36) he is listed as "the one of the holy angels who is in charge of paradise and the dragons and the cherubim" (20:2). He is commissioned to destroy the offspring of the rebellious angels and human women (10:9–10). The fruitless petition addressed to Gabriel by the rebels in 10:10 complements the reference (40:6, 9) to Gabriel's association with petition and prayer in the Similitudes (*1 Enoch* 37–71).

In the War Scroll from Qumran (1QM) the names of the 4 archangels, Michael, Gabriel, Sariel, and Raphael, are written on the shields of the 4 towers of the army. The positioning of the 4 archangels around the throne of God or other sacred space has a long subsequent history in both Jewish and Christian tradition (see Milik 1976: 173; Yadin 1962: 239–40).

The gospel according to Luke identifies Gabriel with "the angel of the Lord" (Luke 1:11, 19, 26; cf. Luke 2:9; Acts 5:19; 8:26; 12:7). Gabriel's announcements to Zechariah and to Mary of the births of John and Jesus draws on an ancient tradition (cf. the announcement of the birth of Samson in Judges 13). In the Hebrew Bible, however, the angel of the Lord (Heb *mal*ʿ*ak YHWH*) is never named and in general is not conceived of as a distinct, personal being, but is rather the manifestation of God's presence. See ANGELS.

CAROL A. NEWSOM

GAD (DEITY) [Heb *gad* (גָּד)]. A deity (or spirit) of fortune mentioned in Isa 65:11 as being worshipped, along with Meni (a god of fate or destiny), by apostate Jews, probably in postexilic Judah. The RSV translates Heb *gad* as "Fortune" and *mĕnî* as "Destiny": "you … who set a table for Fortune and fill cups of mixed wine for Destiny." Most likely the setting of a table took place to venerate both deities, as also the filling of cups.

According to the evidence of Aramaic, Syriac, and Arabic, *gad* should be understood as "fortune," "good luck." It is used with this appellative meaning in the OT (Gen 30:11 [*kĕtîb*], though some commentators would see here the name of the deity) and in other ANE literature. When *gad* is used as an element in compound names, it is often difficult to determine whether it should be taken in the appellative sense or as the name of the god. The place name Baal-gad (Josh 11:17) could be interpreted as "Lord Gad" or as involving an epithet *(gad)* joined to the divine name Baal. Likewise "Migdal-gad" (Josh 15:37) could be "Tower of Gad" or "Tower of fortune." However, such names as Gaddi (Num 13:11), Gadi (2 Kgs 15:14, 17) and Gaddiel (Num 13:10) are best understood as using *gad* as an appellative (see *RE* 5: 329, 332–33; *TDOT* 2: 383, also for the name Gad [Gen 49:19, 1 Sam 22:5] as possibly representing the appellative meaning).

Certain witness in the OT for a deity Gad comes from Isa 65:11, and from the name Azgad, Heb *ʿazgād* (Ezra 2:12 = Neh 7:17; Ezra 8:12; Neh 10:16—Eng10:15), according to analogy with the Phoenician names *ʿzbʿl,* "Baal is mighty," and *ʿzmlk,* "Malk is mighty." Clear attestation for the divinity Gad also comes from Aramaic, Palmyrenian, and Arabic evidence. There is, however, no corresponding divine name in the pantheons of Assyria or Babylonia. It has been suggested, with some credibility, that the deity Gad, "Fortune," evolved relatively late (perhaps in the 1st millennium B.C.) as a personification of the appellative (and abstract) *gad,* "fortune." Support for this suggestion may come from the pointing in the Hebrew text, which provides *gad* in Isa 65:11 with the definite article (lit. "for *the* Gad"), perhaps indicating that the Masoretes retained an awareness of the "original" appellative meaning of *gad* (i.e., "for the [god of] good fortune"?).

Jewish tradition identified Gad with the planet Jupiter, regarded in Arabic astrology as the star of greater fortune. Yet there is insufficient evidence to establish that the apostates described in Isa 65:11 had such an understanding of Gad. Gad has also been identified with the deity Tyche (Gk *tychē*), "Fortune," mentioned in Gk inscriptions, many of which come from the Hauran. This identification is probably correct: An Aram-Gk bilingual inscription from Palmyra apparently equates Gad and Tyche (however, see *RE*5: 334). A minority of scholars would connect Tyche with another divinity (e.g., Atargatis: *RE*5: 335), and the best-attested reading for the LXX at Isa 65:11 renders "Gad" with *daimoni* (or *daimoniō*), "demon," and "Meni" with *tychē* (for one possible explanation for this reading, see Delitzsch 1969: 484; *SDB* 2: 322). However, in some manuscripts "Gad" is rendered with *tychē,* "Meni" with *daimoni;* the LXX at Gen 30:11 has for the Heb *gad* (used in the appellative sense) *tychē;* and for Isa 65:11 the Vg reads *Qui ponitis Fortunae mensam,* " (You) who place a table for Fortune."

Gad is mentioned frequently in Syriac and later Jewish literature. A Syriac writer of the 5th century mentions that tables were still being set for Gad in his time. This practice of spreading a table laden with food before a deity or deities (usually equated with the Roman *lectisternium*) was common throughout the

ancient world (in the OT, cf. Jer 7:18; in the NT, 1 Cor 10:21). There may be a partial parallel in the worship of Yahweh, the God of Israel, with the provision of the "shewbread" (Lev 24:5–9) set on a special table (Exod 25:23–30; 1 Kgs 7:48). The apostates of Isa 65:11 were looking to Gad, not Yahweh, as the source of well-being and prosperity.

WALTER A. MAIER III

GAD (PERSON) [Heb *gād* (גָּד)]. GADITE. Two persons bear this name in the Hebrew Bible.

1. The son of Jacob, and therefore eponymous ancestor of the tribe of Gad. His mother was Bilhah, Leah's handmaiden (Gen 30:11). The etymology of the name "Gad" is not clear. Although some suggest a derivation from the root *gdd,* "to cut off," most scholars follow the pun of Genesis 30: "Gad" = " (good) fortune." The name Gad is known as a theophoric element in a number of W Semitic personal names. It is not the real name but an adjective, an appelative, "the Fortune," and could be used for a number of gods.

There is not one system of 12 tribes in the OT, but two. The first is mainly a list of patronyms. It is mostly known as "system A" and includes Levi and the tribe of Joseph. The second system, called "B," does not include Levi and has Ephraim and Manasseh in the place of Joseph. This second system is geographical, and it lists tribal areas. This system "B" is older than system "A." (The main texts for system "A" are: Gen 29:31–30:24; 35:23–26; 46:8–25; 49:3–27; Exod 1:2–4; Deut 27:12–14; Ezek 48:31–35; 1 Chr 2:2. For system "B": Num 1:5–15; 2:3–31; 7:12–83; 13:4–15; 26:5–51; Josh 13–19; 21:4–7, 9–39.) In the first system, Gad is usually the 7th son, in the second the 9th tribe. (The different order in Numbers 26 has to do with the placing of the standards in Numbers 2. In this way it was easy to prevent the tribe of Judah coming under the standard of Reuben.)

In trying to locate the exact tribal regions or even their boundaries one encounters several problems. The first is the uncertainty about the identifications of biblical place-names, especially in Transjordan. The second is that those who produce biblical maps tend to harmonize different texts. The third problem is a methodological one. The biblical data on the geographical and historical situations in Transjordan show a wide variation. To what extent can these differences be explained historically? That is to say, do the different texts record different situations in successive periods? Or to what extent do we have to reckon with purely literary procedures, without any basis in a historical reality?

There is a rather broad consensus that the oldest reliable source on the Transjordanian tribes of Gad and Reuben is the core of the city-list in Num 32:33–38. According to Wüst (1975) this core consists of the following 4 cities for Gad: Dibon, Ataroth, Aroer, and Atroth-shophan. The city-names Jaazer, Beth-nimrah, and Beth-haran are later additions that were taken from Joshua 13. The addition of Jogbehah is a harmonization with Judg 8:12. This means that according to the oldest biblical tradition there is a tribe Gad centered around Dibon (cf. the name-form Dibon-gad in Num 33:45). This is a territory N of the river Arnon, its heartland being a fertile plateau with excellent grazing, called "the Mishor" (Josh 13:9, 16; Deut 3:10; 4:43). The oldest text locates Gad therefore to the S of the tribe of Reuben that was centered in the N parts of the Mishor around Heshbon. As will be shown below, the tribe of Gad was forced out of this S position and resettled in towns more to the N.

Many have noticed that of the Transjordanian tribes only Reuben is mentioned in the very old Song of Deborah (Judges 5). Instead of Gad we find "Gilead." It is too simplistic to assume that "Gilead" was just another name for the territory of Gad. To the author of the Song there were obviously two nuclei of Israelite settlement E of the Jordan: Gilead, N and S of the river Jabbok; and the Mishor, called by him after Reuben, S of Gilead but N of the Arnon. In Num 32:29, 30 "the land of Gilead" is used as the general name for the Israelite territories E of the Jordan. It is equivalent to "the land of Canaan." In v 1 the tribal territory of Reuben is called "the land of Jaazer." The absence of Gad can best be explained by assuming that Gad was only later considered as a separate tribe. In the early monarchy, Israelite Transjordan was known as "the land of Gad and Gilead" (1 Sam 13:7; cf. also 2 Sam 24:5).

Gad is mentioned in 2 other old texts: in the "Blessing of Jacob" and in the "Blessing of Moses" (Genesis 49 and Deuteronomy 33, respectively). Zobel has shown that the blessing of Gad belongs to a younger type. A comparison with an animal, for instance, is lacking. On the other hand the condition of the tribe differs in both blessings: In the older one (Genesis 49) the tribe is depicted as threatened; but in Deuteronomy 33 only praise is expressed for Gad—here the tribe is obviously in its prime. The rise of Gad was largely at the cost of the tribe of Reuben. This development becomes visible already in Num 32:34–38. The analysis of this text by Wüst (1975) has shown that the additions to the original document are all situated to the N of the territory of Reuben. These additions are: Jazer, Beth-nimrah, Beth-haran, and Jogbehah.

In the case of the tribe of Gad we have the rare opportunity to supplement biblical tradition with extrabiblical data. The famous stela of king Mesha of Moab (a modern English translation is given in *HAIJ*, 283) gives us valuable information on the historical situation in S Transjordan in the mid-9th century B.C.E. King Mesha introduces himself in line 1 as "the Dibonite," which seems to imply that he was born there. Dibon therefore was already Moabite at the beginning of the 9th century. The homeland of the Moabites lay S of the river Arnon, and Dibon is situated just N of it. Then, in lines 7–8, Mesha informs us that "the men of Gad lived always in the region of Ataroth." "Always" should be understood as "of old," "in living memory," i.e., at least during the last 3 generations. This brings us into the time of Saul and David, in excellent agreement with 1 Samuel 13. Next, king Mesha informs us that the town of Medeba was given back to Moab by its god Chemosh. This former Reubenite town was clearly lost by Israel at an earlier time. After that it was reconquered by king Omri of Israel. But after Omri's death, Mesha had been able to conquer it again. From this we may conclude that the Moabite expansion probably went N along the King's Highway and left the areas W of it—Ataroth—at first untouched. The following cities are counted by Mesha as having been conquered from Israel: Beth-baal-meon, Kiriathaim, Nebo, and Jahaz. All of these are well-known from the Bible. Mesha was the first king of Moab to make Dibon the royal residence. It was also here that the stela was erected. From this stela we see clearly how the border with Israel was pushed northwards.

Pressure came not only from the S, but also from the E. The already famous scroll 4QSam^{a}, found near the Dead Sea, has kept a few verses of 1 Samuel 11 that apparently were lost in the MT. This additional text is to be placed before 1 Sam 11:1 (translation F. M. Cross 1980):

> [And Na]hash, king of the Ammonites, sorely oppressed the children of Gad and the children of Reuben, and he gouged out a[ll] their right eyes and struck ter[ror and dread] in Israel. There was not left one among the children of Israel bey[ond] [Jordan who]se right eye was no[t go]uged out by Naha[sh king] of the children of [A]mmon; except seven thousand men [fled from] the children of Ammon and entered [J]abesh-Gilead. About a month later, Nahash the Ammonite went up and besieged Jabesh-[Gilead] and all the men of Jabesh said to Nahash [the Ammonite, "Make] with [us a covenant and we shall become your subjects."] Nahash [the Amonite said t]o [th]em, ["After this fashion will] I make [a covenant with you] …

From the course of history we must conclude that the victories of Saul and David over the Ammonites were decisive: It was not until more than 2 centuries later that Ammon once again became a threat to Israel. David made himself king over Ammon and in 2 Sam 23:26 a hero from Gad and one from Ammon are mentioned side by side.

The list of the Solomonic districts—1 Kgs 4:7–19—describes the land of Israel at the end of the United Monarchy. At the end of the list the 12th district includes "the land of Gilead, the land of Sihon." The use of "Gilead" is suspect because of the geographical order and because Gilead was already treated as the 6th district. (To read only "the land of Gad" with LXX^{B} is probably too simple.) Sihon was the Amorite king of Heshbon (Num 21:21–30). In any case the list does testify to the existence of an Israelite district in S Transjordan at this time.

Deuteronomy, however, locates the tribe of Gad much farther to the N than do the older texts (Deut 3:12, 16; 4:43; 29:7). A number of younger texts associate with the tribe of Gad an itinerary through the Jordan valley southwards. It passes through Zaphon, Succoth, Beth-nimrah, Beth-haran, and Beth-

jeshimoth. This route entered former Reubenite territory at Kiriathaim and joined the King's Highway at Dibon. Again according to Wüst (1975), this itinerary was also known to the redactor of Joshua 13. This document originally listed Israelite cities in Transjordan; a subdivision over tribes was added later. In Joshua 13 the border is drawn between Gad (N) and Reuben (S) at the wadi el-Wâlah. From the Mesha stela we concluded the same borderline. Heshbon remained an Israelite city, probably until 722 B.C.E. Jer 49:1–3 also considers the wadi el-Wâlah as the border with Moab. Jeremiah still connects Heshbon with the tribe of Gad.

Remarkable, however, is Isa 15:2–4; 16:9. It does not seem to disturb the prophet Isaiah that almost all the Moabite towns he enumerates had been Israelite until a few decades before him.

In later, postexilic texts, the location of the tribe of Gad continues to be in the N. We find Gadite cities even mentioned near the river Yarmuk. A Gadite city is also mentioned in the list of Cities of Refuge (Joshua 20). The list of Levitical cities from Joshua 21 ascribes a number of N cities to Gad too, but at the same time also Heshbon, the former Reubenite center. Maybe this can be explained by assuming that Gadite clans withdrew to the N and to the Jordan valley after their original territory was lost.

2. An Israelite seer (1 Chr 29:29) and prophet (1 Sam 22:5). He was a contemporary of King David, and was significant primarily for his influence in David's life and decisions. Having become the object of Saul's anger, David fled and lodged in the cave of Adullam where his family and many socially distressed persons joined him. After some time Gad counseled David to leave the cave and settle in Judah; David acceded to his counsel (1 Sam 22:5). Later, after David took a census of his increasingly numerous people, Gad offered David a selection of 1 from among 3 punishments for the prideful act; David selected a pestilence in the land as the preferred punishment. While the pestilence raged, Gad instructed David to sacrifice on an altar to be erected on a chosen plot. David again followed the seer's instruction: He purchased the plot, erected the altar, and sacrificed; the pestilence ceased (2 Samuel 24 = 1 Chr 21:1–27). He was later influential, indirectly and posthumously, in a decision by King Hezekiah: When the king cleansed the polluted temple and consecrated it, he ordered the Levitical musicians to serve strictly according to Gad's commandment issued during David's reign and applicable to the situation (2 Chr 29:25). A document entitled *Chronicles,* devoted to the memory of David's rule, might, grandeur, and success, is attributed to him either as its author or editor (1 Chr 29:29–30).

GERALD J. PETTER

GAD, VALLEY TOWARD (PLACE) [Heb *gād* (גָּד)]. A place where David's census officers

camped after crossing into Transjordan. The KJV, based on the MT of 2 Sam 24:5 *(hannaḥal haggād),* translates this phrase as the "river of Gad." However, the fact that both words in this expression have the definite article suggests that this is an incorrect translation. The RSV and NEB, following Lucian, emend the two Hebrew words in this expression to read *naḥal ʾel-haggadi* and respectively translate the phrase "valley, toward Gad" and "gorge, proceeding toward Gad." Since this river valley is the one in which

Aroer is located, it is probably to be identified with the Arnon. This valley apparently formed the S limit of Israelite expansion in Transjordan.

RANDALL W. YOUNKER

GADARENES [Gk *Gadarēnos* (Γαδαρηνος)]. The name of the territory where Jesus cast demons out of 2 men and into a herd of swine (Matt 8:28). See also GERASENES. This area is associated with the site of Gadara, modern Umm Qeis (M.R. 214229), located near the N border of Jordan, about 10 km SE of the S tip of the Lake of Tiberias, on a flat plateau which is aligned in an E–W direction at an altitude of 350 m above sea level. On the N, steep slopes descend to the Yarmuk valley, on the W is the Jordan valley, and to the S is the Wadi el-ʿArab. In and near the modern village lie the ruins of the ancient city, which was first associated with Gadara by U. J. Seetzen in 1806. Its arrangement and size were adapted to the local topography.

In 1886, G. Schumacher was commissioned to undertake a surface survey of Umm Qeis, mainly in the upper city, which at that time was uninhabited. After a long interruption, several separate campaigns have been conducted at the site: The excavation of a late bath in the NW part of the village, whose mosaic floor and inscription were published by U. Lux (1966) and S. Mittmann (1966) respectively; the cleaning of a (probably) Late Roman tomb in the same vicinity, published by B. De Vries (1973); and the uncovering of an extensive, subterranean mausoleum within the ancient city limits (unpublished). In 1974 a second surface survey was carried out, and its site plan recorded the architectural remains of the ancient city over an area ca. 1,600 m long with a maximum width of 450 m, superceding Schumacher's 1886 plan of the upper city. The necropolises located all around the ancient city limits could not be taken into account.

Between 1976 and 1980, excavations were conducted under the direction of Ute Wagner-Lux, and later with S. Holm-Nielsen who joined the expedition in 1977. Several fields between the upper and lower cities, the so-called terrace, and in the lower city were excavated. The results of these excavations are briefly presented in the remainder of this article. See Fig. GAD.01.

Field I is situated in the central part of the terrace. The expedition unearthed the foundations of a square building (measuring ca. 23.5 × 23.1 m) with an octagonal interior, built over a floor from the Roman period which was composed of limestone slabs. The doors were on the W and E sides of the building. Two shaft tombs (0.52 × 1.72 m and 0.6 × 1.74 m) were found in the floor of the NE apse in front of a basalt sarcophagus. At the horizontal apex of the SE apse, which had been separated by chancel screens from the octagonal interior, a hexagonal basalt column 0.74 m high (a reliquary stand?) was discovered. In the interior, a corridor surrounds a central octagon, which is entered from the N and formerly was demarcated with chancel screens. On the E side of the central octagon was a semicircular, stepped installation oriented to the E, and just W of the latter, a shaft tomb with a stone ossuary or reliquary (?) (ca. 1.2 × 0.5 × 0.4 m). The floor of the building was overlaid with small, stone tiles assembled to form various geometric patterns in hues of black, slate blue, yellow, red, and white. All the excavation data indicate that this square building corresponds to a church of the central-plan type. It was erected at the beginning of the 6th century A.D. largely from reused material and was destroyed in the 8th century by an earthquake. From the courtyard, three doorways gave access to the *decumanus maximus.*

Field II was excavated by the Danish team in 4 campaigns from 1977 to 1983. Its focus was a public bath located about 50 m W of the church and skirted on the N by the E–W oriented *decumanus maximus.* The main building was 30 m wide and 50 m long. It had been built on a steep slope, with its northernmost room cut partly into the rock and its S end supported by 2 large, vaulted rooms founded on bedrock. Skirted by another E–W street, the S facade of the building at its original height of about 14 m, must have been an impressive sight. Including the auxiliary rooms or corridors on the E and W as well as some on the N, the edifice covered an area of about 2,300 square m. From the auxiliary rooms, the hot bathrooms were heated through underground furnaces so that hot air circulated under the floors *(hypokaustikon),* which were supported by pillars made mainly of basalt but also of tiles. The temperature needed for the different rooms was further regulated by chimneys and hot-air pipes *(tubulus)* along the walls. It is estimated that 10 furnaces were employed when the 8-room bath was fully functional. Olive wood and

olive seeds were used as fuel, and water was supplied by the main aqueduct carrying water to Gadara from the far NE. The various rooms known from the classical Roman public bath were represented: dressing room *(apodyterium),* cold-water room *(frigidarium),* lukewarm room *(tepidarium),* hot-water room *(calderium),* dry hot-air room *(sudatorium),* and possibly also a room for massage and anointment *(unctorium).* The open courtyard for gymnastic exercises *(palaestra)* does not seem to have been included in the construction, however, perhaps because by this time it was no longer a normal feature of public baths.

Three main periods are discernible in the history of the bath. The first was terminated by a destruction possibly caused by an earthquake, around A.D. 400. In the second period, the building continued as a bath, but on a slightly reduced scale. The S wall had partly collapsed and was not re-erected. The southernmost room, originally the most luxurious of all the rooms, was abandoned as a bathroom and from then on served only as a stoke room for a new and much smaller, semi-circular hot-bath basin, which was built against the arched passage to the neighboring room on the N. Some of the other doorways in the building were narrowed and the heating system reduced. This gradual change may reflect the beginning of an economic decline at Gadara. Sometime in the first half of the 7th century A.D., the use of the building as a bath came to an end, and in the third period it was used for habitation and perhaps also for industrial purposes on a smaller scale. Whether this development had anything to do with the Islamic conquest is uncertain, but the finds, especially in the smaller rooms on the W, clearly attest an Umayyad presence. A semicircular niche in the S wall of Room VII seems to have been turned into an Islamic prayer niche *(mihrab).* The structure was ultimately destroyed by the great earthquake of A.D. 746 at the end of the Umayyad era.

SVEND HOLM-NIELSEN

Field III is located at the N end of a street that branches southward at right angles from the *decumanus maximus,* running to the W of and below the terrace, and leading along a row of consecutive rooms with vaulted ceilings but broken-off facades to the W theater. In this field the W face of the entrance at the N side of the terrace, as well as the adjacent vaulted room extending to the S, were exposed. The reconstruction of the facades on the series of consecutive rooms was facilitated by the recovery of various architectural pieces. In addition, a water system was identified both under the Roman street and, in its later phases, breaking through the pavement.

Fields IV and V were in a 34 m length of the E–W oriented *decumanus maximus,* which was excavated at about the midpoint of the ancient urban area. The average width of the street between the N and S stylobates of the column rows measured 12.55 m, and the average width of the sidewalks was 3 m. The reuse of building stones for the street pavement suggests a secondary process of road formation, probably a renovation during the Byzantine period.

Field VI is situated in the W zone of the ruins at the remains of a hippodrome. Three soundings were made in order to examine the structure more closely, but without obtaining further results.

Although Gadara played a role as a member of the Decapolis only from the time of Pompey (64/63 B.C.), the known history of the city nevertheless reaches well back into the Hellenistic period. According to the ceramic finds from the 1974 surface survey, Gadara must have had an even older, pre-Hellenistic predecessor; however, no clarifying section could be cut at a suitable place during the excavations.

Gadara was made famous primarily because of its scholars: Menippus (3d century B.C.), Meleager (first half of the 1st century B.C.), Philodemus (first half of the 1st century B.C.), Theodorus, teacher of the emperor Tiberius (end of the 1st century B.C.), Oneomaus (2d century A.D.), and Apsines (3d century A.D.). The establishment of Christianity at Gadara must have occurred very early (as the participation of Bishop Sabinus in the Council of Nicea in A.D. 325 notably attests), though doubtless not without a struggle (witness the martyrdom of the deacon Zacchaeus in A.D. 303). Subsequently Christianity became the dominant religion throughout the Near East, resulting in the emergence of important Christian centers with proportionately major church structures, such as Bosra, Zor῾a, Jerash, and Madeba. On the basis of the excavation of its central-plan church, Gadara joined these cities, with their analogous central-plan churches, as a center of equal rank.

GADDI (PERSON) [Gk *Gaddi* (Γαδδι)]. Nickname of John, the eldest among the 5 sons of Mattathias (1 Macc 2:2). As with all his brothers, 1 Maccabees mentions his nickname. We do not know to what purpose these nicknames are mentioned nor when or why they originated. It is assumed that they were given to Mattathias' sons at their birth, and were aimed to distinguish their bearers, especially because their proper names were very common at that period. Gaddi may be drawn from Heb *Gad*, which means (good) fortune. It may also be a name (cf. Num 13:11), but this is less acceptable since the other brothers carry what are evidently nicknames, and not second names. See MACCABEE.

John the Gaddi did not distinguish himself in the Maccabean rebellion and is mentioned only once as a commander of a convoy, sent for shelter to the Nabateans, but ambushed on its way. In the ensuing battle or in captivity, John was killed (1 Macc 9:35–38). This event took place some time after the fall of Judah Maccabeus in 160 B.C.E. See JOHN (PERSON).

URIEL RAPPAPORT

GADDIEL (PERSON) [Heb *gaddiʾēl* (גַּדִּיאֵל)]. The name is a compound of the Hebrew words *gad* and *ʾel* ("God"). The root meaning of GAD is "luck" or "good fortune" (cf. Gen 30:11). In Isa 65:11 it represents the name of a deity which personified "fortune." Thus, the most likely meaning of Gaddiel is something like "God is my good fortune."

The personal name Gaddiel is found only in Numbers 13:12. The son of SODI, Gaddiel represented the tribe of Zebulun among the 12 men Moses sent from the wilderness of Paran (Num 12:16) to spy out the land of Canaan. Though not the head of the tribe of Zebulun (Num 1:9; 7:24), he was one of its leading princes (Num 13:2, 3). His selection was doubtless based upon his suitability for the mission to be carried out. For further discussion, see Gray *Numbers* ICC.

JON PAULIEN

GADI (PERSON) [Heb *gādî* (גָּדִי)]. The father of Menahem king of Israel and the assassin of Shallum ben Jabesh (2 Kgs 15:14, 17). Nothing is known about him apart from these 2 references. The name ending has suggested to some scholars that it refers not to his father's name, but to Menahem's place of origin, the tribal territory of Gad on the E side of the Jordan River. However, that Gadi is a personal name is supported by its appearance as such in several sources. The name is found in a slightly different form in

Num 11:13 as "Gaddi" [Heb *gāddî*], in the Samarian Ostraca (6, 16–18, 30) as "Gaddiyo" [Heb *gdyw*], possibly an abbreviation for "Gaddiyahu" (*TSSI* 1: 8–11), and in the Arad Inscriptions (71, 72) as "Gadi" or "Gaddiel" and as a possible diminutive, "Gada" [Heb *gdʾ*] (*AI*, 95–96). Recently published Hebrew seal impressions from the 7th century B.C.E. (Avigad 1986: 39–41) have confirmed that Gadi is an abbreviation for Gaddiyahu. Seal impressions 23, 24 and 26 mention "Shahar ben Gad[d]iyahu" [Heb *šḥr bn gdyhw*]. Obviously referring to the same person is seal impression 25, which reads "To Shahar son of Gadi" [Heb *šḥr bn gdy*].

T. R. HOBBS

GAHAM (PERSON) [Heb *gaḥam* (גַּחַם)]. Second son of Nahor, Abraham's brother, by the concubine Reumah (Gen. 22:24). The assumption that Nahor's 12 sons were the fathers of as many tribes appears to be groundless since most of their names, as Gaham, never occur again in Scripture. The name "Gaham" most probably means "flame" or "bright blaze."

JOEL C. SLAYTON

GAHAR (PERSON) [Heb *gaḥar* (גַּחַר)]. Head of a family of *nĕtînîm* (temple servants) (see NETHINIM) which is listed among those exiles returning from Babylon to Jerusalem and Judah (Ezra 2:47 = Neh 7:49; 1 Esdr 5:30 [*geddour* reading Heb *gdwd* instead of *gḥr*]). Noth (*IPN*, 229) places the name among those emphasizing spiritual/intellectual qualities and derives it from Ar *jaḥirun* "weak (or humble) of spirit (or intellect)." Koehler (1940: 37), pointing to the lack of such emphases in Hebrew names, derives it from the Ar *jaḥara,* similar to *jaḥrāh* "year with little rain," which he understood as describing one "born at a time of little rain." Loewenstamm (*EncMiqr* 2: 475), discounting these proposed Arabic etymologies for lack of supporting examples, holds that the interpretation of the name remains vague. Zadok (1980: 112) likewise agrees to the unsatisfactory nature of these etymologies as well as those he derives from Mishnaic Hebrew by citing Jastrow (1926: 237b, 233b): *gîḥôr* "red-spotted"; *gĕḥārîm* (or *gehārîm*) and *gĕḥîrîm* from *gaḥar* or *gahar* "projection, jetty." Zadok nevertheless includes the name with those which are "both Hebrew (or a late type) and Aramaic."

RODNEY H. SHEARER

GAI (PLACE) [Heb *gayʾ* (גַּיְא)]. A place toward which the Philistines fled after the death of Goliath (1 Sam 17:52). Although it has been translated as "the valley" (KJV; see also Rainey 1975: 69*–70* who identifies "the valley" with the Elah Valley), this translation appears unlikely owing to the absence of the definite article. The syntax of the verse would seem to indicate that Gai is to be understood as a proper noun. However, on the basis of the LXX "Gath" most modern scholarship views Gai as a Heb scribal error for Gath (M.R. 135123; see Driver 1890: 114; McCarter *1 Samuel* AB, 286, 290; RSV). This argument is strengthened by the pairing of Gai and Ekron as the destinations of Philistine flight in the first half of v 52 in the MT, and the pairing of Gath and Ekron in the second.

CARL S. EHRLICH

GAIUS (PERSON) [Gk *Gaios* (Γαιος)]. 1. A Corinthian Christian mentioned after Crispus and before the household of Stephanas as one of the few people baptized by Paul during his stay in Corinth in the

early 50s (1 Cor 1:14). Being baptized by Paul, it is reasonable to assume that Gaius was partial to Paul's position in the disputes among the divisive Corinthians. It is most probable that he is the same Gaius who served as host to Paul and to "the whole church" at Corinth in the late 50s (Rom 16:23), since Paul was apparently in Corinth when he wrote Romans. In Rom 16:23, Gaius sends greetings from his residence in Corinth to the church in Rome, implying that he may have known personally some of the Roman Christians. His Latin name and his financial position suggest that he belonged to the class of Roman freedmen who had come to Corinth and had apparently prospered economically. He was at least a person of sufficient wealth to host the whole Corinthian church, which must have been quite large judging from Acts 18:10 and from the names of the Corinthians that are known.

Because Rom 16:23 names Gaius as Paul's host and because Acts 18:7 states that when Paul left the synagogue in Corinth he went next door to the house of the god-fearer Titius Justus, some have held that Gaius may be identified with Titius Justus, whose full name would then be Gaius Titius Justus. According to a tradition reported by Origen (*comm. in Rom.* 10.41). Gaius became the first bishop of Thessalonica. See JUSTUS.

2. A Macedonian who was a traveling companion of Paul and who along with Aristarchus was present with Paul in Ephesus at the confrontation with Demetrius and the silversmiths (Acts 19:29). Gaius and Aristarchus were dragged by the rioters into the theater, probably to be questioned concerning Paul's activities. They apparently were freed shortly after the town clerk had defused the scene (Acts 19:35–41). Then it is probable that Gaius along with Aristarchus joined Paul when he departed for Macedonia and Greece (cf. 20:1–2).

3. One of the 7 people named in Acts who accompanied Paul from Corinth to Troas as he journeyed toward Jerusalem with the collection (Acts 20:4). This Gaius may also have been one of the brethren referred to in 2 Cor 8:18–22, previously sent to Corinth by Paul. The text of Acts 20:4, which reads Gk *Gaios Derbaios,* is usually taken to mean Gaius "from Derbe." However, it is also possible that he was not from Derbe since *Derbaios* could refer to Timothy who is also mentioned in 20:4 (cf. 16:1); thus the text could be read as listing Gaius as one of the Thessalonians, along with Aristarchus and Secundus. If so, it could be argued that this Gaius, being a Macedonian and being with Aristarchus, is to be identified with Gaius #2 above. The question whether Gaius was actually from Derbe has also been raised on textual grounds since the Western text (D) reads *Douberios* (instead of *Derbaios*), which like Thessalonica is also a Macedonian town. This reading, too, would support an identity of Gaius #3 with Gaius #2. According to the late 4th century *Apos. Con.* (7.46) Gaius (from Derbe) was made the first Bishop of Pergamum in Asia Minor. However, the historicity of this information, due to its late date of composition, is highly questionable.

4. The personal recipient of the canonical letter 3 John (v 1) and a person who had showed hospitality to the Johannine "brothers" (vv 5–6). Because he provided hospitality, Gaius must have been a wealthy Christian whose means, home, and social status enabled him to play such a role. The recipients of Gaius' hospitality were itinerant missionaries who adhered to the Presbyter (also translated Elder), the author of 3 John. The Presbyter favors the leadership of Gaius, referred to affectionately as beloved (v 1), to that of Diotrephes, the head of a house church who refused hospitality to the Johannine "brothers." Whether Gaius himself belonged to the house church in which Diotrephes liked "to put himself first (among them)" (v 9), or was part of another, is unclear. The use of the singular, "the church," in vv 9–10, suggests that Gaius was a member of the house church controlled by Diotrephes. Other evidence seems to indicate that Gaius and his circle of "friends" (v 15) were not dominated by Diotrephes: Gaius had been able to offer hospitality without being expelled by Diotrephes; "among them" in v 9 excludes Gaius; and the singular, "the church," may have a more general reference, thus including the various house churches in the area. Also, if Gaius was unaware of the earlier letter sent to the church of Diotrephes (v 9), this is a further argument that the two were part of different groups since the Presbyter has to tell Gaius about this letter (Brown *The Epistles of John* 729, 731). Finally, it is unclear whether Gaius was a member or the head of a house church. There is no evidence that he had any special authority by virtue of his hospitality beyond that of being able to accept or to exclude traveling missionaries.

JOHN GILLMAN

GALAL (PERSON) [Heb *gālāl* (גָּלָל)]. The name of 2 persons mentioned in Nehemiah and Chronicles. The name possibly means "turtle" (*1PN,* 230).

1. An ancestor of one of the Levites who returned to Jerusalem following the Babylonian exile (1 Chr 9:16, Neh 11:17). Galal is presented as a descendant of Jeduthun who was head of one of the 3 families of Levitical singers appointed by David (1 Chr 16:42, 25:1–8). Galal and his descendants probably continued to function as Levitical singers.

2. One of the Levites who returned from Babylonian exile to Jerusalem (1 Chr 9:15). According to the text, Galal was a descendant of Asaph who was the head of another of the 3 families of Levitical singers appointed by David (1 Chr 15:16–17, 25:1–8) and the author of several psalms (Pss 50, 73–83). Thus Galal most likely served as a Levitical singer himself. Galal is not mentioned in the parallel passage in Nehemiah (Neh 11:15–18), but Bowman (*Ezra and Nehemiah* IB, 777) suggested that Gilalai (Neh 12:36) who was a trumpeter might have been Galal. Although the names and professions are similar, there is no conclusive evidence that Galal and Gilalai were the same person.

ROBERT C. DUNSTON

GALATIA (PLACE) [Gk *Galatia* (Γαλατια)]. GALATIANS. The name applied to a region of central Asia Minor (modern Turkey) which was occupied or controlled by Celtic immigrants of European origin known as Galatians. The geographical definition of this region varied widely at different periods. The Galatians crossed into Asia Minor in 278/77 B.C. and after raiding the prosperous W regions in the 270s were restricted to the arid steppes of central Anatolia stretching about 150 kms E and W of modern Ankara, henceforth known as Galatia. Raids against the cities of the W continued during the 3d century B.C., but Galatian power was much curtailed first by Attalus I of Pergammon between 240 and 230 B.C. They retained their independence and enjoyed a resurgence in the 1st century B.C. when their leaders proved to be stalwart allies of Rome in the wars against Mithridates VI of Pontus (95–63 B.C.). They were rewarded with important territorial grants by Cn. Pompeius and M. Antonius between 63 and 36 B.C. At the time of the Battle of Actium (31 B.C.) and the beginning of the principate of the emperor Augustus, a single Galatian ruler, Amyntas, controlled the whole of central Turkey and his kingdom even reached the Mediterranean. Other Galatians controlled territory in NE Anatolia, the old Pontic kingdom of Mithridates. During this period the Galatians retained much of their traditional Celtic culture: they spoke a Celtic dialect which survived in rural areas at least until the 4th century A.D.; Celtic personal and place names are widely attested; and they had a distinctive Celtic form of religious and political organization. They were renowned warriors and prized mercenaries whose outlandish appearance, great physical stature, and barbarian ways struck terror into their enemies, but they were insufficiently disciplined to prevail over the armies of the Hellenistic kingdoms or Roman legions (Stähelin 1907; Ramsay 1899: 1–102).

Around 25 B.C. the entire kingdom of Amyntas was annexed to the Roman Empire to form the province of Galatia. At this date the province included the original area of Galatian settlement around Ankara; ancient Ancyra, which was henceforward the chief provincial city; the steppic central Anatolian plateau of East Phrygia and Lycaonia; the mixed Pisido-Phrygian area around Pisidian Antioch and Apollonia; the mountainous tribal region of Isauria and Pisidia; and the Pamphylian plain. This vast and diverse area was further enlarged between 6 B.C. and A.D. 64 by the addition of Paphlagonia to the N and the Pontic regions to the NE. Between A.D. 70 and 114 it was joined under a single Roman governor with Cappadocia and Armenia Minor to form a central and E Anatolian province which reached as far as the river Euphrates (Sherk 1980).

During the first 150 years of direct Roman administration autonomous city states with large adjacent territories were created over most of the province except for Cappadocia. For instance in N Galatia the Celtic tribal peoples were constituted into the cities of Pessinus, Ancyra, and Tavium during Augustus'

principate. At the same time, 13 Roman colonies, each inhabited by an elite of discharged Roman veterans, were founded mainly in the S of the province, including 3 cities evangelized by St. Paul on his first missionary journey, Pisidian Antioch, Iconium, and Lystra (Levick 1967; Mitchell 1980). During this period the province was generally governed by a Roman senator of consular rank with experience of important military commands behind him. Garrison legions were stationed in the S of the province around Pisidian Antioch under Augustus, and along the E frontier of the empire, the upper Euphrates, from the 70s A.D. until late antiquity (Mitchell 1976; Mitford 1980). A major Roman highway, the *via Sebaste*, was built before 6 B.C. linking most of the major colonies of the S part of the province and helping to secure Roman domination over the intransigent native tribesmen of the Taurus mountains; the Roman roads of the N part of the province were constructed for the first time in the 70s and 80s A.D., as part of the program to fortify and garrison the Euphrates frontier (Magie 1950, 1: 566–92). As a result, many of the cities of the N, in particular Ancyra, witnessed a spectacular growth in military traffic.

After A.D. 114 the E part of Asia Minor, including Cappadocia, Armenia Minor and most of Pontus, was made into a separate province under a consular governor, while central Anatolia was reserved for separate administration by a junior praetorian senator (Sherk 1954). Although the province of Galatia thereby reverted to relative insignificance in Roman political-military thinking, it enjoyed considerable prosperity. Much of the rural central plateau was divided into great estates owned by the emperor, members of the senatorial aristocracy, or civic dignitaries; it was inhabited by a peasantry which developed a thriving mixed agricultural economy alongside the rearing of livestock, which had hitherto been typical of the area. The cities meanwhile, benefitting from this rural prosperity, were adorned with fine public buildings in the Greco-Roman tradition and displayed many of the characteristics of cultural life which was the hallmark of civilization under the high Roman Empire. While the urban elites acquired the trappings of Hellenic sophistication, the indigenous population of the countryside retained its native culture. Not only Galatian but other local languages such as Phrygian, Pisidian, and Lycaonian were spoken under the empire (Holl 1908); there was worship of a bewildering diversity of native deities, principally Zeus, the Phrygian Mother of the Gods, and the Anatolian moon god Mên.

Within the boundaries of the Roman province of Galatia there is little reliable evidence for Judaism or Christianity in the 1st and 2d centuries A.D. Except for the passages in Acts which refer to synagogues at Pisidian Antioch (13:14) and Iconium (14:1), Jews are hardly attested in any of the cities before the 4th century. There were, however, important Jewish communities to the W, above all in Phrygia at Apamea and Acmonia (*HJP²* 3/1: 27–32). Moreover, inscriptions of N Galatia from the 3d to the 6th centuries do indicate small Jewish communities in rural districts (*RECAM* 2: 133, 141, 2096, 508–11). There is only one unambiguous reference to Christians in a Galatian city before A.D. 200, to Montanists in Ancyra (Eusebius, *Hist. Eccl.* 5.16); the evangelization of the apostolic period, therefore, left few traces. It is likely that Christian communities became larger and more influential in the second half of the 3d century, at least in certain cities (Harnack 1915, 2: 184–226). By the mid-4th century, however, Christianity seems to have become the religion of the majority of the inhabitants, as was more obviously the case in neighboring Cappadocia. The Galatian city of Laodice Catacecaumene was then a noted heretical center (Calder 1923).

The references in the NT to Galatia, Galatians, and to cities in the province have given rise to contentious dispute. The central problem concerns the recipient of Paul's epistle to the Galatians. The letter is addressed "to the churches of Galatia" (Gal 1:2; 1 Cor 16:1) and the recipients are apostrophised as "foolish Galatians" (Gal 3:1). Do the churches belong to the cities of Antioch, Iconium, Lystra, and Derbe, which Paul had visited according to Acts (the so-called South Galatian Theory); to the cities of Celtic N Galatia, Ancyra, Pessinus, and Tavium (the North Galatian Theory); or to the cities of the whole province? The most authoritative champion of the South Galatian Theory was the great explorer of Asia Minor, W. M. Ramsay, and although the North Galatian Theory still finds many supporters, his work should long ago have put the matter beyond dispute (Ramsay *HDB* 2:81–89; 1899).

There is no evidence in Acts or any non-testamentary source that Paul ever evangelized the cities of N Galatia by any means. In so far as the gospel was taken here in the early years of the church, the

evangelist was the author of 1 Peter, who addressed the Jews of Pontus, Galatia, Cappadocia, Bithynia, and Asia (1 Pet 1:1). Paul did not visit N Galatia. The book of Acts relates that he passed through a region called Phrygia and the Galatic country after leaving Derbe and Lystra, as a stage in a journey that led through Mysia to Troas (Acts 16:6). This cannot have been Galatia, which lay some 200 km NE of any natural route between Lystra and Mysia in NW Asia Minor. The phrase is naturally understood as denoting the country of Phrygia Paroreius which lay on either side of Sultan Dağ, the mountain range that divided Pisidian Antioch from Iconium, an area that was ethnically Phrygian but which was divided between the Roman provinces of Asia and Galatia.

A later passage in Acts describing Paul's third journey states that he crossed these same regions, the Galatic country and Phrygia, before coming to Ephesus (Acts 18: 22–23; 19:1). Again, this route can only have intersected the first one in the region of Phrygia Paroreius, not conceivably in N Galatia, which would have involved a huge detour for any traveller between Syrian Antioch and Ephesus. The Pontic bishop Asterius of Amasea in the later 4th century A.D. rightly understood this passage to refer to Lycaonia and Phrygia, not to Galatia in the ethnic sense. In the mid 1st century A.D. it was normal to refer to the whole province and not just the Celtic region as Galatia (Eutropius 7.10; *Inscriptionos Latinae Selectae* 9499; *IG* Rom. 3.263). It is proper therefore, for Luke to speak of non-Celtic parts of the province as Galatian country, and in the 1st century A.D. it was as natural to refer to the churches of Antioch, Iconium, Lystra, and Derbe as churches of Galatia as it was to call that of Corinth a church of Achaea (1 Cor 1:1).

No weight should be placed on Paul's reference to the foolish Galatians. Certainly this would not be a natural mode of address to the inhabitants of cities which had few if any Celtic inhabitants, but that is precisely the point. It is part of Paul's reproach to his correspondents that he equates them with the barbarous and unsophisticated people who had given their name to the province and who, throughout antiquity, had a quite independent reputation for simplemindedness. The epistle, therefore, was certainly addressed to the Galatian churches where Paul had preached in the S of the province, and should be interpreted in conjunction with the account of his mission to them in Acts, not treated as a letter addressed to communities in N Galatia, with whom he had no other attested dealings.

The churches of Galatia, therefore, were established in the S part of the province, at Antioch, Iconium, Lystra, and Derbe in the course of Paul's first missionary journey. Although he was to revisit them twice they appear not to have flourished, and Christianity made no further significant progress in the region before the 3d century A.D.

    3. The Anti-Pauline Opponents
H. Galatians as a Theological Document
I. Literary Influence of Galatians

A. Text

Among the extant letters of the Apostle Paul, his letter to the churches of Galatia is the fourth in the present CANON (NT), but the first in Marcion's (Harnack 1924: 40*–79*). The canonical lists, however, do not reflect the actual historical chronology. Textually, we do not possess the Gk original, and the early history of transmission is unknown. The reconstruction of the text, presented by the critical editions of NovTG[27] and *The Greek New Testament* (1983), is as close an approximation to the original as possible, given present knowledge (see TEXTUAL CRITICISM [NT]). J. C. O'Neill's (1972) attempt to follow the example of Marcion by eliminating approximately one third as later glosses and interpolations remains unconvincing.

B. Author

The preface names Paul (1:1) as the author of the letter. This fact is confirmed by the literary form and style, argumentative methods, and theological content, as well as by the tradition, which never doubted it. Pauline authorship was denied by some scholars in the late 19th and early 20th centuries, but their arguments are insufficient. Since in the original the postscript was handwritten by Paul (6:11), the remainder of the letter must have been written by an amanuensis, a fact which complicates authorship technically but not substantially (Betz *Galatians* Hermeneia, 1).

C. Address

The letter is addressed to "the churches of Galatia" (1:2; cf. 3:1). The location of this area called Galatia has been discussed extensively but without definitive result. Most likely the location is central Anatolia, where wandering Celtic tribes settled after 278/277 B.C.E. (the "North Galatian" or "territory hypothesis"). Less likely is the "South Galatian" or "province hypothesis," which assumes that Paul meant the Roman *provincia Galatia*, established in 25 B.C.E. This included Galatia as well as some areas to the south (Pisidia, Lycaonia, and Pamphylia) which can be connected with Paul's first missionary campaign, according to Acts 13–14. Yet the information contained in Galatians and Acts cannot be harmonized. Acts 13–14 does not mention Galatia as all. In 16:8 and 18:23, a "Galatian country" is mentioned, but no mission is described. Also, the inhabitants of Pisidia and Lycaonia were not called "Galatians." Whether the itineraries of Acts are historically reliable in that they report all of Paul's campaigns accurately is another unsolved problem. Although no archaeological traces seem to be left, central Anatolia is the most likely location of the churches of Galatia (see Betz *Galatians* Hermeneia, 1–5).

D. Date and Place of Origin

The Galatian letter can be dated only approximately, since no unambiguous evidence exists. Scholars have argued in favor of both early and late dates in relation to the other Pauline letters (see Betz *Galatians* Hermeneia, 9–12). Theologically Galatians reflects positions closer to 1 Thessalonians, while Romans, Paul's last extant letter, shows development and revision at important points. Hence, an earlier date is more probable (Vielhauer 1975: 79–81, 110–11: 52–54/55 C.E.; Jewett 1979: 103: 53 C.E.).

The letter provides no clues as to its place of origin. The Marcionite Prologues (for the text see Harnack 1924: 127*–28*) state that it was sent from Ephesus, but the *subscriptio* contained in some manuscripts of Galatians names Rome as the place from which it was sent. Scholars have argued in favor of Ephesus, Macedonia, and Corinth; but these are no more than possibilities (see Betz *Galatians* Hermeneia, 12).

E. Galatians and the *Corpus Paulinum*

Among the authentic Pauline letters, Galatians holds a peculiar position. While all the others are addressed to churches in Macedonia, Greece, and Rome, only Galatians has survived from what must have been at one time a larger correspondence with churches in Asia Minor (unless Romans 16 was originally addressed to Ephesus). The reasons for its survival, however, are unknown, as is the early history of transmission and edition of the Pauline corpus (see Gamble 1975: 403–18; Aland 1979: 302–50). Galatians shows no awareness of or links with the churches of Macedonia and Greece, or with any of the other letters. The literary genre and composition of Galatians have much in common with Romans. Both are apologies; but while Galatians is short and confrontational, representing the beginning of a controversy, Romans is conciliatory and greatly expanded, showing an advanced stage of debate in which Paul defends his theology as a whole by elaborate arguments reformulating and even revising positions taken in Galatians. While Galatians is unaware of the Corinthian crisis, Romans acknowledges it. Because of the theology of the Spirit, Galatians is closer theologically to the early letter of 1 Thessalonians which, however, is not concerned with Jewish-Christian adversaries; in this regard, Galatians has parallels in Phil 3:2–21; 2 Cor 10:1–13:10; Rom 16:17–20.

F. Literary Analysis

The literary analysis proposed by Betz (*Galatians* Hermeneia, 14–25) assumes Galatians to be of the "apologetic" letter type including other epistolary and rhetorical features. The letter frame consists of an epistolary prescript (1:1–5) naming the sender and co-senders (*superscriptio,* 1:1–2a) and the addressees (*adscriptio,* 1:2b) and a conclusion with an expanded salutation (*salutatio,* 1:3–4) and doxology (1:5). The epistolary postscript (6:11–18), handwritten in the original (6:11), sharpens the points Paul wishes to make in the letter and concludes with a blessing (6:18).

The body of the letter (1:6–6:10) is a compositional unit containing the typical features of a defense speech. The *exordium* ("introduction," 1:6–10) confronts the readers with the statement of the cause for the letter—their impending shift from Paul to his opponents (1:6–7)—along with a conditional curse (1:8–9). The *narratio* ("statement of facts," 1:11–2:14) defines the nature of Paul's apostleship (1:12) and narrates the history of his previous apostolic work (1:13–2:14) in three sections. The first section deals with the beginnings of his life as a Jew (1:13–14), his vocation (1:15–16a), and his early mission (1:16b–24). The main point here is to underscore his independence from the authorities of the church at Jerusalem. The second section (2:1–10) treats the conference in Jerusalem, where the mission of Paul and Barnabas was recognized. The third section (2:11–14) recounts the conflict between Paul and Cephas at Antioch and the subsequent separation from Barnabas. As Paul formulates it, Cephas' dilemma (2:14) is precisely that which the Galatians must face. The *propositio* ("proposition," 2:15–21) sets forth the points of agreement (2:15–16) and disagreement (2:17–18), an exposition 2:19–20), and a refutation (2:21). The *probatio* ("proofs," 3:1–4:31) presents the major arguments justifying Paul's theological position. The first proof (3:1–5) is one of undeniable evidence: the Galatians have received the Spirit on the basis of their faith, not of their observance of the Torah. The second proof (3:6–14) uses the example of Abraham (Gen 15:6; 12:3; 18:18) and other testimonies from Scripture (Deut 27:26, Hab 2:4, Lev 18:5, Deut 21:23) to demonstrate that those who are believers are the "sons of Abraham" and the heirs of the promise. The third argument (3:15–18) introduces an analogous example from the secular law of inheritance. Chapter 3:19–25 is a disgression on the Jewish Torah. The fourth proof (3:26–4:11) is an argument from Christian tradition, using baptismal (3:26–28) and christological (4:4–6) formulae. The fifth proof (4:12–20) uses topics from friendship and speaks about Paul's relations with the Galatians, both past and present. The sixth proof (4:21–31) consists of an allegory of Sarah and Hagar. The *exhortatio* ("exhortation," 5:1–6:10; differently Merk 1969: 83–104; Hübner 1984a: 67, n. 65; Hübner *TRE* 14:6) is made up of three sections:

a warning against the acceptance of the Jewish Torah (5:1–12), a warning against the corruption of the "flesh" (5:13–24), and recommendations in the form of ethical maxims (5:25–6:10).

The *peroratio* ("peroration," 6:11–18) is identical with the epistolary postscript and sums up the main concerns of the letter. A sharp polemic against the opponents (6:12–13) is followed by a restatement of Paul's own position (6:14) and his "canon" (6:15). The conclusion consists of a conditional blessing (6:16) juxtaposed with a conditional curse (1:8–9), an appeal (6:17), and a benediction (6:18). The rhetoric of the letter is, on the whole, of the judicial type (*genus iudiciale*), but the element of dissuasion is also present (*genus deliberativum*). The two genres co-relate here as they do in other texts. In addition, Galatians contains features of a "magical" letter, in that the reaction of the readers to the letter will activate either the conditional curse (1:8–9) or the blessing (6:16; see Betz *Galatians* Hermeneia, 25, 32–33).

G. Galatians as a Historical Document

Galatians is an historical document of the first order, without which the earliest history of the Church would be even more obscure than it unfortunately is. To be sure, Paul's accounts are to a certain extent biased in that Paul does not provide a full account of the history but only certain data and episodes that are important for his self-defense. Information is recoverable in mainly three areas.

1. Paul's Own Early History. It was Paul's conviction that he was set aside from birth (1:15) and then called when God had decided that the time had come to proclaim the gospel to the gentiles (1:16). Speaking of his time before conversion, he names his strict Jewish orthodoxy and zeal in persecuting the Church (1:13–14, 23–24). His early mission work was done in Arabia and Damascus, independently from the Jerusalem authorities (1:16–17). His first visit to Jerusalem occurred three years later (1:8), when he first visited with Cephas (Peter) and James, the brother of Jesus. Then there was more mission work in Syria and Cilicia (1:21). The apostle remained unknown to the churches of Judea (1:22–24; but cf. Acts 9:26–30) until his second visit to Jerusalem "after fourteen years."

2. The History of the Early Church. Information related to the history of the early Church is comparatively rich although it is extremely brief. When the mission spread to Palestine and Syria at a very early date, there was apparently no regulation concerning areas or ethnic identities. Opposition arose over the practice of making converts from gentiles without subjecting them to either the Torah covenant or circumcision. This dispute led to the conference at Jerusalem (2:1–10), where three parties came together: Paul, Barnabas, and Titus as delegates of the gentile mission; James, Cephas, and John as the "pillars" of the Jerusalem church (2:9); and the anti-Pauline opposition, called "the false brothers" (2:4). The last group demanded circumcision and observance of the Torah for gentile as well as for Jewish Christians. Agreement was reached by two parties at the expense of the third. The gentile Titus took part in the conference and returned uncircumcised (2:3). Paul cites from what may be the formal agreement (2:7–9). The stipulation recognizes one God and one church, but the mission was divided into two thrusts. Cephas was put in charge of the "apostolate of the circumcision," while Paul was appointed as the leader of the gentile mission. As a token of gratitude (2 Cor 9:6–15, Rom 15:27), Paul pledged a financial collection for the poor of the Jerusalem church (2:10; see Betz *Galatians* Hermeneia, 103; *2 Corinthians 8 and 9* Hermeneia, 169). The final episode concerns the conflict at Antioch between Paul and Cephas (2:11–14; see Betz *Galatians* Hermeneia, 103–12; Kieffer 1982; Dunn 1983: 3–57; Hübner *TRE* 14:9–11). At issue was whether Jewish Christians could have table fellowship with gentile Christians without the former violating their Jewish purity laws (*koinophagia*, "consumption of unclean food"). The question was, what must take precedence, Christian fellowship or Jewish purity laws? Paul took the side of the gentile Christians, defending their religious standing in faith and salvation; but Cephas, Barnabas, and others were persuaded by "the men from James" to withdraw. The dispute was not resolved but resulted in the separation of Paul from the other Jewish Christians present; a further result was the current crisis in Galatia which precipitated Paul's letter.

3. The Anti-Pauline Opponents. Also of great importance is what the apostle has to say about the anti-Pauline opponents, whose agitation he traces back to the Jerusalem conference (2:4). As he sees it, the present crisis was caused by intruders who had almost persuaded the Galatians that their salvation

depended upon their acceptance of Torah and circumcision (1:6–7; 5:1–12; 6:12–13). The question of who the intruders were is still a matter of controversy. The traditional view stated by the Marcionite Prologues identifies the opponents as "false apostles" who had reverted to Torah and circumcision (Harnack 1924: 127*–28*; 37–38). Called Judaists or Judaizers (Gal 2:14; Ignatius, *Mag.* 10.3). they were seen as Jewish Christians who erroneously prescribed Torah and circumcision for all Christians. Rediscovery and reconstruction of Jewish Christianity by 19th- and 20th-century historians, however, brought to light a far more complicated picture (see Lüdemann 1983b for the history of research and bibliography). This picture is reflected by a number of hypotheses. Lütgert (1919) assumed that Paul fought on two fronts, against law-observant Judaists and against libertine enthusiasts ("pneumatics"); the evidence for the latter, however, came largely from 1 Corinthians. Schmithals (for bibliography, see Betz *Galatians* Hermeneia 7, n. 46; Schmithals 1983a: 27–58; 1983b: 111–13) took the opponents to be Jewish-Christian gnostics who for magical reasons were interested in Jewish rituals but not in the Torah as a whole. Other scholars opted for other syncretistic combinations of Christian, Jewish, gentile, and gnostic elements. Galatians, however, shows no evidence of gnosticism, and one must not supply it from other Pauline letters or later sources. At present, there is a growing consensus that Paul's opponents were rival Jewish-Christian missionaries opposed to the Pauline mission. For them, the Christian Church was an extension of the Jewish religion, so that joining the Church required conversion to Judaism with mandatory observance of the Torah and submission to circumcision. Jewett (1970–71: 198–212) pointed out their connection with Palestinian Judaism, both Christian and non-Christian. A further question is whether James (2:12) was in fact behind the agitators (see Lüdemann 1983a: 64–66). Betz (*Galatians* Hermeneia, 5–9) sees them in connection with the early history of the Galatian churches: following an initial phase of spiritual enthusiasm, the Galatians had increasing problems with the "flesh," at which point the anti-Paulinists impressed them with the cultic and moral security provided by the Torah covenant.

H. Galatians as a Theological Document

Galatians testifies to the first radical questioning of Paul's gospel and theological views by his own churches, a challenge the apostle met by his first systematic apology. This apology involved not only his message but also his apostolic office and mission work as a whole. The apostle was not defending himself for the first time. His report on the conference at Jerusalem (2:1–10) implies that he had had to justify his preaching and mission to the gentiles before, and especially at the conference. Similarly the account of the Antioch incident (2:11–14) suggests fierce debates in which Paul had to defend his position. One should not, however, assume that the arguments on these earlier occasions were quite the same as those he presents in Galatians. This particular apology was worked out to meet the Galatian crisis; other apologies employing different arguments were sent to Corinth (CORINTHIANS, SECOND EPISTLE TO THE). Compared with Galatians, Romans shows more similarity but also considerable expansion and reworking. However, Galatians does not represent a transition theology rendered obsolete by Romans (so Hübner *TRE* 14: 9–8, 11). Paul's theology and its relation to the letters has yet to be described by scholarship. Galatians, in this respect, is important for several reasons.

First, it contains Paul's line of argument as he justifies his preaching of the gospel to the gentiles and their acceptance into the church without Torah and circumcision. The theological legitimacy of this message and mission was questioned first by his Jewish-Christian adversaries and then by the Galatians themselves. In the section of the "proofs" (*probatio,* 3:1–4:31), Paul argues from experience, history, and theology. He reminds the Galatians that they have received the gift of the Holy Spirit not on the basis of "works of the law" but by faith (3:1–5). He then demonstrates by exegesis of scripture (3:6–4:31) what he calls "the truth of the gospel" (2:5, 14), specifically "the gospel of the uncircumcision" (2:7). In the "statement of facts" (*narratio,* 1:11–2:14), Paul demonstrates that his preaching has always been consistent and in correspondence with the history of the Church, while his opponents have been acting disruptively and inconsistently. In the "exhortation" (*exhortatio,* 1:1–6:10), the apostle recommends that continued reliance on the Spirit (5:25; 6:8–9) will enable the churches to deal effectively with the problems of ethical conduct that have arisen in their midst (6:1). Such reliance on the Spirit is declared

sufficient even to the extent that it enables them to fulfill the demands of the law of God apart from the Jewish Torah (5:14; 6:2).

Second, the arguments reveal that Paul can draw on a wide variety of conceptual, scriptural, and doctrinal resources. As in 1 Thessalonians, the doctrine of the Holy Spirit is fundamental. New in Galatians is the doctrine of justification by faith juxtaposed to justification "by works of the law" (2:15–16, 18–21; 3:6–25; 5:4–5). Two questions arise in connection with the doctrine of justification by faith. Did Paul work out the doctrine of justification by faith in response to his Galatian opponents (so Strecker 1976: 481)? Or did he argue the doctrine before, at Jerusalem or Antioch (see Hübner *TRE* 14: 8)? Certainly the doctrine was shared by Jewish Christianity apart from Paul, but it was the apostle who fully realized the doctrinal implication (see Betz *Galatians* Hermeneia, 115–19). Accordingly, all Christians, including those of Jewish origin, are granted justification before God by faith in Jesus Christ (2:15–16). Therefore, christology and soteriology are of principal importance, while the Jewish Torah is devaluated (3:19–20). Christ's death on the cross as a voluntary sacrifice has redemptive efficacy (1:4; 2:19–21; 3:1; 4:4–6; 5:11; 6:12, 14, 17). It is the source of Christian freedom (2:4; 5:1, 13; cf. 3:28; 4:21–31).

The preaching of the kerygma of "Christ crucified" (3:1), accompanied by the gift of the Spirit (3:2–5, 14; 4:6, 29; 5:5, 16, 17, 18, 22, 25; 6:1, 8), leads to baptism (3:27). In this ritual, the Christian is made partaker and beneficiary of redemption; together with other Christians the baptized is henceforth "in Christ" (3:26–28; 1:22; 2:4, 17; 3:14; 5:6) and a member of the Christian church (1:2, 13, 22). The gift of the Spirit continues to serve in enabling the Christian "to walk in the Spirit" (5:16, 25) and to bring the "fruit of the Spirit," the Christian virtues (5:22–23). Living a life thus endowed and assisted by the Spirit, the Christian community awaits the eschatological judgment (5:5; 6:7–9).

I. Literary Influence of Galatians

The literary influence of Galatians must be distinguished from that of Paul's theology or later Pauline controversies (see on the whole Lindemann 1979; Lüdemann 1983a). In the NT, only Romans shows clear literary and theological relations with the Galatian letter (see Hübner *TRE* 14: 11). Acts refers to events told of also in Galatians but without knowledge of the letter. The epistle of James has polemics against Paul's theology, but whether it alludes to the letter of Galatians remains unclear. In the 2d century, Justin Martyr (*Dial.* 46–47) could describe Jewish Christianity without reference to Paul's letters. The *Grundschrift* (or "basic writing") of the Pseudo-Clementines, however, seems to aim at Galatians in its anti-Pauline polemics (see Lüdemann 1983a: 248–52). Marcion appears to be the first to appropriate Galatians and its theology. Removing from it what he regarded as judaizing interpolations (see Harnack 1924: 67*–79*), he "reconstituted" the "original" letter and placed it at the beginning of his *Apostolikon.* Marcion seems to have influenced Mani (216–276/274 C.E.) and some of his disciples who valued Galatians highly (see Betz 1986). In the 4th century, the unknown author of the so-called Ambrosiaster commentary shows an astonishing understanding of the letter, an understanding matched only by the commentaries of Martin Luther, especially that of 1535 (for bibliography see Betz *Galatians* Hermeneia, 36–37).

HANS DIETER BETZ

GALBANUM. See PERFUMES AND SPICES.

GALEED (PLACE) [Heb *gal-ʿēd* (גַּלְעֵד)]. The Hebrew name that Jacob gave the heap of stones that served as a witness to the covenant he had made with Laban (Gen 31:44–54). Laban named the heap in Aramaic JEGAR-SAHADUTHA; both names mean the same: "heap of witness" (in Heb *gal* means "heap" and *ʿēd* means "witness"). Verse 45 narrates that Jacob set up a single stone as a massebah (cf. Gen 28:18), probably serving the same purpose. One suggestion is that v 45 is from the E source of the Pentateuch while v 47 is from the J source. Skinner (*Genesis* ICC, 401) and Simpson (*IB* 1: 716) have suggested that originally the cairn or stele either was a god or was the home of a god. Hence Galeed may have been the name of a god, as the god Salem is reflected in Jerusalem. Note, however, that the inanimate is often called as witness to covenant making (cf. Josh 24:27) perhaps reflecting a naturalizing or historicizing of the ancient gods who normally served as witness to a covenant, or perhaps reflecting an animation or anthropomorphizing of nature, since Israel had (at least later) only one God.

Von Rad (*Genesis* OTL, rev 1972: 313) sees v 53 (J) as speaking of two gods, the God of Abraham and the God of Nahor, but this could also be one deity. In v 50 (the Elohist? ca. 750 B.C.), God is the witness, which Skinner sees as an advance over the primitive witness of an inanimate object (J; ca. 950 B.C.). However, one may not be amiss here to see a touch of humor in the ancient mind when a god or symbol of a god is changed into a pile of rocks.

One may also note (v 52) that the Galeed was a boundary marker between the two peoples of Israel and Aram. The implication is a peace treaty or a nonaggression pact, since neither is to pass the marker "for harm." However, the covenant meal (vv 46, 54) implies active protection of one another rather than

simple "hands off" each other's territory. The Galeed then becomes a witness to others of the mutual protection agreement between the two neighbors.

Verse 50 introduces yet another dimension of the covenant. Marriages of the ancient world were often political alliances; thus Jacob was prohibited from other marriages that might endanger the covenant with Laban, and/or the Aramaeans.

Some have suggested the Galeed was a witness of peace in the time of the writers (ca. 950–750) but von Rad proposed that it reflects a very old boundary agreement from a time of fairly peaceful contact, perhaps when both groups were still nomadic. Both J and E use the occasion to explain a well-known landmark in Gilead. The "Galeed" has been seen by some interpreters as an etymology of Gilead. The "Galeed" has been seen by some interpreters as an etymology of Gilead, the name of the country, and a later great-great-grandson of Jacob. Gen 31:21, 23, and 25 all refer to "Gilead," perhaps building up to this etymology from *gal ʿēd* (Keil and Delitzsch n.d.: 300).

At one time, some scholars suggested Galeed was the mountain range of Gilead and that Laban and Jacob were giants (Rephaim?), but as Skinner (*Genesis* ICC, 401) pointed out, there is no support for this in the text. This same "naming" of Gilead has been related to Josh 22:34. The term *gal ʿēd* does not appear there, but some would restore it to the text. Joshua 22 tells the story of the 21/2 tribes of Transjordan, who returned after the conquest was complete. At the Jordan, they built an altar, which upset the other tribes, but the builders explained it as an altar of witness.

The exact location of the *gal ʿed* is unknown, but Skinner, Gehman (1970: 625), and others note Kh. Jel ʿad on Jebel Jel ʿad, S of the Jabbok N of es-Salt, as one suggestion. Keil and Delitzsch (n.d.: 300) reject this because Gilead is a much broader term, but especially because it refers to the area N of the Jabbok. They and others note that Jacob moved from N to S and did not cross the Jabbok until later (Gen 32–33). Others do not think the narrative reflects a consistent line of travel and note that nomads following their flocks do not necessarily move in a straight line. Jacob may have been in the area for some time before Esau arrived. Still others take all the stories as fiction and aetiologies to explain such things as the heap of stones.

Both (*NHI*, 158–159) dates the stories after the encounter between the Ammonites and Gileadites under Jephthah. "A group of Aramaeans settled for a time S of the Jabbok immediately to the E of the land of Gilead." Here they come in contact with the Gileadites. It was a peaceful contact and the boundary—the *gal ʿēd*—marked their frontier. They were, however, in the area of the expanding Ammonites who occupied Gilead, a settlement on "Mount Gilead" from which the whole district took its name. It was this occupation which brought the defensive action led by Jephthah, which drove out the Ammonites and saved the area for its Ephraimite inhabitants. See EPHRAIM, FOREST OF.

Roland de Vaux (*EHI*, 170–71, 573) also thought the stories concerned two peoples, the Aramaeans and Israelites, though Aramaean was a more general term that included Ammonites. The *gal ʿēd* was set up as a boundary between them on Mt. Gilead and explained the name of the latter. Gilead is used in the earlier and narrower sense of S of the Jabbok in the region of, and the boundary to the E of, Jebel Jel ʿad. The frontier separated the two peoples in the time of the Judges, particularly the time of Jephthah. Finally, we note that the Aramaic name seems natural in the mouth of Laban, biblically part of the Aramaic tradition. Millard notes (*NBD*, 402) that documents of the earlier 2d millennium show a great mixture of ethnic groups in N Mesopotamia. It is quite possible some Aramaeans were included among them and that their dialect had been adopted by other Semitic groups. The Aramaic, of course, would also be "natural" with Noth's theory.

HENRY O. THOMPSON

GALILEANS. Discussion of the ethnic strands among the inhabitants of Galilee in Hellenistic-Roman times has often centered on an understanding of Isa 8:23. In that oracle of salvation the three newly established provinces of the Assyrians in the north—the Way of the Sea, the Land of Zebulun and

Naphtali, and Galilee of the Gentiles—are promised deliverance from their oppressor. Whatever the precise meaning of the expression *galil haggoyim*—circle or region—it can scarcely mean that the territory later to be known as Galilee was totally populated by non-Israelites in the wake of the Assyrian conquest (Alt, *KlSchr* 1). Yet, this has been the dominant understanding, so that when the phrase is echoed at 1 Macc 5:15—*galilaia allophylon*—it is assumed that Galilee in early Hellenistic times was populated for the most part by people of non-Israelite stock, with only a tiny minority of Jews living there. However, apart from other considerations (see GALILEE), there seems to have been an implicit understanding by the Hasmoneans that the region was part of traditional Jewish territory, and this influenced their approach to the region, including the forced circumcision of the Itureans who had infiltrated into upper Galilee and the Gaulan (Jones 1933). The fact that archaeological surveys suggest that the population of Galilee increased considerably in the early Hasmonean period (Meyers et al 1978) does not seriously challenge this assumption, since "internal colonization" ensured that the best lands in the conquered territories were distributed to Hasmonean sympathizers from Jerusalem.

The name "Galilean," though primarily geographic in connotation, often carries with it other associations—cultural, social and religious—both in ancient sources and modern discussions. The purpose here is to focus primarily on the religious affiliations and attitudes of the Galileans. (For the cultural and social dimensions, though intimately interwoven with religious issues, see GALILEE [HELLENISTIC-ROMAN]). One cannot view these matters in isolation, however. If, for example, the Galileans of the 1st century B.C.E. were largely forced converts to Judaism, would that fact influence our perception of their alleged religious laxity when judged by the standards of later Jerusalem orthodoxy? If Galileans lived in conditions of social and economic deprivation, would this predispose us to view them as apocalyptically motivated revolutionaries (Lohmeyer 1936)?

The Galileans are mentioned in lists of Jewish sects by two early Christian writers, Justin Martyr (*Dial.* 80.2) and Hegesippus (Eusebius *Eccl Hist* 4.22.7), but no information is given on their distinctive beliefs and practices, except that, with the others, they were "opposed to the tribe of Judah and the Christ." In addition, Galileans are mentioned by Epictetus (Arrian, *Dissert.* 4.7.6) and in a letter of Simeon bar Cosiba (Bar Kokhba) from Wadi Murabbaat, but both may be references to Jewish Christians of the 2d century rather than to a Jewish sect of earlier times.

The number of sects listed by Justin Martyr and Hegesippus (as well as in a third similar list in Epiphanius, which does not mention the Galileans) is 7, and this is suspicious. Therefore we are largely dependent on Josephus and the NT for our information on the Galileans, while being conscious of the fact that these literary sources are themselves also the product of religious propaganda which may not convey a correct picture of the total complexity of the situation (Vale 1987). By far the greatest number of references occur in Josephus' writings—82 in all, distributed as follows: 46 in *Life*, 20 in *JW*, 15 in *Ant*, and 1 in *AgAp*. These may be compared with the NT figures, where apart from the adjectival usage in regard to an individual (Jesus, Peter, or Judas, Matt 26:69; 14:70; Luke 22:59; 23:6; Acts 5:37), the plural *galilaioi* occurs only 6 times in all. Of these 2 refer to the followers of Jesus (Acts 1:11; 2:7), 3 to certain Galileans who had been put to death by Pilate on the occasion of a pilgrimage to Jerusalem (Luke 13:1.2.3), and 1 to the inhabitants of the region generally who are said to have received Jesus in contrast to the *Ioudaioi* who rejected him (John 4:45).

It has been proposed, particularly on the basis of Josephus' *Life*, that "Galilean" does not have a geographical connotation, but refers rather to a party of revolutionaries against Rome who were so designated by the Jerusalem leadership opposed to the revolt (Zeitlin 1976: 193). This party is further linked to the Fourth Philosophy of Josephus, whose founder in 6 C.E. was Judas the Galilean (*Ant* 18.23–25), and the members of which have been identified with Josephus' *lestai* who were responsible for the first revolt (Hengel 1976: 57–60).

The theory of the Galileans constituting a revolutionary party with no geographical connotations attached to the name can be easily dismissed on a closer examination of all the references in Josephus' *Life* (Armenti 1981). In that work the Galileans are constantly distinguished from the inhabitants of the chief cities of Galilee (Sepphoris and Tiberias) with whom they have a generally hostile relationship

(Freyne 1980b). They are equally distinguished from the brigands who operate in the border regions of upper Galilee, in the district of Ptolemais or in the Great Plain (*Life* 77f, 105–11, 126–31, 145, 175, 206). Since these various and separate bands of brigands do not operate in favor of the Galileans, they can scarcely be described as social brigands (Horsley 1979; Freyne 1988b). Allowing for the self-apologia operative in *Life* (Cohen 1979) it can still be said with a fair degree of confidence that the picture of the Galileans emerging in this work—namely, that of a confused peasantry, but with deep-seated attachment to Jerusalem and its representative, Josephus, and not at all intent on revolution—is in its general outline quite plausible (Freyne 1987).

That does not deny that some Galileans were fired by the religious nationalism of the period. As well as the impending struggle with Rome, there were also the tensions with the residents of the surrounding cities and the Jewish inhabitants of the land which seem to have flared up with particular intensity just prior to the First Jewish Revolt. These tensions inevitably engendered increased religious fervor as a way of establishing separate Jewish identity, as is exemplified in the case of the Jewish inhabitants of Caesarea Philippi, who were prepared to pay exorbitant prices to John of Gischala for oil produced from olives grown within the land (*Life* 74f). John, a moderate turned rebel (Rappaport 1982; 1983), emerged in Jerusalem at the head of a company *(syntagma)* of Galileans, (*JW* 4.558), and we hear also of some Galileans who joined the leader of the radicals of Tiberias, Jesus son of Sapphias, in destroying Herod's palace, ostensibly because of the animal representations in violation of strict Jewish observance of the second commandment (*Life* 66). There is also the rather surprising case of the inhabitants of Tarichaeae refusing to allow refugee noblemen to remain in their city unless they underwent circumcision (*Life* 112f).

These examples of particular manifestations of Galilean fervor at the time of the First Jewish Revolt cannot be detached from their geographical setting, but neither can they be made to signify a radical party of Galileans, much less a whole province whose inhabitants were fired with religio-nationalist aspirations. It is not easy to assess the extent to which any of the special halachic developments associated with the parties during the Second Temple period had any impact on Galileans. Such essentials of Jewish life as Sabbath (*Ant* 13.347) and observance of the pilgrimage to Jerusalem (Luke 2:41; 13:1) are assumed in literary sources, though archaeological evidence for synagogues from the pre-70 period is meager (Levine 1986).

The gospel of Mark mentions scribes and Pharisees coming from Jerusalem in order to discredit the native Galilean teacher/healer, Jesus (Mark 3:22; 7:21); some local Pharisees are also presumed in the gospel narratives. Luke speaks of "teachers of the law" *(nomodidaskaloi)* from every village of Galilee (5:17), but if he means Pharisaic scribes this can hardly be an accurate description of the situation in Jesus' day or before 70 C.E. The Galileans of the gospels are enthusiastic about Jesus' healing activity, whereas his teaching appears to have been directed to a more intimate band of traveling companions/disciples. The Fourth Gospel generalizes this picture by declaring that the Galileans received (that is, accepted) Jesus in a way that the inhabitants of Judea did not (John 4:3, 43–45), even though it is not possible to restrict the use of the term *Ioudaioi* to a purely geographic reference to Judeans (cf. John 6:52; Ashton 1985; Bassler 1981). Yet the stance of James, the brother of the Lord, on issues such as the dietary laws (Gal 2:10), and even the vacillation of Peter on such matters, indicates that not all Galileans were automatically open to a more liberal understanding of their faith as proposed by Jesus, especially in regard to relations with gentiles.

On several occasions the suggestion has been made that the enthusiastic crowds of the gospel narratives may be representative of post-Resurrection Galilean Christianity (Elliot-Binns 1956; Lohmeyer 1936; Meeks 1966). However, there is little evidence elsewhere of any substantial attachment to Jesus in his homeland after his death. Luke makes a passing reference to a mission in Galilee (Acts 9:31), but this seems to have been prompted by his missionary schema rather than by any hard evidence. Apart from an obscure sect of the Nazoreans, which Epiphanius locates in Transjordan, and the passing references to Galileans already alluded to in Epictetus and the Wadi Murabbaat letter, there is little evidence in later sources for a form of Christianity that remained directly rooted in Galilee. In these circumstances it seems better to apply the term "Galilean Christianity" only to the later, post-Constantinian situation.

We read about only a few other Galilean teachers in addition to Jesus of Nazareth in the literary sources. Judas the Galilean, the founder of the Fourth Philosophy, is described as a *sophistes,* teacher (*JW* 2.118). Eleazar, a Galilean teacher, is to be found at Adiabne, advocating circumcision for the royal family, despite the political implications of such an act (*Ant* 20.43). Yose, the Galilean, is known to us from the Jamnian stratum of the Mishnah's redaction, but there is nothing in the traditions ascribed to him that would link them specifically with Galilee or a Galilean viewpoint (Lightstone 1980). Significantly, all three seem to have operated outside the region.

Even when the scribal schools moved N after the Bar Kokhba revolt (132–35 C.E.), rabbinic control of Jewish life in Galilee was not absolute. This emerges both from a study of the rabbinic documents emanating from the Galilean schools (namely, Mishnah/Tosefta and Yerushalmi) and from the archaeological remains of the great Galilean synagogues (Neusner 1983a; 1983b; Meyers and Strange 1981), in which the Targumin (the Aramaic paraphrases of the Scriptures) were read. School and synagogue became the two independent but related centers around which Jewish religious life was to develop, and while there would appear to be no fundamental conflict concerning the nature of Israel and its responsibility between the rabbinic viewpoint and that reflected in the Targumin, some tensions can be detected between the two spheres of influence which these two bodies of writings represent (e.g., the matter of representational art and the different areas of jurisdiction of rabbinic and nonrabbinic courts). Thus, the divisions of an earlier age—in terms of the religious life of the ordinary Jews and the more-intensified programs associated with the various parties—continued to find expression in the religious life of the Jews of Galilee, long after the destruction of the Jerusalem temple and the disappearance of the parties associated with it (Goodman 1983: 93–174).

SEÁN FREYNE

GALILEE. The northernmost region of the land of Israel. Culturally and historically it is characterized by its close proximity to the coastal cultures of Canaan-Phoenicia on the W and NW and to the inland Syrian-Aramaean cultures on the E and NE. The character and culture of Galilee and its neighbors changed and developed with respect to their relative strengths, consequently the political and cultural borders between them fluctuated, and the direction and intensity of their mutual influences varied. To understand the culture and history of Galilee, one must first appreciate the interplay of these forces and cultures.

Since Galilee was geographically distant from Jerusalem, the seat of the Judaean palace, temple, archives, and scribes, events occurring there are rarely mentioned in the Hebrew Bible, and its history is therefore difficult to reconstruct. However, throughout the biblical period, and even after Galilee had become part of the Assyrian empire in 732 B.C.E., the beauty of its countryside—particularly the mountains that skirt it: Carmel, Tabor, Bashan, Hermon, and Lebanon—inspired the prophets and poets; there are references to it in similes and metaphors throughout the poetic books of the Bible (e.g., Cant 4:8–15; 7:5–6; Pss 42:7; 89:13; 133:3; Isa 33:9; 35:2; Jer 46:18; 50:19; Neh 1:4). On the other hand, because Galilee was the location for much of the ministry of Jesus, for the military activity of the Jewish historian Josephus, and for post-70 C.E. Palestinian Judaism, it is mentioned prominently in the NT (especially the Gospels), in the writings of Josephus, and in early rabbinic writings.

A. Geography

1. Name and Borders. The name Galilee appears possibly for the first time in Thutmoses III's town list from the 15th cent B.C.E. as *K-r-r* (Simons 1937: list I, no. 80). In the OT the name appears as *gālîl* or *gālîlâ* 7 times (including 1 in corrupted state), once as "the land of Galilee" (1 Kgs 9:11), and twice as "Galilee of the Gentiles/peoples" (Isa 8:23; Josh 12:23 LXX^{B}). The name is derived from Heb *gll*, a root associated with circularity, meaning "cylinder" or "rod" (Cant 5:14; Esth 1:6) or, by extension, " (circumscribed) district" (Josh 13:2; Joel 4:4). With the definite article, however, it always refers specifically to the N region (see Fig. GAL.01).

It is not clear whether Galilee is an abbreviation of "Galilee of the peoples" (cf. also 1 Macc 5:15, which may allude only to part of Galilee) or whether "of the peoples" is a later explanatory addition (Alt 1937: 53–54). In either case, the name almost certainly originated as a description of the N mountain region of the land of Israel encircled by valleys, the coastal plain to the W, the Jezreel to the S, the Jordan to the E,

and the Litani to the N. Throughout history, these valleys were usually more densely populated than the central mountain area, often with peoples of diverse character and origin.

The OT references, although few, suggest that Galilee in the Bible coincided with the whole geographical region that the name implies, including "the twenty cities in the land of Galilee" presumably in the coastal plain (1 Kgs 9:11–13); Kadesh in the central mountains (Josh 20:7; 21:32; 1 Chr 6:61); and Ijon and Abel-beth-maachah in the N Jordan valley (2 Kgs 15:29; Alt 1937: 55–56). Zebulun and Naphtali appear as a synonym for "Galilee of the peoples" as a whole (Isa 8:23). From later sources (such as Josephus, the NT, and Talmudic literature) the same geographic picture emerges, although in some cases the surrounding valleys are included in Galilee while in others they are not. On occasion there is similar confusion between Galilee as a geographic region and as a political or administrative province. For instance, the Mishnaic definition of the border between Samaria and Galilee at Kefar 'Otnay (Lejjun; M.R. 167220) (*m. Git.* 7:7) implies the inclusion of the Jezreel Valley in Galilee, as does Josephus' definition of this border at Ginaē (Jenin; M.R. 178207) (*JW* 3.3.4). However, Josephus' definition of the S border of lower Galilee at Exaloth (Iksal; M.R. 180232) (*JW* 3.3.1) would exclude the Jezreel Valley from Galilee. Similarly, by placing Ptolemais/Acco on the "coast of the land of Galilee" (*JW* 2.10.2), Josephus includes the coastal plain within Galilee; yet elsewhere he states that the border of Upper Galilee and "the land of the Tyrians" is Baka (el-Buqeia/Peqein; M.R. 181264) (*JW* 3.3.1), which would exclude not only the coastal plain but also the hills W of Mt. Meron. Josephus' definition of the N border of upper Galilee at Mērōth (Marus; M.R. 208272) is again clearly a political, not a geographical, border (Ilan 1984).

2. Regional Subdivisions. In the OT, the subdivision of Galilee is generally according to tribal territories (see Josh 19:10–48). Joshua 11:2, however, suggests that there were also geographic subdivisions: mountain region *(hār),* the "Arabah south *(negeb)* of Chinneroth," the "lowland" *(šĕpēlâ),* and "Naphoth-Dor." The "Shephelah" of Israel is mentioned only one other time in the Bible (Josh 11:16, "the mountain of Israel and its *šĕpēlâ"*). This division is clearly reminiscent of the traditional subdivision of Judah into hill country, Negeb, and Shephelah (Deut 1:7; Josh 10:14; 12:8; Judg 1:9, and esp. Josh 15:20–63); thus a familiar Judaean topography has been attributed superficially to Galilee. Nevertheless several suggestions have been made as to the position of the "lowland" or "Shephelah of Israel" (Josh 11:2, 16), the most recent (Finkelstein 1981) locating it in the W foothills of upper Galilee (i.e., modern S Lebanon).

In later literature, Galilee was subdivided by Josephus into Upper and Lower Galilee (*JW* 3.3.1), whereas the Mishnah divides it into Upper Galilee, Lower Galilee, and the valley (*m. Šeb*. 9:2). The places defining the border, Kefar Ḥananiya (*m. Šeb*. 9:2; Kafr ʿInan; M.R. 189258) and Beer-sheba (*JW* 3.3.1; Kh. Abu esh-Shiba; M.R. 189259) are less than 1 km apart, clearly indicating that upper Galilee began with the steep escarpment N of these 2 sites. Upper and lower Galilee as defined in the Mishnah and by Josephus are strikingly different, upper Galilee having a maximum height of 1,208 m above sea level (Mt. Meron) and lower Galilee a maximum of only 598 m (Mt. Kamon). Height is not all: There are also noticeable differences in morphology, climate, vegetation, and agriculture; consequently modern geographers continue to subdivide Galilee into upper and lower regions.

3. Topographical Features. The present morphology of Galilee is mainly the result of faulting and uplifting of tilted blocks of cretaceous rocks associated with the creation of the great Jordan valley rift. The most marked feature of the Galilean landscape is the great escarpment dividing upper from lower Galilee. The highest parts of upper Galilee are at its S extreme near this scarp; gradually it drops off to the N until it reaches the Litani river valley. The Cenomanian and Turonean rock formations exposed in the S of upper Galilee create a rugged landscape, which together with its height makes this one of the most forbidding and isolated regions of the country.

North-south faults in upper Galilee create additional geographical features, primarily the great block of Mt. Meron. The hills W of this block are cut by valleys that flow W to the coastal plain. This W region was the natural hinterland of the coastal plain, whose political centers were Acco and Tyre; when these were politically strong, their E borders extended as far as Mt. Meron. To the E of the Mt. Meron block the

valleys flow S and SE, so that this region was always more open to influences from the S. An interesting and anomalous feature in the E region are the 2 small basaltic plateaus of Dalton and Alma (W of Hazor).

The hills of W lower Galilee consist of a series of blocks tilted by tectonic pressures from the N, consequently the S faces of the blocks are more abrupt escarpments, while the N faces gently slope down to the N, just like the main block of upper Galilee. In E lower Galilee the tectonic pressures were from the reverse direction (from the S), so that the abrupt escarpments face N and the gentle slopes extend S.

The Tosephta (*t. Nida* 3:11; but cf. *b. Nida* 20a) names from N to S the parallel valleys of W lower Galilee: the valley of Beit Ha-kerem; the valley of Sakhni; the Valley of Yoṭbat; and the valley of Ginosar. Also known in Talmudic literature is the valley of Beit Netofa (Klein 1939: 24), and "Yoṭbat" was either the name of its NW part or 1 of its 2 names. The last valley listed in the Tosephta—Ginosar (on the shore of Lake Kinneret)—is not included in lower Galilee according to *m. Šebu*. 9:2, and is there called simply "the valley" (note detailed description in *JW* 3.10.8). Yet another valley apparently S of that of Beit Netofa is called Rimon in *y. Ḥag.* 3: 78d. Of the series of valleys of E Galilee apparently only the name of the northernmost (valley of Arbel) appears in Talmudic literature.

Galilee has the highest annual rainfall of any region of the land of Israel, reaching 1,000 mm in the highest mountains; only in the E region of lower Galilee, where the average annual rainfall is below 400 mm, is there any danger of drought. Consequently, there are several perennial streams and many springs in the region. In the mountains of upper Galilee temperatures reach below freezing point for some period every year, and some snow falls in most years; whereas in the valleys, and particularly in the Jordan valley, the winters are mild and summers hot. These differences allow for a great variety of agricultural crops and for regional variations in harvest times for the same crop or fruit.

A map showing the probable course of ancient routes in Galilee can be drawn based on the location of ancient sites, on the records of ancient military campaigns, and on itineraries and roads of later periods. There were international routes in the Acco coastal plain to the W, in the Jezreel valley to the S, and in the Jordan valley rift to the E of the mountains of Galilee. The main N–S watershed route through the hill country of Judah and Ephraim continued N past Megiddo, ran to the E of Mt. Tabor and of the Beit Netofa valley, and entered upper Galilee near Beer-sheba and Kefar Ḥananiya. Since they were located on the road near where travelers crossed into upper Galilee, it is logical that Josephus and the Mishnah would define the regional subdivision in terms of these 2 towns. This route then continued E of Mt. Meron to Gush Halav and NW to Tyre. A subsidiary of this route branched E to join the Jordan valley road N of Tiberias.

The 3 main E–W routes crossing the Galilean mountains were (from S to N) that associated today with the Way of Hauran from Acco via the Ibelin, Beit Netofa, and Rimon valleys (Oded 1971); the route through the Beit Ha-kerem valley; and the route from Tyre to Dan skirting the N edge of Upper Galilee, possibly associated with the "way of the Sea" (Rainey 1981: 146–48).

B. The Bronze Ages

1. Chalcolithic Period. Until recently it was suggested that the Ghassulian-Beersheba culture typical of the land of Israel in the Chalcolithic period did not penetrate as far N as Galilee, and that in this region the pottery Neolithic culture continued until it was replaced by the EB cultures (*CAH* 1/1: 530–34). However, recent surveys have recorded some sites with close affinities mainly to the Wadi Rabah culture and others that can be associated with the later Ghassul Beer-sheba cultures (Frankel and Gophna 1980). The presence of Chalcolithic sites on the Dalton basaltic plateau is particularly interesting in light of their close cultural affinities with the Chalcolithic cultures of the Golan Heights (also a region of basaltic rock).

2. Early Bronze Age. The early stages of the EB I (Proto-Urban) period were characterized in the N by grey, burnished pottery (Ezdrealdon ware) associated with intensive settlement in the valleys skirting Galilee; few sites were found in the mountains. In the later stages (characterized in this region by "band slip" [or "grain wash"] ware), settlement penetrated into the hills of lower Galilee. It was, however, only in the EB proper (EB II–III)—the period of urbanization—that the mountains of Galilee as a whole (including upper Galilee) were intensively settled (Broshi and Gophna 1983). Over 70 sites of this period are now known in the mountain regions, some of considerable size. The ceramic vessels typical of the

region at this period are jars with everted rims (combed) and large platters, both of fine metallic ware. Also common in the region are seal impressions (Ben-Tor 1978). This first intensive occupation of the Galilean mountain areas came to an abrupt end and did not continue into EB IV, although the circumstances and the exact stage of this break remain a quandary.

In Galilee, as in other parts of the country, the main finds dating to the EB IV period are from burial caves apparently not associated with settlements. However, some small sites have been recorded in SE lower Galilee and in the Jordan and Beth-shean valleys (Zori 1977; Gal 1980), while in upper Galilee the only evidence of actual settlement is in several natural caves. The remarkable finds from the cave at Kedesh would appear to represent a cult center (Tadmor 1978). The ceramic repertoire in Galilee at this time has close affinities to that found in Syrian sites, where urban civilization continued throughout this period; this suggests that during EB IV, Galilee culturally was a peripheral extension of Syria.

3. Middle Bronze Age. In the MB III period of re-urbanization large cities were established in the valleys skirting the mountains of Galilee (Broshi and Gophna 1986), and a comparatively large number of them are listed in the Egyptian execration texts (Helck 1962: 49–66). The absence of Megiddo from these texts has been cited as evidence that this city was perhaps an Egyptian administrative center, while the others were at least potential enemies or rebels. The mountain regions of Galilee were less-densely populated in this period. In upper Galilee more sites have been recorded in the E than in the W, perhaps a result of the influence of the great urban center of Hazor.

4. Late Bronze Age (1550–1200 B.C.E.). The primary importance of the LB Age for biblical studies is that it is the precursor of the Iron Age, the stage during which the Israelites first emerged in Canaan. The cities of the period were the Canaanite cities of the Bible, and the "princes" of these cities the Canaanite kings mentioned in the Bible.

The archaeological evidence suggests a cultural decline in the LB Age. In sites that have been excavated, many structures from earlier periods (particularly fortifications) continued in use, while many others (such as temples and palaces) were rebuilt with only slight modification. Excavations and surveys show a reduction both in the number and size of settlements. The main centers of population remained in the valleys; but LB sites have been recorded in the mountain areas also: 15 in lower Galilee and 6 in upper Galilee (within modern Israel), fewer sites than in the previous period. There are also several cases of burials from this period which cannot be associated with any settlement (e.g. Hanita, Saphet), presumably evidence of a non-sedentary population.

However, Egyptian New Kingdom records provide us with data from which we can gain insight into the political and social structure and pattern of settlement in the region. The description of military campaigns, the topographical lists, and other documents (such as the El Amarna [EA] archives and Papyrus Anastasi A [*ANET*, 476–78] describing an imaginary journey through the region) allow us to draw up a reliable map of the Canaanite cities (Simons 1937; *ANET*, 242–43; *CTAED*). The locations of many places have been established without doubt, and the fact that others also appear in the description of Israelite tribal territories in Joshua 13–19 enables us at least to define the region in which they are situated.

From the Thutmoses III list, 6 cities in the N Jordan valley have been identified: Laish (#31), Hazor (#32), Chinnereth (#34), Beth-shean (#110), Abel (-beth-maachah) (#92), and Ijon (#95). In the Jezreel valley another 6 cities have been identified: Megiddo (#2), Shimron (#35), Geba-Shumen (#41), Taanach (#42), Ibleam (#43), and Jokneam (#113). In the coastal plain only Acco (#47) can be identified with certainty; however, 4 other cities also listed in the territory of Asher (Josh 19: 25–26) are probably located somewhere in the S section of the Galilean coastal plain—Mishal (#39), Achshaph (#40), Allamelech (#45), and Helkath (#112). In lower Galilee 3 cities have been identified: Adami-Nekeb (#36), Kishion (#37), and Anaharath (#52). Aharoni (*LBHG*, 147–52) has suggested that some sites in upper Galilee can be associated with names on the Thutmoses III list, but these identifications are subject to revision. We learn of additional LB cities from other sources: Hannathon, a city in the portion of Zebulun (Josh 19:14), appears in two Amarna letters (EA 8 and 245), while Shunem in Issachar (Josh 19:18) is mentioned in another (EA 365). Yarmuth in Issachar (Josh 21:29) is mentioned on a Stele of Seti I (*ANET*, 255).

The Amarna letters from the 14th century B.C.E. provide important glimpses into the political and social structure of Galilee at this period. They indicate that the region consisted of city-states whose princes nominally were Egyptian officials; in practice, however, they were vassal monarchs involved in complicated relationships with one another. The ʿApiru mentioned in those letters were social and not ethnic groups, a class outside the law and the urban social structure; their connection with the Hebrews of the Bible remains a moot point. See HABIRU. Letters from some Galilean city-states were found in the Amarna archives, including *Ṣur-ri* (Tyre), *Ak-ka* (Acco), *Ak-ša-pa* (Achshaph), *Ma-gid-da* (Megiddo), *Ta-aḫ-nu-ka* (Taanach), *Ša-am-ḫu-na* (Shimron), and *Ha-ṣu-ra* (Hazor). In addition, we know that Beth-shean was an Egyptian garrison town. The Amarna archives were not retrieved in their entirety, and from earlier documents we know of other cities that were city-states (e.g., Geba-Shumen; *ANET*, 247). However, it is unlikely that there were many more than these, and although there could have been some changes in the political structure, it seems unlikely that all the cities in Thutmoses III list were independent city-states.

From the Amarna letters we learn in considerable detail of the activities of the Galilean princes. Zuratu, prince of Acco, and Indaruta, prince of Achshaph, aided Abdu-Heba of Jerusalem with 50 chariots (EA 366). Twice Rib-Addi of Byblos complained to the king of Egypt that Zuratu of Acco was unjustly receiving preferential treatment (EA 85, 88). The Babylonian king Baranburiash complained to the king of Egypt that one of his caravans had been pillaged at Hannathon in the land of Canaan by Sutatna, the son of Zuratu of Acco, and by Shum-Addi, the son of Balumeh, prince of Shimron (EA 8). Aiab of Ashteroth complained to the king of Egypt that the prince of Hazor had taken 3 of his towns (EA 364), while Abimilki of Tyre complained that the prince of Hazor was allied with Abimilki's enemy, Zimreda of Sidon, and had "joined the ʿApiru" (EA 148). The affairs referred to most frequently in the Amarna letters are those connected with Labayu of Shechem, who, with the help of the ʿApiru, appears to have attempted to expand his influence as far N as Megiddo, as far S as Jerusalem, and as far W as Gezer. He was finally killed under mysterious circumstances in the region of Hannathon on the way to Egypt, but Zuratu of Acco, Biridiya of Megiddo, and Yashdata of Taanach all seem to have been involved in this affair (EA 245).

The picture of Galilee that emerges from the written and archaeological evidence is one of city-states situated in the valleys. Even important towns such as Hannathon and Anaharath (the capture of which is described in detail in the annals of Amenhotep II; *ANET*, 247), both situated on routes crossing lower Galilee, were apparently not city-states in their own right but dependencies of states located in the valleys. From the Labayu affair we learn of a large political organization in the central hill-country around Shechem, and from the letters of Rib-Addi of Byblos (EA 68–137) we learn of a similar organization ("Amurru") further N under the control of ʿAbdi-Ashirta and his son Aziru. The fact that Abimilki of Tyre complains of the activities of the prince of Hazor suggests that their respective territories met somewhere in the mountains of upper Galilee. Abdi-Tirshi of Hazor was the only prince to call himself "king" in a letter to Pharaoh (EA 227), and he was also called this by Abimilki of Tyre (EA 148); it is therefore probable that he ruled large parts of the Galilean hill-country (Alt 1966: 155). The widespread influence of Acco beyond the immediate confines of the coastal plain is suggested by the fact that twice we hear of the prince of Acco being at Hannathon, that the king of Byblos regarded him as a competitor, and that on one occasion he sent aid as far as Jerusalem. Megiddo also seems to have enjoyed such widespread influence.

C. The Late Bronze–Early Iron Age Transition

The transition from the LB Age to the Iron Age is undoubtedly the period to be associated with the events portrayed in the books of Joshua, Judges, and the parts of the Pentateuch describing the Exodus and the Israelite entry into the land of Canaan. It was the time in which the Israelites first appear in history. However, the sparsity of extrabiblical (mainly Egyptian) sources, the varying critical interpretations of the biblical texts, and the ever-increasing amount of archaeological data have led different scholars to depict the historical events of the period in extremely different ways. Consequently, although research has reached the stage that the specific biblical texts associated with each site and each

region demanded fresh examination in light of the new archaeological evidence, such an examination can only be intelligible within the wider context of the historical problems of the period in the country as a whole, and of the various historical hypotheses advanced to resolve these problems. See also ISRAEL, HISTORY OF.

Albright and others regarded the very marked archaeological and cultural break characteristic of the end of the LB Age (manifested both in the destruction of the Bronze Age cities and in the very different character of the civilization in the subsequent strata) as evidence corroborating the historicity of the conquest narrative (especially in the book of Joshua). Alt (1966), however, pointed out that the Egyptian New Kingdom evidence shows that the important Canaanite centers were located mainly in the valleys, whereas the biblical evidence reflects the Israelite settlement to have been mainly in the mountains. A similar picture is reflected in the list of cities not captured by the tribes (Josh 1:27–36), usually understood as representing the cities that became part of the kingdom only at the time of David. Those cities are also located in the lowlands, mainly in the Jezreel valley and coastal plain. This settlement pattern, when viewed in terms of the analogy of modern bedouin and other nomadic sedentarization, led Alt and others to conclude that the Israelite settlement was primarily a peaceful infiltration of the largely unsettled mountain regions, corroborating their view that the narratives in the book of Joshua were largely etiological, not historical.

Archaeological research in Galilee in the 1950's brought these two approaches into sharper focus. In 1951–53 Aharoni carried out an archaeological survey in upper Galilee, recording many small hill-country settlements from the first stages of the Iron Age that had not been occupied in the LB Age (Aharoni 1956; 1957). These early Iron Age sites provided, for the first time, archaeological evidence that could be used to support Alt's hypothesis of peaceful infiltration, a hypothesis that previously had been based only on written evidence. Excavations at Hazor in 1955–58, however, demonstrated that the 175-acre LB city (stratum XIII) was utterly destroyed and that the subsequent Iron Age settlement there (stratum XII) was an extremely meager hamlet (Yadin 1972: 108–9, 129–32). For some, this provided striking archaeological confirmation not only of the biblical conquest narrative as a whole, but particularly of the events as described in Joshua 11. Subsequent discussion of the historical interpretation of the evidence from the Hazor excavations and the upper Galilee survey focused primarily on the chronological problem: Did the foundation of the early Iron Age villages in upper Galilee *precede* the destruction of LB Hazor or were they established *after* this destruction (Yadin 1972: 129–32)?

At the same time, other scholars approached the problem of the Israelite "conquest" from a different angle suggesting a completely new approach as to the origins of the Israelite tribes. The picture of social unrest as evidenced in the Amarna letters (e.g., EA 248; 74; 89), and the fact that many aspects of early Iron Age culture were apparently derived from Bronze Age (ceramic, linguistic, and epigraphic) prototypes, led Mendenhall (1962) and later Gottwald (1979) to suggest that people who lived in the early Iron Age villages (such as those discovered in the upper Galilee survey) were not nomads who had come from the far-off desert fringe to settle down, but rather indigenous town-dwellers who had fled from the more densely populated areas controlled by the Canaanite cities into the more remote hill-country area. Finkelstein *(AIS*) has suggested that these villages were created by the sedentarization of pastoralists who previously had existed in symbiosis with the LB urban population but who found it necessary to create self-sufficient farming villages when the urban structures collapsed.

The ever-increasing archaeological evidence is modifying the picture by showing that the LB/Early Iron transition was much more variegated both culturally and chronologically than previously realized. The crucial question regarding the LB cities is the date of their destruction. Inscriptional remains provide rather precise *termini post quem* dates for the destruction of several LB cities. At Aphek/Antipatris the final LB occupation can be dated to early in the reign of Ramesses II (see ANTIPATRIS); at Lachish to that of Ramesses III; and at Megiddo certainly to that of Ramesses III and probably to that of Ramesses VI. These exact dates have led to attempts to reappraise the destruction dates of other LB cities. The destruction of stratum XIII at Hazor previously had been dated to ca. 1200 B.C.E. due to the presence of imported Mycenean IIIb vessels and the absence of those of Mycenean IIIc (Yadin 1972: 108–9).

However, comparison of the locally made pottery with that from the governor's palace at Aphek (which could be precisely dated) led Beck and Kochavi (1985: 33, 38) to suggest that the destruction of Hazor XIII should be dated instead to the beginning of the 13th cent. B.C.E. Thus, present evidence suggests that the LB cities were destroyed over an extended period of 150 years.

Early Iron Age sites similar to those Aharoni identified in Upper Galilee have been reported from more recent surveys in the hill-country regions of W Galilee (Frankel 1983: 222–23; 1986) and lower Galilee (Gal 1982a), as well as in the hill-country regions of Samaria and Judah. Just when these sites were established remains unclear, and although early 13th or even 14th century sherds have been found at one or two sites (Gal 1982a: 86), there is as yet no stratigraphical evidence proving that any of these sites were established earlier than the end of the 13th century B.C.E.

Examination of early Iron Age strata from excavated sites shows these to be far from uniform in character. Hazor stratum XII consists of foundations of huts or tents, cooking and similar installations, and stone lined storage pits (Yadin 1972: 129–20). Megiddo stratum VIb is a small village and Tel Abu Hawam IV a village of well-built square buildings divided into 1 large and 2 small rooms. At Beth-shean V we find temples, albeit different from those of previous strata. The diversity of these sites, all in the valleys of Galilee, suggest a variegated population in the region at this period.

The results of current research permit the following conclusions. The archaeological evidence as a whole suggests that the cultural break between the LB and early Iron periods (i.e., the physical change in size, character, and pattern of settlement that took place at this time) was one of the most marked in the ancient history of the S Levant. Examination of the details, however, indicates that the changes took place over a considerable period and that neither the date of the destruction of the LB cities nor the character of the early Iron Age settlements is uniform. This overall picture—and the discrepancies in details between the archaeological evidence and the biblical narratives (esp. concerning, for example, Arad, Jericho, and Ai)—tend to corroborate the nonhistorical character of some of these narratives. From the historical evidence we know of many agents active in the region during the 14th–12th centuries, among these were the Canaanite city-states themselves, the Egyptians (whose military campaigns are recorded throughout the period), the Sea Peoples, the Israelite tribes, and apparently other tribal groups hinted at in the Bible (Jebusites, Perizzites, Hivites, the biblical Hittites, Amorites, Gibeonites, etc.) of whose history we are almost completely ignorant. The destruction levels and the early Iron Age settlements are evidence of the activity of these diverse agents. Scholars continue to be occupied with the important task of unraveling the specific historical details.

D. The Settlement of the Galilean Tribes

1. Written Evidence. a. Primary Documents. The Amarna letters provide an overall picture of the political climate prevailing in the country prior to this period. Several specific events mentioned in these documents have been related to the early history of the Galilean tribes, particularly some activities associated with the ʿApiru. The early date of these events (ca. 1350 B.C.E.) and the clear realization that the term ʿApiru designates a social class rather than an ethnic group, however, raises difficulties as to how these may be related to the Israelite tribes.

Historically, not only did the Egyptian armies pass through Canaan in their campaigns against the N Hittite and Mitanni empires; we also know of punitive campaigns that the pharaohs took against Canaan itself, right up to the end of the 19th dynasty. Seti I campaigned in the N, capturing cities in the Jordan valley, the coastal plain, and the mountains of upper Galilee (*LBHG*, 166). Ramesses II also both passed through Galilee on his campaigns against the Hittites, and possibly also carried out punitive campaigns in the region itself (Helck 1962:222). The "Israel stele" of Merneptah, after mentioning 3 cities—Ashkelon, Gezer, and Yanoam (in order from S to N)—mentions "Israel" for the first and only time in Egyptian sources, which could be interpreted as evidence for the presence of a people of this name in the north (*ANET*, 378).

Several references in 19th dynasty texts have been tentatively read as "Asher." If this reading is correct, it would imply the presence of this tribe in the region at an early date. Albright's (1954) reservations should, however, be taken into account. The Onomasticon of Amenope, one of the Egyptian sources

referring to the Sea Peoples, lists 3 of these groups: Sherden (#268), Tjekker (#269), and Pleset ("Philistines," #270; Gardiner 1947: 194–201). The Philistine cities are on the S coastal plain. According to the letter of Wen-Amon (*ANET*, 26), the Tjekker lived further N at Dor in the Carmel coastal plain. Recent archaeological evidence of similar elements at Tel Akko and Tel Keisan (Briend and Humbert 1980: plate 71: 8, 9?; plate 80: 12) have led scholars to suggest that the Onamasticon implies Sherden settlements still further N in the Galilean coastal plain (see ACCO).

b. Biblical. The biblical evidence is more extensive but equally problematical. In recent years it has been suggested that the patriarchal traditions recount activities in this period (Mazar 1969; Naaman 1986: 79–84). Since none of those traditions are connected to places in Galilee, and none of the 5 eponyms of the Galilean tribes figure in any significant patriarchal episode, these traditions clearly all originated in the S. Only the genealogy of these 5 eponyms is possibly relevant, although its date and significance are far from clear. Zebulun and Issachar, the eponyms of the 2 southernmost Galilean tribes, were the 2 youngest of Leah's 6 sons (Gen 30:18–21), while those of the 3 northernmost tribes were sons of Jacob's concubines—Asher of Zilpah, and Naphtali and Dan of Bilhah.

On the other hand one of the main conquest stories (Joshua 11) takes place in Galilee, while two of the stories of the book of Judges—Deborah (chaps. 4–5) and Gideon (chap. 7)—take place in the Jezreel valley. The fact that Jabin king of Hazor appears both in Joshua 11 and Judges 4 has led to much controversy. As regards the Song of Deborah, Rabin (1966) has shown that each tribe is there depicted poetically in its traditional geographic setting, so that the historicity of this document as regards the activities of the Israelite tribes at the actual battle is doubtful. In the blessings of Jacob (Gen 40:1–28) and Moses (Deut 33:2–29) there are poetic references to the character, history, and geography of the tribes which cannot be ignored, although the date and significance of these poems are difficult to determine. Although their respective dates are also often uncertain, the genealogical tables (Genesis 36; 46:8–25; Numbers 26; 1 Chronicles 1–9; see *LBHG*, 221–27) provide evidence for connection between tribes, often incorporating geographical and historical elements of undoubted authenticity.

Our knowledge of the tribes is derived primarily from the description of the tribal territories in Joshua 13–19, the longest and most detailed geographical document in the Bible. Although there is considerable difference of opinion as to the origin of this document, there is no doubt that it originates from several different sources. It is generally agreed that one of these sources is a tribal *border description* distinguished by the use of verbs to connect various place names. The description, although not completely uniform in character, delineates a map of the country as a whole with neither intervening gaps nor overlapping territories. Some scholars date this source to the period of the judges (Noth 1935; *LBHG*, 228, 233) while others date it to the United Monarchy (*HGB*; Naaman 1982a).

The second source used in compiling this description of tribal territories was *lists of towns* that usually appear after the border descriptions. These are distinguished by the use of the conjunctive *waw* to connect various place names. These town lists themselves clearly derive from various sources. That of Judah (Josh 15:21–62) originates in administrative lists of the kingdom of Judah, while parts of the town lists of the Galilean tribes derive partly from the cities appearing in Judg 1:27–35 (these always appear in Joshua at the end of the description of the territory of each tribe). It has been suggested that other parts of these lists originated in administrative lists either of the Assyrian province of Magidu (Galilee) (Alt 1927) or of the kingdom of Israel (*LBHG*, 227). The descriptions of the territories of Ephraim and Manasseh lack town lists, and in the description of Asher town list and border description have apparently been interwoven. On the other hand, Simeon, Dan, and Issachar seem to lack border descriptions and are represented only by town lists. The description of the tribal allotments (Joshua 19) does not indicate the N part of the tribe of Dan, including instead a S Dan to depict an historiographic viewpoint prior to the Danites' migration north (Naaman 1986: 46).

The territories of the Galilean tribes, far from Jerusalem, are described more cursorily than those of the S tribes. The latter are described independently of each other, and common borders of adjacent tribes are often described twice; whereas the description of the Galilean tribal territories are integrated one with the other. That of centrally located Zebulun is the first to be described (Josh 19:10–16). Issachar follows (vv

17–23), then the portion of Asher with respect to that of Zebulun (vv 24–31), and finally that of Naphtali with respect to both Zebulun and to Asher (vv 32–39). Also, the borders of Zebulun, Asher, and Naphtali are described in a similar manner. In each case the description begins from a fixed starting point, describing the border in one direction, and then, using the phrase "the border returns" *(wĕšob haggĕbûl),* the description returns to the fixed starting point and continues describing the border in the opposite direction. In spite of the chronological, textual, and geographical problems of Joshua 13–19, this document undoubtedly represents an authentic picture of traditional tribal territories and must be the basis of any attempt to understand early Iron Age Israel.

The lists of Levitic cities (Joshua 21, 1 Chronicles 6) have been regarded as an independent historical source (*LBHG*, 269–73; *HGB*, 379–403); however, recent research suggests that the full list of 48 cities is a literary expansion on a core of 13 cities in Judah (Auld 1979). Further it has been suggested that the expanded list was largely based on the tribal descriptions in Joshua 13–19 (Naaman 1986: 203–27). Consequently, all reconstructions based on these lists should be used with caution, especially those connected to the N regions of the country.

2. Archaeological Data. In the valleys skirting the mountains of Galilee a large number of sites have been excavated providing data relevant to the period under discussion: in the *coastal plain,* Tel Abu Hawam, Tel Acco, and Tel Keisan; in the *Jezreel and Beth-shean valleys,* Tel Taanach, Tel Megiddo, Tel Beth-shean, Tel Yokneam, Tel Qashish, Tel Qiri, Afula, Tel Kedesh, and a site near Tel Menorah; and in the *Jordan valley,* Tel Hazor, Tel Dan, and Tel Kinnerot.

Our knowledge of the mountainous areas, however, is based primarily on archaeological surveys. Aharoni's pioneering survey (Aharoni 1956, 1957) recorded intensive Early Iron occupation in the Peqiin Valley and more sparse occupation on the Meron Range to the E. Similar Iron Age sites were identified in the W slopes of the mountains of upper Galilee (Frankel 1983; 1986). Early Iron sites have been recorded in the Nazareth mountains (Gal 1982a), but the period is apparently not represented in the low hills to the E of Mt. Tabor (Gal 1980).

An important aspect of the material culture of the early Iron Age is the marked regional diversity in the ceramic repertoire. This manifests itself primarily in the large storage jar or pithos so typical of the period. Three main types of this vessel have been identified: the collar-rim jar typical of the S regions; the Galilean jar (first published by Aharoni 1957: fig. 4); and the Tyrian jar (published from excavations at Tyre, Bikai 1978: plate 40). The geographical distribution of these pottery types is significant. The S collar-rim jar is found in the mountains only as far N as the Beit Netofa valley; the Galilean type is found in the mountains of upper and lower Galilee; and the Tyrian type has been found at sites along the present Lebanese border. The Tyrian jar has clear affinities to earlier jars from Tyre (Bikai 1978: plate 46), and the Galilean jar has similar affinities to LB jars at Hazor.

Only a few Iron Age sites have been excavated in the mountains. These include the site of Horvat Avot, a small village at which both Tyrian and Galilean vessels were identified; and the site of Sa'sa, where a cult installation was excavated and a kernos found. Of special significance are 2 Iron Age forts that have been excavated: one on Mt. Adir, where early Iron Age pottery from the 11th century B.C.E. has clear Tyrian affinities, and the other, Horvat Rosh Zait, dating to the 9th century B.C.E., with pottery that included fine specimens of Cypro-Phoenician ware with clear Phoenician affinities (Gal 1984). Several other forts from the Iron Age have been identified in surveys: one on the S edge of the peak of Mt. Merom; one on an E spur of Mt. Canaan; one on Mt. Mitzpeh Yamim, one of the S peaks of upper Galilee; and one on Mt. Gamal on a SW spur of upper Galilee facing Acco.

3. The Galilean Tribes. a. Issachar. This tribe's allotment is described second in the Joshua 19 list (vv 17–23). Enough place-names there have been clearly identified to determine that the tribal territory consisted of the low, basalt hills SE of Mt. Tabor as well as the E section of the Jezreel valley. Most of the places in the description are connected by the conjunctive *waw,* leading Alt (1927) to suggest that this description was primarily a town list, and that Issachar originally was not included in the border description. Only the N border is described from Mt. Tabor to the Jordan (v 22), and Alt suggested that this was part of the original description of the border of the tribe of Manasseh. Thus, according to Alt, no

allotment was originally assigned to Issachar, and the territory subsequently considered as Issachar's in Joshua 19 originally belonged to Manasseh. Among the Galilean tribes, Issachar is exceptional not only because it is defined almost entirely by means of a town list but also because Judges 1 does not list any towns that Issachar failed to inherit.

The description of the N border of the tribe of Manasseh states that the border "touches on Asher to the north and on Issachar to the east" (Josh 17:11) and the cities described there as being "of Manasseh in Issachar and Asher" are the same cities that Manasseh failed to inherit (Judg 1:27). It has been suggested that Josh 17:11 be understood as meaning that these cities were on the border of the two N tribes (*HGB*, 173), but it may also reflect two different historical situations, one in which the hills in the hinterland of Beth-shean, Ibleam, Taanach, and Megiddo were occupied by the tribes of Asher and Issachar, and a later time in which these were incorporated into the territory of Manasseh.

There is much biblical evidence of close ties between the tribe of Issachar and the territory of Manasseh and Mt. Ephraim. The Bible recounts that "Tola, the son of Puah, the son of Dodo, a man of Issachar, dwelt in Mt. Ephraim" (Judg 10:1). Both Tola and Puah are also listed in genealogies as sons of Issachar (Gen 46:13; 1 Chr 7:1). Shimron the son of Issachar is apparently to be associated with Mt. Shomron, on which the city of Samaria was built (1 Kgs 16:24). Jashub, another son of Issachar (1 Chr 7:1), may be connected to Jashub, a place mentioned in the Samaria Ostraca (*LBHG*, 223, 325).

Issachar is mentioned in the song of Deborah as participating in the battle and described as "on foot in the valley" (Judg 5:15), a clear description of the tribe's home territory. Surprisingly, Issachar is not mentioned in the Gideon story that is set in that tribe's territory (Judges 6–7). In Jacob's blessing (Gen 49:14–15), Issachar is characterized as a corvee-worker through an apparent wordplay on the phrase "a man of hire" (Heb *ʾîš śakar*). In Moses' blessing (Deut 33:18–19) the tribe's close association with Zebulun is expressed through poetic parallelism, and both tribes are associated with a mountain of sacrifice, undoubtedly Mt. Tabor. The territory of Issachar is listed 10th among Solomon's districts (1 Kgs 4:17), and the tribe is rarely mentioned in the Bible in connection with subsequent events.

Egyptian New Kingdom documents describe two incidents occurring within the territory of Issachar. From the Amarna letters we learn that Labayu of Shechem captured Shunem (EA 250) and that its lands were worked by Birdiya of Megiddo with corvee labor (EA 365). On a stele of Seti I from Beth-shean there is reference to a battle with ʿApiru on the mountain of Jarmuth (*ANET*, 20). Both Shunem and Jarmuth are towns of Issachar (Josh 19:18; 21:29; in Josh 19:21 Jarmuth appears corruptly as "Remeth"). On the basis of these sources, Alt (1924) reconstructed the history of the tribe, suggesting that the Amarna episode was evidence of the early settlement of the tribe among the Canaanites and that the tribal name ("man of hire") reveals its status at this early time. The lack of a border description in Joshua 19 was, he suggested, evidence that at the time of the formulation of these borders (in his opinion at the time of the judges) the tribe no longer existed as an independent entity, which explains the absence of Issachar from the Gideon story.

The recent archaeological survey, however, has shown that the hill country of Issachar lacked early Iron Age sites. Gal (1980; 1982b) suggests that the tribe of Issachar originally dwelt in the hills S of the Jezreel valley and that only in the 10th century did it settle in the territory ascribed to it in Joshua 19 (the Jezreel valley together with the hills to its N). This earlier situation would then be reflected in the close connection between Issachar and Manasseh in the biblical tradition and perhaps in the references to Issachar in the description of the territory of Manasseh (Josh 17:10–11).

b. Zebulun. In the allotment of Zebulun, the first of the Galilean tribal territories to be described in Joshua 19 (vv 10–16), the distinction between border description and town-list is clear. The starting point is Sarid (Tel Shaddud; M.R. 172229), a vantage point from which all the S border of the tribe can be clearly seen. The border is first described W towards Jokneam (Tel Qamun; M.R. 160230) and then E from Sarid towards Mt. Tabor. It is not clear whether Mt. Tabor is within Zebulun's tribal territory or is perhaps an extra-tribal area, a "holy mountain" at the point where the territories of Zebulun, Issachar, and Naphtali meet (Deut 33:19; Hos 5:1). The border continued from Mt. Tabor N and W through the valley of Beit Netofa to the valley of Iphtahel, identified either with Wadi el-Malik (Nahal Sippori; Dalman

1923: 35) or with the Ibillin valley (Gal 1982a: 104–5). The W border is not described. Nevertheless, the territory of Zebulun is thus a fairly well-defined area geographically, known today as the mountains of Nazareth bordering on the Jezreel valley to the S and the Beit Netofa valley to the N. Paradoxically, in both Jacob's and Moses' blessings there are clear references to Zebulun's connections to the sea coast and maritime activities (Gen 49:13; Deut 33:18–19). This has been regarded as evidence of trading with and political dependence on the Canaanite coastal cities (*NHI,* 79), but there is no reason not to see here a reflection of an actual geopolitical situation, albeit a different one from that portrayed in Joshua 19.

Zebulun is the only one of the Galilean tribal territories that was not one of Solomon's administrative districts. Alt (1913: 14) suggested that Bealot (1 Kgs 4:16) is a corruption of Zebulun (but see Ahlstrom 1979) and that Zebulun was part of the 9th district with Asher, while Kallai *(HGB*) suggests that the close connections of Zebulun with Issachar make it probable that Zebulun was part of the 10th district with Issachar. There are several cases in the OT where "Zebulun and Naphtali" seem to represent Galilee as a whole (Judg 4:6, 10; Isa 8:23 [—Eng 9:1]; Ps 68:28 [—Eng 68:27]), reflecting a situation in later years when these were the dominant Galilean tribes. Yeivin (*EncMiqr* 2: 895–900) followed Alt's premise that Issachar appeared in the Jezreel valley as early as the Amarna period. He explained Zebulun's absence from the N border of Manasseh (Josh 17:11), the close association of Zebulun and Issachar in Moses' blessing (Deut 33:18–19), and the genealogies listing them as brothers of the same mother (Genesis 30; 46) by suggesting that Zebulun was originally part of the tribe of Issachar and only later became independent.

Gal's recent survey of the territories of both tribes (Gal 1980, 1982a) requires a reappraisal of Alt's and Yeivin's conclusions. In contrast to the hill country of Issachar, which lacks early Iron Age sites, the hill country of Zebulun yielded several such sites, including some in which were found sherds of imported vessels dating to the early 13th century. The local ware had affinities to that from regions to the S. The mention of Zebulun's connections to the sea in the blessings of Jacob and Moses reflects a situation later than that portrayed in the territorial divisions in Joshua. At this later time, Asher had declined in importance and Zebulun and Naphtali then appear often representing Galilee as a whole.

c. Asher. Asher is the third Galilean tribe to be described (Josh 19:24–31). The reference to the towns of Achzib, Tyre, and Sidon leaves no doubt that this tribe's territory includes the Galilean coastal plain. There is, however, considerable difference of opinion as to the exact extent of the tribal territory to the SE and N. The text consists apparently of alternating sections of border description and town list.

The starting point of the border description is Helkath (in the LXX "from Helkath"). This site has been identified with various places to the SE of the Galilean coastal plain: Khirbet Harbaj (Tel Regev; M.R. 158240; Alt 1929: 38); Tel el-Amar (M.R. 159237; Gal 1982a: 107–8); or Tel Qashish (M.R. 160232; Aharoni 1959: 118–20). The precise location of Helkath would determine the extent to which the low hills in this region (the "Shephelah" of Galilee) belonged to Asher or to Zebulun. Shihor-Libnath is undoubtedly a river, and it has been identified with Nahr el-Zarqa (Nahal Tanninim), thus including Mt. Carmel in the territory of Asher (Grollenberg 1956: map 1; Alt 1927: 69, n. 4). However, analogy (with Josh 19:22, 27, 34) suggests that "touching on Carmel" (v 26) means that Mt. Carmel was outside the tribal area proper and that Shihor-Libnath was the Kishon river. The border then "returns" to the fixed starting point (apparently to Helkath) and then continues in the opposite direction N, touching on Zebulun and the Iphtahel valley "going out towards Cabul to the north" and "reaches greater Sidon and the border returns to Ramah and to the fortified city of Tyre."

It has been suggested that the border actually reached the city of Sidon *(HGB*) but it is more probable that only the border of the Sidonian territory, the Litani river, was intended (*LBHG,* 238; Naaman 1986: 54). The mention of the "fortified city of Tyre" (v 29) shows close affinity to the description of the N border in Joab's census (2 Sam 24:6–7, where MT *tḥtym ḥdšy* [v 7] should be read *tḥt ḥrmn,* "beneath Hermon" [Skehan 1969: 46–47]), which in turn is reminiscent of other references to Israel's N border (Josh 11:8; 13:4–6; Judg 3:3; see Naaman 1982a: 154–55). The border thus skirted a Tyrian coastal enclave S of Tyre. The description terminates with a list of towns clearly based on the same source as

Judg 1:31. The territory of the tribe is then the coastal plain, from Mt. Carmel in the S to the Litani river in the N, excluding the city of Tyre and its environs, but including the low foothills E of the coastal plain.

The list of cities that Asher did not inherit (Judg 1:31) is the longest such list. Three of the cities can be precisely identified (Acco, Sidon, Achzib), while Helbah and Ahlab are almost certainly to be read as Mahalab and identified with Khirbet el-Maḥalib (see MAHALAB). The remaining two, Aphik and Rehob, should probably be sought in the N part of the coastal plain of Acco. It is noteworthy that Achshaph, one of the more important of the Canaanite cities in the region, is not included in the list. Asher is mentioned in connection to the N border of Manasseh (Josh 17:10–11), Dor presumably being the town that Manasseh held "in Asher" (Josh 17:11).

It has been suggested that the place-name Khirbet el-Ḥabay (M.R. 170265) is connected to Jehubbah *(yḥbh)*, a descendant of Asher (1 Chr 7:34), and that the Iron Age site nearby was called *Ḥbh* (Zadok 1988: 45). Similarly, Serah *(śrḥ)*, Asher's daughter (Num 26:26; 1 Chr 7:30), should perhaps be associated with Khirbet Suruḥ (M.R. 175276), near which an Iron Age site has been identified. There are, however, also several clear connections to the S tribes of Benjamin and Ephraim. Beriah appears as a son of Asher, as a son of Ephraim, and as a descendant of Benjamin (Gen 46:17; 1 Chr 7:23; 8:13). Beriah's son Malchiel was father of Birzaith (1 Chr 7:31), almost certainly the modern Bir-Zeit (M.R. 169153). Heber, another son of Beriah, was father of Japhlet (1 Chr 7:32), associated with the border between Benjamin and Ephraim (Josh 16:3). Shual and Shilshah, grandsons of Japhlet's brother Helem (1 Chr 7:35–37), may be associated respectively with "the land of Shual" presumably in Benjamin (1 Sam 13:17) and with "the land of Shalishah" in Mt. Ephraim (1 Sam 9:4).

Asher figures in the Gideon saga (Judg 6:35; 7:23), while in the Song of Deborah Asher is said to have "lingered by the seashore, by its inlets he stayed" (Judg 5:17)—again a clear description of the tribal territory. Asher was the 9th of Solomon's administrative districts (1 Kgs 4:16) and the only one that combines a tribal name with what appears to be that of a city, Bealoth (^{A} Maalot). This anomaly has been explained by seeing Bealoth either as a corruption of Zebulun (Alt 1913: 14; but see Ahlstrom 1979) or as a city (Mazar 1942: map 16) possibly added to Asher to compensate for territory ceded to Tyre (1 Kgs 9:11), and that can perhaps be identified with Me'ilya (M.R. 174269).

In several Egyptian New Kingdom inscriptions the word *i-s-r* has been deciphered. Opinions vary as to whether this refers to the tribe Asher, to Assyria, or to an unidentified place name (see discussion in Gardiner 1947: 191–93; *CTAED*, 73; Albright 1954). The name appears in town lists of Seti I and Ramesses II (Simons 1937: xvii 4, xxv 8). A town by the name of *q-t-i-s-r* ("Gath-Asher"? Aharoni 1957: 65; but see also Helck 1962: 222) is mentioned with Acco in a description of a campaign of Ramesses II (Wreszinski 1935: plate 55a). In papyrus Anastasia A, dated to Ramesses II (*ANET*, 477, and n. 42) a king or tribal chief of *isr* is mentioned in association with a description of a journey through what is undoubtedly the Aruna pass S of Megiddo. In the Onamasticon of Amenope (from the time of Ramesses XI), *isr* is listed between coastal cities of S Canaan and tribes of the Sea Peoples.

In an archaeological survey of the region, a large number of small, early Iron Age sites have been recorded on the W slopes and foothills of the mountains of upper Galilee (Frankel 1983; 1986). These, however, neither reached the edge of the coastal plain nor do they reach the top of the hills; thus there remained an unsettled area between these sites and those discovered by Aharoni (1956; 1957) in the Peqiin valley and further E. This survey showed a difference in the ceramic repertoire between the northernmost sites (along the present Lebanese border) and those further S, the main difference evident in the pithos. Those found at the N sites have affinities to Tyrian pithoi both from Iron and Bronze Ages (Bikai 1978), while those found at the S sites are similar to those found in upper Galilee (Aharoni 1956: fig. 4; 1957: 22, plate 4:4, 5) and have clear affinities to pithoi from LB Hazor.

On the basis of all these sources, certain tentative historical conclusions can be drawn. The list of Canaanite cities in Judge 1:31 show that most of the coastal plain did not come under Israelite control until the period of the monarchy, whereas Assyrian annals (*ANET*, 287) show that already in the 8th century this region was Sidonian. There is no proof as to when the region came under Sidonian control; however, the lack of a Solomonic district of former Canaanite cities in the coastal plain (*NHI*, 213 n. 3)

makes it probable that the incident of "the twenty towns in the land of Galilee, the land of Cabul" (1 Kgs 9:11–14; 2 Chr 8:2) reflects Solomon's surrender of this region. Consequently the coastal plain, the heartland of the territory of Asher as depicted in Joshua 19, was Israelite for little more than a generation, which in turn leads to the conclusion that the small Iron Age sites in the Galilean foothills are evidence as to the character and extent of the tribe of Asher. On the one hand, the close affinities of the Galilean pithos to earlier pottery from the region and its marked differences from S pithoi point to this N tribe's extended cultural development independent of the S tribes; on the other hand, they suggest that its N culture either was derived directly from the previous LB Canaanite culture or coexisted with it for a considerable period.

A question that remains is the significance of the genealogical tables. Asher and the other 3 tribal eponyms listed as sons of Jacob's concubines (Dan, Naphtali, Gad) share another common trait: they are geographically peripheral, which implies that they were politically peripheral was well. The question is whether they were also ethnically peripheral. As for Asher's close connection to Benjamin and Ephraim, the archaeological evidence does not support Asherite families having originated in the S at an early stage. It is possible that, like Dan or Issachar, clans moved N at a later stage. Recently an interesting solution has been suggested (Edelman 1985) connecting this S presence of Asher to the "Ashurite" province of 2 Sam 2:9. However, the most attractive explanation of the connections between Asher and Benjamin and Ephraim is that of Finkelstein (*AIS*, 299, n. 35). Based on an archaeological survey of the Bir-Zeit region yielding Iron Age remains (almost only from Iron II), he suggests that the Asherite family of Beriah did not originate in the S and migrate N but the reverse—they reached the region of Benjamin and Ephraim at a late period, possibly after the capture of Galilee by the Assyrians.

The territory of the tribe of Asher as described in Joshua 19 (the Galilean coastal plain and adjoining foothills) is a geographical region that throughout history has been to a greater or lesser degree an entity separate from the region to the E. At many later periods this was the territory of the cities of Acco and Tyre, and in the LB Age, too, these were the dominant forces in the region (Meyers 1983: 55). It was within this geopolitical territory that the tribe crystallized.

At various historical periods the exact position of the political border between the coastal plain and the mountain region of upper Galilee to the E has varied. The E border of Asher coincides with a rugged region that is difficult to settle and lacks Iron Age settlements; thus it coincides with a sparsely populated region. The pottery with Tyrian affinities found in the N suggests that this region was largely under the influence of Tyre until a late stage, probably until the Davidic expansion. The written sources hint at changes in the S border of the tribal territory also. The fact that it is implied that Dor belonged to or was on the border of Asher (Josh 17:11) and the possible reference to Asher in the same region in Papyrus Anastasi A (*ANET*, 477) perhaps suggest that at an early stage the tribal territory included the Carmel. The S border as designated in Joshua 19 is N of the Carmel (an intermediate stage?), and the blessings of Jacob and Moses imply yet a third stage in which *Zebulun*'s territory reached the sea (see above).

The tribe of Asher, however, in effect never controlled more than the periphery of the well-defined geographic region that was its purported territory. It is perhaps significant that Asher is the only tribe of which it is said that "the Asherite dwelt amongst the Canaanite" without the addition "and they (the Canaanite) became tributaries" (Judg 1:31–32). It was certainly not one of the more important tribes and rarely appears in later episodes.

d. Naphtali. The references to the "mountain of Naphtali" (Josh 20:7) and the "land of Naphtali" (1 Kgs 15:20; 2 Kgs 15:29)—terms rarely used in reference to other Galilean tribes—have been taken as evidence that the name was originally a geographic one (*NHI*, 67 and n. 1). Naphtali was the largest of the Galilean tribes and, used either in conjunction with Zebulun (Judg 4:7; Ps 48:28; Isa 8:23) or by itself (Deut 34:2; 1 Kgs 15:20; 2 Kgs 15:29; 2 Chr 34:6), "Naphtali" was often synonymous with "Galilee" itself.

The description of the border of this last Galilean tribe is cursory but clear (Josh 19:33–34). First, the S border is described from Heleph (without doubt a site at the foot of Mt. Tabor; v 33) E to the Jordan (the same border is apparently described in Josh 19:22). Then the border "returns" to the fixed starting point

(Heleph) to describe the W border in the opposite direction northwards. From Aznoth-Tabor the border "went out towards Hukkok and touched on Zebulun to the S and on Asher to the W …" (v 34). The Jordan is clearly the E border, but the N border is not described nor are the important cities on this border (Dan, Ijon, and Abel-beth-maachah; cf. 1 Kgs 15:20; 2 Kgs 15:29) included in the list of cities that follows (Josh 19:35–38). Naaman (1986: 46) notes that the tribal territories have been compiled to reflect the situation prior to the Danite migration N. On the basis of biblical descriptions of the N territory that "yet remains to be possessed" (Josh 13:4–6; Judg 3:3) and of a geographical line often mentioned in various biblical episodes (Josh 11:8, 17; 2 Sam 24:6), it is possible to speculate about Naphtali's N border. The joint border with Asher almost certainly extended to the Litani river, and then that of Naphtali followed the river E and N; after the northward bend of the river, the border extended NE to include the valley of Marjayoun (Ijon) and then skirted the foot of Mt. Hermon to the Jordan.

The description of the tribal boundary is followed by a list of towns (Josh 19:35–38). What appears as the first 2 towns (Ziddim and Zer) is apparently a corrupt text (see below). Not all the remaining 14 towns have been identified, but they are clearly listed from S to N. The last 2, Beth-anath and Beth-shemesh, are drawn from the list in Judg 1:33, and their identification remains uncertain.

The reference to "Naphtali on the heights of the field" in the Song of Deborah (Judg 5:18) is again a characterization of the tribe's highland territory. There is, however, no reason to doubt that Barak the son of Abinoam the Naphtalite was the leader in the battle or that Naphtali was the leading tribe in this war. Naphtali also figures in the Gideon epic (Judg 6:35; 7:23) and its territory was the 8th of Solomon's administrative districts (1 Kgs 4:15). In Moses' blessing (Deut 33:23), Naphtali is urged to "possess the west and the south," implying a territorial expansion, although it is unclear whether this refers to the early stages of settlement or rather (as with most of the other blessings) to a later period. It perhaps implies an expansion at the expense of Asher and Issachar, who are rarely mentioned in later biblical episodes.

The group of early Iron Age sites surveyed by Aharoni (1956; 1957) in the Peqiin valley and on Mt. Meron in the territory of Naphtali were explained by him as evidence of early Israelite settlement in the area. However, as in the territory of Asher so in that of Naphtali, strong Tyrian influence can be discerned. On the 1,006-m-high peak of Mt. Adir overlooking its surroundings, a well-built fort from the early Iron Age has been partly excavated and has yielded pottery of high quality with marked Tyrian affinities. Evidence of Tyrian presence in this region is referred to in the list of cities of Naphtali (Josh 19:35), the first words of which should not be read "the fortified cities are Ziddim, Zer, …" but rather "the fortified cities of the Tyrians: Tyre, …" (Heb *ʿry mbṣr ḥṣwrym ṣwr;* cf. Kochavi 1984: 67–68). Kochavi also suggested that the other Iron Age forts situated on peaks in upper Galilee as well as the other early Iron Age sites in this region are all Tyrian, and that the early settlement of Naphtali should be sought only in lower Galilee. However, the exact date and character of the other Iron Age forts has not yet been ascertained; the character of the pottery found at Khirbet el-Tuleil (Tel Harashim; Aharoni 1956: fig. 4) is not Tyrian; and the term Mt. Naphtali (Josh 10:7) clearly suggests an upper Galilee component of the tribe. The LB geopolitical territory in which the tribe of Naphtali settled is that of Hazor, and although the borders are not necessarily identical with those of Hazor, there is every reason to regard the Iron Age sites identified by Aharoni as the early nucleus of the tribe of Naphtali.

The history of Tyre at the end of the LB Age is not clear, but as opposed to the inland region where the Canaanite city-states were replaced by tribal and later national rule, in the coastal region the Canaanite city-state structure continued to exist, in time becoming the flourishing Phoenician kingdoms of the Iron Age. In the early stages of the Iron Age these were clearly dominant in the N, the fort on Mt. Adir probably marking their S border with Naphtali until King David's expansion N to the Litani river reduced Tyre to a small enclave.

e. Dan in the North. The detailed biblical description of the migration of part of the tribe of Dan northwards (Judges 18; Josh 19:47) is confirmed both historically and archaeologically. That Laish was the city of Dan's ancient name is confirmed by its appearance both in the Execration Texts and in Thutmoses III's city list. The identification of ancient Dan with Tell el-Qadi is certain: The Arabic name is a translation of the Hebrew name. Eusebius states that a village named Dan was located 4 miles from

Caesarea Phillipi, as is Tell el-Qadi; and recently the name "Dan" has been found in a Gk inscription at the site. Early Iron Age strata have been uncovered in which were found pithoi of the S type (the collar-rim jar) as well as typical Tyrian pithoi, a remarkable illustration of the biblical episode (Biran 1980: 176).

For obvious historiographic reasons (Naaman 1986: 46) only the S territory of Dan is mentioned in the territorial descriptions attributed to the time of Joshua (Joshua 13–19). Moses' blessing hints that the N area occupied by the tribe reached as far as Bashan (Deut 33:22). Over time, Dan in the N was doubtless absorbed into Naphtali; in fact, Dan and Naphtali appear as the 2 sons of Bilhah (Gen 35:25). The complexity of N Danite identity, however, is suggested in the narrative about Huram-abi, "the son of a woman of the daughters of Dan, and his father was a man of Tyre" (2 Chr 2:14); in the 1 Kgs 7:14 parallel his mother is said to have been "a widow of the tribe of Naphtali."

4. Summary. The transition from the LB to the Iron Age was characterized by great change but also by much continuity. The continuity manifests itself in language, certain aspects of the ceramic repertoire, and apparently in the geopolitical divisions of the country. The changes are seen in the character and pattern of settlement: in the LB Age, cities were located mainly in the lowlands; in the Iron Age, villages were located mainly in the hill country.

The maps of tribal territories undoubtedly reflect the dynamics of the settlement process. In part the territorial units are a continuation of those from previous periods; but on the other hand the borders *between* the tribes either are the areas of intensive Canaanite settlement or are the courses of important transportation routes. For example, the border between the Galilean tribes in the N and Manasseh, in the S is the Jezreel valley, an area of Canaanite and Philistine settlement apparently until the time of David. Similarly, the border separating Zebulun and Issachar in the S from Naphtali in the N is the Beit Netofa valley through which passes the "Hauran Route" (Oded 1971), a route of intensive LB traffic and settlement. The territory of Zebulun is the mountain area between these two Canaanite regions—the Jezreel valley to its S and the Beit Netofa valley to its N. The tribe of Asher settled in the mountain areas E of the coastal towns Acco and Tyre, while Naphtali settled in those W of Hazor. The border between these 2 tribes coincides with an area of sparse Iron Age settlement, possibly the border of the area under the control of Hazor in the previous period.

The regional diversity in ceramic typology between the Tyrian, Galilean, and southern cultures appear partly to coincide with the tribal territories. The Galilean pithos is apparently not found S of the Jezreel valley, and the southern collar-rim jar is not found N of the Beit Netofa valley (the border separating Zebulun in the S from Asher and Naphtali in the N); thus, both types are found in the territory of Zebulun.

The cultural continuity from the LB to the Iron Age points to close connections between the periods. The continuity from period to period of the regional diversity in the ceramic repertoire such as that of the Tyrian and Galilean Pithoi is particularly significant when contrasted with the presence of the southern collar-rim jar at Dan. The latter is quite understandable in light of the biblical tradition about the migration of the tribe of Dan to the N. The lack of similar southern ceramic forms elsewhere in the mountains of upper Galilee suggests a lack of connections to the S in these areas, whereas the Iron Age ceramic forms there are quite similar to those found there from the previous LB period, suggesting continuity in population.

In attempting to explain the changes, one must assess the overall historical background. This was apparently a time of general turmoil. Egyptian punitive expeditions were undertaken by all the pharaohs, and the capture of cities is recorded. Violent conflict between Canaanite kings as evidenced by the Amarna letters doubtless continued, while the ʿApiru and the Shusu probably also played a disruptive role. The Egyptian annals record the invasions of the Sea Peoples, while the biblical traditions describe the penetration of the Israelite tribes (whose presence is also attested in the Israel Stele of Merneptah). The Bible hints also at the appearance of other tribes and peoples at this time.

The crucial issue, however, remains the chronology of the changes. The present evidence shows that the destruction of the LB cities took place over a period of more than a century from the early 13th to the middle of the 12th century. The date of the beginning of the Iron Age villages remains a matter of

controversy. There is as yet no clear evidence, however, that these existed before the second half of the 13th century.

Therefore we must see the end of the LB Age and the early stages of the Iron Age as contemporaneous. The collapse of the city-states was doubtless the result of a combination of external forces—Egyptians, Sea Peoples, Israelites, and others—and of inner strife between and within the cities themselves. The population of the Iron Age villages in the Galilean hill country was probably variegated, but doubtless included many people who formerly had lived in LB cities before their destruction and abandonment, as well as recent immigrants. The inhabitants of a city the size of Hazor probably later populated many such villages, Hazor's area being at least as great as that of all the known Iron Age sites in the mountains combined.

E. The Period of Samuel and the United Monarchy

None of the events the Bible recounts for the period of Samuel and Saul are set in Galilee. The struggles with the Philistines, which was the challenge that led to the consolidation of the tribes and the creation of the Israelite monarchy, took place in the regions bordering on Philistia, primarily in Ephraim and Benjamin.

It has been suggested that the reference to the "Ashurites" in the description of the kingdom Ishbosheth inherited from Saul (2 Sam 2:9) should be read "Asherite" (Alt 1966: 161; *LBHG*, 255), designating the province of Galilee. In no other cases, however, is Asher used to designate Galilee as a whole, and there is no other evidence of Saul being active in this region. Edelman (1985) suggests that the verse refers to a southern Asher. Jezreel (2 Sam 2:9), presumably a region, was part of the kingdom although it is not clear exactly what region was entailed. Beth-shean remained under Philistine control (1 Sam 31:10) as apparently did Megiddo (stratum VI) and the Jezreel valley as a whole. This is probably the explanation for the battle of Gilboa. Saul apparently attempted to gain control over the Jezreel valley in order to enlarge his domain to central Galilee and the Philistines went to war to prevent him; when Saul failed, David inherited the kingdom. There is no doubt, however, that in the time of David not only the mountains of Galilee up to the Litani river but also the surrounding valleys were incorporated into the kingdom.

There is very little evidence about the attitude of the Galilean tribes to the struggle between the houses of Saul and David, or about their attitude to the later struggle between Israel and Judah. However, in later periods there are hints of special relations between Galilee and Judah (see G. below), the story of the wise woman of Abel-beth-maachah and Sheba the son of Bichri being one of these (2 Sam 20:14–22).

The fact that Issachar and Zebulun are sons of Leah and not of Rachel perhaps also symbolizes such a relationship. In genealogical tables in the Bible, the geopolitical elements are no less significance than the historico-genealogical elements. This is demonstrated most strikingly by the Samaria Ostraca as regards the genealogy of Manasseh (*LBHG*, 326, map 29). In the genealogy of the tribal eponyms, Jacob's (Israel's) sons conform to such a geopolitical reality. The sons of Rachel, Joseph (Ephraim and Manasseh) and Benjamin, are the dominant tribes of the N kingdom of Israel, later known as Samaria. The sons of the concubines (Dan, Naphtali, Gad, and Asher) are the peripheral tribes geographically and also politically. The first 4 sons of Leah (Reuben, Simon, Levi, and Judah) are the tribes of the S kingdom of Judah. The fact that Issachar and Zebulun are the last 2 of Leah's sons apparently reflects a geopolitical conception by which these 2 lower Galilean tribes had closer relations to S Judah than with the neighboring region of Israel. The questions that remain are: when did this genealogy finally crystalize, and what specific political situation does it reflect?

As regards Galilee during the Solomonic period, there is evidence both in the Bible and from excavations for Solomon's building activities; there is also evidence for his administrative districts and hints of changes in the political borders during his reign. Megiddo was fortified at this time (1 Kgs 9:15), but there is considerable controversy as to which structures are Solomonic (Ussishkin 1980; Wightman 1985). Hazor stratum X, with its typical 6-chamber gate and casemate wall, was the first city to be built at the site after the destruction of the Canaanite city (stratum XIII), and it is clearly Solomonic. The finds there indicate that Solomon's administration was capable of building a city at the N extreme of his

kingdom, albeit only one-twentieth the size of its Canaanite predecessor. The episode of the 20 cities in the land of Galilee and the land of Cabul (1 Kgs 9:11–14; 2 Chr 8:2) apparently implies Solomon's surrender of taxable land to Hiram king of Tyre, presumably in the coastal plain up to Cabul. It has been suggested that Cabul should be identified with Horvat Rosh-Zayit (M.R. 171253) 2 km NE of the village of Kabul (M.R. 170252). This early Iron Age site was a fortified town in the 10th century, which was superseded by a fort built in the middle of the 9th century (Gal 1984). Gal suggests that the city is the Israelite Cabul and that the fort is Phoenician, built after Solomon relinquished the area to Hiram.

David's administration was apparently based on the tribal structure (1 Chr 27: 16–22; the fact that Asher and Gad are missing is probably a corruption of the text). Solomon's administrative districts, however, were only partly tribal; those districts designated by city names were probably Canaanite regions only recently added to his kingdom (1 Kgs 4:7–20; Alt 1913). The Jezreel, Beth-shean, and part of the Jordan valleys constituted the 5th district designated by the names of cities; Naphtali was the 8th; "Asher and Bealoth" (LXX^A Maalot) the 9th; and Issachar the 10th. Two anomalies appear in the Galilean districts: the absence of Zebulun and the fact that the 9th is the only district apparently comprised of both tribe and city. Alt (1913) suggested that "Bealoth" was a corruption of Zebulun, thus resolving both problems, but for paleographic reasons this has been challenged (Ahlstrom 1979). It has also been suggested that "Bealoth" be read "in Aloth," and that Aloth be identified with Me'ilya (M.R. 174269; cf. Mazar 1942: map 16). That two of Solomon's sons-in-law are listed among the district officers, and that there is no district listed for the Canaanite coastal towns (*NHI*, 213, n. 3), suggests that the administrative list reflects a situation toward the end of Solomon's reign, after territory in Asher had been surrendered to Hiram; thus, in compensation, Aloth would have been added to Asher to help strengthen it. It has also been suggested that Zebulun was incorporated as part of the tenth district of Issachar (*HGB*, 59).

F. The Divided Monarchy

For 200 years, from the revolt of Jeroboam (928 B.C.E.) until the capture of Galilee by Tiglath-pileser III (732 B.C.E.), Galilee was part of the N kingdom of Israel. The history of the period was marked by complicated interrelations between Israel and Judah, as well as between both of these and their neighbors (Tyre, Sidon, and Damascus to the N, Moab and Edom to the E, and the Philistine cities to the SW). In the background loomed the evergrowing Assyrian empire, although, in the S, Egypt was comparatively weak.

Five years after the schism ca. 924 B.C.E., Shishak I conducted a military campaign through Israel. The biblical account focuses only on Jerusalem (1 Kgs 14: 25–28; 2 Chr 12: 1–12), but Shishak's inscription at Karnak (Simons 1937: list XXXIX) indicates that the campaign reached as far N as Galilee. Several places in the Jezreel and Beth-shean valleys are listed (Taanach, Shunem, Beth-shean, Hapharaim, Megiddo). A stele of Shishak was found at Megiddo, and Kitchen (1973: 436–37; 447, no. 126) has suggested that the inscription perhaps includes references to campaigns in the N coastal plain and in the N Jordan valley. Opinions differ as to whether Shishak was responsible for the destruction of Megiddo stratum IVa or b (Yadin 1972: 147–164; Aharoni 1972; Ussishkin 1980; Wightman 1985).

About 40 years later, Asa king of Judah made an alliance with Ben-Hadad king of Aram against Baasha king of Israel. Ben Hadad (I) invaded Galilee; captured the 3 border towns, Ijon, Dan, and Abel-beth-maachah (1 Kgs 15: 20); then advanced to capture the Jordan valley ("Chinneroth") and all Galilee ("all the land of Naphtali"). Hazor stratum IX was probably destroyed in this campaign. A short time after this invasion, and probably partly as a result of it, a series of violent political upheavals raised Omri to the throne of Israel (1 Kgs 16:8–22). He and his son Ahab after him carried out a different foreign policy: cooperation with both Judah and Tyre as manifested in marriages with both royal houses (2 Kgs 8:26; 1 Kgs 16:31). However, throughout the Omride dynasty there was continuous struggle with Aram-Damascus. Ben-Hadad (II) seized Samaria, but Israel subsequently defeated Aram at Aphek (1 Kgs 20:26), recently identified with a tell in the valley below Fiq in the Golan (see APHEK). Ahab was killed fighting Aram in Gilead (1 Kg 22:32–38), and the death of his son Joram and Jehu's revolt that displaced the Omride dynasty was also connected to the war against Aram at Ramoth-gilead (2 Kgs 9:14–27).

At the same time, Assyrian influence began to be felt in the region. In Shalmaneser III's description of the battle at Qarqar (853 B.C.E.), both Ahab the Israelite and Hadadezer of Damascus are mentioned.

According to the usual reading, Ahab's army consisted of 2,000 chariots and 10,000 foot soldiers (*ANET*, 279); but it has been recently suggested that this is a scribal error and should be read as 200 chariots (Na'aman 1976: 97–102). The Assyrian campaigns are not mentioned in the Bible, although the alliance with Damascus is perhaps hinted at (1 Kgs 22:1–4; *LBHG*, 305). The description of the Qarqar battle is without doubt one of the factors that has led scholars to regard Ahab as an important monarch (Yadin ascribed Hazor stratum VIII to him). In this stratum, Solomon's city (stratum X) was doubled in size and the water system and storehouses were built. Stratum IVa at Megiddo, with massive wall, water system, and 17 pillard buildings (described as stables), has also been ascribed to Ahab (Yadin 1972: 147–78). There is, however, controversy as to the date of both stratum VIII at Hazor and stratum IVa at Megiddo (Kenyon 1971: 106; but see Kenyon 1975: 167–169; Aharoni 1972), and it is possible that neither should be attributed to Ahab. There is similar controversy as to the function of the pillared buildings, which are probably royal storehouses (Pritchard 1970; Herzog 1973; Na'aman 1981: 142–43).

One of the first events to take place after Jehu's revolt was the campaign of Shalmaneser III (841 B.C.E.), who besieged Damascus and then proceeded to ḫa‹ali Rasi"—the headland, probably the Carmel—to receive tribute from Jehu and from the kings of Tyre and Sidon (*ANET*, 280). The description of Shalmaneser's receipt of tribute on Baali-Rasi (Carmel), combined with the fact that the religious struggle between Tyre and Israel was symbolized by Elijah's sacrificing on Mt. Carmel (1 Kings 18), suggests that this had become the political border between Israel and Phoenicia, although we cannot determine when this border was fixed. The only hint as to a conflict between Israel and Tyre in the written sources is Amos 1:7–10, which presumably refers to a later period. However the violent destruction and abandonment of the fort at Horvat Rosh Zayit (Gal 1984) is evidence of such a conflict in the middle of the 9th century.

The struggle with Aram continued during the reigns of Jehu and his son Jehoahaz, and Hazael king of Aram prevailed over both Israel and Judah (2 Kgs 10:32–34; 12:18; 13:3–4; 22). It was only in the days of Joash the son of Jehoahaz that Israel succeeded in rebuffing the Arameans, the battle once again being fought at Aphek, the gate to Golan (2 Kgs 13:17, 25), and the century-long conflict came to an end. It has been suggested that stratum VII at Hazor was destroyed by Hazael and that from this time on (except for a short interlude) Galilee as a whole was under Aramean rule (Oded 1971: 195–97). The battles described in the Bible, however, took place in Gilead (Ramoth-gilead), in the Golan (Aphek), or in the environs of Samaria and in Judah, and even in the very detailed list in 2 Kgs 10:33 there is no mention of Galilee. The written evidence therefore suggests that the wars between Damascus and Samaria bypassed Galilee. Furthermore, the large degree of continuity at Hazor between strata VIII–V makes it most unlikely that strata VI and V were Aramaean. Several Iron Age forts oriented towards the S and E have been identified in upper Galilee, and although their exact character and date must await excavation these were probably built as a defense against the Aramaean threat.

During the reign of Jeroboam, the son of Jehoash, Israel became a dominant force in the region and succeeded in enlarging its territory N at Aramaean expense (2 Kgs 14: 25–28; Amos 6:14). It was a prophet from lower Galilee, Jonah the son of Amittai from Gath-hepher, who encouraged Jeroboam in his program of territorial expansion. Strata V–VI at Hazor, particularly the citadel with houses of the elite at the W end of the town and the residential quarter in the center, provide evidence of the prosperity enjoyed during this period. Stratum VI was probably destroyed in an earthquake (Amos 1:1; Zech 14:5), and the residential quarter was immediately rebuilt, but with some changes that perhaps hint at attempts to adapt the house plan to that of the popular 4-room house (stratum V; Shiloh 1970).

The Assyrian armies of Tiglath-pileser III appeared in the region attacking Philistia in 734 B.C.E. and capturing Damascus and Galilee in 733–732, turning them into Assyrian provinces (Tadmor 1967). The biblical account enumerates the cities captured by Tiglath-pileser at the N approaches to Galilee (Ijon, Abel-beth-maacah, Janoah, Kedesh, and Hazor) and then sums up "Gilead and Galilee, all the land of Naphtali" (2 Kgs 15:29). Janoah is the only town whose identification is uncertain. Identifications with 2 sites whose names resemble Janoah are problematic since the sites are too far distant from the other towns mentioned; one too far to the SW (*LBHG*, 37a), the other too far to the NW (Rainey 1981). Kaplan

(1978), however, has suggested identifying Janoah at Tel Shoquet, situated between Abel-beth-maachah, Kedesh, and Hazor (as the biblical reference suggests). In the Assyrian annals the names of several other places appear: *Hi-na-tu-na* (Hinatun) and *(Ia)-at-bi-te* (Jotbah) in the Beit Netofa valley, and "Aruma [and] Merom … fortified cities in the land of Omri [situated] on high mountains" presumably in upper Galilee (Tadmor 1967), although some regard these as being in lower Galilee (Na'aman 1986: 119–34). The Assyrian records also enumerate the number of people exiled from some of the cities, providing data useful in estimating the population of Galilee at this time. Tadmor (1967) has pointed out, however, that there is no evidence of the Assyrians settling people in Galilee from other parts of the empire, as was done in Samaria a decade later (*ANET*, 284; 2 Kgs 17: 24).

Excavations at Hazor revealed dramatic evidence of the preparation for the Assyrian attack. Existing residential structures (stratum Vb) were destroyed to allow for additional fortifications (stratum Va), and alternative housing was constructed. The final destruction itself is also evident, and it is even possible to discern from which direction the attack came.

The material culture in the few sites excavated in Galilee from this period shows a marked similarity to that exhibited in contemporaneous Judean sites, among these are the "pillared buildings" (storehouses/stables) and the "4-room houses." On the other hand, there are elements found in various sites both in Galilee and in other parts of N Israel showing affinities to the Phoenician cities to the NW and Syrian cities to the NE. Phoenician influence is particularly marked in the ceramics and the ivories, although one ivory found at Hazor shows Syrian influence and a pillar base found at Dan is similar to one found at Carchemish. The proto-aeolic capitals found at Hazor are markedly different from those found at other sites; they are more naturalistic and lack the typical (frontal) triangle (Shiloh 1979). It has been suggested that this difference is due to their earlier date (Aharoni 1982: 216); however, the capitals from Hazor show marked affinities to capitals appearing in reliefs from the N (Frankfort 1954: fig. 89, pl. 121), and thus their unique character is partly regional, apparently also a result of N influence.

G. Assyrian and Persian Rule

The Israelite regions captured by Tiglath-pileser III became Assyrian provinces named after their respective capitals: Dor (*Duru,* the Sharon coastal plain), Gilead (*Galaza,* the region E of the Jordan) and Megiddo (*Magiddu,* presumably Galilee). After Sargon II captured Samaria, the remaining region became a province of that name *(Samerina).* The prophet Isaiah (8:23—Eng9:1) was perhaps referring to these provinces in his description of the future exaltation of "the way of the sea [Dor? but see Rainey 1981], the land beyond the Jordan [Gilead], Galilee of the nations" [Megiddo].

Little is known of Galilee at this period. At Megiddo (stratum III) fine examples of courtyard buildings, clearly part of the administrative capital, were found exhibiting Assyrian characteristics (Amiran and Dunayevsky 1958). This, however, was not the last Iron Age stratum of Megiddo; stratum II consisted only of a fort, and Alt (1938: 90–93) suggested that the capital of Galilee had been moved from Megiddo to Acco. At Hazor (stratum III), however, a fort resembling the Megiddo courtyard buildings was built on the ruins of the Israelite citadel (Yadin 1972: 191–194), and a large and impressive building built below the tell has been identified as an Assyrian palace or residence (Reich 1975). Avi-Yonah (1977: 25) has suggested that this, not Acco, was the capital of Galilee that replaced Megiddo. The fine bronze cup in the shape of an antelope's head found at Kafr Kana is additional evidence of Assyrian presence in Galilee (Frankfort 1954: 103, pl. 118A).

Recent surveys show a marked decline in the size and number of sites during this period (Gal 1982a: 78–79), as opposed to a marked increase in Judah (Kochavi 1972: 85). Also, the ceramics of the N are now stylistically much less similar to that of the S than in previous periods. Nevertheless, there is considerable biblical evidence for ongoing contact between Judah and Galilee during this period, in some ways more than between Galilee and Samaria. At the time of the great Passover, Hezekiah is said to have sent messengers to Ephraim, Manasseh, "and as far as Zebulun." It is then stated that the people ridiculed the messengers, but that a few people from Asher, Manasseh, and Zebulun (but not from Ephraim) came to Jerusalem (2 Chr 30: 10–11). Ephraim's omission could be the result of a later scribal error; it could reflect the truly special relationship between Judah and Galilee; or it could well be a result of the

Chronicler's historiographical preference for Galilee. Also, 2 Kgs 21:19 records that Manasseh, undoubtedly at Hezekiah's initiative, married Meshullameth the daughter of Haruz from Jotbah in lower Galilee (2 Kgs 21:19), identified with either Kh. Shefat (M.R. 176248) or Kerem el-Ras (M.R. 182239).

During Josiah's reign, Judaean influence extended to Megiddo (2 Kgs 23:29) and even farther N (2 Chr 34:6). The fort of Megiddo (stratum II) has been dated to this period. According to 2 Kgs 23:36, one of Josiah's wives was Zebudah the daughter of Pedaiah of Rumah (Kh. el-Rumeh; M.R. 177243), located in the Beit Netofa valley only a few km from the 2 sites proposed for Jotbah, the hometown of Josiah's grandmother. Apart from Athaliah the Israelite princess (2 Kgs 8:26), these 2 queens from lower Galilee are the only queens of Judah known not to come from Judah.

During the Persian period there is considerable archaeological and written evidence for the importance and prosperity of the Phoenician towns on the coast. The main source is the *Periplus* attributed to Scylax of Coryanda, but shown to date to the 4th century B.C.E. and known as pseudo-Scylax (Avi-Yonah 1977: 28–31). The S coastal cities are all described as belonging either to Tyre or Sidon; but Acco and a city to its N (presumably Achzib) were apparently independent, and Acco is known to have been the Persian base for wars against Egypt (Strabo *Geog.* 16.2.25; Diod. 15.41.3). The archaeological evidence shows Acco to have grown immensely at this period (see ACCO), and the population inland also increased. We have no written evidence as to the administrative divisions of the region, but Hazor was probably capital of the province of Galilee during this period also (Avi-Yonah 1977: 28–31).

A fundamental historical question that has aroused much controversy is the character of the population of Galilee culturally and ethnically in the Persian period—more specifically the degree of continuity between the Israelite presence in Galilee in the First Temple period and Jewish Galilee at the end of the Second Temple period. According to one view (Bar-Kochva 1977: 191–94), the Jewish population in Galilee in the Mishnaic period consisted mostly of descendants of Itureans converted during the Hasmonean period and Jews who migrated from Judea later. The main arguments put forward are: the complete lack of any reference to Galilee in the biblical sources of the Second Temple period; the complete lack of archaeological evidence of a specifically "Jewish" character from this period; and the fact that the situation in Galilee at the time of the Hasmonaean revolt as reflected in the written sources would appear to be one of a predominantly Gentile majority and a small Jewish minority (1 Macc 5:21–23). Archaeologically the material culture in Galilee in the Persian period has been defined as Phoenician in character (Stern 1973: 237), and attempts have been made to show that sites important in later Jewish history had no antecedents in the First Temple period (Meyers, Strange, and Groh 1978).

On the other hand, the same written sources have been interpreted as showing the existence of a Jewish population in Galilee before the Hasmonaean conquest (Alt 1939; Stern 1974: 225–26; Fuks 1981). Further, the deep-rooted Jewish traditions of a distinctly Galilean Judaism (already manifested in early Mishnaic texts) could not have arisen over such a short period or developed in a region that had been previously antagonistic. Furthermore, Samaria came under Hasmonaean rule a generation before Galilee; therefore the schism between Judah and Samaria, as well as the close connection between Galilee and Judah only 2 or 3 generations later, can only be explained as originating in characteristic differences between Galilee and Samaria in previous periods.

There is biblical evidence for connections between Israelite elements in Galilee and Judah after the Assyrian conquest (2 Chr 30:10–11; 2 Kgs 21:19; 23:36), and it has been suggested that the cultural difference between Galilee and Samaria had its origins in the fact that the Assyrians settled people from other parts of their empire in Samaria but did not do so in Galilee (Tadmor 1967). The two remaining questions are whether or not there were differences between Galilee and Samaria prior to this, and in which parts of Galilee a Jewish population survived and continued into the Second Temple period.

RAFAEL FRANKEL

HELLENISTIC/ROMAN GALILEE

A. Introduction
B. Administrative History
C. Economic and Social Conditions
D. Cultural Ethos
E. Christian and Jewish Sources

A. Introduction

As applied to the N part of Israelite, and later Jewish territory, the name Galilee has been interpreted to mean "the circle" or "the district" (Bosen 1985: 13–17). The former would be indicative of the early

Israelite experience, surrounded by Canaanite city-states, and is perhaps echoed in the designation "Galilee of the Gentiles" (Isa 8:23). Whatever about the precise designation, Galilee had become a proper name relatively early, as the repeated description of Kadesh as "a city in Galilee" (Josh 10:7; 21:32; 1 Chr 6:61) indicates. It is, perhaps, significant that the expression "Galilee of the Gentiles" is echoed in the Hellenistic period (1 Macc 5:15) when the predominantly Jewish territory was encircled by Hellenistic city-states.

Josephus gives a detailed description of Jewish Galilee of his own day, defining its boundaries in terms of the surrounding states: On the W lay the regions of Carmel and Ptolemais, with those of Gaba (of the cavalry); Samaria and Scythopolis were to the S; on the E side the territories of Hippos, Gadara, and the Gaulanitis touched the Sea of Galilee; and to the N the territory of Tyre completed the circle (*JW* 3.35–40). There is some scattered evidence, however, also from Josephus, to indicate that the territory had once been more extensive (*Ant* 5.63.89; *JW* 2.188f; 3.25). Both Josephus and the Mishnah agree on distinguishing between upper and lower Galilee, the latter on the basis of altitude and vegetation including a third division, namely the valley of Gennesar (*JW* 3.38f; *m. Šeb* 9.2), but the distinction had also social and cultural implications.

B. Administrative History

We are poorly informed about the administrative divisions of Palestine as a whole in the Persian period, and hence there is no definite information on whether Galilee constituted a separate political region at the beginning of the Hellenistic period. As part of Coele-Syria it was at the center of the struggles between the Ptolemies and the Seleucids during the 3d century B.C.E., and several of the campaigns that ensued between the rival Hellenistic monarchs were conducted in the region (*Ant* 12.132; Polybius, *Hist.* V, 62.2; 87.1–7). In the wake of the Hellenistic reform of Antiochus IV Epiphanes, the Maccabean brothers were also involved in struggles there. Simon went to Galilee and rescued the Jews who were being harassed by the gentiles, probably only in the region of the Hellenistic coastal cities (1 Macc 5:14–23), and later Jonathan engaged the Syrian general Trypho at Kadesh in Galilee (1 Macc 11:63; 12:47,49). Two of the sons of John Hyrcanus, Antigonus and Alexander Jannaeus, are said to have lived in Galilee, and the former may have conducted a military campaign there (*Ant* 13.304.322). A third son, Aristobulus, had the Itureans, who had infiltrated into Galilee, forcibly circumcised as part of his consolidation of Jewish-controlled territory, though (*HJP²* 2:9), this episode cannot apply to the whole of Galilee (*Ant* 13.318f, on the report of Timagenes, cited by Strabo). At all events the Jewishness of Galilee is recognized by both Pompey and Gabinius, the former making it part of the territory ruled by the ethnarch Hyrcanus II (*Ant* 14.74), and the latter establishing a sanhedrin at Sepphoris as one of 5 such centers for his administrative reorganization of Jewish territory (*Ant* 14.91).

After the long reign of Herod the Great, who as a young man had been governor of Galilee, and who encountered stiff resistance there at the beginning of his reign as king of the Jews (40–37 B.C.E.), the province was again detached from the S and, together with Perea, became part of the territory allotted to Herod's son, Antipas. He ruled as tetrarch (though Mark 6:14 gives him the title *basileus*, king) from 4 B.C.E.–39 C.E., and it was in this period that Sepphoris was restored as the ornament of all Galilee (*Ant* 18.27) and Tiberias founded, probably in the year 19 C.E. (*Ant* 18.36–38). The old kingdom of Herod the Great was briefly restored under his grandson, Agrippa I (41–44 C.E.). Thereafter, Galilee, while clearly retaining some internal administrative separateness (cf. the evidence of Josephus' *Life* at the outbreak of the First Jewish War), appears to have been included in an enlarged province of Judea (*Ant* 20.137; *JW* 2.247; Tac. *Ann.* 12.54), even though Nero granted the cities of Tiberias and Tarichaeae with their territories to Agrippa II (*Ant* 20.159; *JW* 2.252). After the First War this administrative pattern was further developed, with Galilee incorporated into a reorganized province of Judea. However, a policy of increased urbanization was part of the Roman strategy also, especially after the Bar Kokhba revolt, when practically all of lower Galilee came under the administrative control of Sepphoris and Tiberias (Avi-Yonah 1966: 111). Upper Galilee seems to have remained under direct Roman rule, with its village life-style reflected in the later official Roman name for the area, Tetracomia. About the year 400 C.E. there is evidence concerning a Roman province, one of three in Palestine, called Palestina Secunda. This included

Galilee of earlier times, the cities of the Decapolis and the Gaulan, as well as Scythopolis, which served as the capital of this enlarged province (Avi-Yonah 1966: 126).

Galilee, then, is a recognized administrative territory throughout the Hellenistic-Roman period according to the ancient literary sources. We are less well-informed about its internal administration, apart from the city territories, though Josephus speaks of 204 cities and villages when he took over administration of the province in 66 C.E. (*Life* 235). This strongly suggests a rural way of life, even though some of the places not included in the list of chief cities (*Life* 123) such as Tarichaeae (presumably to be identified with Magdala), Gischala, and Gamala (in the Gaulan, though closely linked with Galilee) were, on the basis of other evidence, large and thriving centers, each with such hallmarks of a typical city as walls, a hippodrome, and its own adjoining land (*JW* 2.252.599; *Life* 45.188). In addition, Corazin, Bethsaida, Capernaum (Matt 11:20), and Nain (Lk 7:11) are also designated *poleis* in the gospels. Because of this, it has been suggested (Sherwin-White 1963: 130) that Josephus uses the term "city" to denote a toparchic capital. On that reckoning, there would be 4 such centers in lower Galilee, with upper Galilee—sparsely populated in the early Roman period—constituting a 5th administrative unit in the area (Avi-Yonah 1977: 97f); however, others have argued for as many as 8 toparchic districts in Galilee (Klein 1928: 44–47).

On the basis both of the gospels and Josephus's *Life*, the internal administration of justice, as well as aspects of commercial and political activity, were in the hands of locals, presumably elders, but sometimes designated *hoi protoi ton Galilaion* (Mark 6:21; *Life* 220). This is similar to patterns of organization in other peasant cultures in antiquity, though we also hear of such local officials as the village scribe *(komogrammateus),* the leader of the synagogue *(archisynagogos),* the village chief *(archon),* the market supervisor, *(agoranomos)* and the controller of finances *(epitropos).* Larger centers such as Tiberias, and presumably also Sepphoris, had all the trappings of a *polis* with a *boule* (council), a *demos* (assembly), and an *archon* (a chief magistrate). Collection of taxes and tolls seems to have been highly organized also, presumably dating from Ptolemaic times, when a bureaucratic network, consisting of locals and foreigners, was established throughout the land on lines similar to Egypt, as we learn from the Zenon papyri (Freyne 1980a: 183–93).

C. Economic and Social Conditions

Galilean economic and social life was largely based on its rural ethos, though there is some evidence of other industrial activity as well. Josephus extols the fertility of the land, and, therefore, the intensity of agricultural activity (*JW* 3.42f). Elsewhere, he singles out the plain of Gennesar in particular for its fertility and the variety of its foliage based on ideal climatic conditions and a spring (*JW* 3.518). This picture can be substantiated both by archaeological surveys based on aerial photography, which suggest intense cultivation of the slopes and terraces, as well as by inference from modern climatic conditions (Applebaum 1977). Grapes, figs, and olives are repeatedly mentioned in Talmudic sources as stable produce, but wheat and other cereal crops were also grown, especially in the plains of lower Galilee in the Bet Netofah, Bet Kerem, and Saknin valleys, as well as in the plain of Gennesar. We hear of royal granaries in upper Galilee (*Life* 71); the underground silos at Sepphoris, reported in recent archaeological probes (Meyers 1986), may be further evidence of the wheat-growing capacity of lower Galilee.

In addition to its soil and climatic advantages, Galilee was also ideally situated on the commercial routes to take advantage of the increased trade and commerce of the Hellenistic age. It provided a natural hinterland for the Phoenician coastal cities, and the important trade routes that operated from Tyre, Sidon, and Ptolemais were the natural outlets for the caravans of traders who followed the Via Maris. This was the road that lead from the E over Damascus to the Mediterranean; it followed the borders of upper Galilee and Tyre, or branched southwards by the lakefront and crossed the great plain to the coast or S to Egypt. The archaeological evidence from upper Galilee has convinced Meyers and his team that despite the religious conservatism of the region, as displayed for example in the synagogues of the Roman and Byzantine periods, strong trading and other commercial links existed between Tyre and the region (Meyers 1985: 123–25; Hanson 1980). Josephus informs us that the Jewish town of Chabulon, on the

borders of Ptolemais and Galilee, had its houses built in Phoenician style, thus suggesting similar links between lower Galilee and the coast despite the religious differences (*JW* 2:504f).

Apart from agriculture, the main industrial activities that can be documented from archaeological and literary sources and glass and ceramic ware and the salted-fish industry; as the name suggests, the latter had its center at Tarichaeae, even though the gospels make clear that other places along the lakefront, like Bethsaida and Capernaum, were also involved in the industry. According to the Meiron team's archaeological survey, native Galilean fine ware does not appear on any significant scale before the 3d century C.E., though native Galilean bowls with everted lips are found in the 2d century already (Meyers, Strange, and Groh 1978: 10–16). Prior to that, luxury goods would have been the prerogative of a small band of wealthy Herodian aristocracy, whose affluence is exemplified in the wife of Herod's overseer Ptolemy. Her caravan, comprising of 4 mule loads of apparel and other articles, as well as a large pile of silver and 400 pieces of gold was waylaid as it crossed the great plain (*Life* 127).

The emergence of large estates in which the peasants were sharecroppers, lessees, or simple day-laborers, was a particular feature of Hellenistic economic policy in Palestine. This is indicated by the 3d-century B.C.E. Zenon papyri, especially PCZ 59004, which deals with a tour of inspection conducted by Zenon that covered estates at Beth Anath and Kedasa, both inland from Ptolemais, where he and his retinue had disembarked. Other papyri help to complete the picture: they deal with the intensification of production, the provision of a proper water supply, and housing for the tenants (Hengel 1968: 12f). The gospel parables of Jesus which are presumed to reflect Galilean social conditions, do suggest a situation of absentee landlordism (Mark 12:1–10; cf. Qoh 2:4–12), yet the same parables know of family farms and small landowners also (Mark 4:2–9; Matt 21:28–30). We should not assume therefore that all Galilean landowners were holders of large estates, and that the peasantry was totally impoverished and in a condition of quasi serfdom. The evidence from Josephus, as well as other Jewish literature, suggests the opposite, while allowing for the fact that some of the better land was held in estates, but often in the less densely populated areas across the Jordan (*Life* 33). Herod the Great had made allotments of land both in Batanea and in the neighborhood of Gaba, as part of his colonization policy for security reasons, suggesting that small private holdings, rather than large tracts under single ownership, formed the dominant pattern in the area (Freyne 1980a: 156–70). This would have been reinforced by Jewish religious beliefs and continued as the dominant pattern in the post-Bar Kokhba period (Goodman 1983: 27–40).

Since it was the primary resource, social stratification was very much dependent on who did and did not own land. In this regard the gospel parables are also illuminating, since they presume a mixed social world in which the whole spectrum of large landowners, sharecroppers, and day laborers is represented. Debts were a fact of life, it would seem, and one can infer from the exhortations of Jesus about the sharing of goods as well as the blessings of poverty, that the prevailing social attitudes and assumptions were those of a limited goods economy. The basic resource, land, was in short supply, and consequently there was pressure upwards and downwards on the small owner. A bad harvest or some other catastrophe could mean lifelong penury. The poor tended to move to the cities—Josephus mentions the destitute classes at Tiberias (*Life* 66)—and there is evidence also of banditry, mainly along the borders and well away from the main centers of population (*Life* 77f.105–11.126–31). In view of this information it does not seem to be an accurate profile to suggest that Galilean life in Roman times was in a state of extreme social tension due to the impoverished condition of the population at large. In this regard an interesting contrast can be drawn between Galilee and Judea in the strict sense, where, according to Josephus, the emergence of the *sicarii* in the pre-Revolt period is to be seen as a symptom of the alienation of the people of the countryside, due to the hardships of direct Roman rule. The long reign of Herod Antipas, while not being without its own problems for the Galilean populace, would seem to have shielded them from the worst features of an insensitive or venal Roman administration.

While the majority of the Galilean population was, we maintain, of peasant stock—that is, private holders of small holdings—there were undoubtedly some representatives of other classes also within the province in the 1st century C.E. These would have comprised both native gentry—the upper eschelon of

the Herodian court—as well as military officers of various rank. In fact these 3 categories are mentioned as the guests at Herod's birthday (Mark 6:21), and this list corresponds to what we know from other sources also (Hoehner 1972: 102, 119f).

D. Cultural Ethos

The current understanding of Judaism's complex interaction with Hellenism as a cultural force, even in Palestine, makes it impossible to continue with stereotypes such as the epithet "Galilee of the Gentiles" might suggest. Galilee was unmistakably Jewish, at least by the time of Pompey's intervention; otherwise it would not have been assigned to the territory of the ethnarch, Hyrcanus. See GALILEANS. The question then is: How did their Jewish loyalty affect the cultural affiliations of the natives, given that they were surrounded by Greek-style city-states and their territories? In discussing such a question it is important to recognize that while cultural affiliation and social stratification are intimately interwoven, allegiance to the values of the larger culture at one level need not necessarily mean their acceptance in other more-intimate areas of life. What, for example, are the assumptions of the Markan narrator about cross-cultural contacts in Galilee when we are informed that a Syrophoenician woman, a Greek, came to a Jewish healer, Jesus, in search of a cure for her child? Furthermore one must distinguish between various periods within the Hellenistic-Roman epoch generally for more intense and active hellenization. Thus the reign of Herod the Great would have to be sharply distinguished from the immediate post-Bar Kokhba situation when emigré Jews from the S found upper Galilee a safe haven in the wake of the collapse of the Second Revolt.

There is widespread acceptance of the fact that Aramaic was the lingus franca of Galilee in the 1st century C.E., but that by itself did not mean cultural isolation; it had been for centuries the international language of the whole Syrian region. Greek, had indeed replaced it as the language of trade and commerce as well as of administration since Alexander's conquests. In Galilee this meant that those who first used Greek would have been non-natives or those who were involved in the bureaucratic structures. Inscriptional evidence suggests that Greek was more common in the region of the lakefront than elsewhere, but even then one has to be cautious in using it as a cultural indicator. In the 1st century Tarichaeae was deeply involved in the international fish industry, we must assume, and it was endowed with a hippodrome; yet its inhabitants refused to accept refugee noblemen from the territory of Agrippa unless they underwent circumcision. Likewise, Tiberias, a city with very strong Herodian associations, had as its governor one Jesus, son of Sapphias, who seems to have been imbued with the xenophobic attitudes of the more nationalistically minded Jews of the period.

These instances may have been exceptions to the rule that the more thoroughly Hellenized Jews, both in terms of outlook and values generally, were to be found in the Herodian cities. Justus of Tiberias, described by Josephus as not unversed in Greek education (*Life* 40) would be typical of such a Jew in the 1st century (Rajak 1973). Even the earlier colonization of lower Galilee by the Hasmoneans would not necessarily have meant that the Jews of lower Galilee were particularly opposed to all aspects of Hellenism. The continuity of material evidence has suggested to the Meiron team that in fact they were quite open to such technical influences, even in supposedly conservative upper Galilee (Meyers 1985). At the same time it must be emphasized that no clear evidence, with the possible exception of the bilingual inscription from Dan (Biran 1981), has so far come to light to suggest syncretistic attitudes among the Jews of Galilee in the religious sphere—even when the late Roman and Byzantine synagogues, such as Hammath Tiberias and Capernaum manifest a combination of pagan and Jewish motifs in their artwork. A recently discovered mosaic of the wine god Dionysus, from Sepphoris, awaits a definitive interpretation (Meyers, Netzer, and Meyers 1987); but it is unlikely to change the profile of Hellenistic influences at this level being confined to the Herodian nobility, even if identification of Yahweh with the wine god may have been a particular temptation for people in the Galilean region generally (Smith 1975; Freyne 1988a).

Other indicators of cultural change such as art and architecture, the presence of various symbols of the Greek way of life—theaters, baths, gymnasia, and the like—are indeed present in the archaeological remains as well as being mentioned in the literary evidence. "Their acceptance was greatest where it did not affect native traditions at all, as with the use of baths, and least where it affected them the most, as

with the insistence on the study of the Greek poets as the basis for education, rather than the Bible" (Goodman 1983: 86). Despite the clear evidence for trading influences with Tyre in upper Galilee, there seems to be reliable indications that it remained culturally more isolated than lower Galilee, as well as being less-densely populated in the early Roman period. On the basis of what we know from elsewhere, some distinction must also be made between the city culture of such places as Sepphoris and Tiberias as well as the larger of Josephus' densely populated villages and the smaller units among the 204 such places which he claims for Galilee. In many of these, the natural conservatism of the peasant way of life would have been resistant not just to the cultural aspects of Hellenism, but even to its technical advantages. Claims to the contrary, often based on meager and disparate evidence, notwithstanding, there seems to be every indication that such resistance, often supported by Jewish religious values, was quite successful.

E. Christian and Jewish Sources

Galilee's ongoing significance both in ancient literature and modern scholarship is largely due to its association with Jesus of Nazareth. The different evangelists focus on different aspects of his association with the region. In Mark, Galilee stands in opposition to Jerusalem as the place in which Jesus conducts a successful ministry of healings and exorcisms and where he is to be reunited with his chosen disciples (16:7). Matthew, maintaining the Galilee-Jerusalem tension of Mark, portrays the career of Jesus as messianic and seeks to validate its claims through scriptural allusions (2:21; 4:15–16). Even though he also includes the woes against the Galilean towns for not accepting Jesus' message (11:20–24), he still locates the final meeting of the Risen One with his disciples and their commissioning for a universal mission on a mountain in Galilee, not in Jerusalem, as might have been expected on the basis of prophecy (28:16; Isa 2:2–4). For Luke, Galilee is the place of beginnings (23:5; Acts 10:37) from which the Jesus movement begins its journey that will eventually lead it to the end of the earth through Jerusalem. In John, Galilee functions as a place of refuge (4:1), but also as a place of revelation through signs (2:11; 4:44; 21:2), even though it receives much less narrative space than it does in the Synoptics.

Because of its treatment in the gospel narratives many different suggestions have been made about the importance of Galilee for the early Christians, ranging from the location of the expected Parousia to symbol of the gentile mission of the church (Stemberger in Davies 1974: 409–38). Despite its symbolic role within these narratives, the importance of Jesus' historical association with the region must also be acknowledged, since a genuine memory of an actual ministry there undoubtedly underlies the later treatment of the region as the location for his career (Bauer 1927; Freyne 1988a).

By contrast, Galilee does not feature prominently in the Jewish sources, even though such foundational documents as the Mishnah and the Yerushalmi reached their final redaction in the schools of Galilee and the Palestinian Targum must assuredly have originated in its synagogues. In the Mishnah it functions for the most part as a separate region from Judea for the working out of the implication of various case laws, but with little concern for detail beyond a few references to certain local customs and differences from Judea in weights and measures. This absence of concern for geographic setting matches the Mishnah's neglect of historical particularity in terms of its overall worldview (Neusner 1981). The often-cited dictum of Johanan ben Zakkai about Galilee's neglect of Torah learning would appear to reflect later Galilean neglect of the authoritative claims of the rabbinic schools, even though the impressive synagogue remains that have been uncovered in upper Galilee suggest an active Jewish faith with a prosperous social base. Despite the revolt under Gallus in the mid-4th century C.E., which was centered on Sepphoris (Diocaesarea) and which may have been prompted in part, at least, by increasing Christian claims on Palestine, Jewish and Christian practice would appear to have coexisted side by side in Galilee down to the Arab conquest, a fact to which the archaeological remains of a Christian church and a synagogue side by side in Capernaum bear striking witness down to the present day (Corbo 1975; Tzaferis 1985).

SEÁN FREYNE

GALILEE, SEA OF (PLACE). The large expanse of water in the Jordan Valley rift which separates Galilee from the Gaulan and Decapolis regions. There is no consistency in the name that is given to it.

A. Terminology

In the OT, this lake was called "the sea of Chinnereth" (Heb *yām kinneret,* cf. Heb *kinôr,* "lyre[-shaped]"), and it is mentioned in connection with the N territorial boundary of the early Israelite settlement (Num 34:11; Josh 12:3; 13:27). Josephus, who gives the most detailed description, usually calls it "the lake of Gennesar (itis)" (*JW* 2.573; 3.463, 506, 515–16; *Ant* 5.84; 13.158; 18.28, 36); less frequently he designates it "the lake of Tiberias" (*JW* 3.57; 4.456) or simply "the lake" (*Life* 96, 153, 165, 304, 327). Pliny assumes that the usual name is the "lake of Gennesaret," while observing that some call it " (the lake of) Tarichaeae" from the name of that town on its shore (*Nat. Hist.* 5.71).

These variant designations are easily explained on the basis of local topography, since Josephus does tell us that natives called it the "lake of Genessar" because a place by that name was situated above the NW shore of the lake (cf. 1 Macc 11:67). In all probability this was the oldest name, since it is clearly a grecized version of "the sea of Kinnereth." The other designations—lake of Tiberias or lake of Tarichaeae—obviously stem from Roman times when these were established Herodian centers on the lakefront, each with its own territory.

Of the gospel writers, Luke alone retains the more general usage, speaking of the "lake of Gennesar" (Gk *limnēn Gennēsaret;* 5:1) or "the lake" (5:2; 8:22, 23, 33). Mark and Matthew, on the other hand, never use the term "lake," but speak of the "sea" (Gk *thalassa:* Mark 7 times and Matthew 11 times), each employing the fuller expression "sea of Galilee" (Gk *thalassan teμs Galilaias*) twice (Mark 1:16; 7:31; Matt 4:18; 15:34). John also speaks of the "sea of Galilee" (John 6:1), to which he adds "of Tiberias." Elsewhere in chapter 6 he speaks of the sea 6 times, and in the later addition to the work, chap. 21, we read "the sea of Tiberias" simply or "the sea" (21:1, 7).

Different proposals have been made to explain this rather distinctive usage. In ancient Semitic and Jewish mythology the sea is associated with evil monsters, of whom Yahweh is lord (Job 38:8, 11; Ps 107: 23–25, 28f). This idea would certainly concur with Mark's theological point of view in regard to

Jesus (Mark 4:35–41; 5:13). Furthermore, within Mark's gospel the various sea journeys mediate between the oppositions represented by the Jew/gentile portrayals within the work, which Jesus, Lord of the Deep, reconciles (Struthers-Malbon 1984). Alternatively, the case has been made by Theissen (1976) for seeing the terminology of the gospel writers in the light of local coloring, and the proximity of the traditions about Jesus and the lake to their original setting. In this connection the Heb *yām* can mean either sea or lake (something Jerome had noted against Porphyry who had attempted to discredit the miracles of Jesus). Mark's constant use of *thalassa* (followed by Matthew), would, in this view, be partly reflective of this linguistic background, but would also point to local usage by country people, living close to the lake and with a very restricted view of the world. Luke's constant use of *limnē* bespeaks a greater distance from the local situation and a much wider horizon, which recognizes that the only proper "sea" in the region was the Mediterranean.

B. Geography

The lake forms part of the rift that is usually called the Jordan valley. The 3 head-streams that eventually flow together to form the river rise in the foothills of Mt. Hermon (*JW* 3.515; 4.2–3) and enter lake Huleh (Semachonitis). In Josephus' day this was approximately 7 miles long by 4 miles wide, surrounded by marshes. (Today, due to extensive Israeli irrigation, the whole area has been drained.) From there the river descends rapidly—930 feet in a 9 mile stretch—to the lake of Gennesareth. The lake, then, is part of a deep basin surrounded by mountains on both sides, but opening out on its NW shore into the plain of Gennesareth, the fertility of which Josephus so lavishly extols (*JW* 3.516–21).

With his accurate knowledge of Palestinian, and in particular Galilean, topography, Josephus describes the lake in detail. His dimensions, 140 by 40 stadia—that is, 16 by 4.5 miles—differ apparently from modern reckoning, which is 12.5 by 7 miles. It may be that the line of the lakeshore at the N end has receded since Josephus' day, since there seems to be some evidence that the river bed has changed near the point where it flows into the lake, though it could scarcely diverge by as much as 4 miles (Pixner 1985). The width of the lake as proposed by Josephus may have been estimated from Tiberias or Tarichaeae across to the other side, a journey that Josephus must have made more than once (*Life* 153).

Strabo, Pliny, and Josephus all extol the lake as a natural resource: Its waters were fresh and of a pleasant temperature, unlike the Dead Sea; it had clear, sandy beaches rather than swampy marshes, and in particular it was well stocked with fish (*Geog.* 16.2; *Nat. Hist.* 5.15, 71; *JW* 3.506–8). Two of the towns along the lakefront have names associated with the fish industry: Bethsaida and Tarichaeae. It is generally accepted that the latter is the Gk name for Magdala (Migdal Nunija), a change of name which reflects the techniques for the preservation of fish, and is indicative of the technical advances which Hellenism brought to Palestine. Josephus also mentions that a fish resembling the *coracin*, a type of black eel normally associated with the Nile in Egypt, was found in a spring near Capernaum. This could indicate a deliberate policy of developing the fish industry by the early Ptolemaic rulers in Palestine also, since we know that they had a virtual monopoly of that industry in Egypt (Freyne 1980a: 174f). The gospels also mention the fish industry on the lake (Luke 5:1–10; John 21:1–11; Mark 1:16–20; Matt 4:18–22; 17:27), though the parables of Jesus do not reflect this to the same extent as farming and other types of commercial activity (cf. Matt 13:47f).

Partly because of the industry which the lake, as a natural resource, generated, and partly because of its role as a border between Jewish and non-Jewish territories, the lake's surrounding regions appear to have been quite heavily populated on both sides, with some important settlements in Hellenistic and Roman times. These settlements gave to the lake region a more cosmopolitan character well illustrated by the high incidence of Gk inscriptions in this area of Galilee/Gaulan (Meyers et al 1978: 16). This suggests frequent contacts between the Jewish and non-Jewish communities on either side of the lake, which is further substantiated by the similarity of the material culture of lower Galilee/Golan according to the evidence of the archaeological remains (Meyers 1976: 97).

GALL (LIVER). See SICKNESS AND DISEASE.

GALLIM (PLACE) [Heb *gallîm* (גַּלִּים)]. 1. A town mentioned as the place of origin of one Palti, the son of Laish, to whom Saul gave his daughter Michal, previously married to David, after David fled from Saul (1 Sam 25:44). Nothing further is known of this site (see McCarter *1 Samuel* AB, 400), unless it is the same as the following place.

2. A town located N of Jerusalem (Isa 10:30). It is mentioned by Isaiah in an itinerary of an invading army (Isa 10:27–34). The identity of this invading army approaching Jerusalem from the N has been identified as that of a Syro-Ephraimite coalition in 734–722 B.C.E. (Donner 1964: 30–38). Others identify the assailant as an Assyrian army, either Sargon II in 715 B.C.E. (Wildberger *Jesaja 1–12* BKAT, 427–428) or Sennacherib in 701 B.C.E. (Kaiser *Isaiah 1–12* OTL, 150). Each of these suggestions has points of historical difficulty. The suggestion that the foe is the Syro-Ephraimite coalition is countered by the observations that the text is not within Isaiah memoirs of the Syro-Ephraimite War (i.e., Isa 6:1–9:6) and that a coalition army is not mentioned (Wildberger *Jesaja 1–12* BKAT, 427). Both Assyrian proposals run into the difficulty that the route does not coincide with any known Assyrian invasion (Christensen 1976: 387). Christensen (1976: 397–99) prefers to see this text as having been reworked and rendered anonymous with respect to the identity of the invader in order to transform it into an eschatological war oracle in which the foe is the Divine Warrior: God who comes to besiege Jerusalem in judgment.

This town has been identified with Khirbet Kaʿkul (Albright 1924: 139) and Khirbet Erḥa (Donner 1968: 54), but in neither case is the identification certain. Both sites lie immediately N of Jerusalem. The mentioning of Gibeah of Saul in Isa 10:29 makes it likely that this is the same town as that mentioned in 1 Sam 25:44 (above, 1), also connected with Saul.

JEFFRIES M. HAMILTON

GALLIO (PERSON) [Gk *Galliōn* (Γαλλιων)]. L. Iunius Gallio Annaeanus, born M. Annaeus Novatus but later adopted by Iunius Gallio, was the oldest son of the rhetor L. Annaeus Seneca Sr. of Corduba (Spain) and a brother of L. Annaeus Jr., the famous politician and author, and of L. Annaeus Mela (Tac. *Ann.* 16.17.3, Stat. *Silv.* 2.7.32). Under Claudius he became proconsul of Achaia, in A.D. 55 consul suffectus (Pliny *HN* 31.62). In A.D. 59 he had to act as compère for Nero at his appearance on the stage (Dio Cass. 61.20.1). He died in A.D. 65 in the aftermath of the Pisonian plot as did his 2 brothers (Dio Cass. 62.65.3), probably by suicide (Eusebius ad annum 64), although the senate had testified to his innocence (Tac. *Ann.* 15.73.3). Famous for his charm, his brother Seneca speaks of him with admiration and love, especially commending his contempt of adulation (Stat. *Silv.* 2.7.32; Sen. *QNat.* 4 praef.10). He shared Seneca's low opinion of Claudius, as is shown by an ironical comment upon the emperor's death by poison (Dio Cass. 61.35.3). Both Seneca and Plinius mention a sea voyage which Gallio chose as an immediate remedy against symptoms of phthisis when he was in Greece (not during his proconsulship as some modern writers wrongly assume) (Sen. *Ep.* 104.1; Pliny *HN* 31.62; Cel. *Med.* 3.22).

Gallio's proconsulship in Achaia becomes a matter of biblical studies because of his encounter with the apostle Paul as narrated in Acts 18:12–17. The story is important for chronological and legal aspects of early Christian history.

A. Chronology

The event gives one of the few firm and rather precise starting points for fixing the journeys of Paul within the frame of secular history and so-called absolute chronology. From 1905 on a number of fragments from an inscription at Delphi (in 1967 totalling up to 9) have been published which mention Iunius Gallio as proconsul and friend of Caesar. The text seems to be a letter (to the city of Delphi?) or decree of Claudius and is dated after the 26th acclamation of Claudius as imperator which leads to a date within the first 7 months of the year A.D. 52, probably in spring (Plassart 1967: 377). According to the reconstruction of the text by Plassart (1970: 27–30), which was only slightly modified by Oliver (1971: 239–40) and Hemer (1980: 7), Gallio had reported the depopulation of Delphi; in reaction, the emperor gives orders to encourage new settlers to come to the city. Plassart (1967: 376; 1970: 31) takes the letter to be addressed to an individual (reading the pronoun *se* in line 17) different from Gallio (mentioned in the third person in line 6), probably his successor as proconsul; however, Oliver (1971) questions this reading of line 17 and concludes from the use of the title *anthypatos* in line 6 that Gallio is still holding his office at the time the letter was dispatched. Taking into account that the letter publishes a political decision with antecedents in a report of the proconsul (and beyond), and reckoning in that governors had to take up their provincial residence by May 1st and used to stay in office for 1 year at least, we reach the conclusion that Gallio seems to have been at Corinth in A.D. 51–52, if not longer. The 18 months of Paul's first stay at Corinth (Acts 18:11) must overlap with this period.

More cannot be said from this part of the evidence—contrary to a popular reading of Acts 18:12,18 which dates the event at the beginning of Gallio's proconsulship and shortly before the end of Paul's Corinthian ministry. Acts 18:12 does not say that Gallio had just taken up office, and "many days" in Acts 18:18 does not denote a short time but rather a longer one (Haacker 1972: 253–54; cf. 1 Kgs 2:38–39). The assumption that Paul left Corinth soon after Gallio's arrival as proconsul becomes highly improbable if Orosius (7.6.15–16) is right in dating the expulsion of Jews from Rome (mentioned in Acts 18:2 and Suet. *Claud.* 25.4) in the 9th year of Claudius (i.e., A.D. 49). Aquila and Priscilla, whom Paul met on his arrival at Corinth and whose firm he joined for a while, will have needed some time for leaving Rome at the emperor's command and for resettling and reopening their business at Corinth. All this considered, the proposal of Hemer (1980: 8) that "Paul was in Corinth from autumn 50 to early summer 52" makes good sense.

B. Legal Aspects

The encounter of Gallio and Paul is introduced by Luke as a dramatic episode if not the climax of the apostle's conflict with the majority of the Jewish congregation at Corinth (Acts 18:1–11). Unable to accept the Gospel and unwilling to lose the support of semi-pagan sympathizers who responded to Paul's preaching, the Jewish leaders resorted to legal proceedings against the Christian movement. This step runs into the traditional policy of Jewish congregations to secure as much autonomy as possible, especially in religious matters, a fact which reveals the severity of the conflict.

The historicity of the event had been disputed by Juster (1914, 2: 154–55) because of the clumsiness of the charge against Paul but was convincingly defended by Sherwin-White (1963: 99–100) who defines the proposed trial as a case of *cognitio extra ordinem* where the judge was free "to decide whether to accept a novel charge or not" (100). A refusal of unsatisfactory charges was likewise possible in the context of an ordinary *quaestio* where the defendant could be present already at the *delatio nominis* (as Paul was according to Acts 18:12) in order to be asked to plead guilty or not guilty (*PW* 24/1: 755–56). In the case of Paul, however, the judge refused to enter into any preliminary proceedings.

Of course the accusation against Paul did touch problems which could demand legal action, since Corinth was a Roman colony and Roman society did not know religious liberty or toleration in the modern sense of the word (Garnsey 1984; cf. Acts 16:20–1). But apparently the enemies of Paul could not charge him with any break of public law, so that they could only denounce his alleged deviations from rules of worship contained in or deduced from the Law of Moses (Acts 18:13). Gallio's decision interprets the traditional Jewish privilege of religious autonomy as an obligation to settle their internal disputes themselves without disturbing the public or troubling the magistrates. Since Paul is not allowed to defend himself (as he is in later appearances before Roman courts), Gallio's attitude should not be regarded as an

expression of sympathy with the Christian movement. Rather it is indicative of the limits of tolerance towards Jewish congregations in Greco-Roman cities, completely in line with the letter of Claudius to the city of Alexandria (CPJ 153; Smallwood 1976: 248–50) and with his expulsion of Jews from Rome because of their being *assidue tumultuantes* (Suet. *Claud.* 25.4). Tensions within Jewish congregations or between Jewish and pagan inhabitants of Greek cities, however limited in scope, were considered as local disturbances of the *pax Romana,* the pride of the early principate (cf. Acts 19:40). That is why the later trial of Paul in Caesarea was much more dangerous for the apostle, because then he was charged of being "a fomenter of discord among the Jews all over the world" (Acts 24:5, NEB).

The suggestion that the decision of Gallio might be due to an anti-Jewish bias of the proconsul (Elliger 1978: 236–37) is confirmed by the reaction of the public (not the Jews themselves, as some mss read) against one of the Jewish leaders and by Gallio's lack of concern in this outbreak of violence (Acts 18:17).

Gallio's opinion of Jews and Judaism may have been similar to that of his brother Seneca who, according to Augustine (*Civ Dei* 6.11) was speaking of the Jews when he wrote (in *De superstitione*): "The vanquished have given laws to their victors." In *Ep. Mor.* 95.47 Seneca's sentence *"quomodo sint dii colendi solet praecipi"* ("There use to be rules as to how the gods should be worshipped") reminds us of Acts 18:13—but is followed by a criticism of the Jewish custom to light candles on Sabbath.

Paul's own reaction to the Jewish attack on his missionary work was not peaceful either: In 1 Thess (written during Paul's first stay at Corinth) the polemical passage 2:14–16 sounds like a furious postscript to the episode of Acts 18:12–17. Taken together, the 2 passages give an impression of the fierceness of the early conflicts between the Christian movement and traditional Judaism in the first decades of their mutual relations.

GAMAD (PLACE) [Heb *gammād* (גַּמָּד)]. A putative place name found in the lamentation over the Phoenician city of Tyre raised by Ezekiel (27:11). The Heb word *gammādîm* is not attested elsewhere and is of uncertain meaning. The context is metaphorical: Tyre is imaged as a ship whose crew is a collection of allied peoples. Fars (Persia), Lud, and Put are mentioned in v 10 as members of the Tyrian armed forces. Men of Arvad (the island of Aradus 125 miles N of Tyre) and Helech (less certainly a place name) are upon the walls—either the hull of the metaphorical ship or, shedding the imagery, the literal city walls)—and *gammādîm* in the towers (Ezek 27:11).

The occasional confusion of the Heb letters *dalet* and *reš* has led to the reinterpretation of the word as **gōmĕrîm* (see GOMER), to which has been compared Ug *gmrm* (*IDB* 2: 351). But the association with Arvad suggests a Phoenician city (Cooke *Ezekiel* ICC, 300). A site appearing in the topographical lists of Seti I at Karnak as *qmd* or *kmt* (*LBHG*, 166 no. 7) is located between Byblos and Arvad. Simons (who prefers to interpret the biblical word as an appellative noun rather than as a place name; *GTTOT*, 455) is among those who have noted the possibility that the name *qmd* in the Egyptian list may designate *Kumidi*, known from the Amarna letters (EA 116:75; 129:85; 132:49, etc.) and other sources (Simons 1938 XIII/55; XIV/57; XV/20). Ancient Kumidi is identified as Kamid el-Loz N of Mt. Hermon in the Beqaʿ valley of Lebanon between Sidon and Damascus (on the site, see Edzard et al. 1970; Hachman 1970).

HENRY O. THOMPSON

GAMAEL (PERSON) [Gk *Gamēlos* (Γαμηλος)]. An alternate form of the name DANIEL.

GAMALIEL (PERSON) [Heb *gamlîʾēl* (גַּמְלִיאֵל); Gk *Gamaliēl* (Γαμαλιηλ)]. **1.** Son of Pedahzur and head of the tribe of Manasseh (Num 1:4, 10, 16). He is so designated by God in the address to Moses, in which a census of Israel's congregation in the wilderness of Sinai is commanded (Num 1:1–54). Gamaliel appears again in the next chapter of Numbers (2:20), where the encampment of Israel around the tent of meeting, by tribes organized by leaders, is set out (2:1–34). Within that scheme, Manasseh—gathered at the appropriate standard and led by Gamaliel—is stationed to the W of the tent, next to Ephraim, the leading tribe of the 3 on the W (2:1–2, 18–24). The entire scheme establishes an ideal of both encampment and orderly movement through the wilderness, in which tribes and their leaders are the principle of discipline. Gamaliel is therefore emblematic, with the other leaders, of the structure inherent in Israel's gathering around the divine presence, guarded and maintained by priests and Levites (cf. Num 2:17; 3:1–4, 49).

Gamaliel next appears after Moses has anointed and consecrated the altar and its tabernacle (Num 7:1). The tribal leaders appear with offerings, which the Lord commands Moses to accept on behalf of the Levites (Num 7:2–10). Specifically, the leaders are to bring offerings one each day (v 11), in an order which corresponds to the scheme of encampment in chap. 2. The names of the leaders are given again in chap. 7, which enhances the impression of correspondence with chap. 2. Such differences as there are appear practically insignificant. Eliasaph, leader of Gad, is identified as "son of Deuel" in 7:42 (and 10:20), rather than "son of Reuel" (2:14); the variation is obviously the result of the similarity of the *reš* and *dalet* in the Hebrew alphabet. Similarly, Gamaliel in 7:54 is son of Pedah-Zur, rather than Pedahzur (2:20 cf. also 10:23), although the RSV does not do justice to the distinction. Although the same name is palpably at issue, the separated orthography perhaps brings out its sense, "the rock (that is, God) has ransomed" (cf. GKC, 81; BDB, 804).

There is, however, a significant contrast between Numbers 2 and 7, which makes them appear more complementary than simply similar. The essential issue in chap. 2 is the order of procedure among the 12 tribes. That order is fixed by the sequence encampment: Judah, with Issachar and Zebulun, camps towards sunrise (vv 3–9); Reuben with Simeon and Gad to the S (vv 10–16), the tent of meeting in the midst (v 17); Ephraim with Manasseh and Benjamin to the W (vv 18–24); and Dan with Asher and Naphtali to the N (vv 25–31). The sequence of encampment is also prescribed as the sequence of setting out from camp (vv 17, 34). In chap. 7 the same sequence is maintained, but the emphasis is upon the equality of the tribes, rather than upon precedence among them. Each is said to offer precisely the same offering: a silver plate of 130 shekels; and a silver basin of 70 shekels, both filled with fine flour and oil for a cereal offering; a golden dish of 10 shekels (full of incense); animals for burnt offering (a young bull, a ram, a male lamb of one year); a male goat for sin offering; and peace offerings (2 oxen, 5 rams, 5 male goats, 5

male lambs of one year). Those specifications are repeated for every leader of each tribe, and then the offering of the 12 tribes in aggregate is tallied (vv 84–88). Each tribe therefore takes part equally in the dedication of the altar (v 5), which is why a full day of dedication is allotted to each tribe (v 11). The sequence of tribes and leaders, when applied to encampment and movement, necessarily implies precedence; the same sequence, when applied to dedicatory sacrifice, assures an equality of participation.

The last reference to Gamaliel, and to the other leaders, appears in Numbers 10. The order of march is in accordance with the specifications of chap. 2, except that there is a refinement in respect of the Levites (see vv 17, 21; and 2:17. The issue of priority among the tribes, however, which was implicit in chap. 2, becomes moot in chap. 10: the march is set in motion by the cloud which settles in the wilderness of Paran, not any tribe or leader (10:11, 12; cf. 9:15–23). All of the passages in Numbers which relate to Gamaliel are commonly ascribed to the 'Priestly' source of the Pentateuch (cf. Marsh, Numbers *IB* 2: 140). Whether or not a strictly documentary theory of Pentateuchal origins is to be upheld, it does appear evident that Gamaliel and the other tribal leaders in Numbers 2, 7, and 10 are invoked in order to offer a portrait of how the divine presence dwells in Israel. Sequence, tribal order, and equal offerings of sacrifice are all conveyed as the occasion of God being with his people.

The function of the name Gamaliel in the book of Numbers, then, is less to refer to a definable character than it is to hold the place of the theological motif of God's presence with Israel.

2. A Pharisaic member of the Sanhedrin in Jerusalem who was widely respected for his learning in Torah (Acts 5:34). At first glance, the name Gamaliel—now attributed to a rabbi of the 1st century—might seem to function differently in the NT than it did in the OT. He plays a crucial role in the proceedings against the apostles. As a result of Sadducean jealousy at the apostles' reputation for healing, they have been put in jail, only to be released by an angel (vv 12–20). Once the Sanhedrin convenes, their officers eventually track the apostles down in the Temple, and set them before the council (vv 21–27a). The high priest demands to know why the apostles persist, despite prior warning, to teach in Jesus' name; they reply that obedience is owed to God, rather than people, and accuse the Sanhedrin of murdering the savior (vv 27b–32). Condemnation to death at that moment seems certain (v 33), but Gamaliel intervenes and cautions restraint. His standing in the Sanhedrin is assumed to be great, in that he *commands* the apostles to be put outside for a brief time (v 34c). He then urges caution, on the grounds that the movements of Theudas and Judas the Galilean had come to nothing: The apostles also will fail, if their movement is of men (vv 35–38). If their movement is of God, Gamaliel argues that the Sanhedrin would be unable to prevail, and rebellious even to try (v 39). Having been convinced by Gamaliel's arguments, the Sanhedrin releases the apostles with a mere beating, and repeats the old command, not to speak in Jesus' name (v 40, cf. 4:17). The second (and last) mention of Gamaliel occurs in Acts 22:3, within a speech of Paul, in which the apostle claims to have been instructed at the feet of Gamaliel with an exact knowledge of the ancestral law.

Superficially, there is a degree of verisimilitude in Gamaliel's portrait in Acts. The Pharisees in general are described by Josephus as combining a view of fate with that of the freedom of human will, a philosophical compromise which may also be said to animate Gamaliel's position in Acts (cf. *Ant* 13.5.9 §171–73; *JW* 2.8.14 §162–63; Neusner 1987: 279, 282; and Bruce 1982: 68 n. 5). Moreover, Gamaliel himself occupies a position of such prominence in Rabbinica, that his implicit status in Acts appears plausible. *Soṭa* 9.15 has it that "When Rabban Gamaliel the elder died, the glory of the law ceased and purity and abstinence died" (Neusner 1984: 33, 34). In that the interpretation of the Torah (in its fullest sense), keeping purity and maintaining dietary discipline were programmatically typical of Pharisaism (cf. Neusner 1987: 290), Gamaliel appears as a paradigmatic figure within the movement. For that reason, his decision that a Targum of Job was to be buried within a construction of the Temple (*Sabb.* 115a, cf. Neusner 1984: 53–54, cf. 37, 38, 42) was representative of the emerging attitude towards the Targumin among the rabbis: Targum, as the product of a discipline between Bible and Mishnah (cf. *Sipre Deut* 161) was to be orally promulgated (cf. *Meg.* 4.4), and yet disposed of as Scripture when it was written. The rabbinic ambivalence in regard to the medium of the Targumin is what resulted in their consignment to writing at a much later stage.

Gamaliel is also said to have forbidden attempts by husbands to annul divorce proceedings without their wives' knowledge (*Giṭ.* 4.2, cf. Neusner 1984: 34–37), and to have extended, for certain groups, the amount of movement permitted on the Sabbath (*Rosû. Hasû.* 2.5, cf. Neusner 1984: 29, 30). In that all of these matters—Targum, divorce, and keeping Sabbath—were of systemic import within the Pharisaic perspective, Gamaliel's prominence, as reflected in Acts 5:34 and presupposed in 22:3, may be taken as factual, and the position attributed to him is not implausible. Indeed, Neusner discovers a significant degree of corroboration between *Rosû. Hasû.* 2.5 and Acts 5:34. Because the former passage concerns the movement on the Sabbath of witnesses who attested sightings of the sun and moon, they were closely associated with the Temple, where the sacred calendar was declared. The pericope therefore assumes Gamaliel's high standing among the authorities of the Temple, much as Acts 5:34 does (Neusner 1984: 29 cf. also 38–40, 42, 43, 50, 55).

Both passages of Acts, however, manifest characteristics which make their accuracy doubtful. In 5:36–37, Gamaliel refers first to the revolt of Theudas, and then to that of Judas, in an evidently chronological order; as it happens, that seemingly careful presentation precisely inverts the order of events. Even more troubling (from the point of view of the historicity of the entire episode) is the fact that Theudas's revolt is dated in A.D. 44, some 10 years after any plausible dating of the scene in Acts (cf. Cadbury and Lake 1979: 60). It has been suggested that the inversion of chronological order is the result of a elementary misreading of a passage in Josephus (*Ant* 20.5.1–2 §97–104, cf. Foakes Jackson and Lake 1979: 356, 357 and Lüdemann 1984: 34, 35). Two considerations have also cast doubt on the alleged assertion of Paul in 22:3. First, it seems strange that, if Gamaliel in 5:38, 39 counseled restraint in respect of followers of Jesus, his supposed disciple should have persecuted them. Second, even if one were to accept that a statement in Acts should be credited apart from a confirming echo in the Pauline corpus, Paul's lack of sympathy with the rabbinic position in his own writings is striking. Each of these considerations requires to be weighed before the historical value of the statements in Acts can be assessed.

The anachronism of Gamaliel's advice in its reference to Theudas in Acts 5:36, 37, certainly casts doubt on the placement of the episode. The infelicitous sequence, which places Theudas before Judas, greatly strengthens the argument that the speeches of Acts are largely synthetic. Indeed, the reference to Gamaliel in Acts 5:34–39 seems to suit the programmatic purpose of Luke-Acts at least as well as, and probably better than, it accurately reports an episode of history. It has been aptly remarked that there is an irony in having "a respected leader of the Jews" provide the interpretation of the new movement which Gamaliel does: He himself provides the criterion by which the movement centered upon Jesus represented a fulfillment of the promises to God's people (Juel 1984: 66, 99, 117). Were the Pharisees comparatively tolerant of Jesus' followers, and were Gamaliel a reputed, Pharisaic leader, those facts may be all that need be posited in order to explain the composition of Acts 5:34–39.

Just such a picture, of Pharisaic toleration of Jesus's followers (at least relatively speaking), is conveyed in Acts 23:6–9: Hauled before the Sanhedrin (22:30), Paul is able to set Pharisees against Sadducees by means of his claim that he is a Pharisee, and that the Pharisaic belief in resurrection is what has occasioned the charge against him (22:6). The statement attributed to Paul in 22:3, that he was born in Tarsus but brought up and educated in Jerusalem at Gamaliel's feet, suits the apologetic tendency of this section of Acts. Paul has entered the Temple at the suggestion of James, to purify himself and participate in the vow of several other men (Acts 21:23, 24). What was supposed to prove him a keeper of the Torah (v 24), however, failed: The deadly charge is raised that Paul has introduced "Greeks" into the Temple (v 28). The claim in 22:3, then, serves retrospectively, as an answer to the charge of sacrilege, and prospectively, as substantiation of Paul's clever ploy in the hearing of the Sanhedrin. It has also been argued that the style of 22:3 suits the redactional tendency of Luke-Acts (cf. Lüdemann 1984: 39, n. 72).

Indeed, the coherence of Acts 22:3 with the characteristically Lukan portrait of Paul is precisely what most casts doubt on its accuracy. Acts 22:3–21 gives us a Paul who was known from childhood in Jerusalem; the Paul of Galatians claims that his face was unfamiliar in Judea (1:22). Luke's Paul gives an account of his commissioning on the road to Damascus (22:6–11), in a manner strikingly similar to Acts 9:1–9 (cf. also 22:12–21 and 9:10–31), but quite unlike anything Paul has to say on the subject in his

letters. Precisely these observations were aptly described by Knox (1950: 34–40, 114–119) and have increasingly featured in discussions of the relationship between Acts and the Pauline corpus. Knox considered "gravely doubtful" the notion that Paul actually studied with Gamaliel, although he also stopped short of denying it outright (1950: 35).

Knox's restraint at this point was apposite. For all that, there are grave difficulties in reconciling Acts and the Pauline corpus, Paul's Pharisaic background is a matter of agreement between them (cf. Phil 3:5). Gamaliel's relative tolerance of Jesus' followers is, in itself, plausible—and not only in view of the general considerations suggested above. That doughty traditionalist of somewhat later in the century, Eliezer ben Hyranus, was known to have discussed exegesis with such a heretic (cf. *Abod. Zar.* 16b–17a). That Paul should have studied with Gamaliel, and then have failed to mention the fact is indeed perplexing, but not impossible (cf. Knox 1950: 35). The argument that Paul was too distinctive from Gamaliel, in his attitude towards the new movement, to have been his disciple, is not convincing.

First, the material in Acts 5:34–39, upon which the argument is based, has itself been shaped by the apologetic requirements of early Christianity, and so is scarcely a direct representation of the historical Gamaliel. Second, Gamaliel's own son, Simeon, took part in the revolt against Rome which is officially dated from A.D. 66 (cf. Josephus, *Life* 5.38–39 §189–98 and Neusner 1987: 276; compare Neusner 1984: 57). If the son might depart from the father in his attitude toward Rome, the disciple might surely devolve from the master in the less pressing concern of a minor sectarian excess (cf. Bruce 1982: 226).

We cannot say with certainty whether Paul ever visited Jerusalem prior to his famous visit with Cephas (cf. Gal 1:18; and Enslin 1927: 366, 372), or even whether such a visit would have been necessary in order for him to have been known as a Pharisee. In the latter regard, it might be observed that, in Phil 3:5, Paul calls himself a "Pharisee according to law" *(kata nomon).* The qualification might mean nothing more than "by custom," but a sense such as "as to the law" (see RSV) appears more likely. Why should Paul have introduced such a qualification? It appears at least possible that he acknowledged that his Pharisaism was not of the sort which flourished in Jerusalem, where Pharisees had a particular concern for, and influence over, the cult in the Temple (cf. Enslin 1927: 365). That aspect becomes especially apparent in the traditions concerning Gamaliel (cf. Neusner 1984: 23–58). Manifestly, a "Pharisee" living in the Diaspora would need to be of an attenuated variety of Pharisaism, a movement whose focus of interest was the Temple, and the maintenance of purity in the interests of cultic worship.

Paul must specify in Phil 3:5 that he is "from the race *(genos)* of Israel," not from the land of Israel. Hellenistic Judaism (cf. Gal 1:14 and Georgi 1986: 46–49) was his natural milieu and continued to be even after he understood himself to be an apostle. Although considerable effort has long been expended on understanding Paul as a product of "Palestinian" Judaism, the result is only a paradox: How can an alleged product of rabbinic Judaism have seen the Torah as a "work" which earns God's favor when the rabbis understood it as a gracious instrument, designed to convey the living possibility of God's covenant with his freely chosen people (cf. Montefiore 1915: 24–44, 70–73)? Precisely that paradox is an obstacle before any attempt to portray Paul as a rabbi, trained by Gamaliel or any other Pharisee who was active in Jerusalem (cf. Montefiore 1915: 90, 91).

Whether or not Paul actually had contact with Gamaliel at some point or another is impossible to know. The inextricable link between Paul and Jerusalem is a thematic and apologetic concern of Acts (cf. Enslin 1927: 372–75). "Gamaliel" is an emblem of that concern, and—except in very general terms—little historically accurate information is provided by Acts in respect of that rabbi. Comparison with rabbinic sources suggests that Paul should not be seen preeminently as a rabbi in the mode of the Pharisees in Jerusalem (cf. Montefiore 1915: 92–129). He was rather a provincial hanger-on of the movement, who turned a zeal for the Temple and purity into a zeal for the oral law (cf. Gal 1:13, 14 and Acts 22:3), and thereby sowed the seeds of his own conversion.

GAMMA. The third letter of the Greek alphabet.

GAMUL (PERSON) [Heb *gāmûl* (גָּמוּל)]. A priest who received the 22d position in the priestly order of the Temple during the reign of David (1 Chr 24:17). 1 Chronicles 24 is the only place where Gamul appears in the OT. An evaluation of the historical reliability of his appearance therefore depends entirely on the literary context of 1 Chr 24:1–19. Though generally agreed that the priestly list originated after the exile, its exact date remains debated. Liver (1968: ix, 33–52) associates the 24 course priestly organization to the reforms of Nehemiah, while Williamson (1979: 262–68) assigns it to the late Persian period. Due to genealogical connections between 1 Chr 24:7–18 and the Hasmonean priestly claims, Dequecker (1986: 94–106) dates the list to the Hasmonean era. The stylistic characteristics of the list, however, seem to link the list to the time of the composition of Chronicles (ca. 385 B.C.E.).

GANGRENE. See SICKNESS AND DISEASE.

GARDEN OF EDEN. See EDEN, GARDEN OF (PLACE).

GARDEN OF GOD (PLACE) [Heb *gan-ʾĕlōhîm* (גַּן־אֱלֹהִים)]. A phrase occurring only in Ezek 28:13 and 31:8–9. The similar phrase *gan-yhwh,* "garden of Yahweh," appears in similies in Gen 13:10 and Isa 51:3. Both phrases indicate a place of great luxury. However, the notion of a divine garden is not restricted to biblical material. References are found throughout ANE literature.

Descriptions of the gardens in ANE literature mention springs, trees possessing divine attributes, and the overall beauty and fertility of the place. The trees on "the cedar mountain, the dwelling of the gods" mentioned in the Gilgamesh Epic, are said to be luxuriant (V.i. 1–9, Assyrian version; *ANET,* 82). No mortal is intended to enter there. In the biblical material, Ezek 31:2–18 compares Pharaoh to a great tree. Verse 9b states that "all the trees of Eden which are in the garden of God" became jealous of the tree which represented Pharaoh. From further description it becomes evident that this tree grows in the divine enclosure.

The divine garden is often the source of life-giving waters that refresh the earth. The land of Dilmun, the most celebrated example of the garden of the gods in Mesopotamian literature, is described in the Sumerian myth called *Enki and Ninhursag.* The land is watered by the "waters of abundance" from the earth which gush forth to fertilize the land (lines 55–64; *ANET,* 38). In Ugaritic myth, the high god El dwells "at the sources of the (two) rivers, in the midst of the (double) deep" (*CTA* 3.5.14–15, etc.). Ezek 47:1–12, Zech 14:1–21, and Joel 4:16–18 all picture life-giving water rushing forth from the sanctuary on Mt. Zion. In the Ezekiel text this water fertilizes even the area of the Dead Sea. Every creature that comes to the stream lives, and its fish are prolific (vv 9–10). Ezekiel is shown two great trees (or forests) growing on its banks (v 7).

Of course, the main feature of the garden of God theme is the presence of the deity. The divine council meets there and decrees of cosmic importance are issued. El's dwelling is also called the *pḫr mʿd,* "appointed assembly" (*CTA* 2.1.19–21). It is to this place that Yamm sends messengers demanding the surrender of Baal (lines 36–38). Also, both Anat and Asherah go to El's dwelling to seek permission for the building of a temple for Baal (*CTA* 3.5.12–17, 4.4.20–24). In Ezek 28:14 the presence of lesser deities in the garden may be reflected in the reference to the "protecting cherub" and to the "fiery stones."

Finally the divine garden is the site where the sexual union of the deities occurs. The marriage of Enki and Ninhursag takes place in Dilmun (*Enki and Ninhursag,* lines 8, 11, and possibly 65–68, 75; see *ANET,* 38–39). In the Ugaritic Baal cycle, El anticipates some sexual activity on the occasion of a visit from his consort Asherah, only to discover that she has come for other reasons (*CTA* 4.4.31–39).

The description of the garden of Eden in Gen 2:4b–3:24 contains many of these motifs. These include the unmediated presence of the deity, the issuing of divine decrees (3:14–19, 22–24), the source of the subterranean life-giving waters which supply the earth (2:6, 10–14), abundant fertility, and trees of supernatural qualities and great beauty (2:9). Eden should not be understood as a garden planted strictly for the habitation of humans. It is essentially Yahweh's garden which humans were invited to enjoy and cultivate. The narrative is therefore concerned with the issue of humankind entering and dwelling within the presence of deity.

HOWARD N. WALLACE

GAREB (PERSON) [Heb *gārēb* (גָּרֵב)]. One of the elite group of David's warriors, known as "The Thirty" (2 Sam 23:38 = 1 Chr 11:40). The etymology of the name is uncertain (see *IPN,* 227). He is placed near the end of the official list of warriors in 2 Samuel, a position which is reserved for those of non-Israelite descent (Mazar 1963: 318–19). He is called an Ithrite (*hayyitrî*) in the MT. This is an adjective probably describing the clan with which he was associated. The Ithrite clan is known to have been related to the peoples who dwelled in the area near Kiriath-jearim in Judah and probably was of Hivite origin (Josh 9:17; 1 Chr 2:53). It has been argued that Gareb was not an Ithrite (*hayyitrî*) but a Jattirite *(hayyattīrî)*—a descendant from the town of Jattir, a Levitical city in the hill-country of Debir (Josh 15:48; 21:14; 1 Chr 6:42—Eng6:57) (Elliger 1966: 104–6). There is some evidence that supports this view but it is far from conclusive. See ITHRITE; DAVID'S CHAMPIONS.

STEPHEN G. DEMPSTER

GAREB (PLACE) [Heb *gārēb* (גָּרֵב)]. The name of a hill in the vicinity of Jerusalem mentioned in connection with Jeremiah's eschatological vision of the restored and re-sanctified Jerusalem (31:39). It is usually associated with the SW hill today known (erroneously) as "Mt. Zion," situated W of the Tyropoeon Valley and N and E of the Hinnom Valley, a hill that was apparently inside the walls of Jerusalem during the century before its destruction in 586 B.C. In Jeremiah's vision, the sanctity of the city would extend to "the whole valley of the dead bodies and the ashes" (31:40), presumably the Hinnom Valley outside the walls (cf. Jer 7:30–34). However, if sanctity is coterminus with the wall of the city (but it perhaps was not; see Num 35:4–5), then Gareb may have been a hill *opposite* the Hinnom Valley, either W or S of "Mt. Zion." In this case, the city wall envisioned by the prophet would have little, if any,

strategic military value, since the lower contours of the Hinnom Valley would then be situated inside the city.

GARY A. HERION

GARLIC. See FLORA.

GARMITE [Heb *garmî* (גַּרְמִי)]. Gentilic derived from Gerem (Heb *gerem*), meaning bone or bony (1 Chr 4:19). A man of Judah, Keilah is referred to as "the Garmite."

DAVID C. SMITH

GAS (PERSON) [Gk *Gas* (Γας)]. A servant of Solomon who was the progenitor of a family which returned from Babylon with Zerubbabel (1 Esdr 5:34). Although 1 Esdras is often assumed to have been compiled from Ezra and Nehemiah, this family does not appear among their lists of returning exiles (see Ezra 2:57; Neh 7:59). Omissions such as this also raise questions about 1 Esdras being used as a source by Ezra or Nehemiah. Furthermore, problems associated with dating events and identifying persons described in 1 Esdras have cast doubt on the historicity of the text.

MICHAEL DAVID MCGEHEE

GATAM (PERSON) [Heb *gaʿtām* (גַּעְתָּם)]. One of the sons of Eliphaz who stemmed from the marriage between Esau and Adah (Gen 36:11; 1 Chr 1:36). According to Gen 36:16, he was considered to be one of the Edomite "tribal chiefs" *(ʾallūpîm),* i.e., a clan of the Edomite-Esauite tribe Eliphaz. The meaning of the name Gatam (LXX: *Gotom, Goōtam, Gotam;* Vg *Gatham, Gathan*) is uncertain (cf. Arabic *ǧuʿṯumat,* Safaitic *jʿṯm*).

ULRICH HÜBNER

GATE, CITY. See CITIES (LEVANT); FORTIFICATIONS (LEVANT).

GATE BETWEEN THE TWO WALLS (PLACE) [Heb *šaʿar bên-haḥōmōtayim* (שַׁעַר בֵּין־הַחֹמֹתַיִם)]. A gate of Jerusalem at the extreme S end of the City of David where the Central and Hinnom Valleys join in close proximity to the King's Garden. It is only called the "Gate Between the Two Walls" in the accounts (2 Kgs 25:4; Jer 39:4; 52:7) of the escape of Zedekiah and members of his army from the forces of Nebuchadnezzar. Jeremiah dramatically broke a clay pot at this gate (19:2; Avi-Yonah 1954: 245) alluding to it as the Potsherd Gate (Heb *saʿar haḥarsô/ût[K]; haḥarsît[Q]*), erroneously translated East Gate in the AV. This gate was later called the Dung Gate (Heb *šaʿar hāʾašpōt*) by Nehemiah (2:13; 3:13, 14; 12:13) and was located some 1,000 cubits (Avi-Yonah 1954: 245) S of the Valley Gate on the W side of the City of David. It was rebuilt by Malchijah, and the gate (or its successor) continued to be used through the Second Temple period (Kenyon 1962: 84).

The yet unanswered question as to how Zedekiah and his men escaped the city under siege may be answered by Kenyon's discovery of an unexplained tunnel complex near and intruding into the area of the Birket el-Hamra. This complex was sealed under 1.25 m of Iron Age II remains and continued "an unknown distance to the SE towards the valley" (Kenyon 1965: 16–17). Evidence of this nature may eventually explain Zedekiah's escape from Jerusalem.

Opinions generally concur as to the location of the Gate Between the Two Walls. An exception is Weill, who proposes the Fountain Gate as the Gate Between the Two Walls because it exits to a 15 m (49 foot) corridor between two massive walls (Weill 1947: 95–96). Others propose that the pool Isaiah identifies as being "between the two walls" (Isa 22:9–11) and the Gate Between the Two Walls share an identity with two parallel walls in the open Central Valley, while Simons believes that the gate received its name for being at the juncture of the two walls which come from the City of David and from the western Hill (Simons 1952: 128).

DALE C. LIID

GATE OF THE GUARD (PLACE) [Heb *ša‹ar* (שַׁעַר) *hammaṭṭârâ* (הַמַּטָּרָה)]. An inner gate of Jerusalem in close proximity to the Court of the Guards and the Royal Palace that most likely gave the royal family, the judiciary, and security personnel access to the sacred Temple precincts.

The Gate of the Guard is mentioned only once (Neh 12:39) as the destination of one of Nehemiah's dedicatory processionals just before they entered the Temple precincts. But functionally, the Gate of the Guard and the "court of the guards" go together, and in the absence of physical evidence there are textual references indicating more precisely where this "gate" and "court of the guard" are located. The texts concerning the "court of the guards" are found in the accounts of Jeremiah's imprisonment in the "court of the guards" (Jer 32:3; 31:1; 37:14–21; 38:6–28; 39:12–18) inside the royal compound (originally built by Solomon, 1 Kgs 7:1–8; 9:15, 24) to the S of the Temple, situated on the former threshing floor of the Jebusites. The royal compound occupied the area at about the present al-Aksa Mosque, N to the stairs (Makam an Nabi) that lead to the platform on which the Dome of the Rock now sits. While the dimensions of Solomon's buildings are known, their arrangement is not certain although they were probably more cloistered (e.g., Avi-Yonah 1973: 13–14, with maps 3.2. 3.3) than those portrayed by Vincent and Steve (1954: 428, fig. 134).

References to Jeremiah's confinement in the court of the guards near the royal residence, his being brought from confinement for a private audience with Zedekiah at the "third entrance of the Temple" (probably the Gate of the Guard of Neh 12:39 as well as the New Gate of Jer 26:10 where the royal judiciary had earlier listened to the people's complaints against Jeremiah), and the abundance of cisterns in this area of the Temple Mount point to a location of the court of the guards, and consequently, the Gate of the Guard between the royal courts and the Temple precincts. The fact that one of Nehemiah's two processionals halted at the Gate of the Guard just prior to the dedicatory liturgy within the Temple enclosure (Neh 12:39) again indicates that the Gate of the Guard was a gate into the sacred Temple enclosure itself as proposed by Avi-Yonah (1954: 240, fig. 1; 1973: 14, with maps 3.2[7], 3.3[9]). There is little to suggest that the Gate of the Guard should be equated, as some have, with the Muster Gate or the Inspection Gate (Neh 3:31; Simons 1952: 340, 342).

GATH (PLACE) [Heb *gat* (גַּת)]. One of the five principal cities of the Philistines. Gath was situated in the Shephelah S of its sister city Ekron (now identified with Tel Miqne) and was the Philistine city in closest proximity to the territory of Judah to the E (1 Sam 17:52). However its exact location is still the subject of scholarly dispute. Early archaeological commentators, including W. F. Albright, favored identification with Tell Sheikh Ahmed el-‹Areini (M.R. 129113), near Araq el-Menshiyeh, located just N of the modern settlement of Kiryat Gat (Albright 1923: 6–12). Interpreting 1 Sam 7:14, which notes the restoration of Israelite territory "from Ekron to Gath," as a note defining Philistine boundaries, Albright looked for the site of Gath to the S, at some distance from Ekron. However, excavations at Tell el-‹Areini (now ironically called Tel Gat) between 1956 and 1961 by S. Yeivin showed that the site was not occupied during the Iron Age I (i.e., the Philistine period [Yeivin 1961; *EAEHL* 1: 89–97]). This led G. E. Wright to suggest an alternative location at Tell esh-Sheri›ah (Tel Sera›; M.R. 119088), even farther S

along the Wadi Gerar at the very edge of the Negeb desert (1966: 80). Excavations there by E. Oren between 1972 and 1976 did recover significant Philistine period remains (*EAEHL* 4: 1059–69).

However, consensus today supports an identification with the more N site of Tell es-Safi (M.R. 135123). This site is located on the S bank of the Wadi Elah, ca. 5 miles NW of Beit Guvrin, and 10 miles to the SE of Tel Miqne/Ekron. Support for such a more N location is based on observations by B. Mazar and H. L. Ginsberg that, rather than suggesting distance between them, the Hebrew text in 1 Sam 7:14 actually indicates the close proximity of Ekron and Gath (Rainey 1975: 68). A close proximity is also reflected in 1 Sam 17:52, and a location in this N region is likewise indicated by the few postbiblical references to Gath (Gitta, Geth) found in the writings of Eusebius and Jerome (Rainey 1975: 64). Two further references to Gath, involving conflicts with Ephraimite (1 Chr 7:20–23) and Benjaminite (1 Chr 8:13) clans, also suggest a N location, but these may refer to a different site otherwise known as Gittaim (Mazar 1954: 228). Until now the only excavations conducted at Tell es-Safi were those by Bliss and Macalister for the PEF in 1899 (Bliss and Macalister 1902). While this early work recovered evidence of Iron Age occupation, including Philistine period vessels, only a very general stratigraphic profile was obtained (*EAEHL* 4: 1024–27). Final confirmation of the site's identification with Gath awaits further field investigation.

For the biblical writers, Gath was considered to be a city of early Canaanite origin where remnants of the Anakim, a race of giants, continued to dwell until after the time of Joshua (Josh 11:22). The huge Philistine champion, Goliath (1 Sam 17:4), was a Gittite, and other giant Philistine warriors also came from Gath (2 Sam 21:19–22). Canaanite backgrounds are further attested by a reference to Gath *(gimti)* in the LB Age Amarna correspondence. In letter 290 (EA 290:9), it is mentioned in relationship to Gezer (Tell Gezer) and to Keilah (a Judean town identified with Khirbet (Qila ca. 12 miles E of Beit Guvrin). Gath is also one of the cities to which the Ark of the Covenant was taken during its sojourn among the Philistines (1 Sam 5:1–12).

The significance of Gath in biblical reference focuses mainly on its association with the early exploits of David. When first expelled from the court of King Saul, David sought refuge with Achish son of Maoch, the king of Gath. In 1 Sam 21:10–15, David flees to the city alone, and when recognized by the men of Gath, feigns madness and is rejected by Achish. This passage and the poetic lament in Psalm 56 (also see Psalm 34) seem to be part of an apologetic tradition regarding David's associations with the Philistines. However, according to 1 Sam 27, David and six hundred of his men and their families are accepted into mercenary service by Achish. Together they reside briefly in Gath and then are settled in Ziklag, a smaller border village (1 Sam 27:6). Through deception, David gains full acceptance by Achish. The service of his mercenary contingent is terminated only by the suspicions and fears of other Philistine overlords during preparations for their final campaign against King Saul at Gilboa (1 Sam 29). It is in connection with David's lament over the death of Jonathan and Saul in 2 Sam 1:20 that the proverb "Tell it not in Gath" first appears. It is repeated in a similar lament context in Mic 1:10.

David's curious association with Achish also helps us understand the later mention of a man of Gath, Ittai and other Gittites among his professional soldiers (2 Sam 15:18–23), and explains his confidence in Obed-edom, another Gittite (2 Sam 6:10), to whom he entrusts the safekeeping of the Ark of the Covenant for three months before its transfer to Jerusalem (2 Sam 6:10–11; 1 Chr 13:13). In 1 Chr 18:1 David's final conquest of Philistia and of "Gath and its towns" is reported. However at this point in the parallel passage in 2 Sam 8:1, the reading of the Hebrew, *meteg ha›ammāh,* is uncertain. The RSV renders it as a place name. It is not clear which of the two texts preserves a correct reading.

In later tradition, Gath is listed among the cities under Judean control that were fortified by Rehoboam (2 Chr 11:8), but 2 Kgs 12:18 records that it was taken from Judah by Hazael of Damascus during the reign of Johoash. 2 Chr 26:6 indicates that it was again recovered from Philistine hands during the time of Uzziah. Although Amos 6:2 testifies to its continued characterization as a "Philistine city" well into the early 8th century, no later reference to Gath is made in the prophetic literature, even where lists of Philistine cities otherwise appear (see Amos 1:6–8; Jer 25:20; Zeph 2:4). In 711 B.C., Sargon II of Assyria claims conquest of the city in his campaign against Azuri, the king of Ashdod (*ANET*, 286; also see Isaiah

20). Apart from a few references in later, postbiblical commentaries, this is the latest historical reference to the site.

JOE D. SEGER

GATH-HEPHER (PLACE) [Heb *gittâ ḥēper* (גִּתָּה חֵפֶר); *gat haḥēper* (גַּת הַחֵפֶר)]. A town on

the E border of the territory of Zebulun (Josh 19:13). Gath-hepher is recorded in the book of Kings (2 Kgs 14:25) as the birthplace of the prophet Jonah, son of Amittai. Jerome, in his commentary on the book of Jonah, locates Gath-hepher two miles from Sepphoris (M.R. 176239), on the road to Tiberias. The modern village of Mashhad, about four km E of Sepphoris, in fact contains a tomb attributed to Jonah, and the nearby site of Kh. el-Zurraʿa (Tel Gat-hefer) is identified with ancient Gath-hepher. Tel Gat-hefer (M.R. 180238), which measures about 5 hectares at its base and 2.5 hectares at its summit, contains remains of urban settlement of the EB and MB Ages, as well as traces of LB Age settlement. A small Israelite settlement was established on the site in the Iron Age I, followed by a fortified city which was occupied until the Assyrian conquest. Settlement was renewed at the site in the Persian period (Gal 1982: 21).

RAPHAEL GREENBERG

GATH-RIMMON (PLACE) [Heb *gat rimmôn* (גַּת רִמּוֹן)]. The last city listed among the Levitical

cities allocated to the tribe of Dan (Josh 21:24; 1 Chr 6:54[—Eng6:69]). Gath-Rimmon is also mentioned only in the inheritance list of Dan (Josh 19:45). It is generally accepted that in the city list of Dan, Gath-Rimmon is so written in order to distinguish it from other cities with the element Gath, i.e., Gath of the Philistines, Gath-hepher, etc. (*LBHG,* 266). The possible confusion of names because of the lack of specificity is one of the problems confronted when looking at the nonbiblical texts that might have used the name Gath-Rimmon.

Some have suggested that Gath-Rimmon is the city Gath *(knt)* of the Thutmose III city list. When studying the route of Thutmose III this suggestion makes good sense. The towns mentioned in the list are Joppa (62), Gath (63), Lod (64), Ono (65), and Aphek (66). If Gath were identified with Tell es-Safi, then Thutmose's forces would have had to backtrack 45 km; if Gath were associated with Gath-Rimmon, then Thutmose's path would have been on course as the army moved NE from Joppa to Gath-Rimmon and then slightly SE to Lod before going N again to Ono and Aphek. Another reference to Gath-Rimmon is in the Amarna Letters. Mazar (1958: 115–23) and Aharoni (*LBHG*, 149) have identified Giti-rimuni with Gath-Rimmon. Although there is no mention of Gath-Rimmon in Shishak's records, Mazar (1957: 206) has argued that the site was destroyed at the time of Shishak's campaign.

Two cities have been identified with biblical Gath-Rimmon: Tell Abu Zeitun and Tell Jerishe. Abel (*GP* 2: 327) has been a major advocate of the former. Today Tell Abu Zeitun (M.R. 134167) is encompassed by the N section of Tel Aviv in the Bene Berak suburb, surrounded by industry and railroad tracks. It is only 6 km E of the Mediterranean and less than 1 km S of the prominent Yarkon River. The importance of this river cannot be underestimated, since not only is it an excellent water supply for drinking and irrigation, but it also provided transportation toward the Valley of Aijalon. Tell Abu Zeitun is situated on the Plain of Sharon, a plain that is nearly flat and was perhaps forested in antiquity (Isa 33:9). It was one of many ancient towns along the lower valley of the Yarkon, important to the sea and inland trade routes, especially the Via Maris.

Very few geographers other than Abel make reference to Tell Abu Zeitun, although the inspection visits made by the Department of Antiquities in the 1930s are helpful. During these visits sherds from the Arabic, Hellenistic, and Iron Age periods were found (Ory 1932). In 1957 Kaplan (1958: 134) conducted an excavation, publishing pottery from the Persian, Iron I and II, and LB periods. The Levitical City survey team found the same periods represented, except for LB (Peterson 1977: 354–78).

Ever since Mazar in 1951 suggested that biblical Gath-Rimmon be identified with Tell Jerishe (M.R. 132166), most geographers have followed his proposal. Tell Jerishe (sometimes called Napoleon's Hill) is located 3.5 km E of the Mediterranean, only 500 m S of the Yarkon River; the mouth of Wadi Musrara is directly to the NW of the tell. As in the case of Tell Abu Zeitun, one of the important geographical considerations pertaining to Jerishe is the Yarkon River. Along with the other tells on the Yarkon, Tell Jerishe defended the mouth of the river, protecting the land against possible invaders from the sea.

When the inspection visits from the Palestine Department of Antiquities began in 1925, the pottery found on the mound ranged from the EB to the Iron Age, with comparatively good numbers of representative sherds from Intermediate Periods. E. L. Sukenik conducted four seasons of archaeological excavations at Tell Jerishe in 1927, 1934, 1936, 1940. As a result of those excavations he identified MB, LB, and early Iron pottery. He suggested that the site was abandoned during the 10th and 9th centuries never to be occupied again. However, the Levitical City survey team's research does not support Sukenik's conclusion because not only were MB II A, LB, and Iron I sherds found at Jerishe, but also Iron II, Hellenistic, and Islamic (Peterson 1977: 354–78). The Levitical City team found evidence of 12th–11th century occupation, but a gap in the 10th century. There was evidence of occupation in the 9th century and a good collection in the 8th century. Clearly Sukenik's conclusion that the site was abandoned after the 10th or 9th century must be reconsidered. Although the site might not have been fully rebuilt after the destruction by Shishak's campaign, a settlement undoubtedly existed at Tell Jerishe in the 8th century, as is the case at nearby Tell Abu Zeitun.

When one studies both sites it is impossible to make an absolute identification. The sites are very close to each other, only a few meters away from the Yarkon River. The pottery distribution at both sites is nearly identical, and although Tell Jerishe is much larger physically, size certainly cannot be the determining factor. What is important to conclude here is that Gath-Rimmon, whether it was located at Tell Abu Zeitun or Tell Jerishe, was occupied through the 8th century. What possibly happened is that at the end of the 8th century Tell Jerishe was abandoned until the Hellenistic period, during which time Tell Abu Zeitun was occupied.

GAULANITIS (PLACE) [Gk *Gaulanitis* (Γαυλανιτις)]. In the Hellenistic and Roman periods Gaulanitis was the common name for the Golan, a rocky plateau situated immediately E of the Jordan and stretching from the foothills of Mt. Hermon in the N to the Wadi Yarmuk in the SE. See also GOLAN HEIGHTS. Although in earlier years the land was used primarily for pastoral activity and was economically somewhat marginal, in the Roman and Byzantine periods this region flourished and became considerably more important. Increased settlement, coupled with the development of an excellent network

of roads and more efficient exploitation of water resources, made the area viable for agriculture and craft industries as well.

The political and cultural history of the Golan in the Hellenistic and Roman periods is interesting, if at times complex and even confusing. Much of our information comes from Josephus, although recent archaeological surveys and excavations are supplementing our knowledge. Significant advances in our understanding of the area are to be expected in the near future.

At the beginning of the Hellenistic period, the Golan was an independent administrative unit with the rank of a hyparchy. The Seleucids had incorporated the entire Golan into the epiarchy of Gilead, however, during the Maccabean revolt, large areas of the Golan were captured and brought under Hasmonean control, particularly by Alexander Jannaeus. In 83–80 B.C.E., he annexed a large part of the Golan and accomplished the conversion of a considerable number of gentiles to Judaism as well.

When Rome took control of the area in 64 B.C.E., Pompey gave the Golan to Ptolemy, son of Mennaeus, an Iturean ruler. In 20 B.C.E., Augustus granted the land to King Herod under whose leadership a significant amount of development took place.

At Herod's death in 4 B.C.E., the Golan (except for Hippos and Gadera) passed into the hands of Herod's son, the tetrarch Philip. He rebuilt Paneas (Caesarea Phillipi) and made it his capital city. When Philip died in 34 C.E., leaving no heir, his territories were incorporated into the province of Syria. This arrangement lasted for less than three years, because in 37 C.E. the emperor Caligula gave the Golan to King Agrippa I. Although at the death of Agrippa I, the territory reverted briefly to Roman control, but was given to King Agrippa II in 53 C.E. and remained in his control until the first Jewish war against Rome. During the war, heavy fighting took place in the Golan and reached a climax in the heroic stand taken at Gamla, which fell after a seven month siege. At the death of Agrippa II the N regions of the Golan were annexed to Syria, and the S regions to Judea.

Because Josephus is such an important source for this history, the situation in the Golan following the war is less clearly understood. Further clarification will come from archaeological excavations now in their early stages. It seems clear, however, that large numbers of Jews from S regions resettled in the Golan following the Bar Kokhba rebellion. Preliminary excavations confirm the view suggested by the occasional references found in rabbinic literature that these settlers flourished and that the region was prosperous throughout the Middle and Late Roman periods.

It is becoming increasingly clear that there is a cultural as well as topological continuity between the Upper Galilee and the Golan. Inscriptional evidence indicates that the language in primary use was Aramaic, although Greek seems to have been widely known, even in small villages. The architecture, the ceramics, and the other artifacts which are found in archaeological excavations show a similarity which supports this picture of cultural continuity, but which separates the Upper Galilee and the Golan from the more thoroughly Hellenized and urbanized regions of the Lower Galilee and the coastal plain to the S and W.

GAULS [Gk *Galatai* (Γαλαται)]. Var. GALATIANS. Cited in 1 Macc 8:2 as the name of a people who were defeated and brought under subjugation by the Romans and in 2 Macc 8:20 (here usually rendered "Galatians") as opponents of the Macedonians in Babylonia. It was the Romans who gave them the name by which we know them—Gauls [Lat *Galli*]. This Indo-European group from central and S Europe, also known in Greek literature as Celts [Gk *Keltoi*], was among the peoples who invaded Italy and other lands to the S in the 3d century B.C.E. A large number also went to Asia Minor where they settled in the region of Phrygia, later called GALATIA by the Romans.

Both of the above citations require explanation. Is 1 Macc 8:2 a reference to the Roman conquest of its northern invaders in Cisalpine Gaul or to the defeat of the Galatians of Asia Minor in 189 B.C.E. (Schiffman *HBC*, 886)? The chronology of events and the context of 1 Maccabees 8 suggests the former.

Goldstein has shown that the Romans did not yet rule nor extract tribute from the Galatians of Asia Minor (*1 Maccabees* AB, 350–51). The subjugation of Spain in 1 Macc 8:3 suggests the Second Punic War (218–201 B.C.E.) which also involved the Gauls of Europe. Since the Galatians of Asia Minor were used by Antiochus the Great (223–187 B.C.E.) in his war with Rome, their mention in v 2 rather than in the description of his defeat in vv 6–8 would be surprising. It is much more difficult to determine whether the Maccabean author is referring to the defeat of the Cisalpine Gauls in 222 B.C.E. or in 190 B.C.E.

Since there is no clear record of a war involving the Gauls (or Galatians) in Babylonia, the specific designation of 2 Macc 8:20 is even harder to determine. Since the Galatians did have quite a reputation as mercenaries and functioned as such for various parties in the battles between the Hellenistic empires, it is reasonable to hypothesize that this citation is a reference to some such conflict (Goldstein *2 Maccabees* AB, 331–34). The Babylonian provenance rules out a number of such instances (cf. Levy 1950). Whether the epitomist was alluding to the battle of Antiochus III (223–187 B.C.E.) with Molon in Media in 220 B.C.E., the victory of Seleucus II Callinicus (246–225 B.C.E.) over his brother Antiochus Hierax (Bar-Kochva 1973), or some other possibility is impossible to determine with any certainty (Habicht *2 Maccabees* JSHRZ, 240–41).

While some variants of 2 Tim 4:10 read *Gallian* (Sinaiticus, Ephraemi, etc.), *Galatian* is more strongly attested. Most commentators understand this to refer to Asia Minor.

GAZA (PLACE) [Heb *ʿazzâ* (עַזָּה); Gk *Gaza* (Γαζα)]. A site in SW Palestine, located on Tell Ḥarube, and the highest point of modern Gaza, covering ca. 55 hectares (M.R. 099101). Gaza lies where the coastal plain is the widest, ca. 25 km, in a very fertile region, rich in wells of sweet water. High sand dunes separate Gaza from the sea, which is about 4–5 km to the W. Gaza lies on the main highway between Africa and Asia. This road is one of the oldest in the world, and has been the military road between Egypt and Asia since the days of the Egyptian New Kingdom; it is called in the Bible "the way of the land of the Philistines" (Exod 13:17). Later it was known as the "Way of the Sea" or *Via Maris* (Isa 8:23—Eng 9:1).

This entry consists of three articles that cover the historical significance of Gaza: one focusing on the pre-Hellenistic OT period, another focusing on the Greco-Roman period, and a third focusing on the Byzantine period.

E. Gaza and the Egyptians/Babylonians
F. Gaza and the Persians
G. Gaza and Alexander
H. Archaeological Remains

A. The Inscriptional/Textual Evidence

Two ancient reliefs show a town in Palestine which can with great probability be identified as Gaza. The first is from the days of Seti I (*ANEP*, 329), and the second from the days of Sargon II (Botta 1972: pl. 90). In both, the town is extremely well fortified; in the second it is a watchtower next to a high strong wall recalling the passage: "He (= Hezekiah) smote the Philistines as far as Gaza and its territory, from

watchtower to fortified city" (2 Kgs 18:8). Both Arrian (*Hist. of Alex.* 1.2; 25.4–27.7) and Curtius (*Hist. of Alex.* 1.4.6–30) give some descriptions of the locality and the fortifications of Gaza in their books about Alexander the Great. The foundation, however, of Gaza is still obscure. The name appears for the first time in the annals of Thutmose III. At that time (April 25, 1468 B.C.—*ANET,* 235), Gaza was already the property of the Egyptian crown and it became the capital of the Egyptian province *Canaan.* In the records of the 19th and 20th Egyptian Dynasties, Gaza is generally referred to as (the town) *The Canaan,* which clearly demonstrates that Gaza is the town of Canaan, in other words, the capital, which is further evidenced by Taanach-Letter no. 6 (Albright 1944: 24–25) or by the Tell El-Armana Letters nos. 289 and 296 (EA, 289, 296). Egypt's rule over Canaan with Gaza as its capital lasted for more than 400 years (ca. 1550–1150 B.C.).

B. Gaza and the Philistines

Already in the reign of Merneptah (1224–1214), the first waves of Sea Peoples menaced Egypt. In the reign of Rameses III (1195–1164), they invaded Palestine in such numbers that even though Pharaoh defeated them, he had to settle them as garrison troops. We know that the Sea Peoples came to Canaan partly in ships from Cyprus, and partly by the land route from Anatolia. These events may be reflected in the oracle of Balaam (Num 24:24): "Ships come from the quarter of Kittim" (i.e. Cyprus). They are even more clearly alluded to in Deut 2:23: "So, too, with the Avvim who dwelt in villages in the vicinity of Gaza: the Caphtorim, who came from Caphtor, wiped them out and settled in their place."

The Philistines (who were one of the Sea Peoples) settled in the SW corner of Canaan and established the confederation of the five Philistine city-states, each under the rule of a lord *(seren).* Since Gaza had once been the capital, it became the leading power among them. This confederation soon came into conflict with another wave of immigrants, the Hebrew tribes. In the book of Joshua, Gaza is mentioned four times (Josh 10:41; 11:22; 13:3; 15:47). Josh 11:22 states that the Anakites disappeared from the land of the Israelites; but some remained in Gaza. Josh 13:2–4, which states that the whole region "from the Shiḥor, which is close to Egypt, to the territory of Ekron on the north …," belonged to "the five lords of the Philistines—the Gazites, the Ashdodites, the Ashkelonites, the Gittites, and the Ekronites …," clearly reflects a tradition which is also preserved in the LXX of Judg 1:18 (contrary to the MT): "And Judah did not capture Gaza …," which is confirmed by Judg 1:19: Judah could not "dispossess the inhabitants of the plain for they had iron chariots." Gaza appears again in the story of Gideon in connection with the raids of the Midianites, who, together with the Amalekites and the Kedemites, would attack the Israelites and destroy "the produce of the land all the way to Gaza" (Judg 6:3–4).

The Philistines appear upon the biblical stage for the first time in the stories about Samson (Judges 13–16), which describes the heavy hand of the Philistines on the Hebrew tribes, especially on Judah and Dan. The leading role played by Gaza among the Philistine towns is revealed in the later stages of Samson's life. The town was well fortified, with a gate and a watchtower (Judg 16:1–3) next to it, and it had a prison (Judg 16:21). But the most important building must have been the temple of Dagon (Judg 16:23–30). It is tempting to surmise that this temple of Dagon was built on the temple of Amon which Rameses III erected (*ANET,* 260–61).

In the wars of the Philistines against Judah and later against Saul, Gaza must have played a part. During the reign of David, the power of the Philistines was much diminished, and this weakness may explain the ease with which "Pharaoh King of Egypt had come up and captured Gezer …" (1 Kgs 9:16).

C. Gaza and Israel/Judah

It is possible that the Philistine city-states were later tributary to David and Solomon, and may be implied in a record from the days of Solomon, which says that Solomon's rule extended "from the Euphrates to the land of the Philistines and the boundary of Egypt. They were bringing tribute and were serving Solomon all his life" (1 Kgs 4:21—Eng 5:1). The same statement is repeated almost immediately, that Solomon "controlled the whole region west of the River (= Euphrates), from Tiphsah to Gaza, all the kings west of the River" (1 Kgs 4:24—Eng 5:4). The geographic expression "west of the River" casts some doubt on the authenticity of the source. On the other hand, the inclusion of the territory as far as the

border of Egypt is reaffirmed, which reads: "from the entrance of Hamath [Lebo-hamath] to the Brook of Egypt" (1 Kgs 8:65).

It appears that towards the end of Solomon's reign, or at the beginning of Rehoboam's, the Philistines began to escape Israelite domination and turned their attention toward Egypt, whom they solicited for help against the Hebrew kings. We may assume that at this time the *seren* of Gaza (and the other cities of the Pentapolis) became a king.

In the fifth year of Rehoboam of Judah (ca. 928–911 B.C.) Pharaoh Shishak raided Judah and Israel. According to the place list on the Temple of Amon at Karnak (Kitchen 1973: §§398–415), the starting point of Shishak's campaign into Asia was apparently Gaza. From there one force advanced to the N, and another to the Negeb. On his way home, Shishak must have passed Gaza again; in the last row of the record is the name of Raphia. Since no other Philistine town is mentioned, apparently an understanding existed between Egypt and the Philistines, and in particular between Egypt and Gaza. Apparently Shishak died shortly after the campaign, before he was able to restore Egypt's grip on Asia, and even though his weak successors did not follow up that victorious raid, the enfeebled Judah was no longer a real opponent to Gaza.

The list of towns which Rehoboam fortified (2 Chr 11:5–12) must refer to the period after Shishak's invasion and suggests possible territorial gains for Gaza and her sister towns—as allies of Shishak (?).

Asa's victory over Zerah the Cushite (2 Chr 14:11–14) almost certainly drove them to an alliance with Gaza. Gaza's trade to the S, mainly spices and incense, could only benefit from these new allies.

Later the alliance between Jehoshaphat and the Omrides strengthened Judah's position vis-a-vis her S and SW neighbors (cf. 2 Chr 17:11). Again Gaza and the Arabs cooperated to oppose Judah. It is no surprise that in the reign of Jehoram of Judah, when Judah and its former ally Israel were weakened by Aram, the Philistine city-states, together with the Arabs, sought revenge on Judah (2 Chr 21:16–17). From this point, the trade route from Arabia to Gaza was in the hands of Gaza's friends (2 Kgs 8:20).

The name of *Pa-la-aš-tu* (Philistia) appears in the Assyrian records for the first time about forty years later, in 805/804, when Adad-nirari III of Assyria appeared in the W (*ANET*, 281).

Under Amaziah and his son and coregent Uzziah, Judah regained much of its former power. Amaziah defeated the Edomites and conquered their capital, Petra (2 Kgs 14:7); his son Uzziah conquered their port, Elath (2 Kgs 14:22; 2 Chr 26:2) and subjugated the Philistines, the Arabs, and the Ammonites. These events were certainly in the background of Amos' oracles, which he delivered about 760 B.C. Unfortunately the denunciation of Gaza (Amos 1:6) is extremely difficult to understand. While only Gaza is denounced, the punishment falls on all the Philistine cities: Gaza, Ashdod, Ashkelon, Ekron. It seems fair to infer that among the Philistine cities Gaza was at least *prima inter pares.* The book of Amos is the earliest source for the tradition that the Philistines came from Caphtor (Amos 9:7).

D. Gaza and the Assyrians

Evil days came upon Gaza in the reign of Tiglath-pileser III (745–727 B.C.). In the tribute list of the year 738 the name of Hanno, king of Gaza, appears (*ANET*, 282). In 734 Tiglath-pileser undertook a special campaign "against Philistia," whose main object was Gaza (*ANET*, 283). Hanno fled (cf. Zech 9:5), the royal family was captured, and a huge tribute was imposed on Gaza, where a "custom station of Assyria" was established (Wiseman 1956: 121).

In contrast, however, to the usual process of annexation by making a conquered state an Assyrian province, neither Gaza nor Tyre was ever incorporated into the Assyrian empire. Hanno was pardoned by Tiglath-pileser and restored to the throne of Gaza, but when Sargon II (721–705 B.C.) came to power, Hanno joined Hamath in rebelling against him. They had the backing of Egypt, but the Egyptian army was defeated at Raphia. Hanno was captured and taken to Assyria in chains, and Gaza again became a vassal city. Gaza remained loyal to Assyria until the reign of Pharaoh Psammetichus I (664–610 B.C.). This Assyrian loyalty made Gaza an enemy of Judah. When King Hezekiah tried to force his W neighbors to join him in the rebellion against Sennacherib (704–681 B.C.), he "overran Philistia as far as Gaza and its border areas, from watchtower to fortified town" (2 Kgs 18:8). After having crushed Hezekiah's rebellion and defeated the Egyptian army which had been called in to help, Sennacherib allocated some of

the border cities of Judah to the Philistine kings who had remained loyal: Mitinti of Ashdod, Padi of Ekron, and Ṣil-Bel of Gaza (Sillibel according to *ANET*, 288). By those grants, Gaza (and her sister states) became "a semi-neutral buffer area between Assyria and Egypt" (Tadmor 1966: 97). Ṣil-Bel ruled a long time and is mentioned in the annals of Sennacherib in 701, in those of Esarhaddon in 677, and in the records of Assurbanipal in 667. Gaza again became the leading city among the Philistine city-states (*ANET*, 291, 294). The name Ṣil-Bel testifies to Gaza's adoption of the usages of the Assyrian overlord.

E. Gaza and the Egyptians/Babylonians

After the death of Assurbanipal in 627 B.C.(?), the Assyrian empire declined rapidly, while the Egyptians under Psammetichus I (664–610 B.C.) regained their full independence and tried to restore their hold in W Asia. In 616 B.C., after more than eight hundred years, an Egyptian army appeared again on the banks of the Euphrates, however, this time to support the Assyrians against the aggressions of the rising Babylonian power. Doubtless, by this time Gaza had a new overlord. A hint of Psammetichus' overlordship over Philistia may be found in the prophecy of Zephaniah, since the list of the Philistine city-states proceeds S–N as follows: Gaza, Ashkelon, Ashdod, and Ekron (Zeph 2:4). This can also be inferred from an inscription, dated to the reign of Psammetichus I, which mentions a king's messenger/commissioner/ambassador Petee-si son (of) Apy in *The Canaan* (= Gaza; see above) (and) in/of Philistia (Aḥituv 1984: 36). There can be no doubt that Gaza was Egypt's vassal in 609, when Neco II (610–595 B.C.) hurried to Harran to help the Assyrians against the attacks of the Babylonians (2 Kgs 23:29 = 2 Chr 35:20).

In that battle (605 B.C.), Nebuchadnezzar (still as crown prince) totally defeated the Egyptian forces near Carchemish, and in the words of the Judean historian: "The king of Egypt did not venture out of his country again, for the king of Babylon had seized all the land that had belonged to the king of Egypt from the Brook of Egypt to the river Euphrates" (2 Kgs 24:7).

In the cup vision (Jer 25:15–26), dated from the 4th year of King Jehoiakim (= 605/604 B.C.), Jeremiah prophesied the downfall of Egypt and of "all the kings of the land of the Philistines" (Jer 25:19–20). The same is repeated in the prophecy in chapter 47. The statement in v 5 that "Baldness (i.e., mourning) has come upon Gaza, Ashkelon is destroyed," probably refers to the fact that in December 604, Nebuchadnezzar conquered Ashkelon and totally destroyed it (Wiseman 1961: 68/69). The editorial heading to Jeremiah 47: "before Pharaoh conquered Gaza" was added by a scribe after 600 B.C., because in December 601, Nebuchadnezzar clashed with Pharaoh Neco in a bloody battle near Migdol (Lipiński 1972). Apparently Neco pursued the beaten Babylon forces and occupied Gaza (Hdt. 2.159).

The *Chronicles of the Chaldaean Kings* records that Nebuchadnezzar returned to Babylon and stayed there the following year to reassemble chariots and horses. Not until December 598 did he feel strong enough to return to the W and subdue the mutiny of his former vassal Jehoiakim (Wiseman 1961: 72–73; 2 Kgs 24:1). It seems probable that when Nebuchadnezzar reappeared in the W, Neco decided to abandon Gaza without a struggle. Records show that some decades later, the king of Gaza was held with other kings in Babylon (*ANET*, 308). It is likely that under Nebuchadnezzar, Gaza became a Babylonian garrison-town as we find it in a record from the reign of Nabonidus (555–539 B.C.) (Langdon 1912: 220–21). By conquering Babylon in October 539, Cyrus became the overlord of Gaza, too.

F. Gaza and the Persians

When Cambyses conquered Egypt in 525 B.C. Gaza became the bridge between Persian Asia and Persian Egypt. In 517, Darius visited Egypt and must have stayed in Gaza. Apparently Gaza, which belonged to the Fifth Persian Satrapy, became a strong fortress town for the Persians. At Tell Jemmeh (ca. 10 km S of Gaza) two big buildings and storehouses belonging to the Persian period were excavated; they probably had been built for the Persian troops. Gaza became the staging era for Persian attempts to subdue Egyptian rebellions or (after Egypt had regained her independence) to restore Persian rule in Egypt.

About 450 B.C., Herodotus passed through Gaza, and recorded that the town was almost as large as Sardis (Hdt. 3.5).

In 350 B.C., Egyptian rebels with help from the Spartans, campaigned against Persia and conquered Gaza, and their fleet landed troops in Phoenicia. Thus after nearly 250 years, Egyptian troops again were

operating in Syria. But an insurrection broke out in Egypt, and the Egyptian forces were recalled from Asia.

About the same time, Artaxerxes III Ochus took over the supreme command to reconquer Egypt, and established his base in Gaza. The initial campaign failed, but proved successful several years later.

G. Gaza and Alexander

At Issus in 333 B.C., Alexander the Great gained a decisive victory over the Persians, and having conquered Tyre in 332, he appeared with his fleet and army at Gaza—the only city in W Asia to remain loyal to the Persian king. The town had been entrusted to one of the most loyal servants of the king, the eunuch Batis, who was determined to stop Alexander and thus save Egypt for the Persian crown (Arrian *Hist. of Alex.* 2.25.4–2.27.7; Curtius *Hist. of Alex.* 4.6.7–30). It took Alexander two months to conquer the strong-walled city. The fighting was fierce and all the citizens perished with their leader; the women and children were sold into slavery. The town was repopulated by the neighboring tribesmen (Arrian 2.27.7) and was again used as a fortress. The booty must have been enormous—aside from the presents that Alexander sent to his mother and his family, he sent his tutor, Leonidas, 500 talents weight of frankincense and a hundred of myrrh (Plut., *De Alex. fort.* 25.5).

H. Archaeological Remains

The material remains from pre-Hellenistic Gaza are meager. Probes have exposed remains of what may have been the wall that surrounded the city when Pharaoh Neco attacked it in the 7th/6th century B.C. (cf. Jer 47:1). An earlier wall has been dated to the middle of the 2d millennium B.C. and Phythian-Adams attributes it to the Philistines. Ceramic wares from the LB (base-ring ware, Cypriot "milk bowls," etc.), Iron Age I (Philistine wares), and some Iron Age II wares have been identified (*EAEHL* 2: 408–17). The series of excavation reports published by William Flinders Petrie, *Ancient Gaza I–IV,* do not pertain to this site, but modern scholarship has since identified that site, known as Tell el-ʿAjjul, as Eusebius' (*Onomast.* 48.19) Beth Aglaim.

H. J. KATZENSTEIN

GAZA IN THE GRECO-ROMAN PERIOD

Gaza was one of the most important cities of Palestine in ancient times for two main reasons: its role as a major emporium for the lucrative luxury-goods trade from Arabia Felix and the Far East, and its location on the Via Maris leading from Asia Minor and Syria to Egypt. Strategically, it served as a bridgehead for Egyptian rulers who launched campaigns to conquer Palestine and Syria, just as it served as a springboard for conquering Egypt from the N. The city already became an international commercial center under the reign of the Achaemenid Persians (Rappaport 1970: 75), thanks to the political alliance and economic cooperation both with the Persian authorities and with neighboring Arab tribes. With good reason Herodotus (3.5) rated Gaza as no less "a great city" than Sardis in Asia Minor.

A. Under Alexander the Great

Gaza was the only city in Palestine which opposed Alexander. Its defense was directed by a local Persian governor called Betis (or Batis) who was assisted with Arab mercenaries (Arrian, 2.25.4; Curtius Rufus, 4.6.7; cf. Jos. *Ant* 11.320). Since Gaza's security needs related chiefly to caravan trade of the Sinai desert and the Negeb of Palestine, it would be reasonable to assume that any such "Arab mercenaries"

hired to protect it had the appropriate military training, namely desert warfare. The explicit mention of Nabataeans in connection with events shortly afterward (312 B.C.E.) reinforces the impression that the Arab mercenaries were Nabataeans or of some closely related tribe.

Alexander besieged the city for two months (August–September 332 B.C.E.) using war machines and digging in the sand underneath the city walls (Stark 1852: 236–244; Kasher 1975: 63–67). He could not leave Gaza unconquered, since it could serve to block him on his return back from Egypt. He was angry with the Gazaeans both for their stubborn resistance and because he sustained personal injury during the siege; he therefore treated them cruelly, their governor Betis in particular. Because this proud man had refused to honor Alexander by kneeling, he was bound by his heals to Alexander's chariot and was dragged around the city, thus sharing a fate similar to that of Hector who was killed by Achilles in the Trojan War. The Gazaeans were sold into slavery and their city was repopulated with people from the vicinity, probably from the loyal Phoenician cities of Palestine. Eventually Gaza was reconstructed and was politically organized as a *polis* by Alexander himself, so as to safeguard his return from Egypt (Arr. 2.25–27; Curtius Rufus, 4.6.7; Diod. Sic. 17.48.7; Plut. *Vit. Alex.* 24).

The conquest of Gaza was also an important step in the realization of Alexander's dream to gain control of the source and markets of perfumes and spices (Plut. *Vit. Alex.* 25.5). From Gaza he sent to Macedonia a cargo of 10 ships loaded with the booty he had captured there, and these ships had to bring back new recruits to fill the ranks of the army which had suffered heavy losses in Gaza (Diod. Sic. 17.49). Josephus reports that at this point Alexander paid his visit to Jerusalem (*Ant* 11.325), but the credibility of this report is still under debate.

Following Alexander's death, Gaza became a focal point in the conflicts between the Diadochi (323–301 B.C.E.). First, it was conquered by Ptolemy I in 320 B.C.E., but already in 315 B.C.E. it fell in the hands of Antigonus Monophthalmus. Later in 312 B.C.E., seizing the opportunity of Antigonus' temporary absence from the Syro-Palestinian arena, Ptolemy I recaptured Gaza after winning a decisive battle over Demetrius Poliorcetes (Antigonus' son). But in 311 B.C.E. Ptolemy I was compelled to abandon Gaza once again because of the speedy return of Antigonus with a huge force. While retreating, he destroyed the fortifications of the city, just as he did to those of Acre, Jaffa and Samaria. In 301 B.C.E. he restored his rule in Gaza following the defeat of Antigonus in the battle of Ipsus (Hengel 1976: 25–33).

B. Under Ptolemaic Rule

Gaza was under Ptolemaic rule for a whole century (301–198 B.C.E.) and served as a prosperous and important economic center for trade with Egypt. Its commercial prosperity is well reflected in the Zenon Papyri found in Philadelphia in the Fayûm district of Egypt. Zenon, the chief agent of Apollonius the *Dioketes* (i.e., the Ptolemaic minister of finance), visited Palestine in 260/259 B.C.E. under the reign of Ptolemy II Philadelphus (283–246 B.C.E.), and Gaza was one of the most important cities mentioned in his Papyri. The main Palestinian commodities passing through the markets of Gaza were slaves, olive oil, Syrian wheat and other grains, fish, wines, dry fruits, etc. But Gaza's world fame was, of course, as a center of the "Arab trade" dealing with spices and perfumes from Arabia Felix. The Zenon Papyri even mention a Ptolemaic functionary there bearing the title "Officer-in-Charge of Frankincense" (*PSI* 628). The trade activity of the Arab tribes with Gaza branched out to India and the Far East. The main commodities brought from there to Gaza included Indian tree resin, dyes, aromatic essences, ginger, pepper, balsam, persimmon, fragrant creams, vermillion, specially processed wool cloth, precious woods, silk, brocades, and medical drugs (Tcherikover 1937: 9–90; Hengel 1974: 39; Kasher 1975: 68–70).

During the Ptolemaic period Gaza was deeply involved in the "Syrian Wars." In 217 B.C.E. Ptolemy IV Philopator defeated Antiochus III in the famous battle of Raphia (south of Gaza). But in 200 B.C.E. Antiochus was the victor, this time in the battle of Paneas against Ptolemy V Epiphanes (Bar-Kochva 1976: 128–57); and within two years he had destroyed the last pockets of Ptolemaic resistance, including Gaza (Stark 1852: 404–405; Tcherikover 1959: 73–75).

C. Under Seleucid Rule

The Hellenization of Gaza probably deepened during the period of Seleucid rule even more, as suggested by the change of its name to Seleucia during the reign of Antiochus IV Epiphanes (175–164

B.C.E.). Later, in the wake of increased internal conflicts and civil wars in Syria, Gaza gradually attained more autonomy as a *polis;* this is well reflected in the city coinage (Rappaport 1970: 78–80). Politically this was mainly manifested in connection with the war between Demetrius II and Tryphon, the legal guardian of young Antiochus VI. At that time (145/44 B.C.E.), Jonathan the Hasmonaean was an ally of Tryphon, while his brother Simon was nominated as the *strategos* of the coastal strip from Tyre to the border of Egypt (1 Macc 11:59). Since Gaza was hostile, the Hasmonaeans attacked the city and burned its suburbs to the ground. Under siege, Gaza sued for peace, which was accepted; however, the Hasmonaeans took some of the city archons as hostages and brought them to Jerusalem (1 Macc 9:61–62; Jos. *Ant* 13.150–53). Thus the plans of Gaza to gain independence went unfulfilled. Moreover, the conquest of Idumaea by John Hyrcanus I (ca. 125 B.C.E.) threatened not only the city's role in trade by disrupting the Idumaean link in the Arabian trade route, but it endangered the very existence of the city's autonomy as a *polis*.

D. Under the Hasmonaeans

In 103/102 B.C.E. Gaza was used as a military base from which Ptolemy IX Lathyrus, governor of Ptolemaic Cyprus, prepared to invade Egypt and depose Queen Cleopatra III, his mother (Jos. *Ant* 13.329, 334, 348, 352). Following the failure of this invasion and the death of Queen Cleopatra III (101 B.C.E.), Alexander Jannaeus, the Hasmonaean king, seized the opportunity to conquer Gaza. Ptolemy XI (Alexander I) probably agreed to the conquest in order to have Jannaeus on his side against his rival Ptolemy IX Lathyrus. According to Josephus' report (*Ant* 13.357–64), Jannaeus isolated Gaza from its hinterland by capturing Anthedon in the N and Raphia as well as Rhinocorura (modern El-Arish) in the S. When the city had been cut off from its own port to the W, the Gazaeans desperately appealed to Aretas II the Nabataean king for aid, but their hopes proved to be in vain. Apollodotus, the city commander, mounted a night raid on the Jewish besiegers, but at daybreak the Jews gained the upper hand. The fate of the city itself, however, had not yet been determined. Only after a fight had broken out between Apollodotus and his brother Lysimachus, in which the former met his death, did Jannaeus succeed in breaching the walls of Gaza. Fierce fighting broke out in the city's streets, and when the Gazaeans realized that they had no chance of victory they set their property on fire and many preferred suicide rather than capture by the Jews. Jannaeus did not take pity even on the five hundred members of the city council *(boulé)* who had sought refuge in the local temple of Apollo. After besieging the city for an entire year (probably 100/99 B.C.E. and not 96 B.C.E. as maintained by many scholars), Jannaeus destroyed it and annexed it to his kingdom (Kasher 1988: 144).

Josephus' report was undoubtedly drawn from historical sources hostile to the Hasmonaeans, probably from the writings of Nicolaus of Damascus. The Gazaeans are portrayed sympathetically, while Jannaeus is described as a bloodthirsty tyrant who tricked the Gazaeans into surrendering and then savagely slaughtered them. The story of the city's last hours was written as a real Greek tragedy which aimed to win the readers' sympathy for the Gazaean victims. Undoubtedly, the destruction of the city was significant, as one might expect to happen after an entire year campaign, but there is no basis to believe that Gaza was completely destroyed. The very fact that Josephus himself stated that Antipas, the new governor appointed by Jannaeus over Idumaea and Gaza, "made a league of friendship with the Arabs and the Gazaeans" (*Ant* 14.10) suggests that the city still existed and even acted politically. Moreover, it seems that Jannaeus wanted somehow to soften the bitterness of his conquest by appointing an Idumaean governor who could win the trust of both the Arabs and the Gazaeans, who had enjoyed good relations in the past (Kasher 1988: 146–49).

E. Under Roman Rule

Gaza was liberated from the Hasmonaeans in 63 B.C.E. by Pompey. Like other liberated Hellenistic cities in Palestine, Gaza too adopted a "Pompeian calendar" to date years from the time of its liberation and reconstruction (61 B.C.E.) and thus to express its gratitude to Pompey. Later, Gabinius, the governor of Syria, rebuilt Gaza along with its neighboring towns Anthedon and Raphia (Stark 1852: 352; Jones 1971: 256–58; 509–13; *HJP²* 2: 101–102).

In 40 B.C.E. Gaza was assigned to the kingdom of Herod, but Herod could not realize his control on it until 37 B.C.E., when he defeated the last Hasmonaean king Mattathias Antigonus. The next year Herod lost Gaza with other cities and rural districts to Mark Antony, who gave them to Cleopatra VII. In 30 B.C.E. Caesar Augustus returned Gaza to Herod's domain (*Ant* 15.217; *JW* 1.396); however, its autonomy as a Greek *polis* was very limited, because of the direct control of the Herodian governor of Idumaea (*Ant* 15.254). It seems that Herod was suspicious of Gaza because of its close relations with the Nabataeans, his enemies. It is possible, therefore, that he rebuilt the port of Anthedon (then called Agrippias after Marcus Agrippa, Augustus' commander-in-chief) in order to compete with Gaza and to diminish its economic power.

After Herod's death Gaza enjoyed the status of partially autonomous *polis* under the aegis of the Roman governor in Syria (*Ant* 17.320; *JW* 2.97; Rosenberger 1975: 54). In Emperor Claudius' days Gaza was flourishing once again and was even described as an important city (Schürer *HJP²* 2: 102, n. 79). In 66 C.E. Gaza and Anthedon were attacked by Jewish zealotic rebels. Josephus (*JW* 2.460) states that the two cities were totally destroyed, but numismatic evidence indicates that this report was greatly exaggerated (*HJP²* 2: 102). Later, in the days of Vespasian, Gaza was annexed to the province of Judaea, but the reason for this is not known.

Under Hadrian, Gaza merited favored treatment, primarily in the economic sphere. Hadrian honored the city with a personal visit (129/130 C.E.) on his trip throughout the eastern provinces. Not only was the date of this visit imprinted on the city's coins, but it formed the basis for a new local calendar used in conjunction with the "Pompeian calendar" adopted in 61 B.C.E. With the suppression of the Bar-Kokhba Revolt in 135 C.E., many Jewish prisoners were brought to the large slave markets of Gaza, Acre, and Bothnah (near Hebron) to be sold and transported abroad (*J. Avodah Zarah,* I, 39 d; *Bereshith Rabbah,* 47 end; *Chronicon Paschale* [ed. Dindorf], I:474; Hieronymus, *In Jeremiam,* VI 31, *Patrum Latinorum Cursus Completum* [ed. Migne], 24 col. 911 etc.). From Gaza the slaves were apparently brought to Egypt on cargo ships or on foot. Some were sold in Egyptian markets and some were sent further to the west. Taking into account the long enmity between Gaza and the Jews, it seems that the defeat of Bar-Kokhba and the Jewish national disaster were probably cheered by the people of Gaza. It is possible that the city served as an important staging base for Roman troops sent to crush Jewish resistance in the southern parts of Judaea (and in Idumaea in particular). Gaza undoubtedly played an important logistical role as a station between Egypt and Judaea, supplying food, water, equipment, and services to the auxiliary forces coming from the S.

It is not known to what extent the establishment of Provicia Arabia in 106 C.E. affected Gaza. If the economic and trade activities of the Nabataeans indeed diminished, then it would seem that Gaza should have suffered as well. But it seems that this was not the case, at least not under the reign of Hadrian, as indicated above. In later generations, however, the fate of Gaza, for better or for worse, was closely involved with that of the Arab population in the vicinity.

ARYEH KASHER

BYZANTINE GAZA

During the Byzantine period, Gaza reached the highest level of prosperity and culture of its long history. Supported by a flourishing trade in agricultural produce, in particular the export of high quality wine throughout the Mediterranean and beyond, it developed as the home of a school of rhetoric which attracted students from the entire Byzantine world, as a focus for Christian pilgrimage, and as a city which offered its citizens a comfortable standard of living with lavish public cultural and recreational facilities. The period is illuminated by relatively abundant literary sources, many written in Gaza itself, and by some archaeological evidence.

A. History of Gaza

The history of Gaza in the Byzantine period is closely associated with the spread of Christianity in Palestine and with its adoption by the imperial authorities and the cities themselves. In Gaza, the conflict between pagans and Christians was particularly bitter and well documented.

It is not known when Christianity first reached Gaza, but a number of Christians from the city, notably Silvanus, "the bishop of the churches around Gaza," suffered martyrdom under Diocletian (Eusebius, *Hist. Eccl.* 8.13). The Christian community in Gaza was very small, and the majority of the citizens remained militantly pagan throughout the next century. In contrast, the people of Gaza's port town, Maioumas, were more receptive to the new faith, and during the reign of Constantine they converted *en masse.* In response to this the emperor granted the town the status of an independent *polis,* renaming it Constantia. The people of Gaza refused to acquiesce in the loss of control over their port, and between 361 and 363 they appealed to the pagan Emperor Julian, who decreed that Maioumas should lose its independence and its new name and revert to its earlier status as "the sea-side part of Gaza." It kept, however, its independent Church administration under its own bishop. Even this did not satisfy the Gazaeans, and attempts were subsequently made to combine the two sees (Sozom., *Hist. Eccl.* 2.5; 5.3; Eusebius, *Hist. Eccl.* 4.38). The bishopric of Maioumas seems to have survived, however, until the 6th century, when it was apparently combined with that of the neighboring town of Anthedon. The intensity and persistence of the struggle over the status of Maioumas suggest that the dispute was not purely religious. There may have been economic factors behind Maioumas' desire for independence and Gaza's insistence to retain control over its port (Glucker 1987: 25–26, 43–44).

Another ecclesiastical dispute occurred in 341, when Asclepas, the bishop of Gaza who founded the "Old Church" just outside the city, was accused by the Arians, at that time in the ascendancy, of Athanasian tendencies and dismissed him from his post. He was subsequently reinstated, following the intervention of Pope Julius and Emperor Constantius (Marc. Diac. *v. Porph.* 20; Socrates *Hist. Eccl.* 2.15, 23; Sozom., *Hist. Eccl.* 3.8).

The first half of the 4th century was also the period of activity of Hilarion, who introduced the monastic way of life into Palestine. He was born in the village of Thavatha, five miles S of Gaza, and after his education in Alexandria he returned to the area and adopted the ascetic life of a hermit in the desert nearby. His growing reputation as a holy man attracted a number of followers, and eventually an organized monastic community developed around him (Jerome, *Vit. Hil.* 2–4; 14).

The reign of Julian was marked in Gaza by an outbreak of mob violence against Christians in which Hilarion's monastery was sacked and destroyed. Hilarion himself was abroad at the time and died later in Cyprus. Eventually his body was brought back and buried in the restored monastery, which became the site of an annual festival. The anti-Christian riots in Gaza, which led to a number of deaths, were suppressed by the provincial governor, who was subsequently dismissed from his post and imprisoned on Julian's orders (Jerome, *Vit. Hil.* 35, 41, 44–47; Sozom., *Hist. Eccl.* 3.14; 5.9).

The official adoption of Christianity came at the end of the 4th century, as a result of the efforts of Porphyry, who was appointed Bishop of Gaza in 394. An eyewitness account of the suppression of paganism in Gaza is available in the biography of Porphyry written by his secretary, Marcus Diaconus. The authenticity of this narrative has sometimes been questioned, but it seems probable that it is essentially genuine, despite some later editing, presumably on doctrinal grounds (Grégoire and Kugener 1930: vii–lxxxix). Since Porphyry's efforts to combat pagan harassment and enlarge his small congregation proved unsuccessful, in 398 he appealed to the Emperor Arcadius, who issued a decree ordering the closure of all the eight public temples in Gaza, except the Marneion, the temple of Gaza's patron deity Marnas, who was a local rain god identified by the Greeks with the Cretan Zeus (Marc. Diac., *v. Porph.* 19–27, 64; Stark 1852: 576–80; Hill 1914: lxxv–lxxvii). Two years later Porphyry traveled to Constantinople and gained the support of the Empress Eudoxia, who finally prevailed upon her husband to grant a decree ordering the destruction of all the temples in Gaza (Marc. Diac., *v. Porph.* 32–34, 37–54). This destruction was carried out in the summer of 402, under the supervision of an imperial official, the civil and military governors of the province, a large body of troops, and with the enthusiastic cooperation of the local Christians. Many of the pagans, however, including most of the richest citizens of Gaza, fled from the city, abandoning their homes (Marc. Diac., *v. Porph.* 57–71). The Marneion was razed and a large church was erected on its site, which was completed and dedicated in 407. It was named the Eudoxiana, after the empress, who had provided funds for the project (Marc. Diac., *v. Porph.* 74–79, 84, 92). From this time onward the Church slowly gained strength and influence in the city.

Almost nothing is known of Gaza during the 5th century. The controversial Monophysite theologian Petrus Iberus was appointed Bishop of Maioumas in 451. He spent many years in exile in Egypt, but eventually returned to Maioumas and was buried there (Raabe 1895). The Emperor Anastasius (491–518) granted a request by the orator and grammarian Timotheus of Gaza on behalf of his fellow-citizens and abolished an oppressive tax (the *demosion chrysargyron*). The people of Gaza expressed their gratitude to the emperor by the erection of a statue and a public encomium (Glucker 1987: 52–53).

Gaza reached the height of its prosperity during the reign of Justinian (527–65). An ambitious building program, involving churches and other public buildings, was carried out at the instigation of Bishop Marcianus, who played a prominent part in the civic administration, with the cooperation of Stephanus, the civil governor of the province, who was a native of Gaza (Glucker 1987: 55–56). One of their first undertakings was the restoration of the city wall, which had fallen into disrepair. Evidence for this reconstruction exists in an inscription erected by the building contractors (Abel 1931b: 94–95; Glucker 1987: 140–41, insc. 33). The orator Choricius speaks eloquently of the fear of enemy attack, conquest, and slavery, which he claims prevailed in the city before the restoration of the wall (Choricius *Laud. Marc.* 1.7), but there is no evidence that the security of Gaza was genuinely threatened. The most serious disturbance in the province at the time, the Samaritan Revolt, took place far to the N and did not affect Gaza. The region was occasionally troubled by bandits who menaced travelers on the roads, or by raiding parties of nomads from across the borders of Arabia or Egypt, but neither bandits nor nomads were capable of posing a serious threat to a large city. Choricius' remarks must, therefore, be regarded as heightened rhetoric, intended to justify a project undertaken primarily for reasons of prestige (Mayerson 1964: 183–88; Isaac 1984: 198–201; Glucker 1987: 55–57).

Gaza seems to have suffered from the terrible plague which spread throughout the entire empire between 540 and 542. Evidence for this consists in three epitaphs dated August 541. Others from the town of Nessana, which had close trading connections with Gaza, date from October and November of the same year (Kirk and Welles 1962: 168, insc. 80; 179–81, insc. 112–14; Glucker 1987: 124–27, insc. 9–11).

In 618/19 Gaza was occupied by the Persians under Chosroes II, as they overran the whole of Palestine and pushed S against Egypt. Nothing is known of Gaza under the Persian occupation, which apparently passed peacefully. The city was returned to Byzantine rule in 629, when the Emperor Heraclius regained control over Palestine.

The Moslem attack on Palestine began in 634. Records of the invasion are confused and inaccurate, but it is clear that Gaza was one of the main objectives of the Arab armies and that some of the earliest battles took place near the city (Mayerson 1964: 156–59; Stratos 1972: 48–50). Gaza was finally occupied by the Moslems under Amr-ibn-el-As in June or July of 637 (Stratos 1972: 78–79). An account of the conquest of the city is extant in the *Passio Sanctorum Sexaginta Martyrum,* a Greek work of uncertain date surviving only in a poor Latin translation, which describes the martyrdom of the troop of soldiers defending Gaza, who were imprisoned and finally executed for their refusal to convert to Islam (Guillou 1957: 396–404). Otherwise, however, the occupation of Gaza was peaceful, and the city continued as the administrative center of the region under the Arab governor (Glucker 1987: 59).

B. Civic Administration

The Byzantine sources on Gaza provide a few references to the city's civic administration and magistrates. A lead weight inscribed *Kolonias Gazes epi Herodou Diophantou* indicates that Gaza had been awarded Roman colonial status, probably in the late 3d or early 4th century (Kubitschek 1916: 31–40; Glucker 1987: 77). As a colony, Gaza presumably adopted a Roman municipal constitution, as is suggested by Jerome's reference to a *duumvir* (*Vit. Hil.* 20) and Sozomen's to *strategoi,* the normal Greek equivalent (*Hist. Eccl.* 5.3). There are references to the city council *(bouleuterion)* and councilors *(bouletai)* by Marcus Diaconus (*v. Porph.* 95) and to a *decurio* by Jerome (*Vit. Hil.* 22). A damaged inscription of the 6th century possibly refers to the council *(boulé)* (Glucker 1987: 128–31, insc. 14). A number of Gaza's magistrates are mentioned by Marcus Diaconus: There are three references to the *proteuontes* in terms which make it clear that they were considered the chief officials of the city in his time (*v. Porph.* 25, 27, 95). They were apparently three in number, and are probably to be identified with the *principales* well-known from Byzantine sources, who seem to have formed an inner group of leading members of a city council which directed its administration (Glucker 1987: 80). Marcus also refers to a *demekdikon,* apparently a local term (it has not been found elsewhere) for the *defensor civitatis,* an official whose mandate was to protect the poorer citizens from exploitation, and to the *eirenarchai,* the commanders of the city police (*v. Porph.* 25; Glucker 1987: 79). Several lead weights have been found in Gaza inscribed with the names and title of *agoranomoi,* the supervisors of the city's markets, whose duties included the issue of authorized standard weights (Lifshitz 1976: 168–87; Glucker 1987: 78, 147–54, insc. 42/1–26; 43/1–3). Choricius mentions an *astynomos,* an official responsible for the maintenance of the water supply, public baths, roads, and bridges (*Proc.* 34). But it is clear that by his time the bishop was the most active and influential figure in the city. He did not replace the official magistrates, but tended to take the initiative in public affairs, civic as well as ecclesiastical.

C. Population, Trade, and Industry

The population of Gaza was mixed in origin, but by the Byzantine period appears to have been fairly cohesive. Two stories, by Jerome (*Vit. Hil.* 22) and Marcus Diaconus (*v. Porph.* 66–68), suggest that most people spoke Aramaic as their everyday language. Knowledge of Greek was evidently restricted to the upper levels of society, and there are hints that Christianity may have been more easily accepted by the Aramaic-speaking people than by the Hellenized upper class (Glucker 1987: 48–51). A few Talmudic references may suggest the presence of a small Jewish community in Gaza, possibly from the 2d century A.D. onwards. The early 6th century synagogue discovered at Maioumas indicates that there was a prosperous community there at that date. There are also references to Samaritans at Gaza and to colonies of foreign merchants resident in Maioumas (Glucker 1987: 98–102).

By the Byzantine period the spice trade on which Gaza's earlier prosperity had been based had largely dried up, although some trade between Gaza and the Arabian Peninsula continued. It is recorded that in the late 5th century a trader in Indian goods, a native of Aila, passed through Gaza with two giraffes and an elephant to be presented to the emperor Anastasius (Haupt 1869: 2, 15). Arab merchants from Mecca are said to have visited and even settled in Gaza before the Moslem conquest (Meyer 1907: 74; Mayerson 1964: 169–71). But in this period Gaza's economy rested largely on the export of high quality wine, particularly to W Europe. Agriculture in S Palestine was flourishing as a result of the sophisticated water conservation and irrigation techniques developed by the Nabateans, and excavations in a number of

Negeb towns have revealed elaborate wine presses, evidence of wine production on an industrial scale (Mayerson 1962: 211–69; 1985: 75–80). The export of wine from Gaza is first reported in the mid-4th century by the *Totius Orbis Descriptio* (29A), which states: "Ascalon and Gaza … send good wine to the whole region of Syria and Egypt." At the end of the century, according to Marcus Diaconus (*v. Porph.* 58), a colony of Egyptian wine merchants was resident in Maioumas. From the 5th to the early 7th century a number of Latin writers refer to the strength and quality of Gaza's wine (Glucker 1987: 93–94). Pottery identified as amphorae from Gaza has been found on several sites throughout Europe and the Near East (Riley 1975: 27–31). Gaza's wine may have been popularized in the W by the Christian pilgrims who visited the Holy Land in large numbers at that time (Mayerson 1985: 79–80).

Gaza also served as a center for trade in other agricultural produce. The Nessana papyri provide evidence for trade in dates, and cereals, olives, and figs must have been marketed in the same way (Mayerson 1962: 227–29; Kraemer 1958: 175–79). The other Negeb towns and the villages on the coastal plain surrounding Gaza must also have dispatched their produce to the city, both to supply the needs of its large urban population and for export. In return, imported goods could be purchased in Gaza and distributed to the surrounding settlements (Glucker 1987: 94–96).

Little is known of other industries at Gaza. The manufacture of pottery was important, consisting chiefly of amphorae for the transport of wine and other agricultural produce. Stephanus of Byzantium refers to jars from Gaza as *keramoi Gazitoi,* and the term *gazition* also appears in papyri (Steph.Byz., s.v. Gaza; Kraemer 1958: 246–47). Excavations on the site of Maioumas near the coast revealed the remains of a dyeworks containing numerous sherds stained with inorganic dyes, some of which had been imported from Italy and Greece (Ovadiah 1969: 197–98). A mosaic pavement in the synagogue also excavated there bore a dedicatory inscription by two timber merchants. This must have been an essential and profitable trade, wood being in short supply in the arid region around Gaza (Ovadiah 1969: 195; Glucker 1987: 96).

Gaza must also have profited from the many Christian pilgrims who began to visit the city from the late 4th century onwards, apparently attracted by the numerous martyr shrines around the city, including those of Timotheus, Major and Thea in Gaza itself, that of St. Victor on the way to Maioumas, and the tomb of Hilarion two miles to the S. The Church officially encouraged pilgrims: a hostel was included in the plans for the Eudoxiana church and a fund was set up to pay each visitor a day's expenses (Marc. Diac., *v. Porph.* 53, 93). The citizens also encouraged visitors to the town. One of these pilgrims wrote: "Gaza is a magnificent and delightful city; its people are most virtuous, endowed with the utmost generosity and lovers of pilgrims" (Antoninus Placentinus, *Itinerarium* 33; Glucker 1987: 96–98).

D. Rhetorical School

Gaza was the home of a famous school of rhetoric, which reached the height of its reputation in the late 5th and early 6th centuries. At that time, it is reported, even Athenians preferred to study rhetoric in Gaza (Aen. Gaz., *Ep.* 18). Members of the school wrote on a wide variety of literary and mythological topics, in verse as well as prose, being strongly influenced by the school of Alexandria and the poet Nonnus. It was also a devoutly Christian school, some of its leading members producing theological as well as literary works, and this may have been a factor in its popularity. An official chair in rhetoric was established in Gaza, involving a salary paid out of public funds. As well as directing rhetorical education in Gaza, its occupant was expected to deliver orations on ceremonial occasions.

Among the leading rhetors from Gaza were Aeneas, who combined Christianity with Neoplatonism in a dialogue, the *Theophrastus,* on the immortality of the soul, and Timotheus, who wrote a lost book on grammar and a treatise on exotic animals in four books of hexametric verse, partly preserved in a prose summary. A few Anacreontic verses by Johannes, a slightly later poet and grammarian, are extant, as is his long hexametric poem describing the wall paintings in a bathhouse in Gaza. Procopius of Gaza (died ca. 526) was one of the leading members of the school with a high reputation throughout the region. Many of his biblical commentaries are extant, as well as a few short speeches and a large collection of letters. He held the chair of rhetoric in Gaza and was succeeded in that post by his pupil Choricius, many

of whose writings have been preserved. Most of these are purely literary in character, but some provide valuable information on Gaza in the first half of the 6th century (Glucker 1987: 51–53).

Public oratory was the most elevated form of entertainment in Byzantine Gaza, and was part of the frequent and elaborate festivals which took place there, some under the patronage of the Church, others, such as the "Day of Roses," evidently survivals from the pagan tradition. Other, perhaps more popular, amusements included mimes, performed in the city's theaters, instrumental and choral concerts, chariot racing, wrestling and athletics (Choricius *Laud. Marc.* 1.83–89; 2.60–69; *Apol. Mim;* Glucker 1987: 54–55).

E. Buildings and Archaeology

Gaza is represented on the 6th century mosaic map from Madeba in Jordan. The vignette of the city, only approximately half of which survives, depicts a walled city built on a Roman street plan, with colonnaded main streets running N–S and E–W, leading to gates in the city walls and meeting in a large *forum* in the center (Donner and Cüppers 1977: 158–59). A small domed structure in the middle of the *forum* may be the elaborate clock described by Procopius of Gaza (Diels 1917: 3–39). A semi-circular structure at the SE corner may possibly represent a theater, but is more probably simply a colonnaded courtyard. The SW quarter is filled by one large building, presumably a church, which cannot, however, be positively identified with any of the churches known through literary sources (Glucker 1987: 18–22). Earliest among these churches are the Irene and the Old Church, both probably dating from the first half of the 4th century (Marc. Diac., *v. Porph.* 18, 20), and the Eudoxiana, dedicated in 407 (Marc. Diac., *v. Porph.* 92). Two magnificent churches built in the 6th century are described in detail by Choricius: the church of St. Sergius, completed shortly before 536, and that of St. Stephen the Martyr, dedicated between 536 and 548 (Choricius, *Laud. Marc.* 1; 2; Abel 1931a: 12–27; Downey 1963: 126–139). Choricius also mentions the Church of the Apostles, which was repaired by Bishop Marcianus (*Laud. Marc.* 2.17–18).

Other building projects initiated by Marcianus include additional stoas and a bathhouse (Choricius, *Proc.* 52). The provincial governor Stephanus was responsible for building another bathhouse, the "summer theater" and, possibly, a basilica (Choricius, *Laud. Arat. et Steph.* 55). The private houses of Gaza were built, for the most part, of sun-dried brick and had flat roofs. They apparently adjoined each other closely, as the rooftops provided an escape (in times of danger) from riot (Marc. Diac., *v. Porph.* 21, 96–98).

No archaeological excavations have been carried out within the modern town of Gaza, apart from an exploratory trench dug in 1922, which revealed numerous Roman and Byzantine sherds (Phythian-Adams 1923: 12, 23–24). In 1965, a large and well-preserved mosaic pavement was discovered close to the sea near Gaza. Subsequent excavations in 1967 disclosed the remains of a synagogue measuring 30 × 26 m, divided by four rows of columns into a central nave with two narrower aisles on either side. One mosaic depicts King David as Orpheus playing his lyre to a group of animals; another represents various animals and birds set in medallions formed from vine tendrils. A dedicatory inscription dates the synagogue to A.D. 508/9. Some private houses and a dyeworks were also uncovered. A second season of excavations in 1976 revealed further domestic and industrial installations and substantial fortifications (a stretch of wall or a tower) close to the sea. These findings, mostly dating from the 4th and 5th centuries A.D., have finally settled doubts over the situation of the port town Maioumas (Ovadiah 1969: 193–198; 1977: 176–178; Glucker 1987: 12).

A number of inscriptions from Gaza, mainly Christian epitaphs, were published at the end of the 19th century (Clermont-Ganneau 1896: 379–437). These appear to have come originally from a cemetery near Maioumas, but most were found in secondary use in buildings in Gaza. Additional inscriptions have been discovered subsequently; a full collection has recently been published (Glucker 1987: 115–63).

GAZELLE. See ZOOLOGY.

GAZEZ (PERSON) [Heb *gāzēz* (גָּזֵז)]. The name of two persons in the OT. The name possibly means "shearer." It appears in the LXX as *gezoue* and in the Peshitta as *gozan.*

1. A son of Caleb by Ephah his concubine (1 Chr 2:46). Gazez, however, may not in fact have been a descendant of Caleb, for some suspect, among them Williamson (*Chronicles* NCBC, 54–55) and Braun (*1 Chronicles* WBC, 40–41), that the genealogy found in 1 Chr 2:42–50a represents a clan other than that of Caleb (compare 1 Chr 4:15). Gazez, as well as other names in this genealogy, appears nowhere else in biblical literature. From whose line Gazez descends is unknown.

2. A son of Haran and grandson of Caleb (1 Chr 2:46). This Gazez is apparently a nephew to Gazez son of Caleb by Ephah his concubine.

CRAIG A. EVANS

GAZZAM (PERSON) [Heb *gazzām* (גַּזָּם)]. Var. GAZZAN. Head of a family of NETHINIM (temple servants) who are listed as returnees from Babylonian exile under the leadership of Zerubbabel and others (Ezra 2:48 = Neh 7:51 = 1 Esdr 5:31). According to Noth, the name means "bird of prey" or "wasp" (*IPN,* 230). For further discussion see AKKUB.

CHANEY R. BERGDALL

GEBA (PLACE) [Heb *geba‘* (גֶּבַע)]. Listed among Benjaminite towns (Josh 18:24) and Levitical cities (Josh 21:17 = 1 Chr 6:60), Geba's original inhabitants were reportedly exiled to Manahath (1 Chr 8:6). Geba is mentioned in such close connection with Gibeah in Judg 20:10, 33; 1 Sam 13:3, 16; and 14:5, and Isa 10:29 that textual emendations in the commentaries are legion; uncertainty exists as to whether the

two toponyms refer to separate sites or are linguistic variants of the same site name. See GIBEAH. The city seems to have figured in a battle which expelled the Philistines from Benjamin (1 Sam 13–14; 2 Sam 5:25), though credit for the victory is variously assigned to Saul, Jonathan, and David. After the division of the kingdom, Asa fortified the site as one of Judah's N outposts on the Israelite border (1 Kgs 15:22 = 2 Chr 16:6). In the late 8th century B.C., an invader from the N reportedly passed by this fortress en route to Jerusalem (Isa 10:29). A hill shrine at Geba was reportedly desecrated during Josiah's reform (2 Kgs 23:8). The city is mentioned during the postexilic period (Ezra 2:26; Neh 7:30; 11:31; and 12:29) and appears to have been regarded as a N limit of Judah into the 4th century B.C. (Zech 14:10).

Since E. Robinson's 1838 expedition (1874: 440–42), Geba has been identified with the modern village of Jaba‹, 9 km NE of Jerusalem (M.R. 175140). The site is located on the brow of a steep hill S of the Wadi es-Swenît directly opposite Mukhmas (see MICHMASH), 2 km to the NE. This location afforded Geba control over a key road which crossed the intervening valley at the Geba/Michmash Pass (1 Sam 13:23; Isa 10:29; Judg 20:33?). Although the site has never been excavated, M. Kochavi's 1968 surface survey (1972: 183) discovered Iron Age and Persian sherds in and near the village.

Regarding Geba's frequent textual confusion with Gibeah, J. M. Miller (1975: 165) proposed that the two names are linguistic variants of the same toponym. P. Arnold (1987: 101–14) suggested that "Gibeah" is the older, Israelite name for the site known in later Judean records as "Geba." The Judean border fortress at Geba was constructed simultaneously with Mizpah ca. 900 B.C. in order to guard the two main highways leading into Judah from Israel, the former at the strategic Geba/Michmash Pass, and the latter along the watershed highway. The term "from Geba to Beer-sheba" (2 Kgs 23:8) thus probably demarcated the limits of the Judean kingdom during monarchical times. Y. Aharoni (1968: 30) proposed that these border fortresses also contained sanctuaries, and that the excavation of Geba might reveal a cultic site corresponding to the shrines discovered at Beer-sheba and Arad.

Geba's identification as a Levitical city probably relates to its post-exilic settlement by priests active in the reconstitution of temple worship in Jerusalem (Neh 12:29).

PATRICK M. ARNOLD

GEBAL (PLACE) [Heb *gĕbāl* (גְּבָל)]. GEBALITES. **1.** A famous ancient Phoenician seaport city, better known today by its Arabic name Jubail (M.R. 210391), situated on the Mediterranean seacoast about 20 miles (32 km) N of Beirut. Since it had a good harbor for small ships it was one of the principal Phoenician seaports long before the development of Tyre and Sidon. Gebal is the earliest Asiatic city mentioned in Egyptian Old Kingdom records. Ancient trade between Egypt and Gebal involved large quantities of papyrus reeds. The Greeks called the city Byblos, meaning "book," because the people of Gebal made paper from the imported reeds. This paper was used to record expense accounts, state correspondence, important documents, and religious texts. The Gebalites (Josh 13:5) were expert stone cutters and masons (1 Kgs 5:18). The inhabitants of the city were also known for their talent in caulking and boat building (Ezek 27:9). Ships built in Gebal sailed between Phoenicia and Egypt carrying cargo of oil for mummification, fancy woods including cedar for mummy cases, etc., and returned with shipments of papyrus reeds, metal wares, gold, and perfumes. These ships also traded throughout the Mediterranean seaports including Cyprus, Tyre, and Sidon.

Gebal was regarded as a holy city. Tradition narrates that the god ›El, identified by the Greeks with Kronos, settled in Gebal at the beginning of time. Archaeological excavations conducted by E. Renan in 1860, P. Montet from 1920–1924, and recent digs of M. Dunand revealed that the site of Gebal was occupied as early as 5000 B.C. Evidence of trade with the Caucasus region, Cyprus, Egypt, Mesopotamia,

and Sudan are noted by the year 3000 B.C. During the Egyptian Old Kingdom (ca. 2700–2200 B.C.), Gebal continued its exportation of oil, leather, wine, and large quantities of wood to Egypt. Sometime before 2100 B.C., five hundred years of peace in Gebal ended with the fall of the Egyptian Old Kingdom and conquest by the Amorites. The Amorites destroyed the city during the conquest, but later rebuilt it. Following the Amorite conquests of Canaan, Phoenicia, and Syria (although there is a shifting concensus that there was not a "conquest"; Richard 1987), peace again came to Gebal and the city enjoyed a new period of prosperity. During this time the city had close cultural ties with W Asia, yet politically it perhaps came under the Egyptian Middle Kingdom control (Albright 1964; however, some see the relation between Byblos and Egypt simply as that of trading partners, Ward 1961; Weinstein 1975).

With the decline of the Middle Kingdom (ca. 1800 B.C.), Egypt lost most of its political outposts in Phoenicia and Syria. At this time the Hyksos moved in and controlled all the area of Palestine, Syria, and the delta region of Egypt. During this period Gebal grew into a large densely populated city and armaments excavated revealed the Hyksos military presence in Gebal. Under the 18th Dyn., the Egyptians drove out the Hyksos sometime after 1600 B.C. and established military control over Gebal and all Phoenicia. During the Amarna era (ca. 1350 B.C.), Egypt's power weakened, and Egyptian strongholds in Phoenicia came under heavy pressure from the Hittites, which resulted in some fifty appeals for help from Rib-Addi of Gebal to Amenhotep IV of Egypt for help (e.g., EA, 137; cf. *ANET*, 483–84), but Egyptian control all along the Phoenician coast declined. Under Rameses II, Egypt restored some control over Phoenicia (ca. 1285 B.C.) but later granted independent status to Gebal (ca. 1200 B.C.). Gebal's subsequent independent spirit resulted in an incident with Egypt (ca. 1100 B.C.) when Wen-Amon, an Egyptian official buying lumber in Gebal, complained about the impolite treatment given him by the king of Gebal (*ANET*, 25–29). See also EGYPTIAN RELATIONS WITH CANAAN.

The people of Gebal thwarted Israel's attempts at conquest (Josh 13:5), enjoying several centuries of independence. During the construction of Solomon's temple at Jerusalem, Gebal sent skilled craftsmen to Israel to assist in its construction (1 Kgs 5:18, 32). In 853 B.C., Gebal, in league with Tyre, fought a successful battle against the Assyrians. The inhabitants of Gebal according to Ezek 27:9, along with its "veteran craftsmen" rendered their services to the city of Tyre. Gebal remained a prosperous city during the subsequent reigns of the Persians, Greeks, Romans, and Muslims.

Archaeological excavations of Gebal reveal some 21 strata of occupation. More significant discoveries include the Amorite temple of Resheph featuring standing obelisks, a Roman theater overlooking the Mediterranean Sea, a large stone Crusader castle, and the late 3d millennium temple of Hathor. Probably one of the most intriguing finds unearthed at Gebal is the sarcophagus of Ahiram, king of Byblos during the 11th century B.C. This sarcophagus is important because it contains one of the oldest Canaanite alphabetic inscriptions, providing a link in the development of the Phoenician alphabet. The inscription includes a curse for anyone attempting to disturb the sarcophagus or the king's remains within (*ANEP*, figs. 456–59).

2. A place referred to in Ps 83:8 (—Eng 83:7) SE of the Dead Sea, probably an Edomite territory N of Petra known also as Teman. It is referred to in a 6th century B.C. ostracon found in the excavations at Heshbon. The place is mentioned along with Amalek, Ammon, Moab, and other nations as forming an alliance against Israel. Josephus spoke of Gobolitis as part of Idumea (*Ant* 2.1.2 §6). However, some scholars believe that the Gebal of Ps 83:8 refers to the Phoenician Byblos (Shea 1977).

RAY LEE ROTH

GEBER (PERSON) [Heb *geber* (גֶּבֶר)]. Son of Uri and the officer in charge of one of the twelve administrative districts under Solomon (1 Kgs 4:19). Geber's territory was the land of Gilead. In 1 Kgs 4:13, Ben-geber is listed as in charge of the territory of Ramoth-gilead, and some have taken the reference to Geber as a duplication of this earlier reference (Albright 1925: 26). Another solution is suggested by a reading in the Codex Vaticanus, which has Gad instead of Gilead in 1 Kgs 4:19. This places Geber in charge of S Transjordan and would leave Ben-geber responsible for N Transjordan. See BEN-GEBER.

PHILLIP E. MCMILLION

GEBIM (PLACE) [Heb *gēbîm* (גֵּבִים)]. A town whose inhabitants fled as the Assyrian army marched S toward Jerusalem (Isa 10:31). In the poetic oracle of Isaiah it is placed between Anathoth and Nob, suggesting that it lies somewhere ca. 2–3 miles N and perhaps E of Jerusalem.

GARY A. HERION

GECKO (LIZARD). See ZOOLOGY.

GEDALIAH (PERSON) [Heb *gĕdalyâ* (גְּדַלְיָה)*; gĕdalyāhû* (גְּדַלְיָהוּ)]. The name *gdlyhw* occurs on a seal found at Lachish (de Vaux 1936; Gibson *TSSI* 1: 64 no. 18). Several individuals listed in the OT bear this name.

1. The son of Pashur, and a functionary in the highest levels of politics in the days of Zedekiah (Jer 38:1–6). In concert with three other Judean leaders: Sephatiah the son of Mattan, Jucal the son of Shelemiah, and Pashur the son of Malchiah, Gedaliah exerted such influence on King Zedekiah that he reluctantly resigned the fate of Jeremiah to these four war lords. Their cogent argument was that the prophet Jeremiah was undermining the national welfare by proclaiming surrender to the Babylonians as the only feasible policy. The prophet and his followers were weakening the will to resist among soldiery and people. This was branded by these war lords as treasonable and disastrous. Accordingly, they urged upon the king the immediate apprehension of Jeremiah and his incarceration in the muddy floor of the cistern of Malchiah, the son of the king.

This incarceration would effectively silence the prophet. This was all they could hope for from Zedekiah since he had a personal interest in the prophet. Nevertheless, the imprisonment of Jeremiah in a foul, muddy cistern base would no doubt be fatal. The power of the quartet of nobles was frankly acknowledged by the king who confessed his inability to withstand their reasonable judgments and their official pressure (Jer 38:5). Ebed-melech who dared to withstand the justice of their plotting against Jeremiah feared for his life.

Gedaliah lived in the tumultuous times when Judah was divided within and stormed at without. As one of the high lords of the royal court, he advocated a fight to the bitter end despite the cost and terror of the program and was diametrically opposed to the seeming utopianism of Jeremiah.

EDWARD R. DALGLISH

2. Son of Ahikam and grandson of Shaphan, who in 587/586 B.C. was appointed by Nebuchadrezzar to govern Judah (2 Kgs 25:22–26; Jer 40:5–41:18). The LXX (Jer 43:25) includes him among those who urged King Jehoiakim not to burn Baruch's scroll, whereas the MT provides Delaiah (36:25). The MT (39:14\v =r[BHS]Je 39:14) first mentions Gedaliah in connection with the prophet Jeremiah's release from captivity after the capture of Jerusalem by the Babylonians in 587 B.C. Nebuchadrezzar ordered Nebuzaradan, the commander of his bodyguard, to free Jeremiah and fulfill his wishes. No doubt other citizens who had encouraged submission to Babylon were similarly favored. Jeremiah was handed over to the care of Gedaliah whom Nebuchadrezzar appointed (Heb *pqd*) over those Judaeans who were not deported (2 Kgs 25:22; Jer 40:5). Since Jerusalem was uninhabitable (Lam 2:13), Gedaliah took up

residence at Mizpah. Excavations at Mizpah have disclosed no signs of destruction for this period, in sharp contrast to Jerusalem and the cities of Judah (Albright *FSAC²*, 322).

Gedaliah may have acquired administrative experience under Zedekiah. A seal impression found at Lachish (dating about 600 B.C.) reads, "Belonging to Gedaliah, the one who is over the house," a title designating the chief minister of the king, although Gedaliah is nowhere designated as such in the Bible (Hooke 1935; de Vaux 1936; *TSSI* 1: 24, 64). Good (1979: 580–82; 1983: 110–11) argues that the title has a Ugaritic antecedent (but cf. Loretz 1982: 124–26). Lohfink (1978: 336, 341) suggests that the appointment of Gedaliah resulted from a plot by the Shaphan family, whose prominent members (including presumably Gedaliah) were exiled after the Babylonian capture of Jerusalem in 597 B.C. This family decided to replace the house of David by the house of Shaphan which would listen to Jeremiah rather than to the official temple prophets who were leading to disaster. There is, however, no evidence that Gedaliah actually went to Babylon (Scharbert 1981: 53 n. 56). De Vaux (1936: 102) suggests he may have been Master of the Palace under Zedekiah, an office he perhaps still held when Jerusalem fell to the Babylonians. This would help to explain why he was appointed governor of Judah by Nebuchadrezzar. Gedaliah at first had some success in his efforts at reconstruction. When the commanders of Judaean troops who had escaped the Babylonians reassembled at Mizpah, Gedaliah encouraged them to submit and proceed with harvesting the crops, which they did. Among these were Ishmael son of Nethaniah and Johanan son of Kareah. Judaeans who had fled to Moab, Ammon, Edom, and elsewhere also returned and participated in the abundant harvest (Jer 40:12).

Not all the prominent Judaeans were satisfied with Gedaliah, however. Johanan son of Kareah led a deputation to Mizpah warning Gedaliah of a plot against him. Baalis king of Ammon had persuaded Ishmael son of Nethaniah, a royal prince, to assassinate Gedaliah. Johanan proposed the countermeasure of assassinating Ishmael, thereby preserving the continuing process of reconstruction. Gedaliah, however, failed to heed the warning (Jer 40:13–16) and in the seventh month (October) Ishmael and ten men came to Mizpah and killed Gedaliah along with other Judaeans as well as the Babylonian soldiers stationed there (41:1). The year of Gedaliah's death is not stated, although the context suggests that it was still the year of his appointment (587/586 B.C.). (This fateful day is commemorated in Jewish tradition by the "fast of Gedaliah," held in the seventh month [cf. Zech 7:5; 8:19]. Today it is celebrated on the third day of Tishri.)

Two days after Gedaliah's murder Ishmael killed seventy pilgrims on their way to Jerusalem, and then departed, taking with him the rest of the Judaeans from Mizpah, including the "king's daughters" whom Nebuzaradan had entrusted to Gedaliah (Jer 41:10). The possession of these royal princesses may have constituted a claim to kingship (cf. 2 Sam 16:21). Lohfink (1978: 334) would see here the rationale behind Ishmael's murder of Gedaliah: these symbols of royal authority belonged to the house of David alone. When Johanan heard of Gedaliah's death, he pursued. Ishmael caught up with him at the great pool of Gibeon and rescued those he had captured; however, Ishmael and eight of his men escaped to Ammon. Fearing Babylonian reprisals in the wake of Gedaliah's assassination, Johanan, his commanders, and the people they had rescued fled to Egypt. Near Bethlehem they asked Jeremiah for an oracle as to what they should do. Ten days later the prophet spoke: They were to stay in the land and Yahweh would protect them. The people, however, rejected this oracle and continued on to Egypt, taking Jeremiah with them (42:1–43:7). The effect that these events had on Judah is not altogether clear. In 582/581 B.C. (Jer 52:30), Nebuchadrezzar ordered a third deportation from Judah, perhaps as a reprisal; it is possible that Judah on that occasion lost all separate identity (Bright BHI, 331, 344).

3. A member of the family of Jeduthun, Levitical musicians and singers after the Exile (1 Chr 25:3, 9). Rothstein (*1 Buch der Chronik* KAT, 455) would identify Gedaliah with Jeduthun's son, Galal (Neh 11:17), but the evidence for this view is slight (Rudolph *Chronikbücher* HAT, 169). Williamson (1979: 255–57) points out that in 1 Chr 25:1–6 David personally organizes the musicians, whereas in vv 7–31 David is not mentioned and the musicians decide their duties by casting lots (v 8). These two lists, furthermore, intend different types of music. In v 7 *šîr* means, "singing," but in vv 1–6 it should be

rendered, "music," that is instrumental harmony. Gedaliah is therefore an instrumentalist according to v 3, but a singer in v 9.

4. One of the descendants of Jeshua the high priest and his brothers, who put away his foreign wife according to the decision of the postexilic community in the time of Ezra (Ezra 10:18). A possible parallel in 1 Esdr 9:19 lists the same brothers, but gives the name Jodan instead of Gedaliah. Fensham (*Ezra-Nehemiah* NICOT, 143) observes that the list of priests who married foreign women is given first, no doubt to show that even the religious leaders had broken the law. The high-priestly family is mentioned right at the beginning to emphasize how deeply the exiles were involved in the matter. At the same time the guilt offering of a ram (v 19) usually refers to an unintentional transgression and should have the same meaning here (cf. Lev 5:14–26).

5. Son of Amariah and grandfather of Zephaniah the prophet (Zeph 1:1). Heller (1971: 104) notes that four ancestors are listed for the prophet, which is exceptional in the OT. He argues that the oldest form of the text contained only one forefather, Cushi. A later redactor understood Cushi as gentilic, "the Cushite," and reprehensible. In the light of Deut 23:7–8, which allows children of third generation pagans to "enter the assembly of the Lord," he added two more ancestors, making Cushi a personal name. Rudolph (*Micha … Zephanja* KAT, 259) shows that this argument is not cogent, for Cushi need not express ethnic descent. It could, for instance, be a nickname for a Judaean. There is no compelling reason for omitting Gedaliah from the text.

ROBERT ALTHANN

GEDER (PLACE) [Heb *geder* (גֶּדֶר)]. GEDERITE. One of the 31 Canaanite cities conquered by the Israelites under Joshua (Josh 12:13). It may have also been the home of David's officer Baal-hanan the Gederite, who was appointed over the olive and sycamore trees in the Shephelah (1 Chr 27:28). Geder belongs to a group of place names formed from the Heb root *gdr* "wall" (e.g., Beth-gader, Gederah, Gederoth, Gederothaim, Gedor). It has been suggested that its vocalization was influenced by the name Gezer in v 12 (Boling *Joshua* AB, 326). Geder's location and identification are disputed. Its proximity to the preceding city in v 13, Debir, could indicate a location in the S Judean foothills, or Shephelah. However, Arad and Hormah, the cities immediately following in v 14, could indicate a location closer to the N Negeb desert. Naʾaman (1980: 138) has sought to identify it with Khirbet Jedur (M.R. 158115) between Bethlehem and Hebron (see GEDOR); while Aharoni (1956: 27; *LBHG,* 231) has suggested emending the otherwise unknown Geder to Gerar on the basis of the frequently attested orthographic confusion between *dalet* and *resû* in Hebrew.

GEDERAH (PLACE) [Heb *gĕdērâ* (גְּדֵרָה)*; gĕdērātî* (גְּדֵרָתִי)]. 1. A town in the Shephelah, the Judean foothills, in the second administrative district of the tribal allotment of Judah (Josh 15:36). It is probably identical with the Gederah where potters, descended from Shelah son of Judah, dwelt in the royal service (1 Chr 4:23). Gederah, whose name means "sheepfold," has been variously identified with Tell Judeideh 2 km N of Beth-Gubrin (M.R. 141115; Albright 1925: 50–51; but see Broshi *EAEHL* 3: 694), Khirbet Judraya in the Elah Valley (Noth *Josua* HAT, 84; but see Kuschke 1971: 299, 312), and Khirbet Jedireh in the Aijalon Valley (Cross and Wright 1956: 215). Recently Galil (1985: 62) has sought Gederah in the vicinity of Latrun. Gederah has also been identified with Kedron, modern Qatra (M.R. 129136), which was fortified by Cendebeus prior to his defeat by John son of Simon Maccabeus (1 Macc 15:39, 41; 16:9; Turner *IDB* 3: 5).

2. The home of Jozabad the Gederathite, one of the Benjaminite warriors who defected to David at Ziklag (1 Chr 12:5—Eng 12:4). It is probably to be sought at Jedireh near Gibeon (Myers *1 Chronicles* AB, 96).

CARL S. EHRLICH

GEDEROTH (PLACE) [Heb *gĕdērôt* (גְּדֵרוֹת)]. A town in the Shephelah in the third administrative district of the tribe of Judah (Josh 15:41). It lay in the oftentimes disputed border area between Judah and Philistia. After the death of Uzziah/Azariah, who had subjugated the Philistine cities of Ashdod, Gath, and Jabneh (2 Chr 26:6–7), the Philistines were able to reassert themselves against the weak rule of Ahaz. They encroached on the Shephelah and the Negeb of Judah, capturing the towns of Beth-Shemesh, Aijalon, Soco, Timnah, Gimzo, and Gederoth (2 Chr 28:18). The precise relationship of these actions to the Syro-Ephraimite war and the campaigns of Tiglath-pileser III to Palestine (734–732 B.C.E.) remains unclear (Tadmor 1966: 88 n.9). Gederoth's location has been sought at many of the same sites as GEDERAH #1 (*GP* 2: 330; Gold *IDB* 2: 361; Kallai-Kleinmann *EncMiqr* 2: 447–48).

GEDEROTHAIM (PLACE) [Heb *gĕdērōtāyim* (גְּדֵרֹתָיִם)]. A town in the Shephelah in the second district of the tribal inheritance of Judah (Josh 15:36). One of a number of place names derived from the Heb root *gdr* "wall," it follows immediately on another, Gederah. The LXX reading *kai hai epauleis autemu̱s* "and its sheepfolds" would presume a Heb Vorlage *wgdrtyh* instead of the MT *wgdrtym.* The scholarly consensus that the LXX version is to be preferred is given weight by the text's total of 14 cities in the district (v 36), a number which can be arrived at only by deleting one town name from the list in vv 33–36 (Abel *GP* 2: 330). The influence of the dual endings on the first two names in v 36, Shaaraim and Adithaim, was probably a factor in the development of the MT (Boling *Joshua* AB, 380). By following the LXX, one would also restore a play on words in the Hebrew: "Gederah and its *gĕdērōt* ('sheepfolds')."

CARL S. EHRLICH

GEDOR (PERSON) [Heb *gĕdôr* (גְּדוֹר)]. A son of Jeiel, the father of Gibeon, by his wife Maacah in the Benjaminite genealogies (1 Chr 8:31; 9:37). Owing to the frequent mixing of geographical, personal and clan names in the biblical genealogies (Myers *1 Chronicles* AB, 66), the suggestion has been made to

equate this Gedor with the *gdr/d,* possibly a district or suburb of Gibeon, found frequently on the inscribed jar handles from Gibeon/Tell el-Jib (Demsky 1971: 20–23).

Bibliography

CARL S. EHRLICH

GEDOR (PLACE) [Heb *gĕdôr* (גְּדוֹר)]. 1. A town in the hill country of Judah in the district of Beth-zur and Halhul (Josh 15:58). Most scholars identify it with Khirbet Jedur (M.R. 158115), between Bethlehem and Hebron. The site was inhabited as of the LB Age (Ben-Arieh 1981: 115). In 1 Chr 4:4 Penuel is mentioned as the father of Gedor, which may mean that tradition ascribed to him the town's founding.

2. A Calebite town in Judah, founded by Jered son of Mered (1 Chr 4:18). It may be identical with Gedor #1. The mention of Penuel (v 4) and Jered (v 18) as the fathers of Gedor may indicate variant traditions about the founding of the same town or different traditions about two similarly named sites.

3. A town on the outskirts of the tribal territory of Simeon (1 Chr 4:39). Following the LXX *gerara,* this reference to Gedor should be corrected to Gerar (Aharoni 1956: 27).

4. A town in Benjamin from which came two of the defectors from Saul to David at Ziklag (1 Chr 12:8—Eng12:7). Some Hebrew mss record that Joelah and Zebadiah the sons of Jeroham came not *min haggĕdôr* "from [the] Gedor" (MT) but were *min haggĕdûd* "from the troop." The suggestion, however, that the MT consonantal *mn hgdwr* at the end of v 8(7) is a dittography of the following verse's initial *wmn hgdy* "from the Gadites" is probably correct (Williamson *1 and 2 Chronicles* NCBC, 106).

CARL S. EHRLICH

GEHAZI (PERSON) [Heb *gêḥăzî* (גֵּיחֲזִי)]. Servant (Heb *naʿar*) of Elisha, the prophet, in three narrative contexts (2 Kgs 4:12–36; 5:20–27; 8:4–6). Two of these contexts are closely connected serving as a sort of frame around the central story of the cure of Naaman's leprosy and Gehazi's greed and punishment. For the name itself, a dual connotation has been suggested: "valley of vision" or "valley of avarice." The latter suggestion is from the Arabic cognate *jaḥida.*

In the story of the wealthy Shunammite woman (2 Kgs 4:8–37), Gehazi is portrayed as Elisha's faithful messenger and perhaps overzealous protector (v 27). The initial episode involving Gehazi is framed by the repetition of Elisha's summons that he "Call this Shunammite" (2 Kgs 4:12, 36)—a "great woman" who had made special accommodations for Elisha. Having failed in his initial efforts to repay her kindness, Elisha asked Gehazi what should be done. When Gehazi had the insight to recognize the woman's secret desire for a son, Elisha commanded him to "Call her" (v 15) and the birth of the child was foretold. Some years later the child of promise died; and when the woman "caught hold of Elisha's feet" in her grief, Gehazi thrust her away. Elisha then commanded Gehazi to run ahead to Shunem where he was to lay the prophet's staff on the child, perhaps as a symbol of authority to prevent the possible burial before Elisha's arrival. When Elisha had restored the child's life, he again commanded Gehazi to summon the woman. In this narrative Gehazi appears as a willing, efficient, and practical man (Schmitt 1975).

Some years later, Gehazi was discussing the deeds of Elisha with an unnamed king (2 Kgs 8:1–6). While he was speaking about restoring the dead to life, the Shunammite woman and her son appeared seeking the restoration of her property after a sojourn in Philistia. When Gehazi identified her, the king secured her inheritance. Though nothing positive or negative is said of Gehazi here, the narrative elicits tension because of what precedes it.

The story of the cure of Naaman's leprosy (2 Kgs 5:1–27) presents Gehazi as greedy and deceitful, and ultimately cursed with Naaman's leprosy. Elisha's integrity in refusing the gifts of Naaman is contrasted

sharply with the baseness of Gehazi's actions. The glibness with which he lied to Naaman and the coolness with which he subsequently appeared to Elisha suggest that "avaricious" is indeed a character trait. Gehazi's punishment was immediate and fitting: permanent leprosy, extending even to his descendants.

A rabbinic tradition suggests the identification of the four lepers at the gate who discover the mysterious rout of the Syrians (2 Kgs 7:3–8) with Gehazi and his three sons. At first they carried off silver, gold, and clothing and hid them (2 Kgs 7:8). But then, realizing the folly of their greed, they bore the good news to the king's household.

It should be noted that conversation between lepers and others was not forbidden. The leprosy of Gehazi was not necessarily the disease now known as leprosy (Hulse 1975). Moreover, it is possible that the sentence of perpetual leprosy was abrogated by penitence on the part of Gehazi. The judgments of God, though apparently unconditional, are sometimes withdrawn when the judged person repents (cf. 2 Kgs 20:1–11).

If the "servant of the man of God" in 2 Kgs 6:15–17, who is explicitly described as Elisha's "boy" (*naʿar,* v 17) is also to be identified with Gehazi (cf. 2 Kgs 4:43), the other suggested meaning of his name as "valley of vision" becomes relevant. It was Elisha's prayer that opened his eyes so that he could see that "the mountain was full of horses and chariots of fire round about Elisha" (v 17). The dominant picture of Gehazi within the biblical narrative, however, is that of avarice. See Bronner 1968: 86–122.

DUANE L. CHRISTENSEN

GEHENNA (PLACE) [Lat *Gehenna*]. Valley, currently known as the Wadi er-Rababeh, running S-SW of Jerusalem and also a designation for fiery hell, the opposite of the dominion of God and eternal life. The Lat form is derived from the Gk *geenna.* The Gk is a transcription of the Aram *gêhinnām* whose Heb form is *gê-hinnōm.* The name means "Valley of Hinnom" or its full form "Valley of the son of Hinnom" (see HINNOM VALLEY). Outside of the NT (Matt 5:22) and the OT Apocrypha (2 Esdr 2:29; 7:36 [Lat only]), the Gk *geenna* or the Lat *Gehenna* is not found in any sources, including the LXX, Philo, Josephus, or Gk literature. Further in the RSV, only 2 Esdr 2:29 renders the Latin form of the name as "Gehenna." The other occurrence of the Latin form in 2 Esdr 7:36 and all NT occurrences of the Greek form of the name are rendered in the RSV as "hell."

A. Old Testament

The Valley of Hinnom marked the boundary between the inheritance of the tribes of Judah and Benjamin (Josh 15:8; 18:16) and the northern border of Judah after the captivity (Neh 11:30). The valley was the scene of the idolatrous worship of the Canaanite gods Molech and Baal. This worship consisted of sacrificing children by passing them through a fire on Topheth (a high place) and into the hands of the gods (Jer 7:31; 19:4–5; 32:35). These practices were observed during monarchy at least under the reigns of Ahaz and Manasseh who themselves sacrificed their own children (2 Kgs 16:3; 21:6; 2 Chr 28:3; 33:6).

Josiah defiled the site as part of his reform program (2 Kgs 23:10; cf. vv 13–14), but the prophecy of Jeremiah indicates that it probably recurred later in the monarchy. Jeremiah prophesied that it would no longer be called Topheth or the Valley of Hinnom, but the valley of Slaughter because of the numerous Judeans killed and thrown into it by the Babylonians (Jer 7:29–34; 19:1–15).

Recently Bailey (1986: 189–91) has suggested that since altars and cultic places were considered an entrance to the realm of the god they served, and such sites often lent their name to that realm, then Gehenna may have naturally lent its name to the underworld realm of the god Molech who was worshiped there.

B. Intertestamental Period

One product of the development of a concept of the afterlife during the Hellenistic Period was the notion of a fiery judgment (*1 En.* 10:13; 48:8–10; 100:7–9; 108:4–7; Jdt 16:17; *2 Bar.* 85:13), a judgment usually in a fiery lake or abyss (*1 En.* 18:9–16; 90:24–27; 103:7–8; *2 En.* 40:12; *2 Bar.* 59:5–12; 1QH 3). The Valley of Hinnom, often referred to simply as "the accursed valley" or "abyss," then came to represent the place of eschatological judgment of the wicked Jews by fire (*1 En.* 26–27; 54:1–6; 56:1–4; 90:24–27).

This association of fiery judgment and Gehenna was once attributed to the influence of the Iranian Avestan doctrine of the ultimate judgment of the wicked in a stream of molten metal (*Yasna* 31.3; 51.9). However, the Zoroastrian molten metal was purgatorial, not penal. Other reasons given for the association are the fact that the Valley of Hinnom was noted for the fires of the Molech cult and later contained the continually burning fires of a refuse dump. Although Gehenna does not have these associations in the OT, the OT is the primary source of the association, particularly the prophecies of Jeremiah regarding the dead bodies of the wicked cast into Gehenna (7:29–34; 19:6–9; 32:35). The prophecies of Isaiah which ironically prophesy the threat of the Topheth readied for Molech himself (30:33), a devouring fire and everlasting burnings, and of a fire that will not be quenched readied for the wicked all contributed to the association (33:14; 66:24; cf. Isa 50:11; Dan 12:2; Mal 4:1).

By at least the 1st century C.E. there emerged a metaphorical understanding of Gehenna as the place of judgment by fire for all wicked everywhere (*Sib. Or.* 1.100–103; 2.283–312). The judgment of the wicked occurred either as a casting of their soul in Gehenna immediately upon death or as a casting of the reunited body and soul into Gehenna after the resurrection and last judgment (2 Esdr 7:26–38; *4 Ezra* 7:26–38; *Ascen. Is.* 4:14–18; cf. *Sib. Or.* 4.179–91). This understanding divorced Gehenna from its geographical location, but retained its fiery nature. Gehenna had become hell itself.

C. New Testament

All of the 12 references to Gehenna in the NT are used metaphorically as the place of fiery judgment. With the exception of Jas 3:6, which refers to the tongue being set on fire by Gehenna, all the references are in the Synoptic Gospels as sayings of Jesus (Matt 5:22, 29–30; 10:28; 18:9; 23:15, 33; Mark 9:43, 45, 47; Luke 12:5). Gehenna is preexistent (Matt 25:41) and its fire is reserved for the destruction of the wicked (Matt 5:22; 13:42, 50; 18:9 = Mark 9:43). Its punishment is eternal (Matt 25:41, 46) and the fire will not be quenched (Mark 9:43, 48). Other related NT expressions include judgment, wrath, destruction, Tartarus, fire, and lake of fire and sulphur (Heb 10:27; 2 Pet 2:4; Jude 7; Rev 19:20; 20:10, 14; 21:8). Recently Milikowsky has cogently argued that the comparison of Matt 10:28 = Luke 12:5 and other passages reveals that both 1st century conceptions of Gehenna are found in the NT: Gehenna as a place of judgment for the soul of the wicked immediately after death is Lukan, and Gehenna as the judgment of the wicked in a reunited body and soul after resurrection and judgment is Matthean (1988: 242–44).

Although not describing the torments of Gehenna, Jesus warned his disciples to take all precautions not to fall victim to it. Those who call their brother a fool (Matt 5:22), those who give in to sinful inclinations (Matt 5:29–30 = Mark 9:45, 47; Matt 18:9 = Mark 9:43), and the scribes and Pharisees (Matt 23:15, 33) are liable to Gehenna. A person destined to Gehenna can be designated "a child of Gehenna" (Matt 23:15). Besides being the fate of the wicked (Rev 20:15; 21:8), Gehenna is the fate awaiting the devil and his angels (Matt 25:41; Rev 20:10), the beast and the false prophet (Rev 19:20; 20:10), and death and Hades (Rev 20:13–14).

With the possible exception of Luke 12:5, the NT distinguishes Gehenna from Hades (*NIDNTT* 2: 208–9). Whereas Hades is the provisional place of the ungodly between death, resurrection, and final judgment (cf. Rev 20:13–14 where Hades yields up its dead for judgment and is thrown into the lake of fire at the last judgment), Gehenna is the eternal place of the wicked after final judgment. Hades receives the soul only (Acts 2:27, 31), Gehenna receives both body and soul (Matt 10:28; cf. Luke 12:5). The NT does not describe the torment of Gehenna or portray Satan as the lord of Gehenna. These are later literary accoutrements. (See *TDNT* 1:657–58.)

D. Rabbinic Literature

The same extended metaphorical use of Gehenna as the place of judgment of the wicked is found in the Mishnah (*m. Qidd.* 4.14; *m. ʾAbot* 1.5; 5.19, 20), Tosefta (*t. Ber.* 6.15), and Talmud (*b. Rosû. Hasû.* 16b–17a; *b. Ber.* 28b). In rabbinic thought, as early as the 1st century–early 2d century C.E., Gehenna was conceived as both an intermediate place of punishment for the souls of the wicked between death and resurrection to final judgment, and as the place of final judgment of the reunited body and soul of the wicked (*Midr.* Tehillim 31.3).

Most Jews would be spared Gehenna completely, and most of those who do enter it in the intermediate state would be released from it, with the exception of historic reprobates, adulterers, or those who shame or vilify others (*b. Rosû. Hasû.* 16b–17a). It was a fiery purgatory for those Jews whose merits and transgressions balanced one another (*t. Sanh.* 13.3) who would afterward be admitted to Paradise. Often the punishment of Gehenna was restricted to 12 months (*m. ʿEd.* 2.10; *S. ʿOlam Rab.* 3; *b. Qidd* 31b). However, the punishment for Gentiles in Gehenna was eternal. The epithet "child of Gehenna" is used in the Talmud (*b. Rosû. Hasû.* 17b) as it is in Matt 23:15. (See Str-B 4: 1029–1118.)

DUANE F. WATSON

GEMALLI (PERSON) [Heb *gĕmallî* (גְּמַלִּי)]. The father of AMMIEL, who was sent from the tribe of Dan to spy out the land of Canaan (Num 13:12). The name Gemalli is related to the Hebrew for camel *(gâmâl)*, thus it is often understood to mean "camel owner" or "camel driver" but this is an unlikely appellation for an infant. More likely, the name derives from the basic meaning of the root, "bring to completion," or its extended meaning "do someone good" (cf. Isa 63:7; Ps 13:6; 116:7). Therefore, the name may express the parents' sense of fulfillment ("my completion") or blessing ("my gift of blessing") resulting from the birth of the child. Noth (*IPN* 182) considers Gemalli to be a short form of GAMALIEL ("God is my fulfillment" or "God is my blessing").

JON PAULIEN

GEMARA. Aramaic name for both the Talmud of the Land of Israel (ca. 350–450 C.E.) and the Babylonian Talmud (ca. 550–600 C.E.). These compilations contain a wide variety of supplemental materials organized as a paragraph-by-paragraph commentary on the Mishnah. The term "Gemara" is also used to describe the genre of this literature.

A. Sources and Literary History

The Gemara's materials stem from a rather wide range of sources. Some units of discourse clearly circulated independently of their inclusion in either Talmud, accounting for passages that occur nearly verbatim in the Gemara as well as in Midrash compilations (Neusner 1986: 22–25). Others seem to reflect traditional oral formulations of earlier customary law (Lieberman 1931: 216). And some pericopae, especially those narrowly focused on the Mishnah, seem to have been created afresh as part of the Gemara's discussions (Bokser 1980: 471–82).

Recently, scholars have propounded two major theories regarding the literary history behind this diversity of materials. The first distinguishes sources—the rulings and opinions of earlier sages recorded more or less verbatim—from *traditions*—passages corrupted in transmission and so subject to rather convoluted interpretations (Halivni 1968: 8–15). Systematic, detailed attention to textual variants and parallel passages has allowed for recovery of many originally independent sources that lay behind textually difficult portions of the Gemara.

A second literary theory differentiates the Gemara's rulings along chronological lines (Friedman 1978: 283). The basic tenet of this method is that materials attributed to an individual rabbi or sage constitute the earliest layers of the Gemara, while anonymous rulings and sayings, for the most part, are part of the Gemara's later redactional framework. As above, application of this method may allow a glimpse at the Gemara's redactional plan prior to its final edition.

B. Redactional Plan

Overall, three patterns may be distinguished in the Gemara's various materials. Each builds in the first place upon the Mishnah's laws, but then as time progresses develops an ever-widening range of interests.

The earliest redacted portions of the Gemara are contained in the tripartite tractate *Neziqin* within the Palestinian (or Jerusalem) Talmud (Lieberman 1931: 5–6). These materials, completed and collected in Caesarea within 150 years of the Mishnah's redaction, set out to demonstrate the continuity and coherence of the Mishnaic law with its earliest interpretation, found in the Tosefta. The simple redactional pattern established here—a passage of the Mishnah, complementary units from the parallel Toseftan tractate, and a brief discussion of the connection between the Mishnah and the Tosefta—serves as the foundation for the work of successive generations.

Over the next 100 years, in the late 4th and early 5th centuries, a second set of materials took shape. Comprising the bulk of the Talmud of the Land of Israel, these portions of the Gemara add general inquiry about the Mishnaic law's relationship to scriptural precedent and prooftext, rabbinic authority, and the special status of Torah. A typical passage opens with Mishnaic and Toseftan materials, to which it appends a comparative discussion of underlying legal principles, and finally topically related, although rather far-removed anthologies (Neusner 1983b: 12–13).

The Babylonian Talmud represents the third and final stage of the Gemara, and presents the fully expounded system of Rabbinic Judaism. The redaction of an average passage unfolds from the legal pericope at hand to more general and abstract themes. Particular emphasis is placed on the dual nature of Torah: the *Oral Torah,* including the Mishnah and the Tosefta, together with their legal theory; the *Written Torah,* especially the Hebrew Bible taken on its own terms as regards to meanings and theological themes. To these the Babylonian Talmud adds discussion of the sage and his doings, which describe the life of Torah central to all later Judaism (Neusner 1986: 10, 213–15).

ROGER BROOKS

GEMARIAH (PERSON) [Heb *gĕmaryāhû* (גְּמַרְיָהוּ)]. **1.** The son of Shaphan, and a high-ranking official in the government of King Jehoiakim (609–598 B.C.). Gemariah was one of those who participated in the important events surrounding the public reading of Jeremiah's first written scroll in 604 B.C. (Jeremiah 36). His father Shaphan was one of the most influential persons in Jerusalem during the reign of Josiah, when the lawbook of Moses was found in the temple and the reform came to a grand climax (2 Kgs 22:3–14). In Josiah's government Shaphan was "secretary of state," and it is possible that he was also head of a scribal school in Jerusalem.

Throughout the difficult years preceding the fall of Judah, the Shaphan family maintained close personal ties with Jeremiah (Muilenburg 1970: 227–28, 231). Gemariah's brother, Ahikam, who was also present when the law book was found (2 Kgs 22:12), gave Jeremiah some needed protection following his famous temple sermon and trial of 609 (Jer 26:24). Another brother, Elasah, hand-carried a letter from Jeremiah to the exiles in Babylon following the deportation of 597 (Jer 29:3). Gemariah did not hold the same high office as his father, perhaps because of his family's pro-Babylonian sympathies and the fact that

Jehoiakim was an appointee of Egypt. Nevertheless, he had his own chamber in the temple, and it was there that Baruch made the first public reading of the Jeremiah scroll (Jer 36:10). After this reading Micaiah, Gemariah's son, notified some of the king's ministers who then wanted to hear the scroll themselves. After Baruch read it to them they realized the king would have to be notified, but in anticipation of the king's response they warned Baruch and Jeremiah to hide. Gemariah was present when the scroll was read to the king, and he along with two others unsuccessfully urged the king not to destroy it.

Among a horde of 51 seal impressions discovered in the 587 B.C. destruction level of Jerusalem is one which reads, "Belonging to Gemariah ben Shaphan" (Shiloh 1984: 19–20). The identification of this individual with the Gemariah of Jeremiah 36 appears certain, which then provides striking confirmation of Gemariah's activities during Judah's last days, as well as the authority which he had to seal official documents and other records.

JACK R. LUNDBOM

2. Emissary of Zedekiah to Nebuchadnezzar who helped to carry a letter from Jeremiah to the exiles (Jer 29:3—LXX 36:3). As a "son of Hilkiah," he is not to be confused with Gemariah son of Shaphan mentioned in Jer 36:10–12, 25—LXX 43:10–12, 25 (as does Thompson *Jeremiah* NICOT, 545; cf. Carroll *Jeremiah* OTL, 552). The probability that at least one if not all of Jeremiah's sympathizers, Elasah (who also carried Jeremiah's letter), Ahikam (e.g., 2 Kgs 22:12; Jer 26:24—LXX 33:24), and the other biblical Gemariah, were sons of Shaphan, the scribe of Josiah, lends force to the suggestion that this apparent friend of Jeremiah was also a son of a prominent figure associated with Shaphan and Josiah, namely, Hilkiah, Josiah's high priest (2 Kings 22). It might be, however, that the association is coincidental; the name of Gemariah's father is very common, and the name Gemariah itself, in addition to Gemariah son of Shaphan (Shiloh and Tarler 1986: 204; see above), is attested three and perhaps four times in Israelite onomastica dating to the end of the monarchy (*AI* 31:8; 38:3; Lachish 1:1; Shiloh 1985 80:19[?]) as well as among the later Elephantine papyri (Cowley *CAP* 2:2; 6:18; 8:29; 9:18; 22:2, 121; 34:5; 43:2, 11; Kraeling *BMAP* 2:15; 4:23; 10:20). Gemariah probably means "Yahweh has completed/accomplished."

MARION ANN TAYLOR

GENEALOGY, GENEALOGIES. Genealogies are records of a person's or a group's descent from an ancestor or ancestors. Outside of Israel, genealogies appear only rarely in ancient Near Eastern literature and are attested primarily in Mesopotamian king lists and in 2d-millennium texts dealing with the political organization and history of the Amorites. However, the OT contains about 25 genealogies of varying complexity, a fact which suggests that genealogy played an important role in Israelite life and thought.

2. Genealogical Functions

C. OT Genealogies in Context

1. Genealogy and Writing

2. Genealogy and Literary Context

A. Introduction: Terminology and Use

The most frequently attested Heb equivalents of the Eng word "genealogy" are *tôlēdôt* and various verbs and nouns formed from the root *yḥś.* The former of these is derived from the root *yld,* "to bear," and seems to mean literally "the order in which people are born." The word is used prominently by the Priestly Writer (hereafter P) in Genesis to introduce genealogies that are intended to give the book a literary structure (Gen 5:1; 10:1; 11:10; 25:12; 36:1). Outside of Genesis *tôlēdôt* is used to introduce or conclude genealogies (Exod 6:16, 19; 28:10; Num 3:1; 1 Chr 5:7), although not all of the OT genealogies are set off in this way. Because of the word's associations with sequence and progression, it sometimes takes on the extended meaning "story" or "history." In this sense it can be used to introduce narrative passages that are not genealogical in form (Gen 2:4; 6:9; 11:27; 25:19; 37:2). The root *yḥś* is attested only in postexilic texts, where it is most often used in verbal forms to mean "to be enrolled by genealogy," "to be recorded in a genealogy" (1 Chr 5:17; 9:1).

Genealogies are attested in the OT primarily in texts that deal with Israel's early history (Genesis, Exodus) or in literature from the postexilic period (Chronicles, Ezra-Nehemiah). This fact has led some scholars to conclude that Israel's early interest in kinship ties waned with the rise of the monarchy and was reborn only when the chaos of exile again made membership in a family and a nation an important issue. Although it is true that evidence for the use of genealogies during the monarchy is minimal, it is unlikely that they disappeared completely. Interest in family ties remained strong during the preexilic period, and in some cases old tribal ties continued to be important in spite of royal efforts to disrupt them. In addition, certain groups such as priests, scribes, craftsmen, and even the kings themselves undoubtedly preserved genealogies, and some of these records probably survived to be included in the genealogical collections of the postexilic period.

Scholars generally agree that the OT's attribution of genealogical interest to the early Israelites is not an anachronism but is rooted in the social structure of the groups that formed premonarchical Israel. The narratives that deal with this period all suggest that kinship was a major organizational principle, and for this reason genealogies, which use the idiom of kinship, became an important means of expressing all sorts of social, political, and religious relationships. Because of the persistence of genealogical thinking in Israel's later history, an understanding of the idiom of genealogy is important for an accurate comprehension of the OT examples of the genre.

B. The Idiom of Genealogy

In societies such as early Israel, where kinship is a basis for organizing the society, the language of genealogy, which has its origins in the need to represent actual kinship ties, is used metaphorically to express other social relationships where real kinship is not involved. In these societies genealogies, usually in oral form, are part of daily life and are known and discussed frequently by the people. The form in which a particular genealogy is related is largely determined by the purpose for which it is being recited or recorded. The genealogy's form and function are related, and this relationship must be understood if the genealogical idiom is to be interpreted correctly.

1. Genealogical Forms. The most common genealogical form is the one which replicates a basic nuclear family consisting of two children having the same parents. Such a genealogy will be segmented or branched (the traditional "family tree") and will show the relationship of the two children to a single parent. Genealogies of this sort have both a vertical and a horizontal dimension. Vertically, the genealogy has depth and traces the relationship between two generations. Horizontally, the genealogy has breadth and traces the relationship between siblings by relating them to a common ancestor. Segmented genealogies can theoretically be expanded beyond the nuclear family to include any number of related kin. As more distant kin are included, the depth of the genealogy will increase as the family's common ancestor recedes further into the past. However, in practice segmented genealogies rarely exceed four or five generations in depth, even when the genealogies are in written rather than in oral form (Gen 35:22–26; Num 26:5–51).

Genealogies which are not segmented are normally in linear form. Linear genealogies are simply lists of names connecting an individual to an earlier ancestor by indicating the kinship relationships that tie all of the names together. Genealogies of this sort have only a vertical dimension and are normally of limited depth, although written genealogies sometimes violate this rule (1 Chr 9:10–13). In written genealogies, in particular, the distinction between segmented and linear forms may not be absolute, and the two forms may be mixed (1 Chronicles 6).

When genealogies are reproduced either orally or in writing, they may be given as part of a larger narrative or in the form of a simple list. In the latter case they will have a form such as "X son of Y daughter of Z" or "the sons of W: X, Y, and Z." The genealogies may be given in descending order from parent to child (1 Chr 9:39–44) or in ascending order from child to parent (1 Chr 9:14–16).

All genealogies, whether oral or written, are characterized by fluidity. Where two or more versions of the same genealogy exist, it is usually possible to detect changes in the relationship of names within the genealogy or to note the deletion or addition of names. This sort of fluidity may occur because the names involved are unimportant and thus liable to be forgotten or at least to be poorly remembered. On the other hand, fluidity may be crucial for understanding the genealogies and may indicate significant shifts in social relationships. A number of examples of genealogical fluidity can be found in the OT, but unfortunately the reasons for the phenomenon cannot always be determined. In some cases simple scribal error may be involved (1 Chr 4:39), but in others changes in the social structure may be at the root of the alterations. For example, the variants in the genealogy of Esau (Gen 36:9–14, 15–19; 1 Chr 1:35–36) may reflect the different purposes for which the genealogies were originally created, while changes within the genealogies of the 12 Israelite tribes may reflect political or geographical realignments (Gen 46:9, 12, 17; 1 Chr 7:23).

2. Genealogical Functions. In societies that attach great importance to kinship, genealogies have numerous functions, and the idiom of genealogy is used for a variety of purposes. In the case of segmented genealogies, their primary purpose is to express actual kinship relationships between individuals. Such relationships are important in daily life because they are the basis for regulating social interaction, marriage, and inheritance, along with other social rights and obligations. At the level of the family, both the horizontal and vertical dimensions of the genealogy are important. Horizontally, people on the same genealogical level are related to each other as equals, while vertically people are ranked hierarchically according to the level of the genealogy which they occupy. Segmented genealogies are thus both statements of equality and statements of inequality.

However, societies that value and use segmented genealogies to express family relationships tend also to use genealogies metaphorically to indicate the relationships of individuals and groups in other aspects of social life. If a genealogy can be used to relate members of an actual family, then it can also be used to express the political relationships between families that are not actually related to each other. This can be done simply through the creation of a common ancestor, who is considered the parent of all of the people living in the society. In this way, the whole political system can be conceived as one large family and described by using the idiom of genealogy. In the same way, status relationships can be expressed genealogically, and so can economic position, geographical location, or cultic position. In a given society, segmented genealogies being used for differing purposes may exhibit a great deal of variation, for the society's political, economic, and religious configurations may be quite different. In such cases the apparently conflicting genealogies are in fact accurately reflecting the way in which the society sees itself in a particular social sphere.

In contrast to the multiple functions of segmented genealogies, linear genealogies have only one: to ground a claim to power, status, rank, office, or inheritance in an earlier ancestor. Such genealogies are often used by rulers to justify their right to rule and by office-holders of all types to support their claims.

Many of these common genealogical functions have left traces in the OT genealogies, although because these genealogies have been set in new literary contexts it is not always possible to recover their original purposes accurately. The various genealogies of the 12 Israelite tribes probably go back to a time when a kinship system was the actual basis of Israel's political organization, although in the OT tribal equality

may well be more pronounced than it was in reality (Gen 29:31–30:24; 35:16–20, 22–26; 46:8–24; Num 26:5–51; 1 Chr 2:1–2). In addition to using segmented genealogies for internal purposes, the OT also preserves genealogies of other nations and uses them to relate Israel to its neighbors (Gen 10:6–7, 21–31; 22:20–24; 25:1–6, 12–20; 36). An important collection of segmented genealogies functioning religiously can be found in the various levitical and priestly genealogies that govern the relationships of the branches of the priesthood to each other and control access to priestly power (Gen 46:11; Num 26:57–62; Exod 6:16–25; 1 Chr 6:1–81; 9:10–34).

Although most of the OT genealogies are segmented, there are also examples of linear genealogies, and these too illustrate the characteristic function of this genealogical form. There are, for example, traces of royal genealogies that indicate that the kings of Judah justified their right to rule by demonstrating their connection to earlier rulers, and such genealogies may have been used in the postexilic period as well as by pretenders to the Davidic throne (1 Sam 9:1; 14:49–51; 1 Chr 2:3–17; 3:1–24; 8:29–40; Ruth 4:18–22). Other officials also seem to have used linear genealogies to justify their authority (Zeph 1:1), and they are particularly important in postexilic texts dealing with the authority of the priesthood (Ezra 2:59–63; 10:9–44; Neh 13:23–28).

C. OT Genealogies in Context

While it is likely that many of the OT genealogies were once in oral form and exhibited the formal and functional characteristics that are common to genealogies used in living societies, it is also important to note that they are now part of a written text. This fact has important interpretive implications not only because writing has a tendency to modify somewhat the formal characteristics of oral genealogies, but also because the literary context of the OT modifies the purposes that the genealogies can serve.

1. Genealogy and Writing. When oral genealogies are fixed in writing, they are likely to become less fluid than they were previously. Although conflicting genealogies in the OT suggest that fluidity in written genealogies is not out of the question, writing nevertheless discourages genealogical change. In turn, when genealogies lose their ability to change, they also tend to become less useful for purposes that require such change. This fact is particularly relevant in the case of segmented genealogies, which are often used to mirror the constantly changing shape of the social structure. On the other hand, writing sometimes helps linear genealogies to function more effectively by permitting them to be longer and therefore more impressive and authoritative.

The most important contribution that writing makes to the use of genealogies is that it preserves them in fixed form so that future generations can read them, reuse them, and on occasion elaborate them. The OT contains a number of examples of this process at work. For example, in 1 Chr 1:1–2:2 the Chronicler has extracted P's genealogies from Gen 5; 10; 11:10–26; 25:1–4, 13–16; and 36:4–5, 10–14 and used them to supply a genealogical introduction to the tribal histories in 1 Chronicles 2–9, which themselves draw heavily on genealogical material found elsewhere in the Pentateuch. The genealogies in 1 Chronicles 2–8, whether drawn from earlier biblical texts or from independent sources, have probably been even further elaborated through the insertion of military census lists and geographical records, a process which adds considerably to the text's genealogical complexity.

A prime example of genealogical elaboration of a written text can be seen in P's genealogies in Genesis 5 and 10, where the ages assigned to these early figures seem to reflect some sort of chronological speculation involving crucial dates in Israel's history: the flood, the Exodus from Egypt, the building of Solomon's temple, the Exile, and the edict of Cyrus ending the Exile. Scholars have speculated that this chronology assumes the existence of a world cycle or "Great Year" of 4,000 years, a chronological scheme found elsewhere in antiquity. Whatever the intent of the writer in the MT, chronological speculation clearly continued after the Heb text was fixed, for the figures contained in the LXX and Samaritan Pentateuch seem to reflect a different system. Also reflected in some of the genealogies is numerical speculation designed to locate an important figure in a numerically significant position, usually the seventh position. This sort of activity is particularly clear in Genesis 5, where P has reordered the genealogy from Gen 4:17–22 in order to place Enoch in the seventh slot (Gen 5:18).

2. Genealogy and Literary Context. Although the OT genealogies can often be interpreted in their own right, they are also sometimes used for other purposes in the context of a larger narrative. These purposes are often far removed from the genealogies' original functions and sometimes represent a literary reuse of earlier material. The clearest example of this phenomenon is P's use of the formula "these are the genealogies/generations" *(ʾēleh tôlĕdôt),* which appears often at the beginning of narratives and genealogies, particularly in Genesis (Gen 2:4; 5:1; 6:9; 10:1; 11:10, 27; 25:12, 19; 36:1, 4, 9; 37:2; Num 3:1). Although scholars have often suggested that these formulas mark material extracted from an independent genealogical book, it is equally likely that they are literary markers used by P to give structure to the narrative. Taken as a whole, the formulas, and particularly the genealogies that they introduce, highlight the writer's motif of the transmission of Israel's election and blessing through genealogical inheritance from Adam through the Israelite ancestors and finally to the Israelite priesthood.

A similar reuse of genealogical material can be seen in Exod 6:14–25, where P has inserted into the narrative a portion of one of the standard versions of the Israelite tribal genealogy. The genealogical recitation stops with the descendants of Levi and is clearly intended to underline Moses' priestly heritage and thus reinforce his authority over the people, who at this point in the narrative are refusing to listen to their leader. In this case the original genealogy has been truncated in order to serve a very specific narrative function.

Finally, the large collection of genealogies in 1 Chronicles 1–9, many of which presumably had other functions in other locations, has been positioned at the beginning of the Chronicler's account of Israel's history in order to draw an inclusive picture of traditional Israel. It is to this broad understanding of the extent of Israel that the returning exiles are connected in 1 Chronicles 9.

Just as a genealogy can take on new functions as part of a larger narrative, so also a narrative can help to interpret a traditional genealogy. In Gen 29:31–30:24 and 35:16–20 the writer presents a version of Israel's standard tribal genealogy. However, while the standard genealogy normally stresses the equality of the twelve tribes, this genealogical narrative introduces the notion of inequality by assigning Jacob's sons to their respective mothers. Reuben, Simeon, Levi, Judah, Issachar, and Zebulun are assigned to Leah, and Gad and Asher to her maid Zilpah. Joseph and later Benjamin are assigned to Rachel, and Dan and Naphtali to her maid Bilhah. In the idiom of genealogy the children of maids are clearly of lower status than the children of wives, and among the children of the wives the first-born are superior to younger children. When this genealogical information is combined with earlier narratives indicating Rachel's status as Jacob's favorite wife, then it becomes clear that the writer is presenting a version of the twelve-tribe genealogy that gives primacy to Joseph rather than to Judah, which is usually the case in later versions of the genealogy.

The various ways in which the biblical writers incorporated genealogical material into their work suggests that they understood the idiom of genealogy and were able to use it creatively throughout the biblical period, even though the social structure of Israel changed markedly during that time. This familiarity with genealogical language persisted well beyond the OT period and continued to flourish in later Jewish and Christian debates.

ROBERT R. WILSON

GENESIS APOCRYPHON (1QapGen). One of the first Dead Sea Scrolls from Qumran Cave 1 to be discovered and published though some of its very fragmentary columns remain unpublished. It is written in a literary form of Imperial Aramaic that is very similar to the language of Daniel. Both

linguistically and paleographically it has been dated to the last century B.C. or the 1st century A.D. though it may have been composed a little earlier.

The preserved text is a rewriting of the events recorded in Genesis. The first clearly identifiable section is a description of Lamech's reaction to the news that his wife Bitenosh is pregnant (Col. 2). A number of fragments continue with the story of Noah (generally parallel to Genesis 8–9). Then follow the best preserved columns (19–22) which retell Gen 12:8 to 15:4—Abram's going down to Egypt, Pharaoh's infatuation with Sarai, the defeat of the four kings and the promise of descendants. There are a number of events which are added to, or more detailed than, the biblical version: Abram's dream, predicting how Sarai will save his life (and in which he and his wife are symbolized by a cedar and a palm tree); a visit by three Egyptians (one named Hirkanos) to Abram and their subsequent report of Sarai's beauty to Pharaoh; an account of Abram's prayer, the affliction of the Egyptians, and their subsequent healing; and a description of the land to be inherited by Abram's descendants. Stylistically, the Apocryphon may be described as a pseudepigraphon, since events are related in the first person with the patriarchs Lamech, Noah and Abram in turn acting as narrator, though from 22.18 (MT 14:21) to the end of the published text (22.34) the narrative is in the third person. There are also a number of specific details in content which are shared with contemporary literature. Thus, the visit of the Egyptians (when they receive religious instruction from Abram) finds a parallel in Pseudo-Eupolemos. The greatest number of similarities are with *Jubilees.* Both texts, for instance, give the name of Lamech's wife as Bitenosh and specify the mountain where Noah's ark came to rest as Lubar. Nevertheless, the precise relationship between the two texts has not yet been determined. The description of Sarai's beauty is thought to be poetry, an early precursor of the Arabic *wasf* (VanderKam 1979). Some of the non-biblical parts and some of the rephrasing call to mind the later Jewish midrashic texts, but any links are tenuous.

Despite the expansions and the recasting in the first person, the biblical text is still recognizable and has been identified as "an older Palestinian type" (VanderKam 1978: 55). Also, as in 11QtgJob, there are a number of "double translations." It is possible that the Apocryphon is (or had as one of its sources) a Targum of Genesis and hence that it may be a forerunner of the Rabbinic Targumim (Kuiper 1968). However, its closest similarities are with the Peshitta and not with the medieval Targumim. One characteristic of the way in which the text has been rewritten is its anticipation of passages which occur later in the Bible. Thus a number of phrases from the later encounter with Abimelech (Genesis 20) are placed in the narrative of Sarai and Abram in Egypt (Genesis 12).

RICHARD T. WHITE

GENESIS, BOOK OF. Genesis is the first book of the Hebrew Bible. The name of the book is derived from Genesis 2:4a in the Greek translation: "This is the book of the origins *(geneseōs)* of heaven and earth." The book is called Genesis in the Septuagint, whence the name came into the Vulgate and eventually into modern usage. In Jewish tradition the first word of the book serves as its name, thus the book is called *Bĕrēʾšît.* The origin of the name is easier to ascertain than most other aspects of the book, which will be treated under the following headings:

———

A. Text
B. Sources
    1. J
    2. E
    3. P

4. The Promises Writer

C. Narrative

4. The Jacob Cycle
5. The Joseph Narrative

D. The Patriarchs and History

E. The Religion of the Patriarchs

F. Ancient Near Eastern Parallels

1. Cognate Parallels
2. Typological Parallels

———

A. Text

There are four major textual witnesses to the book of Genesis: the Masoretic text (MT), the Samaritan Pentateuch (SP), the Septuagint (LXX), and the Genesis fragments from Qumran. The latter group comprises our oldest manuscripts but only covers a small proportion of the book (McCarter 1986: 82–88; Davila 1989). In general, the MT is well preserved and reliable, but there are many individual instances where the other versions preserve superior readings (see e.g., index in Tov 1981; frequent examples in McCarter 1986; Davila 1989). An important category of textual variants is the glosses in the MT that are not attested in other major versions; this category of variants shows how the Hebrew text continued to grow even in a conservative scribal tradition (e.g., Gen 14:22: *yahweh* added to *ʾel ʿelyôn* [not in LXX or Syr, SP has *hāʾĕlōhîm*]; Gen 35:7: *ʾēl* added to *bêt-ʾēl* [not in LXX, Vg, or Syr]; see Tov 1981: 307–9).

B. Sources

Since the beginnings of source criticism of the Pentateuch in the 17th and 18th centuries there has been much controversy over the sources of Genesis. There are several competing theories today, but the long-established identification of J (the Yahwist), E (the Elohist), and P (the Priestly source) still provides the most plausible model for the composition of Genesis (Friedman 1987; see the overview of Knight 1985). To these three sources some scholars would add the Promises writer, who inserted a series of divine promises into the patriarchal stories of J + E (see below, B.4.). Other scholars would explain the growth of Genesis by a series of editorial expansions of a single source (Rendtorff 1977; Blum 1984) or as wholly composed by a single author (Whybray 1987), but these theories cannot adequately explain the evident inconsistencies in Genesis (see Emerton 1987–88).

1. J. The J writer was probably not the first Israelite author to write prose narratives, but adapted the prose styles of his predecessors (among whom were probably the composers of the "ark narrative," the "history of David's rise," and the "court history of David," found in slightly expanded form in 1 and 2 Samuel; see McCarter *I Samuel* AB; *II Samuel* AB) to his task. J retold the stories of the past, from the creation of Adam and Eve through the patriarchs, the Exodus, and beyond, in a single extended narrative. J's style is generally very compressed, as would be necessary for such a large task. It is likely that many of these stories would have been told at much greater length in Israelite oral traditions, as some of the allusions to unknown details and variants would suggest (e.g., Cain's wife, Gen 4:17; the "men of renown," Gen 6:4; Rebekah's message for Jacob to return, Gen 27:45; Jacob's conquest of Shechem, Gen 48:22; Jacob weeping at Penuel, Hos 12:5—Eng12:4). J portrays his human protagonists as bold, complex figures who tend to choose their own destiny (e.g., the first couple, Gen 3:6), sometimes by devious means (e.g., Abraham, Gen 12:11–13; Isaac, Gen 26:7; Rebekah and Jacob, Genesis 27). J's deity is similarly complex; he is shown changing his mind about the desirability of destroying humans (Gen 8:21–22; cf. 6:5–7) and, in a moving scene, takes ethical instruction from Abraham (Gen 18:22–33). Yahweh often has no role in the stories or intervenes only occasionally. This intermittent role of the deity is in marked contrast to the other sources of Genesis, and shows J as, in a sense, one of the least "theological" writers of the Bible, perhaps reflecting a closeness to the folk traditions of Israel.

The J composition is plausibly dated to the early monarchy and appears to reflect Judean interests (Skinner *Genesis* ICC, lvii; Friedman 1987: 61–67). The depictions of a sympathetic side of Esau (= Edom) in J (Gen 27:30–38) and E (Gen 33:4–16) are strong evidence against an exilic or post-exilic date for J (*pace* Van Seters 1975); at this later time Edom was reviled for its part in the sack of Judah (Ps 137:7; Obadiah; cf. Ezek 25:12–14; Isa 34:5–17; 63:1–6; Mal 1:2–4). For other historical indications, see D. below. See also YAHWIST ("J") SOURCE.

2. E. The E source is less dominant than J or P in Genesis but has a narrative voice and technique that is often distinct (McEvenue 1975 and 1984) In E's narratives, beginning with Abraham in Genesis 20, the human protagonists are often idealized, with their deceits and ambiguous acts explicity justified (e.g., Abraham's apparent lie about Sarah, Gen 20:11–12 [cf. Gen 12:12–13, J]; Abraham's acquiescence in the expulsion of Hagar, Gen 21:10–13 [cf. Gen 16:6, J]). The human characters often voice their intentions and show strong emotions, displaying a greater "interiority" than in J (McEvenue 1984: 320–21). God's role in the stories is much more pronounced than in J; the events and plots of the stories are often explained as the direct expression of God's will (e.g., God's explanation of Abimelech's innocence, Gen 20:6; God's remarks to Abraham about the explusion of Ishmael, Gen 21:12–13; the narrator's description of the plot of Genesis 22: "God tested Abraham," Gen 22:1; the dream theophany explaining Jacob's success in breeding sheep, Gen 31:10–12 [cf. Gen 30:32–43, J]; Joseph's interpretation of events to his brothers: "God sent me before you to save life," Gen 45:5 [cf. 45:7; 50:20]). E is interested in the piety and probity of his characters; a favored quality is the "fear of God" (attributed to Abraham, Gen 22:12; possibly none in Gerar, Gen 20:11; attributed to Joseph, 42:18; see Wolff 1969), and a proper note of humility is struck when Jacob and Joseph exclaim, "Can I take the place of God" (*hătaḥat ʾĕlōhîm ʾānōkî/ʾānî:* Gen 30:2; 50:19).

The E source occasionally displays northern interests (Jenks 1977; Friedman 1987: 70–83) and may have been composed as an alternative text to J, though strongly influenced by J in style and length of the stories (Friedman 1987: 83–88). Others regard E as an expansion of J rather than an originally separate document (McEvenue 1984: 329–30), and some regard the E source as insufficiently proven (Rendtorff 1977: 82; Westermann 1984–86: 2. 571–72). See also ELOHIST.

3. P. To the P source belong two basic types of material in Genesis: narratives and genealogies. Among the narratives are whole texts, such as the creation account in Gen 1:1–2:4a, a version of the flood myth in Genesis 6–9, God's covenant with Abraham in Genesis 17, Abraham's purchase of the cave at Machpelah in Genesis 23, and partial narratives that are appended to J or E texts, such as Rebekah's disgust at Esau's marriages in Gen 27:46–28:9 and various notices of births and burials. Among the genealogical lists are extended sections, such as Genesis 5 or Gen 11:10–27, and also briefer notices that are scattered throughout the narratives. The genealogies and other chronological matter serve to structure the book as a whole. It appears that the P source is best described as a collection of independent narratives (Emerton 1988; Nicholson 1988) *and* as a redactional source (*CMHE*, 301–21; Tengström 1981). It may be that this implies more than one compositional phase for P, perhaps a pre-exilic P writer and an exilic P redactor (Friedman 1981: 44–132).

One of P's chief interests is the relationship between narrative and cult: the practices of Sabbath observance and circumcision are explicitly connected with the narratives of creation (Gen 2:2–3) and God's covenant with Abraham (Gen 17:10–14). On a more subtle level the primeval events in P anticipate the creation of the Jerusalem temple, an institution at the center of Israelite religion. The language in the P creation story anticipates the construction of the tabernacle in Exodus 35–40, which is P's symbol for the Jerusalem temple (Weinfeld 1981; Blenkinsopp 1976: 280–86; Levenson 1988: 77–99). In addition, the chronology of the primeval events also anticipates the construction of the temple: the creation begins the first year, the emergence of the earth from the flood waters also begins a new year (Gen 8:13), the tabernacle is set up on the first of the year (Exod 40:2), all of which foreshadow the sanctification of the temple, which occurred at the (autumn) New Year festival (Blenkinsopp 1976: 283). The symbolic structure of P appears to bring the temple into a close bond with creation and the cosmic order. The

interplay between myth and cult, and the explication of the sacred structure of the cosmos, joining past to present, are dominant concerns for P in Genesis. See also PRIESTLY ("P") SOURCE.

4. The Promises Writer. In addition to the three major sources of Genesis (J, E, P) and a few texts of independent provenance (Genesis 14; 49:2–27), some scholars have noted that many of God's promises to the patriarchs belong to a separate compositional stratum (Hoftijzer 1956; Westermann 1980: 95–163; Emerton 1982). There is a common diction and set of themes in the divine promises in Gen 12:2–3; 13:14–17; 18:17–19; 22:15–18; 24:7; 26:3b–5; 28:14; 32:13; and elsewhere. Many of these passages, which occur in both J and E contexts, appear to be intrusive (e.g., Gen 22:15: "the angel of Yahweh called out to Abraham a second time …"). The promises were apparently added to the combined JE text prior to the combination with P, since the promises in the P source are written in characteristic P language but appear to be influenced by the earlier texts (Gen 17:5–8; 28:3–4; 35:11–12). The promises of descendants, land, blessing, etc., bring to the fore some of the implicit and explicit themes of Yahweh's relationship with the patriarchs, and apparently point to the era of the Israelite monarchy as the time of fulfillment of the promises (cf. 1 Kgs 4:20). The Promises writer gives an ethical interpretation to Genesis in Yahweh's explanation of his choice of Abraham: "I have chosen him that he may command his children and his descendants to keep the way of Yahweh by doing what is right and just, so that Yahweh may bring to Abraham what he has promised him" (Gen 18:19). The promises provide a sense of structure and a commentary on the patriarchal narratives. Several of the promises are probably original to the J and E texts (Gen 12:7; 16:11; 18:10, 14; 28:15; also 15:4–5, 18 [source obscure]; see Emerton 1982: 17–23); these formed the basis for the redactional and interpretive activity of the Promises writer. It is instructive to note the differences in theme and diction between the passages from the Promises source and the earlier passages of the blessings given by Isaac (Gen 27:27–28, J) and Jacob (Gen 48:15–16, E; 49:2–27, archaic poetry).

C. Narrative

Hermann Gunkel began the modern study of the Genesis narratives with his attention to matters of genre, literary art, and prehistory in Israelite and ancient Near Eastern traditions (*Genesis* HKAT, 1964). Concern with the first and last of these matters ("form-criticism" and "tradition-criticism") has dominated scholarship on Genesis in the decades since (see Knight 1975), in conjunction with recurrent theological interests (e.g., von Rad *Genesis* OTL; Westermann 1984–86) and historical concerns (see D below). In recent years much attention has returned to the literary aspects of Genesis (Fokkelman 1975; Fishbane 1979; Alter 1981; Sternberg 1985). Also in recent years some have drawn on other fields such as anthropology and folklore for new perspectives on the Genesis narratives (Culley 1985: 180–89; Niditch 1987; Oden 1987; Hendel 1987b). At present there is a wide range of approaches to the Genesis narratives, though there is a regrettable tendency for each approach to be practiced in isolation from the others.

1. The Framework: Genealogy. Genealogies serve as a framework for Genesis on two complementary levels: redactional and conceptual. The final editor of the book (probably to be identified with the P redactor; see B.3 above) used genealogical lists as a structural framework for Genesis (*CMHE,* 301–21; Tengström 1981). The list begins in Genesis 5 with Adam's immediate line and continues in Genesis 10 and 11:10–27, and then occurs sporadically through the rest of the book, linking the various sections of narrative. The editor prefaces each of these sections with the phrase, "These are the generations of …" *(ʾēlleh tôlĕdôt …),* a heading that occurs ten times in Genesis. The editor essentially organized the book as a genealogical document, from the generations of heaven and earth (Gen 2:4a) to the genealogical descent of Israel's ancestors.

In addition to this redactional role in defining Genesis as a "book of generations," the genealogies also play a conceptual role. The conceptual function of genealogy is evident throughout Genesis (see Oden 1983; McCarter 1988). The linear genealogy from Adam to Jacob serves to define Israel's relationship to its neighbors and other foreign nations (the descendants of Noah, Gen 9:25–27 and Genesis 10; Moab and Ammon, Gen 19:30–38; Ishmael, Genesis 16; Edom, Gen 25:21–34). The segmented lineage of Jacob's sons serves to define the internal relationships of Israel, clarifying the relationships among the tribes and

affirming the genealogical unity that binds them together as a nation. The idiom of kinship relationships, whether real or ascribed, is a key organization principle in the type of society called a segmentary lineage system, as Israel appears to have been in the era of the tribal league (see Wilson 1984: 30–53). Derived from this social base, the genealogical structure of the Genesis narratives served to define Israelite identity as a function of the kinship relationships of their ancestors. The genealogical framework of the book thus operates as an expression of ethnic, national, and religious self-definition. Many of the narratives are explicitly concerned with the clarity of kinship relationships (e.g, the wife-sister stories, Gen 12:10–20; 20; 26:1–11; the wooing of Rebekah, Genesis 24; the rape of Dinah, Genesis 34; Judah and Tamar, Genesis 38; the elevation of Ephraim, Genesis 48). The genealogical structure is difficult to separate from the individual stories; it appears that the narratives and kinship relationships are organically related, probably reflecting a common emergence in the early centuries of Israelite society (McCarter 1988: 15–19; and D below).

2. The Primeval Cycle. The stories of Genesis 1–11, often misleadingly called the "primeval *history*" (see the criticisms of Barr 1976; Hendel 1987a: 14 n. 8), form a loose cycle of stories, organized by the idiom of genealogical descent. The stories are properly termed "myths," that is, "sacred narratives that relate how the world and man came into their present form" (Dundes 1984: 1; cf. Oden 1987: 40–91; Müller 1972). The P sections of the primeval cycle include the creation myth of Gen 1:1–2:4a and a version of the flood in Genesis 6–9. The interplay between myth and cult in these P accounts has been mentioned above. The J section begins with the Garden of Eden and extends through the Tower of Babel.

In these myths we see more explicitly the multiple functions of traditional myth: to explore the transition from creation to the present world and to construct the categories and relationships that sustain a coherent world (see Turner 1968; Dundes 1984; O'Flaherty 1988; Blumenberg 1985). The transgressions in these myths—disobedience (Adam and Eve), fratricide (Cain and Abel), illicit sexual union (Sons of God and Daughters of Men), generalized evil (the flood), familial taboos (curse of Canaan), excessive ambition (Tower of Babel)—serve as narrative catalysts that impel the movement toward the emergence of the present world; they provide the necessary crises for the definition of the proper relationships in the Israelite ethical system. In response to these transgressions Yahweh introduces the qualities and limitations of the present world: from an initial human state of nakedness and innocence come the familiar traits of clothing, mortality, work, the division of labor, a limited lifespan, the multiplicity of societies and languages, etc. The proper ethical relationships are established in this process: between man and woman, brother and brother, father and son, nation and nation, and running through all of these, human and God.

Many views have been advanced in recent years concerning a central theme of the primeval cycle: the increase of human sin and God's grace (von Rad *Genesis* OTL, 24; Clines 1976: 502–3; see the criticisms of Golka 1980), the variety of human sin (Westermann 1984–86: 1. 53), the diminution of the "being" *(Dasein)* of humans (Steck 1971: 544), the irresolvable duality of human and divine (Oden 1981: 30–33), and the proper limits of the human "drive for life" (Fishbane 1979: 37). It may be appropriate to avoid the search for a single meaning and to consider the mythic role of the primeval cycle as a narrative exploration and point of origins for the categories and ethical relationships of ancient Israelite religion.

3. The Abraham Cycle. The stories of Abraham form a loosely connected cycle organized around two central themes: Abraham's need for a child and his relationship with Yahweh. These themes concern Abraham's identity as the ancestor of Israel and the founder of Israelite religion. The first theme is sounded in Gen 11:30 with the mention that "Sarai was barren, she had no child." The second theme begins two verses later with Yahweh's command to Abraham to "Go forth" (Gen 12:1). During the course of the Abraham cycle the relationship between Yahweh and Abraham is developed in various ways, with the problem of childlessness as a recurrent theme. The stories that concern Abraham's need for an heir include: the wife-sister stories, in which Sarah's status as Abraham's wife is endangered (Gen 12:10–20, J; Gen 20:1–7, E); the stories of the birth and expulsion of Ishmael (Gen 16:1–15, J; 21:9–21, E); the covenant with Abraham (Genesis 17, P); the announcement that Sarah will bear a son (Gen 18:1–15, J); the birth and circumcision of Isaac (Gen 21:1–8, JEP); and the binding of Isaac (Gen 22:1–19, E). The passages from the Promises writer in the Abraham cycle often concern the promise of descendants; also

the passage in Gen 15:1–6 (source obscure) relates the promise of a son. The story of the wooing of Rebekah continues the concern for proper descendants to the next generation (Genesis 24, J).

Yahweh's relationship with Abraham is defined in the course of the Abraham cycle as that of a personal god who grants him offspring, land, abundance, blessing, and victory in battle. Abraham argues with Yahweh (Gen 18:22–33, J) but is obedient to his command (Gen 22:1–14, E), portraying a dialectic of autonomy and obedience that runs deeply in Israelite religion (Levenson 1988: 149–53). The Abraham cycle presents Abraham as father and religious founder; it defines Israel's claim to the promised land and its relationship with Ammon, Moab, Ishmael, and other peoples; and it depicts the religious bond between Yahweh and the children of Abraham.

4. The Jacob Cycle. The stories of Jacob and his family continue some of the main concerns of the Abraham cycle. The themes of the barren wife and the need for an heir recur in Gen 25:21 (Isaac and Rebekah, J) and Gen 29:31–30:24 (Jacob and Rachel, JE), but are minor concerns in comparison with the Abraham cycle. Jacob's relationship with Yahweh is also a subject of interest, particularly in the theophanies at Bethel (Gen 28:10–22, JE; 35:1–15, EP) and Penuel (Gen 32:23–33, E). The kinship with neighboring peoples, particularly Edomites and Arameans, is an important matter, as is the internal relationships among Jacob's children.

The Jacob cycle is primarily a narration of Jacob's life story and adventures, from his early career as a youthful trickster to his later identity as the eponymous ancestor of Israel (Hendel 1987b). Jacob faces a series of adversaries in the course of his career: initially Esau, later Laban, and at Penuel he contends with God. He prevails over his adversaries, both human and divine (as emphasized in Gen 32:29), generally through guile, and thereby wins the family birthright (Gen 25:29–34, J), the blessing of the first-born (Genesis 27, J), abundant flocks (Gen 30:25–31:8, JE), and finally a new name (Gen 32:27–29, E).

Jacob's character is defined through his encounters with adversaries (Hendel 1987b: 101–31). His adversarial relationship with his brother Esau is echoed in Rachel's rivalry with her sister Leah. Rachel, the younger child who becomes Jacob's favored wife, acquires the family gods by deceiving her father (Gen 31:19, 33–35, E), establishing her as a proper counterpart for Jacob, who acquired his father's blessing through deceit (Gen 27:1–29, J; see Hendel 1987b: 94–98). Jacob eventually resolves his relationships with his adversaries: first with Laban (Gen 31:43–54, E), then, curiously, with God (Gen 32:23–33, E), and finally with Esau (Gen 33:1–17, E).

The Jacob cycle traces Jacob's identity in its various aspects: as a trickster, a founder of cult places, a man of blessing, a husband and father, a contender with God, and an eponymous ancestor. Jacob's struggles and the eventual outcome—that he prevails (Gen 32:29)—form an evocative paradigm for Israelite identity.

5. The Joseph Narrative. The stories of Joseph have a different narrative pace than the other stories in Genesis; they linger on individual scenes and flow more directly from one episode to another. This is less a story cycle than a single narrative, though the difference may be one of degree rather than kind. Another difference concerns the absence of theophanies and links with cultic sites. It appears that the Joseph narrative continues the J, E, and P sources, though the differences between J and E are less distinct than in previous sections (compare Skinner *Genesis* ICC, 438–42; Redford 1970: 106–86; Schmitt 1980; Westermann 1984–86: 3. 20–22).

Joseph is not presented as a cult founder or patriarch (except as father of Ephraim and Manasseh), but as the favored son of Jacob who ascends to authority over his brothers, as foretold in his dreams (Gen 37:5–11). The ascent of the youngest is a common theme in Israelite traditions (cf. Isaac over Ishmael, Jacob over Esau, Rachel over Leah, Ephraim over Manasseh, Gideon, David). The Joseph narrative traces the rise of this eponymous ancestor and provides a transition to the stories of the Exodus. Joseph's rise is told through a series of encounters with adversaries and benefactors, after each of which he experiences a change in status. Joseph begins as his father's favorite son and attracts the enmity of his brothers. His first transition, from beloved son to foreign slave, occurs after he is cast into a pit and his special garment taken away. As a slave he is the favorite of Potiphar but attracts the desire of Potiphar's wife. His identity is transformed from slave to prisoner as he is cast into prison, again with his garment torn away by his

adversary. The repeated images of Joseph's clothing torn away present a series of symbolic "rites of passage" from one state to another, from beloved son to foreign slave to prisoner. After the cupbearer remembers Joseph's wisdom to Pharaoh, Joseph is released from prison and is dressed in new clothes (Gen 41:14), signaling a new ascent in identity. His success in interpreting Pharaoh's dreams is rewarded by a final ascent in status to Pharaoh's vizier, and is symbolically enacted when Pharaoh has Joseph dressed in fine clothes and jewelry (Gen 41:42). Joseph's rise is followed by his reunion and eventual reconciliation with his brothers. Yet before this occurs Joseph deceives his brothers, as Jacob had deceived his brother (Friedman 1986: 28–30; Niditch 1987: 99–104), and he implicitly threatens the life of the youngest son, Benjamin, by having a divining cup planted in his bag. In a moment of sharp irony, the brothers tear their clothes in anguish over the danger posed to their youngest brother (Gen 44:13), recalling the scene when Israel tore his clothes after the report of Joseph's death (Gen 37:34). Joseph then reveals his identity to his brothers and effects a reconciliation, symbolized in part by giving his brothers new clothes (Gen 45:22). The transformations that occur in the relationships of Joseph, his brothers, and the other major characters, are often accompanied by the granting, taking away, or tearing of clothing, providing a symbolic framework to the narrative. The key scenes in the story are also linked together by the themes of recognition, disguise, and knowledge, as Alter and others have noted (Alter 1981: 159–76; Sternberg 1985: 285–308). The end of the narrative, according to the E source, fulfills God's design: that the lives of the Israelites be saved (Gen 45:5–8, 50:20).

D. The Patriarchs and History

The topic of the relationship between history and the patriarchal narratives has been of much interest in recent years (e.g., Van Seters 1975; Thompson 1974; de Pury 1978; de Vaux 1978: 161–266; Dever 1977; Worschech 1983; Malamat *WLSGF* 303–13; McCarter 1988). The confidence of Albright and his colleagues that the "patriarchal period" could be located in the archaeological record of the second millennium B.C.E. has waned in the light of recent criticisms, and research into the historical memory of oral narrative traditions has tempered earlier claims (Culley 1967). If the writers of Genesis were drawing on the oral narrative traditions of their times, as is the most plausible scenario (see F below), then we would expect these traditions to preserve a variety of old historical details—social, economic, and religious customs, names and epithets, vague traces of particular events—but would expect many of the themes and plots to be traditional rather than historical (Vansina 1985; Lord 1972; Finnegan 1970). We would expect most of the historical referents to reflect the times when the stories were told, not the times that they purport to describe. From the limited historical data available to us, it appears that the relationship between history and tradition in the patriarchal narratives fits this general understanding of oral traditional narrative.

The Joseph narrative, though written down no earlier than the early monarchy, reflects in the tribal relationships a time when the Joseph tribes (Ephraim and Manasseh) were dominant. In the era of the Israelite tribal league, prior to the monarchy, Ephraim and Manasseh were the most populous tribes (*AIS*, 324–35) and apparently had a dominant status (cf. the tribal blessings in Gen 49:22–26, Deut 33:13–17). This story thus preserves in its plot a memory of the social relationships of the Israelite tribal league. It is possible that the elevation of Joseph to a position of authority in Egypt also preserves a vague memory of a time when men with West Semitic names ruled Egypt (the Hyksos dynasty, ca. 1670–1570 B.C.E.). The role of Reuben in the E stratum of the Joseph narrative recalls the period of early Israelite history when Reuben was still an important tribe, while the corresponding role of Judah in the J stratum reflects a time after the rise of David when Judah became a dominant power. In the Jacob cycle, the dominance of Jacob over Esau corresponds to the era of the monarchy when Edom was a vassal of Israel, ca. early 10th to mid-9th centuries B.C.E. (the reference in Gen 27:40b to a time when Edom will "break the yoke" of Israel appears to be a prose gloss added to update the poetic blessing; Gunkel *Genesis* HKAT, 314), yet Esau's name, locale, and character are independent of his identification with Edom; thus it is evident that his narrative role predates this period (Gunkel *Genesis* HKAT, xx; 1964: 23–24).

The names of the patriarchs follow normal West Semitic patterns that are found in the 2d and 1st millennia B.C.E., though the conspicuous absence of theophorous elements derived from the name

"Yahweh" lends weight to the supposition that many may be genuinely archaic names. Occasional references in extrabiblical texts may directly relate to the patriarchal traditions. A local Canaanite ruler in the 18th century B.C.E. may have been named *y‹qb-HR* (in Eg transliteration), and it is conceivable that he may have been the precursor of the biblical *ya‹ăqōb,* or Jacob (Kempinski 1988: 45–47). An Egyptian document from the 15th century B.C.E. mentions a Canaanite place named "Jacob-El"; this may also be a sign of the antiquity of the Jacob tradition (*LBHG*, 163; McCarter 1988: 24). An Egyptian document from the late 10th century B.C.E. mentions a place in Judah called the "Field of Abram"; it is likely that this place-name commemorated the biblical patriarch (Breasted 1904–5; *LBHG*, 328–29; McCarter 1988: 239–40 n. 58). The names and social relationships of the Israelite tribes may also shed light on the history of the patriarchal traditions. Some of the names of Jacob's sons may have been originally geographical designations (possibly Naphtali, Asher, Ephraim, Judah, Benjamin; see McCarter 1988: 28) that were personified as the names of tribal ancestors in the narrative traditions.

In general, the ethnic configurations in the narratives and genealogies reflect relations during the tribal league or early monarchy (Mazar 1969; McCarter 1988: 18–19), which was the era of the formation of Israelite identity and, evidently, of the narrative traditions which articulated this identity. There is thus a diversity of historical reference in the patriarchal narratives. Some items, such as the practice of erecting standing stones at sacred sites (Gen 28:18, 35:14) preserve customs that are continuous from Stone Age to Israelite times (Hendel 1987b: 66–67); many social and economic customs are at home during a broad range of the 2d and 1st millennia B.C.E. (Morrison 1983; Frymer-Kensky 1981; Matthews 1981; Selman 1980); while other elements of the stories, such as the prominence of Hebron, Beer-sheba, and Jerusalem, or the ethnic and tribal relationships, reflect a time when Israel had become a nation.

E. The Religion of the Patriarchs

Without corroborative evidence it is impossible to tell whether the patriarchs were historical individuals, and thus it is impossible to tell what their religion may have been. It is, however, possible to gain a sense of the religious beliefs and practices that are contained in the patriarchal narratives. Many of the features of patriarchal religion are ordinary traits of Israelite religion, including such religious practices and objects as altars, standing stones, animal sacrifice, circumcision, prayers, and oracles (de Vaux 1978: 282–87; Wenham 1980: 168–70). The sacred places founded by the patriarchs are local Israelite sacred places, reflecting the period before Josiah abolished the local shrines (ca. 622) and, more precisely, a time when these sites (Shechem, Bethel, Hebron, etc.) were prominent, pointing to the period of the tribal league and early monarchy (Mazar 1969: 81).

There is a notable discontinuity from the normal pattern of Israelite religion, however, in the name of the deity worshiped by the patriarchs (Alt 1929; *CMHE*, 44–75; Köckert 1988: 55–114; and, in the early poetry, Freedman 1976: 63–66, 87–98, and 1987). Both the E and P sources preserve a tradition that Yahweh did not reveal his true name to the patriarchs, but was known to them as simply "the God of Abraham, the God of Isaac, and the God of Jacob" or "the God of your fathers" (E, see Exod 3:6) or *›ēl sûadday"* (P, see Exod 6:3). The J source does not follow this tradition and tends to call the patriarchal deity Yahweh. The nature of the titles of the patriarchal deity in Genesis lend credence to the E and P tradition of a patriarchal deity that was not yet named Yahweh (on the following, see esp. *CMHE*, 46–60 and Cross *TDOT* 1: 255–60). The titles include *›ēl rō›î* (Gen 16:13), *›ēl ‹ôlām* (Gen 21:33), *›ēl ›ĕlōhê yiśrā›ēl* (Gen 33:20), and *›ēl sûadday*. The god of Melchizedek, king of Salem, is called *›ēl ‹elyôn qōnê šāmayim wā›āreṣ* (Gen 14:19). The word *›ēl* can be read either as a generic noun meaning "god" or as the personal name for a god named "El." The latter meaning clearly holds for the title *›ēl ›ĕlōhê yiśrā›ēl,* literally, "El, the God of Israel." Many of the other divine titles are probably to be understood in the same way as titles of the god El: thus *›ēl ‹ôlām* is probably "El, the Eternal One" or "El, the Ancient One" (or simply "the god of eternity" or "the ancient god"), *›ēl sûadday* is probably "El, the Mountain One" (cf. the Ammonite gods called *šdyn,* probably "the mountain ones" in the Ammonite inscription from Deir ‹Alla; Hackett 1984: 85–89), *›ēl ‹elyôn qōnê šāmayim wā›āreṣ* is "El, the Most High, Creator of Heaven and Earth" (cf. the title "El, Creator of Earth" in Canaanite and other West Semitic texts; Miller 1980),

etc. In much of the Hebrew Bible the name El is an alternate name for Yahweh, but in the tradition followed by E and P it is conceived as an *earlier* name than Yahweh.

The discovery of the Ugaritic tablets from the 14th century B.C.E. and other epigraphic finds has made it clear that in Canaanite religion the high god of the pantheon was named El. Many of the El epithets in Genesis are also attested of other gods in Canaanite, Phoenician, Aramaic, and Ammonite religion. It appears that the biblical tradition according to which a god named El was worshiped in the land of Israel (i.e., Canaan) prior to the settlement of the Israelite tribes is historically accurate, and that the religion of the patriarchs described in Genesis preserves at least some authentic memories of Canaanite religion (*pace* Van Seters 1980). Many of the religious features of the patriarchal narratives would be at home in Canaanite traditions. For example, there are many continuities in the relationship between El and his votaries Danel and Kirta in the Canaanite epics and El and the patriarchs in Genesis (*CMHE*, 182–83; Clifford 1973; Hendel 1987b: 33–67). However, the patriarchal narratives only preserve features of earlier religious practice and belief that are compatible with Israelite religion; thus while there are divine "messengers" *(mal›ākîm)* in Genesis, there is no mention of Baal, Asherah, or other prominent Canaanite gods.

The patriarchs are monotheists (or monolatrists) and practice a form of "personal religion" in which a family enters into a close relationship with a deity, who blesses and protects the family. This type of religion is common in the ancient Near East, and appears to be a substrate of both Canaanite and Israelite religion (Albertz 1978; Vorlander 1975). The title "the God of my father" is often applied to the patron god in personal religion. This personal god has a name (*pace* Alt 1929) and is often one of the major gods of the pantheon. The religion of the patriarchs preserves memories of El as a personal god, and this religious tradition, rooted in pre-Israelite times, was apparently a precursor of Israelite religion, in which Yahweh is both a high god and a personal god.

F. Ancient Near Eastern Parallels

There are many parallels in ancient Near Eastern literature to the narrative elements (motifs, episodes, themes, story patterns) in Genesis. Some of these parallels are sufficiently precise to indicate a genetic or historical relationship between the stories, while others may be attributed to general habits of thought or universal storytelling techniques. Often it is difficult to distinguish between these two classes of parallels, which can be termed "cognate" (i.e., genetically related) and "typological" (i.e., not genetically related). Factors such as the degree of cultural contacts and the specificity and complexity of the parallel are important to assess in order to form a proper evaluation. In general it appears that the primary basis for cognate parallels is not a scribal relationship between individual texts but a continuity of the narrative traditions that the texts (and their audiences) presume.

1. Cognate Parallels. Motifs belonging to the class of cognate parallels include: the heavenly "ladder" *(sullām)* in Gen 28:12 and the heavenly "ladder" *(simmiltu)* in Babylonian myth (see the Sultantepe version of "Nergal and Ereshkigal," Hendel 1987b: 65); the great dragons *(hattannînīm haggĕdōlîm)* in Gen 1:21 and the Ugaritic dragon *tunnānu* (Day 1985: 74); the "Sons of God" *(bĕnê hā›ĕlōhîm)* in Gen 6:1–4 and the Ugaritic "Sons of God," or more precisely, "Children of El" *(bn ›il)* (Hendel 1987a: 16 n. 16); the cherubim *(kĕrūbîm)* in Gen 3:24 and the Akkadian *kurību* and the frequent representation of mixed-breed guardian creatures in Near Eastern art (Freedman and O'Connor *TWAT* 4:322–34); the "seven years of famine" in Gen 41:27–30 and numerous examples of this motif in Egypt, Mesopotamia, and Canaan (McCarter 1988: 26 n. 77); the "spurned wife" motif in Genesis 39 and the Egyptian "Tale of Two Brothers" (Redford 1970: 91–93; Irvin 1977: 185–88).

Some more general concepts or themes that are cognate include: the "garden of God" at the source of the rivers, including the Tigris and Euphrates, in Genesis 2–3 and the abode of Canaanite El at the source of the Tigris and Euphrates (see the Hittite myth "Elkunirsha" and the Ugaritic descriptions of El's abode at "the source of the rivers," Wallace 1985: 76–86); the creation of humans in "the image of God" *(ṣelem ›ĕlōhîm)* in Gen 1:27 and 5:1 and the Egyptian descriptions of the king (and occasionally all humanity) as the "image" of god and the Assyrian descriptions of various kings as the "image" *(ṣalmu)* of a god (Dion *DBSup* 10: 365–403); the lengthy lifespans of the antediluvian patriarchs in Genesis 5 and the lengthy

lifespans of the antediluvian kings in Mesopotamian traditions (see the "Sumerian King List," VanderKam 1984: 23–38); the humans who have knowledge "like the gods (or: like God)" but are denied immortality in Genesis 3 and in Mesopotamian traditions (Adapa and Gilgamesh, see Westermann 1984–86: 1.272; Wallace 1985: 104–5); the creation of the universe by divine word or divine action in Genesis 1 and 2 and numerous Mesopotamian, Egyptian, and Phoenician myths (Westermann 1984–86: 1.26–47; Blanquart 1987).

Whole story patterns that are cognate include: the flood stories in Genesis 6–9 and the several Mesopotamian stories of the flood (Westermann 1984–86: 1.398–401; Wenham *Genesis 1–15* WBC, 159–66); and the birth stories of the biblical patriarchs and the Ugaritic birth stories in the Aqhat and Kirta epics (Hendel 1987b: 37–59). The parallels in the flood story extend from the general plot to specific motifs and scenes such as the wisdom and piety of the flood hero, the instructions to build an ark, the sending of birds (or the same bird) three times to determine when the waters have abated, the landing place of the ark on a mountain in Armenia or Kurdistan, the flood hero's sacrifice after departure from the ark, a symbolic reminder of the flood (the rainbow in Genesis, a necklace in Atrahasis), and the ethical reflections of the deity (or deities) after the flood. Several obscure features of the biblical flood stories are illuminated by this history of tradition reaching back to older Mesopotamian myths. Yahweh's apparently unmotivated change of heart after Noah's sacrifice is illuminated by the Mesopotamian scene at a similar point in the myth when the flood hero offers a sacrifice and the starving gods realize that they are dependent on humans for their sustenance. Similarly, the apparent contradiction in Yahweh's decision to destroy *all* humans (Gen 6:7, J; 6:13, P) but to save Noah's family (Gen 6:8, J; 6:14, P) is clarified by the Mesopotamian tradition where there are two major gods in opposition, one of whom (Enlil) decides to destroy all humans, and another god (Enki) who determines to save the flood hero and his family. In the Israelite tradition a single god has taken on both divine roles—destroyer and savior—thus creating an inner tension in his character and a deep ambiguity in the story (cf. Petersen 1976; Müller 1985).

In the Canaanite and Israelite birth stories there is a similar story pattern and set of relationships between the childless father and his god(s). The hero (Daniel [or Danel], Kirta, Abraham, Isaac, Jacob) has a special relationship with the god (El or Yahweh/El), he appeals to the god(s), and El or Yahweh finally blesses the hero and promises him a son. The parallels in narrative themes and plot are accompanied by the common role of El or Yahweh in both narrative traditions as the patron god who bestows blessings and progeny to his favored ones (see D above). The birth stories in the patriarchal narratives appear to be later multiforms of the traditional birth stories of Canaanite epic, though with the differences one would expect in Israelite narrative: there are no prominent gods besides El/Yahweh, and the human heroes are not kings but farmers and herders (Hendel 1987b: 47–48).

The many cognate parallels between Israelite and Near Eastern texts lend credence to the theory that there existed a tradition of oral narrative in Israel that was continuous with other Near Eastern oral narrative traditions (Cross 1983; Wallace 1985; Hendel 1987b). There are some indications of cognate parallels with archaic Greek traditions as well, as in the myth of the destruction of the demigods in Gen 6:1–4 and the Greek tradition that the Trojan War was sent to destroy the mixed offspring of gods and mortal women (see Hesiod's "Catalogue of Women," Hendel 1987a: 18–20; Van Seters 1988: 4–9). The oral narrative traditions that served as the most likely source for these Near Eastern and Mediterranean parallels would have been characterized by a multiformity of stories and motifs, as one generally finds in oral narrative (Culley 1976: 1–68; Lord 1960). It is less likely that these parallels were generated primarily by textual or scribal traditions; it is possible that some Mesopotamian, Canaanite, or Egyptian literary texts were available to Israelite writers, but none have yet been found in Israelite sites, and direct textual influence is rarely discernible in biblical writings (a probable exception is the Egyptian "Instruction of Amenemope" and Prov 22:17–24:22, see McKane *Proverbs* OTL, 369–406).

2. Typological Parallels. Ancient Near Eastern parallels that are more likely typological than cognate include: the symbolic contrast of culture and nature in the rivalry between Jacob and Esau and in the Mesopotamian rivalry between Gilgamesh and Enkidu, the Egyptian rivalry between Horus and Seth, and the Phoenician rivalry between Hypsouranios and Ousoos (Hendel 1987b: 111–31); the use of clothing to

symbolize the *rites de passage* in the Joseph narrative (see above, C.5.) and in the Gilgamesh epic (Moran *EncRel* 5: 559); Jacob's mysterious wrestling encounter with God in Gen 32:23–33 and Gilgamesh's dream of a wrestling encounter with his patron god Shamash in the Gilgamesh epic (Hendel 1987b: 103–9). There are many typological parallels from other cultures for stories about tricksters like Jacob (Hendel 1987b: 123, 128–29; Niditch 1987: 95–118), wise heroes like Joseph (Niditch 1987: 110–14), heroes who wrestle with gods (de Pury 1979), primeval floods (Dundes 1988), and many other motifs and themes in Genesis (Frazer 1918; Gaster 1950). There are also typological parallels for the overall structure of the book of Genesis, beginning with myths of origins and extending through the lives of the ancestors, e.g., the Mayan *Popul Vuh* (Pitt-Rivers 1977: 149–50).

RONALD S. HENDEL

GENESIS, THE NARRATIVE OF. This entry consists of two articles surveying certain aspects of the story told in the biblical book of Genesis. The first summarizes the flow of the plot and the story line, while the second examines various literary forms that are found within the story.

THE GENESIS NARRATIVE

The book of Genesis, or the first book of Moses, is known in Jewish tradition by its opening words in Hebrew, *bĕrēʾšît,* "in the beginning." The name Genesis derives from the LXX heading (Gk *Genesis*). Since the middle of the 18th century the great majority of scholars have explained the formation of Genesis, as part of the Pentateuch, by means of the documentary hypothesis, deriving in large part from K. H. Graf (1815–69) and A. Kuenen (1828–92), and given its definitive formulation by J. Wellhausen (1844–1918). All three scholars built on the work of their many predecessors, the earliest of whom were R. Simon (1638–1712), J. Astruc (1684–1766), and J. G. Eichhorn (1752–1827). The Graf-Kuenen-Wellhausen hypothesis explained Genesis, and the Pentateuch, as in essence, the result of the juxtaposition of three written accounts of the origin of the human race and Israel known as the Yahwistic (J), Elohistic (E), and Priestly (P) documents. Scholars have subdivided these sources further. Wellhausen's important contribution was to date the Priestly Document to the late exilic or postexilic period. The standard introductions to the OT by Eissfeldt (1965; see also his article in *IDB* 2: 366–80), and Fohrer (1968) provide detailed accounts of the documentary hypothesis (see also TORAH). Though many scholars still follow this hypothesis in substance, it has been subject to thorough examination and penetrating criticism by Volz and Rudolph (1933), Cassuto (1961), Engnell (1969), Schmid (1976), Rendtorff (1977, 1985), Thompson (1987), Whybray (1987).

There has been a long and massive process of formation behind the book of Genesis. It is relatively simple to discern the heavily stylized Priestly tradition and, by and large, a "Yahwistic" storyteller. It is possible to note expansions of compact, self-contained stories, places where passages have been joined together more or less skillfully, and incoherences. There are also theological comments which betray a definite religious bias. In addition, the patriarchal stories are laid down on a set of promises, which reflect to a large extent the situation of land and people between the period of maximum expansion in the early monarchy and the Exile as well as the Deuteronomic-Deuteronomistic interests. See also GENESIS, BOOK OF.

It is not known who gave to posterity the final biblical text of Genesis or when this was done, though it can scarcely have been preexilic. But this biblical text with its unity and disunity is the only definitive text that we have. It is this text that the scholar must exegete, always bearing in mind both its final form and its long period in the making.

Genesis may be divided conveniently into three parts: The primeval story, 1:1–11:26; The patriarchal story, 11:27–36:43; The Joseph story, chaps. 37–50. Though the contents of these parts are different and

the types of story have their own characteristics, they are not entirely disparate. One leads into the other until, in the steady expansion of the human race in time and space under the dynamism of the creation blessing (1:28), the people that is to become Israel is in Egypt awaiting God's saving action. The word "story" is used to describe each of the three parts rather than history because history today, though descriptions of it vary, is still much under the influence of the fathers of modern scholarly and documented history—Leopold von Ranke (1795–1886) and Theodore Mommsen (1817–1903)—and rightly so. Von Ranke aimed to present the past "wie es eigentlich gewesen," "as it actually was"; Mommsen pored over centuries of documents relating to Roman history and law with similar interest. For the people of Israel, the book of Genesis, and the whole Pentateuch, is their tradition; this is their past, this has made them what they are, this is what happened.

A. The Primeval Story

The Priestly (P) and Yahwistic (J) accounts of the primeval period may be considered separately, at least as a preliminary step, as each is large and, for the most part, presents an easily definable block.

1. P Source. The creation of the universe and its inhabitants, animal and human, is followed by the blessing which is effective in time in the long genealogy of chap. 5. There is no account of sin or transgression or revolt on the part of humankind as a prelude to the flood, but merely the statement that "the earth was corrupt … and … filled with violence" (6:11). This omission makes one hesitate to describe P as a continuous document. God is in complete control of the flood and its effects (7:16; 8:1). The blessing of creation is renewed after the flood (9:1), and an assurance is given to humankind that the order and stability of the universe will remain undisturbed (9:8–17). The extension of the human race in space, stemming from the sons of Noah, is recorded in chap. 10; the progression in time of the descendants of Shem (11:10–26) leads to the father of the family which is to become Israel.

2. J Source. The Yahwistic account presents a series of transgressions similar in style and pattern (cf. sections 5 and 6). The man and the woman transgress in chap. 3, and the first child, Cain, son of *hā›ādām,* transgresses in chap. 4. There follows the defiance of Lamech, the father of Jabal and Jubal, the first cattle breeders and metal workers (4:23–24). The transgression of "the sons of God" (6:1–4) is a prelude to the general revolt against God that leads to the flood (6:5–8). Assurance is given after the flood that the order and stability of the universe will remain undisturbed even though the human race remains evil (8:21–22). The revolt continues when Ham dishonors his father (9:20–27), and when "the sons of *hā›ādām*" attempt to burst their limitations (11:1–9).

3. Creation of the Universe and Its Inhabitants. The Priestly writer begins with a statement which distinguishes between God and "not God." "In the beginning God created the universe," has become, as it were, the superscription of the Bible. The Hebrew word *bārā›,* create, is used 46 times in the OT, always with God as subject, never with a preposition governing the material out of which God created, and with a variety of objects such as the universe, the human race, something new and wonderful (Isa 48:6–7; 65:17), the people of Israel. "The heavens and the earth" are the equivalent of the cosmos, for which Hebrew has no single word. The sentence in v 1 is of primary importance. It is an affirmation that God is supreme and, of course, alone to be worshipped; but the people of God fell away continually throughout its history and worshipped "not-God." Verse 2 describes "before creation." The Priestly writer speaks out of the ordered universe of his experience, in which day follows night with regularity, season follows season, plants sprout and animals breed at their proper times, and water and land have their proper place. "Before creation" is the opposite of this, namely *tôhû wā bōhû,* "a formless waste or chaos." Darkness was over the deep.

The verse in Genesis describes "before creation" in a language and imagery stamped strongly or faintly by the language and imagery of the ancient Near East. It is "chaos" as opposed to "cosmos." One cannot speak of God creating chaos or formless pre-existent matter; this is a contradiction in terms. "God created" means God created order. This sentiment is expressed in the Isaian passage, "He (God) did not create *(bārā›)* it (the universe) a chaos *(tôhû);* he formed it to be inhabited" (Isa 45:18). The problem of *creatio ex nihilo,* creation out of nothing, is not a problem here; it became one for later generations when Hebrew and Hellenistic culture came together (cf. Wis 11:17; 2 Macc 7:28).

The great Jewish scholar of the Middle Ages, Rashi, Rabbi Solomon, Son of Isaac (d. 1105), read v 1 as a temporal subordinate clause (protasis) in the construct with v 3 (apodosis), and v 2 as a parenthesis: "When God began to create (or In the beginning of God's creating) the heaven and the earth—the earth being unformed and void, with darkness over the surface of the deep and a wind from God sweeping over the water—God said, 'Let there be light'; and there was light" (NJPSV; Orlinsky 1983: 207–9; Speiser *Genesis* AB, 12–73). The NEB joins vv 1 and 2 as protasis and apodosis and reads v 3 as an independent principal sentence: "In the beginning of creation, when God made heaven and earth, the earth was without form and void, with darkness over the face of the abyss, and a mighty wind that swept over the surface of the waters. God said." The NAB is virtually the same. In yet another view the action begins with the 3d part of v 2: "When God began to create …, the earth was …; and the spirit of God was moving over the surface of the waters, and God said …" The writer, it is claimed, goes a step behind creation; v 2c is a circumstantial sentence referring to the creative breath of God which is about to become the creative word (Steck 1981: 236–37). The NIV and JB (1985, 2d ed.) retain the more familiar RSV translation reading vv 1, 2, 3 as three successive main sentences. The question cannot be resolved on grounds of syntax alone. The structure of the chapter as a whole, in particular the eight times repeated "And God said," must be brought into the discussion. The position adopted here is that "And God said" introduces each work of creation after the presentation of chaos according to a pattern.

The word of God in the formula "And God said" (vv 3, 6, 9, 11, 14, 20, 24, 26, [29]) dominates the account of the creation of the ordered universe and its inhabitants. God creates light and order, which are necessary for vegetable, animal, and human life to exist. He does this by his word. The writer stands in the full stream of the tradition of the ANE. "The creative power of the word underlies all Mesopotamian religious literature" (Jacobsen 1976: 15). The creative word is a feature too of the Egyptian theology of

Memphis (Dürr 1938; Koch 1965). The word in the ancient Near East was presented under the image of a natural and cosmic power (Dürr 1938: 21); it came from the mouth of God and was the power that creates and sustains in existence. The word of God in the Bible must be effective, just because it is *God's* word (Pss 33:6; 104:7–9; 147:15–20; Isa 55:10–11). It is no emanation from the divinity, but depends on God's will.

The priestly creation account follows a pattern in vv 3–25. Immediately after the formula, "And God said," followed by the command, and before any action, there is the fulfillment formula, "and it was so." The exceptions in the MT are vv 6–7, where the words follow the action of v 7 rather than the command of v 6, and vv 20–22, where "and it was so," expected at the end of v 20, does not occur at all. In the LXX, however, the fulfillment formula, "and it was so," follows the word of command immediately in each case (vv 3, 6, 9, 11, 15, 20, 24; "and there was light" in v 3, in both MT and LXX, is an equivalent). Whether the LXX imposed the fixed pattern or followed a slightly different Hebrew text, or whether there has been a slight dislocation and an omission in the MT, cannot be decided. It can be stated reasonably that there is the pattern, Word-Formula-Event. God's word effects an event that follows immediately on it and in precise accordance with what is said. There is an inner connection between God's word and the event. God's word is an event. The pattern is there in essence in vv 26–31 where God speaks, creates, blesses, assigns a function, and makes provision for the human race and the animals; the formula "and it was so" is at the end of v 30. A second formula, "And God saw that it was good" (vv 4, 8 [LXX only], 10, 12, 18, 21, 25); v 31 ("very good"), means that the ordered world with its inhabitants, human and animal, was just as it should be as it came from the word of God.

The creation of humankind (Heb *hā›ādām*), begins with the words: "And God said," (v 26), and ends with "and it was so," (v 30). "Let us make" is best understood as a plural of deliberation, though there may be an echo of the heavenly court. The word *hā›ādām* means predominantly humankind, one of the human race; its various meaning groups are all related in some way to the creaturely state of humans; *›ādām* occurs 46 times in Gen 1–11. God creates *hā›ādām* "in our image" (Heb *ṣelem*) and "according to our likeness" (Heb *dĕmût*) (Gen 1:26). In Gen 5:3 (also P), Adam begot a son "in his own likeness" (Heb *biděmûtô*) and "after his image" (Heb *keṣalmo*), the same words used in Gen 1:26. Just as there is something of the father in the son, and there can be communication and response between the two, so there is something of God in *hā›ādām,* and there can be communication and response between them.

The statement about creation in v 27 is best set out in rhythmic form:

So God created man *(bārā› ›et hā›ādām)* in his own image *(ṣelem),*
In the image of God he created *(bārā›)* him,
Male and female he created *(bārā›)* them.

The creation of the human race is the creation of male and female. In v 28 the blessing, in the plural, is given to "them," male and female. To bless is to bestow with the dynamism to increase. The blessing is given to humans and animals alike (v 22), and is natural to them. Both man and woman receive dominion over the world that God has created (v 28). "Dominion is not a license to caprice and tyranny but, in the best sense, a challenge to responsibility and the duty to make right prevail" (Vawter 1977: 59). *Hā›ādām* stands over God's ordered creation (Psalm 8), but with God, the creator of all, as humankind's point of reference.

"The universe (the heavens and the earth) and all its furnishing was completed" (2:1); the verse resumes 1:1. The Priestly writer now links creation formally with the seven-day week and the Israelite sabbath (2:2–3), and with the last words of v 3 echoes 1:1 once again, "because on it he rested from all the work which God created *(›ăšer bārā› ›ĕlōhîm)* and made."

The priestly creation account carries traces of a variety of presentations of creation in the ancient Near East. Besides creation by word and act, there are traces of creation by separation (v 6), by eduction (v 11), and by spontaneous generation (v 20). But the priestly tradition has brought all under the creative word of God, though not at all times smoothly. There are some polemics too in the priestly account. Light is not to be identified with God (vv 3–5) as in Egypt (*ANET,* 365–66, 368); the sun and the moon (their names, *šemeš* and *yārēaḥ* are not used) are not deities (see the warnings in Deut 4:12, 15–20; 17:3; Job 31:31–38;

and the abuses, 2 Kgs 23:5–11), but are described in their functions in an ordered universe (vv 14–18); it is God, not Baal, who gives fertility through God's own blessing. These 35 verses are priestly doctrine, the fruit of centuries of careful theological reflection (von Rad *Genesis* OTL, 63).

"These are the generations (Heb *tôlĕdôt,* or, this is the story) of the heavens and the earth in their being created" (2:4a). The word *tôlĕdôt* means begettings, generations, genealogies; hence, story, descendants, family history. *Tôlĕdôt* is used in Genesis in 2:4a (universe); 5:1 (Adam); 6:9 (Noah); 10:1 (Noah's sons); 11:10 (Shem); 11:27 (Terah); 25:12 (Ishmael); 25:19 (Isaac); 36:1, 9 (Esau); 37:2 (Jacob). This half verse (2:4a) is a link verse from the Priestly tradition. In retrospect, the ordered universe has been created; in prospect, the story of the human race, and of Israel, can run its course in the created universe (Anderson 1977: 160–62).

4. The Garden and the Transgression (2:4b–3:24). In the ancient Near East the story of the creation of the human race is a tradition separate from the creation of the universe. The final editor of Genesis has taken one such story, the work of the storytelling Yahwist, and put it immediately after the account of the creation of the universe. Revolt against God follows upon God's ordering of chaos. The story is not cut from whole cloth. The account of the four rivers (2:10–14) is an independent piece of geographical information; the punishments in 3:14–19 are etiological. There are the well-known themes from the ancient Near East of the garden and the tree of life. The grammatical structure of the opening verses, 2:5–8, is similar to the structure of the opening of the Babylonian epic, Enuma Elish: "When YHWH-Elohim made the earth and the heavens, there was not yet … nor was there *ʾādām* … then YHWH-Elohim formed *hāʾādām."* The Babylonian epic begins: "When on high the heaven had not been named, firm ground had not been called by name … no reed hut … no marshland … no gods … then it was that the gods were formed within them" (*ANET*, 60–61). The important difference is that there is no theogony, that is, genealogy of the gods, in Genesis.

The author of 2:4b–3:24 has fashioned a unity, tying the parts together with great skill. *Hāʾādām,* dust from the earth (2:7) is to return to the source whence he came just because that is what he is (3:19); the tree of life, a symbol of immortality in the ancient Near East (2:9), must be protected against man's attempt to reach beyond himself (3:22, 24); the prohibition to eat of the tree of the knowledge of good and evil is at the center of the story (2:16–17; 3:3, 11–12); the experiences of no shame and shame are linked (2:25; 3:7); nearness to God in the garden (2:9, 15) is followed by alienation and expulsion (3:23, 24). The Yahwist has given unity to disparate traditions and motifs.

a. Making of *hāʾādām* (2:4b–7). The combined name, *YHWH-ʾĕlōhîm* (2:4a) occurs only in Gen 2–3 (in Exod 9:30 the text is uncertain). It is probably a construction of the Yahwist (or an editor) to mediate the transition from *ʾĕlōhîm* in chap. 1 to YHWH. Man *(hāʾādām)* from the surface dust *(ʿāpār),* of the ground (*ʾădāmâ;* 2:7) is destined to return to the *ʾădāmâ,* because he is *ʿāpār;* the human being is linked inexorably with the ground and is limited; because of this limitation the human being is not immortal; human destiny is from the mother's womb to the womb of mother earth. The human being is a living being (*nepesû ḥayyâ;* 2:7) one with all other living beings (1:20, 21, 24, 30; 2:19; 9:10, 12, 25). In 9:12–14 God makes a covenant with all living beings.

b. Rivers (2:10–14). The author incorporates into the text a piece of vague geographical information (2:10–14), saying that the four great rivers, the Indus? *(Pîšôn),* the Nile? *(Gîḥôn),* the Tigris *(Ḥîddeqel),* and the Euphrates *(Pĕrāt),* the sources of the earth's fertility, have their origin in the river in God's garden. Verse 10 is best rendered: "And there is a river going out from Eden to water the garden, and from there it divides into branches and becomes four (separate) streams."

c. Prohibition (2:15–17). The prohibition in 2:15–17 is essential to the story of chaps. 2–3 (cf. 3:3, 11–13). There is plenty for the man to eat in the garden. The prohibition does not improve a privation, but tells the man that God the creator, who possesses a will beyond the creature, requires him to live according to the creator's will. The human being is limited; the creature cannot be the creator. The prohibition implies the possibility of the opposite, namely, of the creature acting freely against the creator. The penalty is pronounced in the form of a capital offense. If or when (*bĕyôm* does not mean "on the very day") you do so, then you are guilty of a capital crime (Heb *môt tamût* or *yāmût,* a traditional phrase from

the sanctions in the legal sections of the Pentateuch). Both stories of creation take for granted that work belongs to the nature of *hā›ādām* who is at work before the revolt against God (1:28; 2:15).

d. Woman (2:18–25). The man is alone in the garden, and this is not good (2:18). It is not that *YHWH-›ĕlōhîm* forgot to create woman or that God experimented to see if the man could manage alone. Neither is it that God took a wrong track in parading the animals before the man to see if the man could find a partner among them. The man exercises his dominion over the animals by naming them; he then decides himself that there is none among them that can stand before him as his counterpart. The "deep sleep" and the removal of a rib from the man are part of the story. The counterpart is of the same stuff as the man. There is no indication that the counterpart is to be subordinate. "This is one *(zō›t)* at last is bone of my bone and flesh of my flesh; this one *(zō›t)* shall be called woman *(›iššâ)* because this one *(zō›t)* has been taken from man *(›îš)"* (2:23). The author repeats the forceful Hebrew demonstrative pronoun three times; it is this one, distinct from the animals, that is his equal, in whom he is reflected. "Bone of my bone" is a traditional formula of relationship (cf. Gen 29:14; Judg 9:23; 2 Sam 5:1; 19:13–14; in each case the RSV renders the Hebrew "bone" by "flesh and blood"). The word *›iššâ,* woman, taken from *›îš,* man, is a name etiology. The author is expressing the complete oneness of man and woman: their physical and spiritual unity, their mutual belonging as equals, their mutual joy in each other. They are to form their own community of life (2:24), and their relationship is without embarrassment (v 25).

e. Transgression (3:1–7). The man and the woman are naked (Heb *‹ărûmmîm*); the serpent is *‹ārûm,* clever. The serpent is a creature of God, "the most clever of all the animals that *YHWH-›ĕlōhîm* had made" (3:1). There is the inexplicable riddle of a creature of God leading another creature of God to transgress God's prohibition. In the modern study of folklore, a talking animal is a trait of the fairy tale or folktale *(Märchen).* The present scene is in the realm of primeval event, before time. The question is not, what does the serpent represent, but what is its function in the story? Its function is to act as antagonist to the woman in a brief dialogue. It disappears from the action as soon as it has enticed the woman to transgress, to be mentioned later as the object of God's curse (3:14–15). The serpent was a symbol of wisdom and magic in Mesopotamia and Egypt. There was the tradition of the bronze serpent in Israel (Num 21:4–9), an object which was worshipped in the temple area and later destroyed by Hezekiah (2 Kgs 18:4). The serpent was familiar in Israel on pottery with serpent decorations on the handles, on cult-stands showing twined serpents, and on an inscribed silver cup from 2250–2000 B.C.E. (*EAEHL* 2.457–58, 477). The serpent was also a symbol of the Canaanite fertility cult, as witnessed by the thousands of cult symbols found in Palestine in the form of figurines of a naked woman with a serpent twined around her neck. Though the serpent in Genesis represents none of these, nor does it represent Satan or human desire or intellectual curiosity or a power of the underworld, nevertheless it is difficult to deny that it would evoke associations, especially with the Canaanite fertility cult, in the minds of the Israelites who listened to the story. See SERPENT (RELIGIOUS SYMBOL).

The serpent exaggerates the divine prohibition (3:2); the woman in reply limits it to the proper object, the tree of the knowledge of good and evil, but builds a fence around it, "you shall not even touch it" (3:3). The serpent's counter is that "you (plural throughout) will be like God (or the gods) knowing good and evil" (3:4). The word *hā›ādām* has been made like God, "little less than *›ĕlōhîm* (God, the heavenly beings?)" (Ps 8:5); now he will be God. Knowledge for the Israelite was not something theoretical, on the plane of mere understanding. It was practical and experiential. The knowledge of good and evil is the knowledge of what is good and evil for *hā›ādām,* with whom these first 11 chapters are concerned. It is a knowledge that concerns humankind in community; the transgression is only completed when the man and the woman have eaten the fruit. To read the text as the seduction of the man by the woman is to read what is not in the text. The man and the woman were aiming to be masters of good and evil, to determine good and evil, to be autonomous and so to determine the course of life without reference to God.

The writer faces that unfathomable riddle which is part of the human race so long as and wherever it exists. There is in the human being that drive to transcend the self by overstepping or bursting the limits within which it is set. There is nothing wrong in the desire itself. The fruit is "good to eat and pleasing to look at." Two normal and good reactions are described. The fruit is also "desirable so as to make one

wise." It is here that the drive to overstep the limits is introduced (Vawter 1977: 79). The relationship of the man and the woman to God is changed by the transgression; hence too their relationship to each other. They are now embarrassed (cf. 2:25). They try to take away their own shame by covering themselves with fig leaves; but they still have to hide themselves from God.

f. Interrogation (3:8–13). God's call to the man: "Where are you?" is decisive for understanding the story. The man and the woman are unmasked before God, who alone can take away their guilt. The four questions (3:9–13), call up the prohibition of 2:16–17. Though the man and the woman each try to shift the responsibility, each must remain responsible for the free individual transgression. There is no interrogation of the serpent; neither its motive nor the origin of evil are explained.

g. Etiologies (3:14–19). These come from another source or are partly or wholly a construction of the Yahwist. In none of the three punishments is it a case of before and after. There was not a state in which the serpent moved along in a way different from crawling on its belly, in which there was painless childbirth, or when the man did not sweat at his work and thorns and thistles did not grow. The writer speaks out of his own situation in which he knows of the enmity between serpents and humans and of the burdens of life, offering an explanation of the cause, that is, an etiology.

The serpent is cursed. In v 1 the serpent is clever (Heb *ʿārûm*) above all wild creatures; in v 14 it is cursed (Heb *ʾārûr*) above all wild creatures. Neither the woman nor the man is cursed, but the ground is cursed; and the man in his work is involved in the consequences. The woman is considered as wife and mother. In the very relationships where she finds her fulfillment, her dignity, and her joy, she also finds pain, suffering, and subordination. The writer speaks out of his own social situation.

h. Woman's Name; God's Intervention (3:20–21). The wife's name is *ḥāwwâ* (Gk *zôē,* "life" 3:20). The blessing of fertility is there. Ben Sirach reflects on the "mother of all the living":

> A great anxiety has God allotted,
> and a heavy yoke to the sons of men;
> from the day one leaves his mother's womb,
> to the day he returns to the mother of all the living.

God makes garments of skins for the man and the woman (3:21), a sign of his care for his creatures. He alone can take away their shame and guilt before each other and before him.

i. Expulsion (3:22–24). The story concludes with 3:23. It is the original punishment. From a life of intimacy with God, the man has passed into a state of alienation, and his life is forever bound to the earth. 3:22 and 3:24 are aware of the two trees of 2:9; they form another ending. 3:22 has the form of a brief divine soliloquy (cf. 1:26; 11:6, 7). The man and the woman have sought to be morally autonomous by eating from the tree of the knowledge of good and evil. Will they now reach for immortality as Gilgamesh did (*ANET*, 96)? But the Adapa myth says: "To him (man) he had given wisdom; eternal life he had not given him" (*ANET*, 101, lines 4–5). "And God expelled the man and at the east of the garden of Eden he stationed cherubim and the flickering flaming sword to guard the way to the tree of life" (3:24; Westermann 1984: 183, 174–75). The cherubim, whose human-beast-bird form varies at different epochs of Mesopotamian civilization, are to protect access to the tree of life.

5. Synthesis (1:1–3:24). The story of Gen 2:4b–3:24 is the story of the primeval event. It is beyond history. It is the story of humankind or Everyman. The goal is not to present an ultimate state of the human race which is different from a previous state. The man and the woman are not endowed with supernatural or preternatural powers which they lost. The story reflects on the human being, and the writer speaks again out of his experience. This is what the human being is: created, limited, weak, with that dynamic in-built drive to know, to continue the species, and to reach beyond, and hence to burst its limitations and to be independent of the creator. Such is *hāʾādām* of the writer's experience; such has *hāʾādām* been from the beginning. There is the sequence, to be repeated several times in chaps. 1–11, of limitation, transgression, punishment, saving action—or simply crime and punishment. The story is making a basic statement about the human being which no religious, philosophical, scientific, technical, or medical advance can alter: the human being is never anything else but limited and weak. The story is about the representatives of mankind in the primeval period who, for the writer and his listeners, were

people in history, the first man and the first woman. It is not concerned with hereditary sin as such or with death as punishment for sin. The story must not be read or interpreted in isolation, but with the rest of chaps. 1–11 as one of several stories about *hā›ādām* that follow a definite pattern.

6. Pattern of Transgression. There follows on chaps. 2–3 a series of independent stories (4:1–16; 6:5–8 + 8:20–22 with 6:9–22 + 9:1–17; 11:1–9) about *hā›ādām* which have been brought together in a common pattern. *Hā›ādām* "knew" (experienced within proper union) his wife (4:1); God saw that the wickedness of *hā›ādām* was great, he was sorry that he had made *hā›ādām,* and he decided to blot out *hā›ādām* (6:5, 6, 7; the *kôl bāśār,* "all flesh," of 6:12 is the priestly equivalent; it is the human being in all its limitations); the *bĕnê hā›ādām,* the sons of man (11:5) reach for the heavens (in 6:1, see below, *hā›ādām* begins to increase in number on earth). In the story of Cain and Abel, the first children in primeval time, Cain usurps God's right. God has given life (4:1) but Cain takes it; God punishes and, at the same time, protects Cain (4:15). The accusation or interrogation (4:9–12) is very like that in 3:9–13. In 6:5–8 the revolt of *hā›ādām* has reached gigantic proportions; hence the punishment is proportional (see also 6:11–13). God saves through the ark. In the Priestly account, God chooses Noah, a just man (6:9) as the instrument through which he is to exercise his saving justice. The men who build the tower (11:1–9) want to become God, or reach to God, to make a name for themselves but not for God (11:4), by means of technology. The builders, who spoke one language (11:1), did not want to be scattered (11:4). They defied God with the work of their hands and so their language was confused; they were scattered and they did not make a name for themselves. God's saving action appears in the Priestly genealogy that introduces Abraham (11:27) and in the Yahwistic introduction to the patriarchal story (12:1–3) where God's choice, Abraham, is the instrument through whom "all the families of the earth shall bless themselves." With chaps. 2–3, these three stories follow a pattern of limitation, transgression, punishment, saving action.

7. Further Transgressions (4:23–24; 6:1–4; 9:20–27). God has reserved vengeance to himself (4:15). Lamech, a direct descendant of Cain (4:17–18) boasts before his wives that he will take vengeance himself (4:23–24), thus usurping the place of God. The four verses which are a preface to the biblical flood story (6:1–4) are not part of the traditional flood material from Mesopotamia. Rather, the writer uses a myth or mythical fragment, probably from Canaanite sources, and adapts it to his own purpose. The myth gave an account of the origin of the giants, the *nĕphîlîm* (Num 13:33; Deut 1:28), and the heroes of old, the *gibbôrîm*. The text as it stands is a "mythological torso" (Gunkel *Genesis* HKAT, lxvi). It is another story about *hā›ādām* as the introductory sentence indicates: "When *hā›ādām* began to multiply on the face of the earth" (6:1). The "sons of God (or the gods)" are clearly celestial beings (Job 1:6; 2:1; 38:7; Pss 29:1; 89:6(7); 1 Kgs 22:19). There is a mingling of the human and the divine in an attempt to grasp at immortality in some form or other. Though the story is about primeval events, that is, about the human race in general, it was told and heard in a culture which was familiar with ritual prostitution as a form of contact with the divine. But there is to be no immortality for the created human being. Yahweh intervenes (6:3); God's spirit, which gives the breath of life, will not remain in *›ādām* forever; three generations (3 × 40) shall be the length of a person's days (God's great servant and prophet, Moses, died at 120 years, Deut 34:7). The pattern of crime and punishment is there.

The wickedness of *hā›ādām* (see 8:21 and below) continues after the flood (9:20–27). Ham, a son of Noah, dishonors his father. The brothers Shem and Japheth make amends and do not look on their father's nakedness, for nakedness, in Israel, meant a loss of human respect. Ham is cursed by his father. The names Ham and Canaan are not connected philologically, and the Hamites are not Canaanites. "Ham was the father of Canaan" (9:18b), is a phrase inserted to link a genealogy with a story and is repeated in 9:22. The story itself takes up the genealogical note of 5:29. Drunkenness was just bad manners but not a crime in Israelite society; wine was not the invention of a god, but the result of human industry and not to be feared; it was a gift of God (Ps 104:15). In Canaan, the dutiful son is the one "who takes him (his father) by the hand when he is drunk, carries him when he is sated with wine" (*ANET*, 150, lines 32–33). Ham was not a dutiful son.

8. Genealogies. The genealogies from the Yahwistic tradition (e.g. 4:1–2, 17–22, 25–26) are usually annotated and do not simply report generation and ages. Notes on the progress of civilization are added to the short genealogy in 4:20–22: Jabal was the father of those who dwell in tents and have cattle, Jubal was the father of those who play the lyre and harp, Tubal-Cain was the forger of all instruments of bronze and iron. This type of genealogy is continued in 4:25–26. In 4:26b, the writer identifies the God who is invoked in the primeval stories with YHWH, the God of Israel: "then it was begun to call on the name of YHWH."

The names in the genealogy in 4:1, 17–22, 25–26 are the same as those in the Priestly genealogy in chap. 5, though with some variations: Seth and Enoch are interchanged (4:25–26 and 5:3–5, 6–8); the order of Enoch (4:17; 5:21) and Mahalalel/Mehujael (4:18; 5:15) is reversed. Noah of 5:29 belongs to chap. 4, after Lamech, and points forward at the same time to 9:20–27.

The Priestly writer begins his genealogy with the *tôlĕdôt,* "generations," formula in 5:1–3, where he resumes the language of 1:26–27—*bārā᾽,* "he created," *zākār ûněqēbâ,* "male and female," *ṣelem* and *dĕmût,* "image" and "likeness." In 5:4–5 he moves into a pattern which continues into the 10th generation of Noah, with modifications in the cases of Enoch (5:24) and Lamech (5:29). The enumeration of the years to the birth of the son, the name of the son, the generalizations about other sons and daughters, and further enumeration, end with the simple words "and he died" (except for Enoch, 5:24). The death of Noah, following the same pattern, is recorded after the flood in 9:29. Not even the hero of the flood is immortal. This is in contrast to the Mesopotamian flood story in which the hero Utnapishtim and his wife are enrolled among the immortals (*ANET,* 93, Tablet XI, lines 1–7; 95, lines 193–97). As for Enoch, he "walked with God and he was not, for God took him" (5:24). This note has given rise to an extensive intertestamental literature surrounding Enoch. The mystery of the long lifespan of the primeval patriarchs has not yet been solved (Vawter 1977: 103–9; Westermann 1984: 352–54).

The genealogy from Shem, a son of Noah, to Abraham (11:10–26) is modeled on chap. 5 and likewise spans ten generations. It omits "and he died," which is added 8 times by the LXX. The ages of the ancestors of Abraham are high enough, though not as high as in chap. 5. The movement here is from the primeval period into the framework of history.

The genealogies are an essential part of the structure of chaps. 1–11. They portray the blessing of 1:28 and 9:1, 6 working itself out in time. They are an old and independent literary type which have their origin among nomad peoples where the basic sociological unit is the clan or family. The genealogy is the basis of origin and belonging (Johnson 1969; Wilson 1975, 1977; Westermann 1984: 6–18).

9. Flood (6:5–9:17). The flood story is set within the framework of the Priestly genealogy (5:1–28, 30–32, and 9:28–29). The analysis presented here supports the view that this block of material is composite in structure. The final editor has left intact the introduction and conclusion of both J and P without any interweaving of texts. The Yahwistic introduction and conclusion are linked neatly: "The Lord saw that the wickedness of man was great in the earth, and that every imagination of the thoughts of his heart was only evil continually" (6:5); *hā᾽ādām* is repeated three times in 6:5a; 6:6a; 6:7a. J is interpreting in 6:5b. The words are taken up in the conclusion: "I will never again curse the ground because of man, even though (*kî,* emphatic concessive) the imagination of man's heart is evil from his youth" (8:21). Then follows Yahweh's pledge that henceforth nature will run its regular course (8:22). The Yahwistic account of the flood moves directly from the divine decision to destroy creation to the entrance into the ark (7:1–5). There is no mention of the construction of the ark. The introduction ends with "Noah did all that Yahweh had commanded him" (7:5), as does the priestly introduction (6:22), though with *᾽ĕlōhîm* instead of YHWH. The Yahwistic material in the description of the flood proper is very sparse, no more than 7:7, 10, 12, 16b, 22–23. The flood is caused simply by rain (7:12; 8:2) which fell for forty days and forty nights (7:4, 12). Noah finds out that the flood has ended and the waters have abated by experimentation. He sends out birds (8:6–12, 13b) as did Utnapishtim in the Mesopotamian epic (*ANET,* 95, lines 156–61).

The Priestly account of the flood moves directly from the genealogy (5:32) to the flood (6:9). The earth is corrupt and seething with revolt (6:11–12), and God decides to destroy it. God had blessed creation and seen that it was just as it should be (chap. 1). Now, with no previous mention of transgression or

corruption, the whole world is corrupt. The instructions for building the ark (6:14–16) may be compared with the parallel instructions in the Mesopotamian account (*ANET*, 93, lines 24–31, 50–69). In the introduction, in the description of the flood itself and the abating of the waters, and in the account of the exit from the ark, P enumerates those who were saved with the animals (6:18–21; 7:13–16a; 8:1a, 15–19). There is a detailed chronological framework (7:6, 11, 24; 8:3b, 4, 5a, 5b, 13a, 14), and the flood is described as a return to primeval chaos (7:11; 8:2). The flood gates are open for 150 days. The flood and its effects last a complete solar year (7:11 and 8:15), i.e., twelve lunar months alternating between 29 and 30 days (a 354-day year) plus eleven supplementary days. Throughout the whole account, God is in complete control. The combined account moves to a mighty crescendo: "the waters increased, and bore up the ark" (7:17); "the waters prevailed and increased greatly" (7:18); "and the waters prevailed so mightily" (7:19); "the waters prevailed above the mountains" (7:20); "all flesh died" (7:23); "and the waters prevailed upon the earth a hundred and fifty days" (7:24). There is a pause after the crescendo reaches its height, "But God remembered Noah" (8:1), followed by a decrescendo down to 8:19.

The repetitions in the narrative as a whole, with the J reference first in each case, are: the general corruption (6:5–7 and 6:11–13); the announcement of the flood (7:4 and 6:13, 17); Noah ordered to enter the ark (7:1–3 and 6:18–20); Noah obeys (7:5 and 6:22); Noah enters (7:7 and 7:13); the deluge commences (7:10 and 7:11); the waters rise and lift the ark (7:17 and 7:18); all living things die (7:22–23 and 7:21); the waters subside (8:3a and 8:1a); God's promise (8:21–22 and 9:8–17). In the J account seven pairs of clean and one pair of unclean animals enter the ark (7:2), and it just rains (7:4, 12; 8:2b). In the P account one pair of each species enter the ark (6:9–20; 7:15–16), and the windows of the firmament open and the waters under the earth burst forth (7:11; 8:2a).

In the light of this evidence, it is beyond reasonable doubt that the biblical writers knew the Mesopotamian flood story in some form. In fact, a fragment of the epic from the 15th century, written in Akkadian, was found accidentally at Megiddo.

The Priestly conclusion to the flood story (9:1–17) resumes the blessings of creation (1:22, 28), and gives an assurance that God will henceforth be faithful to his creation. It is in two parts, each framed by an *inclusio:* (1) 9:1–7: "And God blessed Noah and his sons and said to them: Be fruitful and multiply, and fill the earth" (9:1); "be fruitful and multiply and bring forth abundantly on the earth, and multiply on it" (9:7); and (2) 9:8–17: "Behold I establish my covenant with you" (9:8); "This is the sign of the covenant which I have established between me and all flesh" (9:17). In 9:1–7, living creatures, as well as vegetable matter, are put at human disposal. Blood is taboo, a tradition elaborated in Lev 17:10–14. There was an ancient belief that life resided in the pulsating blood. It is not a question of shedding blood as such, nor of the material, blood, but of blood in so far as and so long as it is the life of an animal. An ancient prohibition against eating blood has been put into the context of the concession to *hā›ādām* to eat flesh. The passage 9:5–6 is best set out in verse form:

v 5 *the blood of your lives* I will *demand*
from every living being will I *demand* it
from *hā›ādām*, from each person, I will *demand* the *life*
of *hā›ādām*
v 6 who sheds the blood of *hā›ādām*
on behalf of *hā›ādām* shall his blood be shed
for God has made *hā›ādām* in his image.

Vengeance belongs to God. The prohibition is against clan vengeance. 9:6 does not give *hā›ādām* the right to take the life of *hā›ādām,* whom God has made in his image. As this image consists in a relationship to God (1:27), murder is a direct affront to God.

9:8–11 describes the covenant, and 9:12–17 describes the sign of the covenant. In the Hebrew text, the word *bĕrît* dominates the passages (9:11, 12, 13, 15, 16, 17) where it occurs 7 times. It is already there in 6:18(P). In both contexts it describes a solemn assurance by which God binds himself. There is no quid pro quo. The initiative and the assurance comes from God. The rainbow is the natural sign that the rain has passed; here it is the sign that destruction has passed. God binds himself to the earth (9:13), to Noah

(9:15), and to all living things on earth (9:15, 16, 17). The covenant is an eternal covenant, *bĕrît ʿōlām* (9:16), a typical priestly expression (Gen 17:7, 13, 19; Exod 31:16; Lev 24:8; Num 18:19; 25:13). The goal of the Flood Narrative for the Priestly writer is a solemn assurance by God that he will remain faithful to his creation. The earth is to be populated anew by the descendants of the survivors of the flood (9:18).

10. Table of Nations (10:1–32). The table of the nations synthesizes Israel's knowledge of the inhabited world in the period of Solomon in the 10th century B.C.E., and at the same time affirms the unity of the human race and the common stem from which it springs. It is an extraordinary combination of system and lack of system. A Priestly framework embraces two largely self-contained blocks from other (J?) sources.

The Priestly writer introduces the generations, *tôlĕdôt,* or descendants of the sons of Noah—the sons of Japheth (10:2–4), peoples to the north; of Ham (10:6–7), peoples to the south; of Shem (10:22–23), peoples to the east. Each list ends with a summary description of what a nation is: "These are the sons of (Japheth, Ham, Shem) in their lands, each with his own language, by their families, in their nations." The formula is virtually the same each time (10:5, 20, 31). The whole is summed up with a closing formula in 10:32. Only Japheth, Ham, and Shem are personal names, the rest being the names of peoples, countries, or regions.

The first block (10:8–19) is fitted in between 10:7 and 10:20. It elaborates on three of the names mentioned in the P list, Cush, Egypt, and Canaan. After the note on Cush's son, Nimrod (10:8–9), the list is expanded with names of lower Mesopotamian cities (or regions; 10:10), and northern Mesopotamian names (10:11–12). Misraim (Egypt) is the father of eight peoples, each with a Hebrew plural ending (10:13–14). After Canaan's firstborn, Heth, come four Canaanite peoples, Jebusites, Amorites, Gergashites, and Hivites (10:16–17a), and five Phoenician peoples, Arkites, Sinites, Arvadites, Zemanites, and Hamathites (10:17b–18a), and a geographical note on Canaan and seven of its main cities (10:18b–19).

The second block (10:24–30) follows the P list of peoples to the east. Arpachshad (10:24) may well be a people to the east, though in 11:10–13 it is a personal name, as are Shelah and Eber (11:13–15). There is a note on Peleg (10:25), though it is not known to what it refers. The sons of Joktan (10:26–30) are thirteen South Arabian names. Jerusalem had commercial dealings with many of these groups just as it did with most of the Phoenician names.

Israel is but one of these many nations, some of which have made substantial contributions to civilization. If Israel has any claim, it is due not to herself, but to God's election (Deut 7:7–8).

11. Statement of Genesis 1–11. The biblical text of Gen 1:1–11:26 is Israel's statement on the universe and the human race. The statement is complete only when both contributions, the Priestly and the Yahwistic, are read together as they stand. The Priestly writer is the systematizer, the Yahwistic writer is the story-teller who recounts the wickedness of *hāʾādām* through stories. The Priestly writer presents God's ordered universe as the theater in which man and woman, made in God's image and likeness, and so with a special relationship to him, are to play out a responsible existence. He records God's blessing (1:28) working itself out in time (5:1–32; 11:10–26) and space (chap. 10). Though he knows that the earth has become corrupt in God's sight (6:11–12), he gives no account of the revolt of *hāʾādām.* However, the Yahwist does give such an account; it is his theme. The writer speaks from the world of experience, the world of revolt of *hāʾādām* against God (chaps. 2–3), of brother against brother (4:1–16), of the race against the creator (6:5–8). God states, "I will blot out *hāʾādām* whom I have created" (6:7). God's order is destroyed by the flood which God sends. The Priestly writer sees it as a return to primeval chaos (7:11; 8:2a). Both writers record a return to the stability and order of creation (8:22; 9:12–16), again effected by God. The primeval blessing is renewed (9:1, 7). But *hāʾādām* remains perverse (8:21). He continues to revolt, now by means of the work of his hands (11:1–9). But God will not abandon his creature of revolt. Such, then, is *hāʾādām;* such has *hāʾādām* always been and will always be.

B. Patriarchal Story

The story of the patriarchs may be divided into two parts, (1) the Abraham cycle, 11:27–25:28, and (2) the Jacob-Esau cycle, 25:19–36:43. The figure of Isaac joins the two parts; he is the channel through which the promises made to Abraham (26:3, 5, 24; 28:3–4) pass on to Jacob. This division is not arbitrary, as each part begins with the *tôlĕdôt* formula: "these are the descendants of Terah" (11:27) and "these are the descendants of Isaac, Abraham's son" (25:19), and each resumes a preceding genealogy. The parts are called cycles, i.e. each is a collection of individual stories or traditions about the patriarch which may have had already a certain unity, and which has now been given a final unity and stretched on a rack of promises. Neither part is a modern biography.

1. Abraham Cycle (11:27–25:18). These chapters present a portrait of Abraham which is definitive biblically and which has determined all subsequent Jewish and Christian understanding of Abraham up to the Enlightenment. The portraits that come from the Yahwistic or Priestly sources, or from any other sources, are not complete. They are like the preliminary sketches of Leonardo da Vinci or Michelangelo. The faces and figures from the sketches can be seen in the final picture, but they are not the complete picture. The biblical writers, Yahwist, Elohist (?), Priestly, and others, as well as the final editor, did not work from nothing, but from material already at hand which itself had undergone a process of transmission. Each writer or editor was, in varying degrees, a receiver, a transmitter, and a contributor. The final product is not a carefully assembled jigsaw puzzle, but a loosely coherent story, put together from genealogies, lists, enumerative passages, and family stories, into and around which have been woven a variety of motifs: the complaints of childless parents; the promises of a son, of descendants, of land, of assistance; the promise in danger, and the son in danger. The final account is neither mere history, nor mere story, nor mere retrojection. It is coherent narrative in which all three elements coalesce within a theological framework.

a. Barrenness, Promise of a Son, Fulfillment. Gen 11:27–32 is the first introduction to the story of the patriarchs. Its purpose is to link them in retrospect with the primeval story and to outline in prospect the framework in which the story of Abraham is to be played out. Abraham the father is also Abraham the son; his father, Terah, belongs to the nations. The elements of the Priestly genealogy (vv 27a–30b) lead into an itinerary (vv 31–32), and are combined with a genealogy at hand to the Yahwist (vv 27b–30), so as to form a literary unity. A typical Yahwistic note on the genealogy sounds the theme of the Abraham cycle: "Now Sarai was barren; she had no child" (11:30). There follows at once a promise of increase and direct descendants (12:1–3). The Yahwist has constructed this second introduction to the story of the patriarchs as a theological transition. To bless is to bestow the dynamism of fertility (Gen 1:27). Immediately the promise, or rather the instrument through which the promise is to be fulfilled, is put in danger (12:10–20 = 20:1–18 = 26:1–11); the repetitions of this story of "the ancestress (or promise) in danger" are best explained as the reworking of 12:10–20 by authors who, respectively, had the narratives in chap. 12 and then chapters 12 and 20 before them (Westermann 1985: 161–68; 318–29; 394–400). The tension between barrenness and fertility has been set up and is resolved only in 21:1–7, when a son is born to Abraham and Sarah. "Sarai's childlessness is the pre-condition for almost all the narratives that follow" (Gunkel *Genesis* HKAT, 162). In chap. 15 Abraham complains to God that he has no heir, but God assures him that "your own son shall be your heir" (15:4b). In 16:1, the absence of an heir, "Now Sarai, Abraham's wife, bore him no children," leads to the Hagar episode (16:1–14). In chap. 17, the Priestly writer heaps the promises together and has God repeat his assurance that Abraham and Sarah shall have their own son (17:15–21). This assurance constitutes the narrative about the visitors to Abraham's tent in 18:1–16a. The promise is put in danger again in 20:1–18, but God intervenes. Finally there is fulfillment with resolution of the tension in 21:1–7. Barrenness, the promise of a son, the absence of a son, the continual assurance, and the fulfillment constitute the Abraham cycle of the biblical text.

b. Promise of a Son, Descendants, and Land. The stories, accounts, reports, and episodes in chapters 15–18 are of different origins. Many scholars think that chapter 15 contains the beginning of the Elohistic strand in the Pentateuch and that the editor uses this tradition as the framework into which he has fitted a corresponding Yahwistic account so as to produce a literary unity (Cazelles 1962). Others suggest that the chapter consists of two stories fashioned out of the promises, namely, the promise of a son and

descendants (vv 1–6), and the promise of the land (vv 7–21). They are "fictitious narratives" (*nachgeahmte Erzählungen*, Lohfink 1967). These narratives have been edited into the present context and introduced by "And after these things," an editorial link (cf. Gen 22:1; 22:20; 39:7; 40:1; 48:1).

In chap. 16, a Priestly framework (vv 1[a], 3, 14–16), encloses a Yahwistic narrative (vv 1[a]b–2, 4–14). Chapter 17 is not a narrative, but a literary construction of the Priestly writer, and is entirely theological. The writer reworks traditions at hand to him (12:1–3; 15; 18:1–16a), and accumulates virtually all the promise material into vv 1–22. The writer gathers together in concentrated form the essence of the Abraham story, what is in fact the central point in his conception of the patriarchal story. Hitherto he has given only genealogies and itineraries (11:27, 31–32; 12:4b–5; 13:6, 11b, 12; 16:1a, 3, 15–16). Now he gives his first detailed discourse. The key word, *bĕrît*, "covenant," here solemn assurance, is used 13 times in the passage (vv 1–22), which is framed by "God appeared to Abram" (v 1), and "God went up from Abraham" (v 22); once in the introduction (v 2); 3 times in the promise (vv 3–8); 6 times in the prescription of circumcision (vv 9–14); 3 times in the promise (vv 15–21).

The passage 18:1–16a is another type of narrative in which the promise of a son is given by God under the traditional figure of the unknown traveler(s). Abraham addresses the three wayfarers as "my Lord," *ʾădonāy* (v 3). In v 9a the phrase "they said to him" indicates that the group dialogues with Abraham. When Abraham replies in v 9b, only one of the travelers continues the dialogue, "and he said" (v 10). Then in v 13 one of the travelers is identified in the statement, "YHWH said to Abraham." So after the meal the travelers take over the conversation affirming that a son shall be born to Abraham and Sarah within the year. The promise is again in danger in 20:1–18, but is fulfilled in 21:1–7.

c. Other Abraham Traditions. Three other stories about Abraham are added in chaps. 22–24, the theme of each being sounded at the beginning: "God tested Abraham" (22:1); "And Sarah died at Kiriath-arba" (23:2), and so a burial place must be found for her; "Swear … that you … will go to my country and to my kindred, and take a wife for my son Isaac" (24:3–4), so that the promise may be handed on.

The first story (22:1–19) is tied loosely to the material preceding it by the formula, "Now after these things." A story that tells how God tested Abraham to see whether he could give back to God the promised son, freely given to Abraham, is joined with a reassurance of the promises in the language and imagery of 12:3 and 28:14, given a Deuteronomic direction with "because you have done this, and not withheld your son … because you have obeyed my voice" (vv 16b and 18b).

Chapters 23 and 24 are family narratives about death and marriage. The story of the purchase of the family tomb is set in a priestly frame (23:1–2, 19), and may well be the work of the priestly writer. The long narrative about the quest for a wife for Isaac is regarded by many as late, though repetitions like 24:11–14, 15–27, 42–49, and 24:2–8 and 34–42 are common in Homer's *Iliad* and *Odyssey.* Abraham is the chief figure in each of these stories. He is the center of chap. 22, and he initiates the action in chaps. 23 and 24. With the heir now settled in marriage (24:62–67), and with the promise of blessing assured, the Abraham cycle can close. His death, after a life of fulfillment (25:7–10[11]) is prefaced and followed by two genealogies (25:1–6; 25:12–18). Ishmael too has been blessed (17:20[P]; 21:13[J]), and his descendants are accounted for. The promises can now pass through Isaac to Jacob. (The Abraham cycle includes another tradition about Hagar and Ishmael [21:8–21], which has been joined to the account of the birth of Isaac [21:1–7].)

d. Figure of Lot. Lot is mentioned in the genealogy of 11:27, and as a member of the company in the itineraries of 11:31; 12:4–5; 13:1–4. A narrative about a dispute between his herdsmen and Abraham's (13:1–12, 18; probably composite) grows out of the itinerary. After Abraham and Lot separate (13:11b), Lot settles in Sodom. The name of the city evokes another tradition about Lot, namely the destruction of Sodom and Lot's role in it, which is anticipated here: "Now the men of Sodom were wicked, great sinners against the Lord" (13:13). The actual events are narrated in chap. 19, an account which is preceded by the dialogue between the Lord and Abraham about the punishment of the innocent with the guilty (18:22–32). This is itself preceded by a theological reflection (of the Yahwist?) in the form of a divine soliloquy which reaffirms that Abraham's descendants will be numerous, but that they must, in Deuteronomic tradition, "keep the way of the Lord by doing righteousness and justice" (18:19b).

e. Abraham the Warrior-Hero. The account of Abraham, the warrior-hero, remains an enigma. There is general agreement that it cannot be assigned to either of the traditions J or P, but stands outside them. Some scholars regard it as an authentic account of a historical event, at least in substance (Speiser *Genesis* AB, 103–9). "But this text appears as an erratic block and is more a hindrance than a help to the historian" (de Vaux 1964: 240; *EHI* 216–20, 258–63). Other scholars reject the "historicity" of the chapter (Thompson 1974: 187–95; Van Seters 1975: 296–308). A full history of the interpretation of the chapter may be found in Schatz (1972). Emerton (1971a, b) and Westermann (1985: 187–208) have opened the most satisfactory approach. Verses 1–11 are a self-contained account of a campaign in annalistic style (vv 1, 4, 5, 8, 10, 11; cf. Zakir Stele, *ANET*, 501) into which an account of another campaign (vv 5b–7), and two lists (vv 1–2; 8–9) have been inserted. The account ends in v 11, and no sequence is expected. Verses 12–17 with vv 21–24 are a narrative following the pattern of the hero stories from the period of the judges (compare Gen 14:14–15 with Judg 7:16–19). A narrative from this period has been applied to Abraham so as to exalt the patriarch to the status of a hero and a savior figure. This narrative has been joined to vv 1–11 which have determined the interpretation of the whole. The section about Melchizedek (vv 18–20) forms an independent episode which breaks the continuity between vv 17 and 21; there was probably some sort of story behind them. They reflect sedentary cult in which priest and tithes have their proper place.

2. Jacob-Esau Cycle. The Jacob-Esau cycle is nicely dovetailed into the Abraham cycle and continues the family story. The cycle begins with the *tôlĕdôt* formula: "These are the descendants of Isaac, Abraham's son" (25:19–20, 26b). The opening passage, describing the struggle of the twins in Rebekah's womb (25:21–26a), sounds the theme of the cycle, conflict and rivalry—between Jacob and Esau, Jacob and Laban, Rachel and Leah; and the following episode about the pot of red soup (25:27–34; *ʾādōm,* a play on *ʾdm,* "red"; hence the descendants of Esau are the Edomites, "the red ones"), sketches with a couple of strokes the broad outline of the type to which each twin belongs. The Jacob-Esau cycle draws on several blocks of tradition. Two of the blocks, Jacob and Esau-Edom (26:29–34; 27:32–33) and Jacob-Laban (29–31; 29:31–30:24, the sons of Jacob, represent a later stage of the tradition), have a Transjordanian setting, the latter being in NE Syria. Another block is set in central Israel, 28:10–20 and 35:7–14 at Bethel, 33:19–20 at Shechem, and 35:2–4 at Bethel and Shechem. There are two traditions about Jacob's change of name (32:23–33 [—Eng 22–32]) and 35:9–13. Jacob is indeed "a wandering Aramaean" (de Vaux *EHI* 169–85; Blum 1984).

a. Isaac. There is a collection of stories about Isaac which have already been told about Abraham. 26:1–11 (= 20:1–18 = 12:10–20) is a story about the ancestress and the promise in danger; 26:17–25 (= 21:25–31) tells of a dispute about wells; 26:26–33 (= 21:22–32) narrates a confrontation between the patriarch and Abimelech. Isaac is a less important figure in the biblical story of the patriarchs; he is the channel through which the promises made to Abraham (26:3, 5, 24; 28:3–4) pass on to Jacob (Israel).

b. Jacob-Esau Conflict Begins. The action that causes the conflict between Jacob and Esau begins with the deception of Isaac, who is now old and blind (27:1–40). The character types and the parental preferences, noted in 25:27–28, are resumed in 27:3–4, 11–15, 34. Jacob is quiet and pliable, Esau rough and ready. The matter at issue is the father's blessing (27:4, 12, 25, 27–31, 31–38, 41) which Jacob gains by deception and which, after some decades in Paddan-aram, he gives back in part to Esau to seal their reconciliation (33:11).

The conflict is now in motion, and Esau plans to kill Jacob (27:41–45). Rebekah again initiates the action and urges Jacob to flee to her brother Laban in Haran. But there is another motive for Jacob's journey to the region between the two rivers. Esau has taken Hittite wives (26:34) who are an irritant to Rebekah and Isaac (26:35; 27:46). The one who is to carry the promise, Jacob, must take a wife from the family of the patriarch, Abraham (28:1–5). Isaac blesses Jacob again. There is no mention of the deception. As a consequence Esau, who has already two Canaanite (Hittite) wives, goes to his uncle, Ishmael, Isaac's brother from Abraham and Hagar, and takes another wife (28:6–9).

The first conflict, between Jacob and Esau, is now left, as it were, hanging in the air. It is to be resumed and resolved in chaps. 32–33. As Jacob leaves Canaan, he encounters God, 28:10–20, just as he does

years later when he returns to Canaan, 32:23–33 [—Eng 22–32]). These two key encounters frame the lengthy Jacob-Laban conflict, chaps. 29–31.

c. Jacob at Bethel. The biblical text narrates that Jacob "happens upon a place" *(yipgaʿ bammāqôm),* which is a sanctuary, though he himself is not aware that it is a sacred place. He takes a stone from the place and puts it *at* his head as a protection (he is not using the stone as a pillow). In a dream he sees a ramp *(sullām)* or sloping earthworks reaching from the ground to the heavens on which members of the heavenly court (Job 1:6; Gen 32:2–3 [—Eng 1–2]) are going up and coming down. Heaven and earth are joined, and so Jacob knows that the place is holy. Yahweh stands by Jacob (not at the top of the ramp) and repeats the promises of the land and numerous descendants, and adds another, the promise of the divine assistance or presence, "I will be with you"—a promise peculiar to the Jacob-Esau cycle (26:3–24; 28:15 [—Eng 20]; 31:3; 32:10 [—Eng 9]; 46:3; cf. 48:15; 50:24). Jacob now realizes that "Yahweh is in this place" (vv 16–17). He takes the protective stone which he had put at his head, sets it up as a holy stone *(maṣṣēbâ)* and anoints it. It is to be a witness to the event. He calls the place "the house of El (God)" *(bêt-ʾēl).* He makes a vow and promises tithes (vv 20–22).

Most scholars regard the story of Jacob's experience at Bethel as composite. De Pury (1975: 33–35, 173–76) lists 21 scholars with their proposed divisions of the text which they assign in various ways to J, E, and a redactor. Blum (1984: 9–35) rejects all source division of the passage and argues that Gen 28:10–22 comprises a compact self-contained narrative (vv 11–13a, 16–19a) which gives an account of the foundation of a place of worship by the eponymous father of the people; this story has been built into the broader context of the Jacob cycle by the itinerary note (v 10), the divine speech (vv 13a–15) and the account of Jacob's vows (vv 20–22). The narrative begins with v 11 and continues as far as v 13a, "And YHWH stood beside him." It is interrupted by vv 13a–15 and is resumed in v 16 continuing on to v 19, "He called the name of that place Bethel." The passages vv 13a–15 and 20–22, it is argued, take up a number of themes which have nothing to do with the narrative and which presuppose the broader context of the patriarchal story, e.g., the promise of the land (28:13b–14, see 12:7; 13:14–17; 15:7–21; 26:3–4; 28:4; 35:12; 48:3–4), the promise of descendants (28:14, see 13:14–17; 22:17–18; 26:2–5, 24; 28:3–4; 35:11–13; 48:3–4, 16, 19), the formulas "like the dust of the earth" (28:14a, see 13:16) and "by you shall all the families of the earth bless themselves" (28:14b, see 12:3; 18:18; 22:18), the promise of assistance or presence (28:15, see 26:3, 24; 31:3; 46:3). Blum's argument is very cogent.

There was a sanctuary at Luz in ancient Canaanite times which became Bethel (28:19) and, later, an important center of worship in Israel. The place was to play an important role in Israel's history: it was taken by the house of Jacob (Judg 1:22–25); it was a premonarchic sanctuary and place of assembly (Judg 20:18, 26; 21:2; 1 Kgs 7:16); it was linked with the beginnings of prophecy (2 Kgs 2:2–3:23); and it was the chief sanctuary in the N kingdom (Amos 5:5; 7:10–13; Hos 10:5). There was a tradition that linked the patriarch Jacob with Bethel. The final redactor has taken the story that preserves this story tradition about Jacob, joined it with the promises, and added vv 20–22 so as to link the later cultic practices of vow and tithes, proper to sedentary life, to the patriarch and to Bethel, thus binding the story into its present context. The whole is now part of the Jacob-Esau cycle.

d. Jacob-Laban Conflict. This is a self-contained conflict narrative in which there is no mention of Esau. The first part (29:1–30) is a combination of two stories, the story of Jacob "the wandering Aramaean" who is looking for a wife and comes to love Rachel (vv 1–14), and the story of Laban, the deceiver (vv 15–30). The second part (30:25–32:54) tells how Jacob outwits Laban (30:25–43), how he leaves Laban's household and outwits him again (31:1–42), and how they are reconciled by making a solemn treaty (32:43–55). God was with Jacob throughout, particularly in the latter episodes (31:11–13, 24, 29, 42).

Just as the self-contained Jacob-Laban conflict has been inserted into the Jacob-Esau conflict, so too has the Rachel-Leah conflict (29:31–30:24) been inserted into the Jacob-Laban conflict. There is a conflict (29:31–30:24) within a conflict (29:1–30 and 30:35–31:54) within a conflict (27:41–45 and chapters 32–33).

The account of the rivalry between Rachel and Leah (29:31–30:24) includes the naming of the twelve children, eleven sons (Benjamin is born later, 35:16–19) and one daughter. The naming seems to be the work of a reviser or editor who gives, as the reason for each name, an action of God in language reminiscent of the Psalms (Westermann 1985: 471–77). The twelve tribes are mentioned in Genesis in chapters 29–30; 35:16–20, 22–28; 46:8–15; 49:1–17. The naming of the children is worked into old narrative material.

Jacob is now ready to return to his own country (30:25). But his departure can only harm Laban who has profited from his twenty years of work (30:25–26). God's blessing has always accompanied Jacob's work (30:30). Jacob now outwits Laban (30:37–43). it is not at all clear what is going on in this old herder's tale. Jacob and Laban finally resolve the conflict with a treaty in which they invoke "the God of Abraham and the God of Nahor, the God of their father" (31:53). The climax of this well-ordered and well-edited chapter comes in v 42: "If the God of my father, the God of Abraham and the Fear of Isaac, had not been on my side, surely you would have sent me away empty-handed. God saw my affliction and the labor of my hands, and rebuked you last night." Laban has learned that might is not right (vv 24, 29, 38–42).

e. Resolution of the Jacob-Esau Conflict. These are chapters of meetings and encounters: with an army of heavenly beings (32:2–3 [—Eng 1–2]); with Esau (32:4–9 [—Eng 3–8], 14–22 [—Eng 13–21]; 33:1–17); with God (32:10–13 [—Eng 9–12]); with the "man" at the river Jabbok (32:23–33 [—Eng 22–32]).

Jacob is afraid as he prepares to meet Esau. But God's power appears in the form of *mal›ăkê ›ĕlohîm,* angels (32:2 [—Eng 1]). Jacob had seen the *mal›ăkê ›ĕlohîm* in his dream vision at Bethel (28:12); they are not the *mal›āk YHWH* of 16:7; 21:17; 22:11, 15 who is Yahweh's messenger and is identified with Yahweh; rather, they are members of the heavenly court who represent God's power in 32:2 (—Eng 1) and his holiness in 28:12, the only two passages where the expression occurs. Jacob sends two embassies to Esau (32:4–9 [—Eng 3–8] and 32:14–22 [—Eng 13–21]); between them he prays for God's help (v 12 [—Eng 11]) and frames the petition by reminding God of his promises (vv 10 [—Eng 9] and 13 [—Eng 12]).

(1) Encounter at the Jabbok. There is broad agreement that a story or a tradition about a demon that guards access to a ford across the river Jabbok has been associated with or applied to Jacob. The Jabbok, *Nahr-ez-Zerqa* (the blue river), flows into the Jordan from the E side about 40 km N of the Dead Sea through a very steep ravine. After crossing and meeting Esau, Jacob appears next at Succoth (33:17) and Shechem (33:18–19), both to the N of the Jabbok, a sign that the present passage is not of one piece with the rest of the Jacob story.

The biblical story says that a man, *›îš,* wrestles with Jacob all night but is unable to overcome him. Jacob demands that the man bless him, which he does (vv 27, 30 [—Eng 26, 29]). Jacob reveals his own name, and the man changes it: "Your name shall no more be called Jacob, but Israel, because you have striven with God and with men, and have prevailed" (v 29 [—Eng 28]). When the "man" (spirit/demon) "faded on the crowing of the cock" (*Hamlet* 1, 1; cf. v 27 [—Eng 26]), Jacob realizes that he has in some mysterious way, encountered God: "For I have seen God face to face, and yet my life is preserved" (v 31 [—Eng 30]). He calls the place Peni-el (v 31 [—Eng 30]), "face of God" (Penu-el v 32 [—Eng 31]); the former has a better assonance with *pannîm,* face. An etiological piece about a taboo concerning the sinew of the hip has been built into the story (26 [—Eng 25b]), 32–33 [—Eng 31–32]).

There have been many attempts to explain the meaning of the name Israel, *yiśrā›ēl:* it has been derived from *śrh,* to prevail or contend; *śrh,* to fight: *śr›,* to rule; Arabic *waśara* and Ethiopic *sûaraya,* to heal (Thompson 1974: 40–43). More recently Vermes (1975: 12–14) has derived it from *śrr,* to rule, act as a prince, and has traced its later development in Jewish writing. The "man" of Genesis becomes an "angel" in Hos 12:4–5. An encounter with a river demon has become an encounter with God. Hence, Jacob has struggled with God. God has blessed him, and he can now go to his meeting with Esau in the strength of God.

(2) Reconciliation of Jacob and Esau. Jacob's ceremonial greeting (vv 1–3, 6–7) is in contrast to Esau's warm advance (vv 4–5). There is no recrimination. Jacob makes a gift to Esau (v 10), thus restoring something of what he had stolen: "accept my gift (*bĕrākâ* blessing) … because God has dealt graciously with me" (v 11). God's favor at work with Jacob is the determining factor. Each, now settled in his own lifestyle, goes his own way (vv 12–17). The biblical story brings them together again to bury Isaac (33:19).

f. Shechem. The chapter is in four parts: vv 1–3, the violation of Dinah; vv 4–24, the negotiations; vv 25–29, the attack (with the conclusion in 35:5); vv 30–31, the reaction of Jacob. Two narratives, an older family narrative (a Shechem tradition), and a tribal narrative (a Hamor tradition), have been joined by an editor who made his own contribution to form a third and final narrative.

g. Bethel Revisited; Death of Isaac. The account of God's commission to Jacob and his household (35:1–7) refers back to the encounter at Bethel (28:10–20, in 35:1b, 3b, 7b). The writer is bringing the story of Jacob's flight and return to a close. The conclusion of chapter 34 is 35:5; v 6 is an itinerary sentence from P, molded into a unity with v 7 by the redactor. The redactor has arranged the chapter according to a definite plan. The Priestly section is a clearly planned whole, included between two itinerary notes (vv 6 and 27). In v 6, Jacob comes to Bethel; then God appears to him (vv 9–13; v 10 is the Priestly change of name); vv 22b–26 comprise a list of the sons of Jacob; in v 27 Jacob comes to Mamre. Finally in vv 28–29, Isaac dies. The texts that do not belong to P are set into an itinerary (vv 8, 14–15 [P knows nothing of pillars], 16–20, 21–22a); and the itinerary is expanded with notes or brief narratives (vv 8, 17–18, 22a). The editor has prefaced his account with a construction of his own, tying it with 28:10–20. It is important for the family unity that Esau and Jacob bury Isaac (35:29), just as it is that Ishmael and Isaac bury Abraham (25:9).

h. Descendants of Esau. The chapter is a redactional unity:

vv 1–14 sons of Esau — names of sons

15–19 chiefs of the sons of Esau — and chiefs are identical

20–28 sons of Seir — names of sons

29–30 chiefs of the sons of Seir — and chiefs are identical

31–39 kings of Edom

40–43 chiefs of Esau (an appendix)

Verses 1–5 are a Priestly construction, introduced by *tôlĕdôt* (v 1). Three Canaanite wives of Esau are named, Adah, Oholibamah, and Basemath. The other wives of Esau are Judith and Basemath (26:34) and Mahalath (28:9). The Edomite king list comes from the period after David's conquest of Edom (2 Sam 8:13b–14). It has been suggested that the list derives most probably from the end of the 6th or the beginning of the 5th century B.C.E. (Knauf 1985).

C. Patriarchs and Promises

1. An Event between God and the Patriarchs. The promises tell of something that happens between God and the patriarchs, and so are a part of patriarchal religion. God makes the promises directly, without a mediator. Most of the divine addresses in chaps. 12–50 are promises. Promises are constitutive of the narratives of 16:1–14; 18:1–16a; narratives are constructed for the promises (15:1–6, 7–21; Lohfink 1967); the promises are brought together so as to form an address by God (17:1–22; P); they form an independent scene (13:14–17) or episode (12:7; 26:24–25), or are introduced into or linked with narratives (15:13–16; 22:15–18; 26:2–5; 28:2–3; 28:13 [—Eng 14–15]; 35:9–13; 46:3–4); a short promise opens the Abraham cycle (12:1–3), and the Jacob-Esau cycle (26:2–5).

2. Six Promises. The promises occur, for the most part, in groups, though occasionally alone. There are broadly speaking, six promises: of a son, of descendants, of divine assistance or presence, of land, of blessing, of covenant.

a. Promise of a Son. It occurs alone in chap. 18; in the other cases it is linked with descendants or blessing. This promise is confined to the Abraham cycle and runs right through the biblical text from

11:30 to 21:1–7. It is very probable that it belongs to the oldest part of the patriarchal tradition. It is distinct from the promise of descendants, as 15:1–6 shows, where vv 2–4 promise a son, and v 5 descendants.

b. Promise of Descendants. This promise is not found alone but together with the promise of a son (above), of land and blessing (13:14–17; 26:2–5; 28:3–4; 28:13–15; 35:11–13; 48:3–4, 16, 19); of assistance (presence) and blessing (22:17–18; 26:2–5; 26:24–25; 46:3–4); of blessing (13:1–3; 18:18–19; 22:15–18). There are fixed formulas to express the multitude of descendants: "I will multiply" so that they will be as "the stars in the sky" (15:3; 22:17; 26:4), "as the dust of the earth" (13:16; 28:14), "as the sand by the sea" (22:17; 32:13 [—Eng 12]). Abraham will be the father of a multitude of nations (17:5), the ancestor of nations (17:16), the father of a company of peoples (28:3; 35:11; 48:4), and the ancestor of kings (17:6, 16, 20; 35:11; Priestly emphasis). The promise is retrospective; it speaks from the standpoint of the greatest expansion of Israel from the river of Egypt to the great river, the Euphrates.

c. Promise of Assistance or Presence. This occurs only in the Jacob story, chapters 26–50 (26:3, 24; 28:15; 31:3; 46:3). It is linked with Jacob's journeys, and so may well go back to the patriarchal (pre-settlement) period. It occurs alone only in 31:3. This promise is not limited to Genesis; rather it is found throughout the OT (Preuss 1968).

d. Promise of Land. The promise is made to Abraham (12:7; 13:14–17; 15:7–21) and later to Jacob and his descendants as a renewal of the promise made to Abraham (26:3–4; 28:4; 35:12; 50:24). It is found alone in 12:7; 15:7–21 (24:7), and with the promise of descendants in 13:14–17; 15:11–13; 48:3–4; 28:13–15. The promise in an inchoate form may go back to the nomadic period. The promise of a settled land is dominant in Deuteronomy where it is confirmed by oath on many occasions.

e. Promise of Blessing. The Yahwistic writer has formulated a blessing given by Yahweh to Abraham and prefaced it to the patriarchal story. God who commissions Abraham is God who sends him out to effect blessing. Through Abraham, all the families of the earth "will be blessed" or "will bless themselves" or "will acquire blessings for themselves" (12:1–3 [Westermann 1985: 151–52]; cf. 18:18; 22:18; 26:3–4; 28:14). When God blesses, he confers the dynamism to continue one's posterity through time and space (Gen 1:28), a blessing resumed in 35:11. The patriarchs stand under God's blessing.

f. Promise of a Covenant. God, *ʾēl sûadday* (P), gives a binding assurance, *bĕrît* (17:7–8), that he will be their God, i.e., the God of Abraham and his descendants.

3. Promise in History and Tradition. Each promise has its own history in the tradition. Probably only two, the promise of a son and the promise of assistance or presence "on the way," go back to the pre-settlement period. In the biblical story of Abraham, all the promises are heaped together in the middle of the cycle, chaps. 15–18. The whole is given direction by the promise of blessing at the beginning (12:1–3). The promises, apart from the promise of a son and, probably, the promise of assistance or presence, are the result of experience and reflection; they are projected back into the past and set within a framework of ancient traditions about the patriarchs.

D. Joseph Story

1. Unity or a Composite Story? Many scholars explain these chapters by means of classical source division as two separate narratives, J and E, each more or less complete. See JOSEPH, SON OF JACOB. Eissfeldt (*IDB* 2: 375–76, 377) and Seebass (1978) maintain that tribal traditions are the basis of the story. Redford (1970) proposes that the chapters are a combination of an original Reuben version with a later Judah version, brought together and worked over by a redactor, both versions having their origin in the period 650–550 B.C.E. Schmitt (1980) reverses the order; the Judah version from the early monarchy is the original version, while the Reuben version comes from the exilic or post-exilic period. Gunkel (1922) and Gressmann (1923) saw a unity in the Joseph story, but neither could free himself from the accepted source division. More recent scholarship generally favors a unity, with variations: Volz and Rudolph (1933), Whybray (1968), Brueggemann (1972), Coats (1976), Donner (1976), Crüsemann (1978), Willi-Plein (1979), Westermann (1986).

2. Literary Type. The terminology used to describe the Joseph story shows uncertainty. It has been called a tale, a story *(Sage),* or a *Novelle.* The terms *novelle* (Old French), *novela* (Spanish), *novella*

(Italian), and later *Novelle* (German), have their origin in the Renaissance period to describe certain "romances," longer or shorter, which tell of the exploits of heroes, but there is no general agreement about what precisely they cover (but see Humphreys 1985). The English "novel" is equivalent of the European *Roman,* but the Joseph story is not long or broad enough to come under this category. Von Rad has written that "the Joseph narrative is a didactic wisdom story, which leans heavily on influences emanating from Egypt, not only with regard to its conception of an educational ideal, but also in its fundamental theological ideas" (1966: 300). But the wisdom elements are restricted to chaps. 40–41, and the woman, the wife of Potiphar, in chap. 39 is the spurned woman rather than the seductress against whom the book of Proverbs warns (Prov 2:16–19; 5:1–23; 6:20–25). It is best described, with due caution, as a short story and may be compared with the short stories of Guy de Maupassant (1850–93) or O. Henry (1862–1910), with the difference that the characters and material were at hand to the biblical writer. The biblical writer did not have to create the characters, nor cut the story from whole new cloth. The complete history of the interpretation of the Joseph story is discussed by Ruppert (1965), Westermann (1975: 56–68; 1986: 15–30), Seebass (1978), de Vaux (*EHI* 291–320), Schmitt (1980).

3. Story in the Broader Sense. The Joseph story in the broader sense has a Priestly frame (37:1–2 and 50:12–14). It resumes the story of Jacob who has returned to Canaan, buried his father (35:27–28), and settled there (37:1), ending with the account of Jacob's death, and his burial by his sons in accordance with his wishes (50:12–14). The theme of Jacob's death is introduced in 37:35b and runs through to the end (42:48; 44:22, 19; 45:28; 46:30; 47:9, 27–31; 48:1; 49:1, 28b–33). Chapter 38 is not part of the Joseph story, but fills out the story of Jacob's family. The conclusions of the Joseph and Jacob stories are woven together in chaps. 46–50 and additional material and traditions are included, e.g., the list of all the descendants of Israel who went down into Egypt (46:8–27), the account of Joseph's economic measures as viceroy (47:13–26), the tribal sayings (49:3–27), which lie outside both stories, and other details. The purpose of the tribal sayings is to praise or blame (there is an earlier collection of tribal sayings in Judg 5:14–18, and a later and more theological collection in Deut 33). Reuben, Simeon, and Levi are censured; Judah, Dan, Gad, Naphtali, Joseph, and Benjamin are praised; Zebulun, Issachar, and Asher are blessed in varying degrees. There are word plays on the names of Judah, Zebulun, Issachar, Gad, Asher, and Joseph. There are animal metaphors attached to the names of Judah, Issachar, Dan, Naphtali, and Benjamin; and in the very difficult saying about Joseph, there is a tree (plant) metaphor.

4. Story in the Narrower Sense. The story of Joseph proper begins in 37:2 and comprises chapters 37; 39–41; 42–45. It is in essence a family story which begins with the shattered peace of Jacob's family (37:4, 11, 18–23, 33–35), and moves through tension to climax and resolution (45:1–15), with the restoration of *šālôm* to the family. The device of the pairs of dreams is introduced in chap. 37 and repeated in chaps. 40–41. The theme of Jacob's death is sounded. Two traditions of how Joseph was disposed of and sold into Egypt are recorded. In one, Reuben is prominent (37:22–24, 29); in the other, Judah (39:1); now it is the Ishmaelites who take him (32:35 and 39:1), now the Midianites (37:28, 36).

Chapters 39–41 form an interlude in the family story; they use two traditional themes: (1) the rise of a young man, his fall due to an injustice, and his restoration to favor; (2) a stranger or a foreigner or a pauper is summoned to answer a question that the wise of the land cannot answer. Joseph must rise to power before he can help his family in need and restore its peace. The account of the attempted seduction of Joseph by Potiphar's wife (39:7–18) resembles the Egyptian story of the Two Brothers (*ANET*, 23–25) so closely that scholars have thought that the biblical writer had direct knowledge of it. Joseph does not solve the riddles of the dreams of the prisoners, chap. 40, or of Pharaoh, chap. 41, by accepted Egyptian methods (*ANET*, 495); rather "the interpretation of dreams belongs to God" (40:8: 41:16, 25, 32, 38, 39). Joseph proposes that Pharaoh appoint "a man discreet and wise *(nābôn wĕ ḥākām)*" to administer the economy of the kingdom (41:33), and Pharaoh appoints Joseph as his vice-regent (41:37–45). As viceroy, Joseph is in a position to help his family which has been driven down to Egypt by the famine. The story of the family continues in 42:1. The regular movement from Canaan to Egypt begins: Canaan to Egypt (42:1–5); Egypt to Canaan (42:26–34); Canaan to Egypt (43:1–15); Egypt to Canaan (45:21–28); Canaan to Egypt (46:1, 6–7; Coats 1976). Israel is now in Egypt definitively. These movements lead gradually

and inexorably through climax to the resolution which restores the *šālôm* of Jacob's family. Joseph's action in 45:1–15, without any recrimination, is an act of forgiveness. With peace and harmony restored in the family, Jacob can die in peace (45:28). The tension has been resolved; the Joseph story has ended.

5. Theology. Gen 45:5–8 and 50:17–31 are key theological passages which tie the Joseph story proper with the conclusion of the story in the broader sense. As Joseph speaks words of comfort to his brothers (45:5), he insists that God has been at work throughout (vv 5b, 7a, 8a): "God sent me before you to preserve for you a remnant on earth, and to keep alive for you many survivors." In 50:17–21, the guilt of the brothers is acknowledged specifically. But Joseph will not play God. It is God who has turned their evil to good. God is acting throughout. The theological introit to the story proper (39:1–6, 21–23) emphasizes that "the Lord was with him" (vv 2, 3, 5, 21, 23). Joseph is aware that he is God's instrument: "the interpretation of dreams belongs to God." God is at work as he brings the brothers to recognize their guilt: "What is it that God has done to us?" (42:28), and "God has found out the guilt of your servants" (44:16). There is no personal revelation to Joseph, nor does he receive divine commands, nor engage in or preside over formal worship. There is no "religion of the patriarchs." The passage 46:2–5a, where God appears to Jacob, is not part of the Joseph story, but part of the conclusion of the Jacob story.

6. Egypt. There is no parallel to the Joseph story as a whole in extrabiblical literature of the period, though 39:7–18 has a parallel in Egypt. Chapters 39–41 are played out in Egypt. They, and the following chapters, display a favorable attitude to the Egyptians and a general knowledge of court protocol (41:37–45; *ANET*, 248a), of dining customs (43:32), of divination (44:4–5), and of interpretation of dreams. But there is no interest in the great buildings or the general culture of Egypt. Westermann (1986: 29) thinks that the Egyptian traits are indicative of the Solomonic period. Vergote (1959) has argued that the Joseph story reflects much ancient Egyptian regal, social, and economic life. Redford (1970: 187–243) takes up twenty-three elements used to support ancient Egyptian influence and argues that they need reflect only the practices of the middle of the 1st millennium B.C.E. Palestine in general had been trading with Egypt since at least 2000 B.C.E.; remains of temples at Byblos, showing marked Egyptian influence, date from the 19th century; and the Amarna correspondence of the 14th century reveals details of the small Canaanite dependencies. Egyptian influence has left its mark. But the dating of Egyptian traits in the Joseph story comes under the history of the relations between Egypt and Palestine.

LITERARY FORMS IN GENESIS

Many of the terms used by biblical scholars to designate the literary forms of Genesis (and other books of the OT) were current among students of literature and folklore in the 19th century; they were used to describe types of literature and folktales well known in W European culture. However, only with great caution can they be applied to the writings of a civilization that flourished in a very different setting over twenty-five hundred years ago. The terms have often been overstrained. It is necessary to describe some of them before studying their application to the book of Genesis.

———

A. General Literary Terms
1. *Legende* (Legend)
2. *Märchen* (Fairy Tale, Folktale, Tale)
3. Myth
4. Narrative
5. Novella (Short Story)
6. Saga
7. *Sage*
8. Story
B. Literary Terms Applied to Genesis
C. Other Literary Terms Applied to Genesis
D. Fixed Formulas and Genesis

———

A. General Literary Terms

1. *Legende* (Legend). Legend has from its beginning expressed a typically Christian concept: the life of a holy person which was to be read to a community for its edification. Rosenfeld (1972: 11–12) describes it as "the imaginative reproduction of the earthly life of holy people … the presupposition of a genuine *Legende* is faith … The meaning and efficacy of the *Legende* is limited to the religious community in which it arose. Because it arose out of faith, it has the form of a naive, simple, uncomplicated account." Miracles are not essential to the legend, but are a regular part of it, being the sign that God is at work in the holy person, thus confirming the person's holiness (OED 1933; Hals 1972; Rosenfeld 1972; Scullion 1984). From the 17th century, legend took on a transferred meaning of an inauthentic or nonhistorical story, especially one handed down by tradition from early times, and popularly regarded as historical (OED). In popular speech today, the legend is a story of dubious veracity about historical persons or events. It is best, in scholarly circles, to restrict legend to its original and well-established hagiographical use.

2. *Märchen.* The *Märchen* is a fairy tale, folktale, tale of magic, or simply a tale. A tale is a story, "true or fictitious, drawn up so as to interest or amuse, or to preserve the history of a fact or incident"; again, it is "a mere story as opposed to a narrative of fact" (OED). A *Märchen* or fairy tale is the sort of narrative found in the collections made by the Grimm brothers or in Hans Christian Andersen's books. The *Märchen* is indefinite as to time and place; its characters have generic or stereotyped names; its world is "the beyond" where the "unreal," the preternatural and the supernatural, predominates or has become normal; characters flit from place to place; animals and trees speak; people, fairy-godmothers, merlins appear and disappear; poor young men conquer monsters, confront giants, overcome obstacles, and marry princesses—"and they lived happily ever after." There is a simplicity, playfulness, and lightness of touch in the *Märchen* (Lüthi 1968; 1975; 1976; 1977; 1979).

3. Myth. Modern anthropology, sociology, and psychology have made contributions to the study of myth. However, such systems, worked out in European culture in the 20th century, are not to be imposed on the OT. Rather a description of myth for purposes of OT study begins from example. Myth is the sort of thing that is found in collections of ancient Near Eastern texts under the heading of myths and epics (e.g. *ANET*: 3–155) from cultures which have had more or less direct influence on Israel (Barr 1959). These ancient Near Eastern myths are not just symbolic or hazy expressions of truth; they are not metaphoric or poetic expression. They are attempts to express some transcendental truth. Myth is aware of reality, but reaches beyond concrete experience. What is narrated in myth not merely corresponds to reality; it is reality. When Tammuz, an ancient Mesopotamian god of fertility, dies and comes to life again, and vegetation dies and comes to life, the two are not just like each other; they are each other. Myth is not really a literary form, but a way of thinking. One may distinguish myth and *Mythos* (a word used by many German writers): myth is the story itself; *Mythos* is the basic philosophy that underpins it. See MYTH AND MYTHOLOGY.

4. Narrative. Narrative is a general term; it is an account of an event, or events, which moves through tension to crisis and resolution (Licht 1978; Alter 1981). Westermann (1984: xii) often uses the word *Geschehensbogen* to describe the movement of a narrative. It is "like the arch of a bridge which spans the whole from beginning to end. Likewise the narrative arch spans an event from beginning to end and makes it into a self-contained whole." The German word may be rendered "narrative span (arch)."

5. Novella. The novella (Old French, *novelle,* Spanish, *novela,* Italian, *novella*) is a shorter (i.e. shorter than the novel, *roman*) prose narrative which tells an unusual, though quite credible, happening; it is brief and eschews prolixity. It has been described as a short novel or a longer short story (the latter, a division of the novella, presents an event in concentrated form; it often reflects a particular mood or attitude). The novella has its origins in the late Middle Ages and Renaissance: Boccaccio's (1313?–75) *Decameron,* Marguerite of Valois' (of Navarre, d'Angoulême, 1492–1549) *Heptameron,* Cervantes' (1547–1616) *Noveles ejemplares.* This type of writing developed in both western and eastern Europe, and particularly in the English-speaking world; some of the best known of its masters are: Guy de Maupassant (1850–93), E. T. A. Hoffmann (1776–1822), Alexander Pushkin (1799–1837), O. Henry (1862–1910), Henry James (1843–1916).

6. Saga. The word saga is applied to the narrative compositions in prose that were written in Iceland or Norway during the Middle Ages. The events narrated in the Icelandic narratives belong mainly to the period 874–1030; they were written down in the 13th century. It is for the specialists in this area to discuss whether the sagas were handed down in oral tradition and committed to writing in the later period, or were due to a flowering of creative writing in the 12th and 13th centuries. In any case, there is a long period of oral tradition behind them. Einarsson (1957: 133–34) has summarized the composition and style of the sagas, while Ker (1957: 186) has described the content as follows:

> The original matter of the oral traditions, out of which the written Sagas were formed, was naturally very much made up of separate anecdotes, loosely strung together by associations with a district or family. Many of the Sagas are mere loose strings of adventures, or short stories, or idylls, which may easily be detached and remembered out of connection with the rest of the series.

The Icelandic *segja* means to tell; in modern Icelandic *saga* covers the German *Historie* and *Geschichte* (*Historie* is what happened in fact; *Geschichte* is what these events became in the process of their being passed on). Bentzen (1961: 240, n. 3) has noted that the Swedish term "saga," used for the "chimerical fairy-tale," is "not to be confounded with the usage in Danish-Norwegian-Icelandic, where this word denotes a 'history-narrative.' " The events narrated in the Norwegian and Icelandic sagas were *Historie,* that which actually happened; they became famed in *Geschichte.*

7. *Sage.* The *Sage* is a popular story, folk story, or simply a story. Though set in the past, often the distant past, it is specific as to place and names of the characters, and is rooted in reality. Though there are devils and ghosts, dwarfs and giants, ogres and spirits, there is a clear distinction between the real and the unreal world, the natural and the supernatural. The *Sage* has usually been worked over by poetic imagination in the process of transmission. It may be long or short. Olrik (1965) has formulated his well-known ten laws of folk narrative from a study of the shorter forms of *Sagen. Sage* has often been translated into English, incorrectly, by "saga" (see above), with which it has nothing to do.

8. Story. The OED describes story as a "narrative, true or presumed to be true, relating to important events and celebrated persons of a more or less remote past; a historical relation or anecdote"; and then, under N.5, as "a narrative of real or, more usually, fictitious events, designed for the entertainment of the hearer or reader; a series of traditional or imaginary incidents forming the matter of such a narrative; a tale." It is in this latter sense that story is a general equivalent of the German *Sage* and may be used aptly to describe many narratives, both short and long, in Genesis. The scope of its use is broad.

Legende (legend), *Märchen* (tale), Saga (saga), *Sage* (story), Story, are terms which describe different types of narrative. The *Märchen* and the *Sage* differ in a number of important ways (see above), though there are many and inevitable overlappings between the two. The distinction between them is adequate, but not complete. The legend, as described, shares almost nothing with the *Märchen* but much with the *Sage* or folk story. French has but one word to render *Sage* and *Legende,* namely, *légende;* hence the clear and useful distinction is made between *légende populaire* (or *folklorique*) and *légende hagiographique* (Lüthi 1976: 11). In short, *Sage* (German) = *légende* (French) = (folk) story (English).

B. Literary Terms Applied to Genesis

1. Legend. Biblical scholars, e.g. Fohrer (1968: 90–95), often refer to the Elijah-Elisha cycles of 1–2 Kings as legends. They also use the term "cult legend," i.e. a story or narrative which is attached to a place and sets out "to explain the origins of the sacredness of the place together with the customs which are observed at it," e.g. Jacob at Bethel (Gen 28:10–20). The cult legend "also gives information concerning the origin and history of many details of the cultus … of the various marvellous effects which were produced by the ark of Yahweh" (Eissfeldt 1965: 43–44). But, as Kaiser (1975: 50) has noted, the name cult legend "is not without danger, because it encourages us to transfer the characteristic features of medieval legends of the saints to these narratives." It is better to call the current cult legends "cultic etiologies," and the legends about individuals "hero stories," "prophetic stories," or "hagiographical stories." The only narrative in the patriarchal story that falls under the heading of legend as described above is the story of the testing of Abraham (Gen 22:1–19). His steadfast adherence to God in faith is a model for the people of Israel.

2. *Märchen.* The prevalent view of OT exegesis is that there are no *Märchen* in the OT, but that there are *Märchen* motifs (Hermisson 1977: 419: Wilcoxen 1974: 69–71). However, a great number of motifs which Gunkel (1917) claimed to be *Märchen* motifs are simply elements from the world picture current at the time or from myths of the surrounding world (Hermisson 1977: 438; 1985: 312–16), e.g. talking animals (Gen 3:1–7; Num 22:28–30); Moses' staff (Exod 4:2–4); Elijah's mantle (2 Kgs 2:8); Elisha's floating ax-head (2 Kgs 6:3–7). There was no abundance of *Märchen* motifs which would point to a rich *Märchen* tradition in ancient Israel. The *Märchen* is a genre in which God does not appear, or in any case is not central. The wonder is a normal part of the *Märchen* world, but God is neither its source nor its cause. When speaking of OT genres, it is better to drop the word tale (used without qualification) because of its association with the *Märchen*, though some scholars use it regularly (Coats *Genesis* FOTL 1985). *Märchen* is often rendered by fairy tale in English (the title of the collection of the *Märchen* of the Grimm brothers is *Grimm's Fairy Tales*); folktale is perhaps a more acceptable rendering.

3. Myth. There are no myths proper to the OT, though mythological language and imagery often occur (e.g. Isa 27:1 [see *ANET*: 137, lines 36–39]; 51:9; Ezek 28:11–19; Amos 9:3; Pss 74:14; 89:11—Eng 10; 93). In Genesis, the prelude to the flood story, the "angelogamy" of 6:1–4, is a "mythological torso" (Gunkel 1910: lxvi). Myth has left its footprint, however faint, on parts of the two creation accounts in Genesis 1–3.

4. Narrative. Very many of the *Sagen* or stories or cycles of stories in Genesis may be described as narratives.

5. Novella. The only story in Genesis that can be classified as a novella is the Joseph story in the narrower sense—that is, Gen 37; 39–41; 42–45 (Humphreys 1985: 82–96). It may be described too as a (long) short story. Coats (*Genesis* FOTL) classifies other stories in Genesis under the heading of Novella: the story of Lot as a subplot in the Abraham story (11:10–12:9 + 13:1–14:24 + 18:16–19:38), though it is very disjointed with disparate parts; the story of Sarah-Hagar (16:1–21:21), though this is rather a story about Hagar as the secondary wife of Abraham who finds herself in distress because of oppression by Sarah (16:1–14 is reworked in 21:1–21); the solemn assurance by the Lord of a son to Abraham and Sarah (17:1–22; 18:1–15), the reflection (18:16–21) and the theological discussion (18:23–33), the account of the destruction of the cities (19), and the account of the promise in danger a second time (20 though they are very disparate and so scarcely qualify either as separate novellae or as parts of a continuous novella; the story of the search for a bride for Isaac (24), though it is a family narrative; the Rachel-Leah conflict and the Jacob-Laban conflict within which it is set (29:1–32:1—Eng31:55), though it does not compare well with the unity that is the Joseph story (37; 39–41; 42–45); the Judah-Tamar story (38), though it really belongs to the Jacob cycle and is scarcely a novella.

6. Saga. Neff (1985: 31–32), attending to Ker's description of saga, suggests that one might speak of the saga of Abraham, 12:1–25:18, and of the saga of Jacob, 25:19–36:43. This is not unreasonable. Coats' proposal to call 1:1–11:9 the Primeval Saga is subject to reservations as the "events described" are on the other side of history. To avoid confusion it seems better to restrict saga to the Nordic classics. The stories about Abraham and Jacob can be suitably called the Abraham Cycle (or story) and the Jacob Cycle (or story).

7. *Sage.* The OED (1933, saga. 2), Gibert (1974; 1979: 179–94), Van Seters (1975: 131, n. 19) and Scullion (1984: 327–29) have pointed out the error of translating *Sage* by saga, and McCarthy has written that "the failure to understand that German *Sage* means "folktale" or the like and has nothing to do with English "saga" or the Icelandic original has misled generations and deprived form-criticism of a valuable word" (1981: 9). Coats (*Genesis* FOTL, 5–7, and passim) and Neff (1985: 19–25) have seen the problem, but have not met with complete success in their use of the terms *Sage* and saga. Coats (*Genesis* FOTL, 7–8; 1985: 63–70) prefers to translate *Sage* by tale; the present article prefers story.

8. Story. Story is a general term which embraces large blocks of narrative as well as short narratives of 10–15 verses. The large blocks are the primeval story (1:1–11:26), the patriarchal story (11:17–36:43), which may be subdivided into the Abraham cycle (story; 11:27–25:18), and the Jacob-Esau cycle (or story; 25:19–36:43), and the Joseph story (37; 39–45), plus the two conclusions (chaps. 46–50). In the

primeval story, distinct units from various traditions have been brought together to form Israel's statement on the world and on human beings. It is not a closely knit "long short story," but it has sufficient coherence, given by the final editor, to be called a story in the looser sense; it is a series of traditional or imaginary incidents on the other side of history. The loose unity, but essential coherence, of the two blocks that form the patriarchal narrative is enough to allow them to be called stories. The Joseph story in the more restricted sense (chaps. 37; 39–45) is well described as a "long short story," though some scholars prefer the term novella (Coats 1985; Humphreys 1985).

The types of stories within these blocks must be considered in the context in which they are preserved. Many of them have had an independent history, perhaps even a long one, before they took their present form in the biblical text, so that it cannot be presumed that they circulated exactly in the form that they have in the OT.

Stories, which form parts of the primeval story, are 2:4b–3:24; 4:1–16; 11:1–9. The first is a literary composition put together from various sources or traditions and edited into a well-bound unity, though the joins are clear. The stories of the first brothers and of the tower are just that, *"Sagen."* All three stories follow a pattern. The same basic pattern is there in the flood story which must be reckoned a genuine, though composite, narrative as it moves to climax (7:17–24) and resolution (8:1–5).

The long patriarchal story (or cycles) contains many stories. The concise "Ancestress in Danger" (12:10–20), set within the framework of an itinerary (12:9 and 13:1), is considered by many scholars (Van Seters 1975: 169; Westermann 1984: 162) to exemplify in essence Olrik's "Epic Laws of Folk Narrative." The second version of this episode (20:1–18) is not a story or legend in the strict sense, but rather a theological development (Coats *Genesis* FOTL, 149–51), while the third version (26:1–16) is more a story stretched over the promise of blessing made to Abraham (vv 2–5). The dispute between the herdsmen of Abraham and Lot is an episode in the life of the family in the broad sense, and scarcely a story. The Abraham, Sarah, Hagar story (16:1–16) is a story of family strife in the context of Sarah's barrenness. In 18:1–16, the promise of a son constitutes the narrative; the tradition of a visit by strangers or unknown divine messengers to announce the coming of the son, sets the stage for the announcement. The story of Lot and Sodom and Gomorrah (19:1–29) is a narrative of destruction and rescue, and has been likened to the story of the flood in the primeval era (Westermann 1985: 297). The long narrative of the quest for a bride for Isaac (24:1–67) has been classified as a novella, and more specifically, an example-story to show the ideal model for future generations (Coats *Genesis* FOTL, 166–70). But this longest narrative in the patriarchal story is rather a family story about a search for a bride (vv 3–4 and 67) with a clear and transparent structure, commission (vv 1–9), execution (vv 10–60), resolution (v 67); the middle section makes use of the traditional literary device of repetition, well known in messenger stories (vv 11–14, 15–21, 42–49; Westermann 1985: 282–83). The Shechem narrative (34:1–31) is a tribal story composed from three parts.

C. Other Literary Terms Applied to Genesis

1. Dialogue. Two passages in the patriarchal stories are dialogues: Abraham and the Lord before Sodom (18:22–23), and Abraham and the Hitties at the sale of the cave in the field at Machpelah (23:1–20). The former discusses a theological problem; the latter, within a Priestly frame (vv 1–2, 19), describes a process of bargaining, not unlike that which goes on in the Middle East today (Scullion 1982/83: 54). Van Seters (1975: 98–100) explains the narrative from the pattern followed in certain neo-Babylonian documents known as "dialogue contracts," which de Vaux (1978: 256) also mentions as a possible parallel. However, the "dialogue documents" begin with a title, "tablet of"; then follows in direct discourse the offer made by the legal advocate: "A went to B and spoke as follows." There is no further bargaining. The reply of the second party is recorded in the third person in stylized form. But in Genesis 23 there is a protracted dialogue; the only legal formula is "the current merchant's rate" (v 16), and the only legal procedure is the presence of witness (vv 17–18). The parallel is weak. The assurance given to Abraham of a son and land in 15:1–21 is not a dialogue; Abraham's two utterances in vv 3–4, 8 are no more than the occasion for a divine speech; the assurances follow from a prophetic oracle of salvation, "Fear not," found about sixty times in a theological sense in the OT, especially in Deutero-Isaiah (e.g. Isa

41:10, 13, 14; 43:1, 5; 44:2; 54:4). The dialogues between Joseph and (1) Potiphar's wife, (2) the prisoners, and (3) Pharaoh, do not follow any particular pattern.

2. Divine Speech. The divine speeches of 9:8–17 and 17:1–22, which give assurance of a *bĕrît,* covenant (the word is used 7 times and 13 times respectively), are both from the priestly tradition. In the former, Noah does not speak; in the latter Abraham falls on his face twice (vv 3, 17) and makes two brief interventions (vv 17b, 18). Before the dialogue that precedes the destruction of Sodom and Gomorrah, there is a divine soliloquy (19:17–21) which is perhaps composite.

3. Etiology. An etiology is a narrative whose purpose is to explain the origin of a custom, an event, a name, a geographical formation, an object, a shrine. There are no etiologies of any length in Genesis, but there are many (popular) name etiologies: 2:23 (woman); 3:20 (Eve); 4:25 (Seth); 16:13–14 (God who sees); 19:22 (Zoar); 19:37, 38 (Moab, Ammon); 21:31 (Beer-sheba); 26:20b (Esek), 21b (Sitnah), 22 (Rehoboth), Ge 26:33 (Shibnah); 28:16–17 (Bethel); 31:47–49 (Jegar-sahadutha, Galeed, Mizpah); 32:3b (—Eng 2b; Mahanaim, a word play); 50:11 (Abel-Mizraim). Some scholars (von Rad *Genesis* OTL, 411; Coats *Genesis* FOTL, 298–300; Westermann 1986: 173) understand the account of Joseph's economic measures (47:13–16) as a tax etiology, i.e. a story to explain a particular method of taxing in Egypt.

4. Genealogies. In chaps. 1–11, the genealogies are a constitutive part and form an essential framework.
Priestly sources (P): 5:1–32 Adam, through Seth to Noah
6:9–10; 7:28–29 Noah and sons
10:1–7, 20, 22, 23, 31, 32 generations of sons of Noah
11:10–26 Noah, through Shem to Abraham
11:27a, 31–32 Terah's life cycle.
The Priestly genealogies trace an unbroken line from Adam to Abraham. Everything that happens in the patriarchal story springs from them. They are monotonous, systematized, and present sober succession without elaboration. Genealogy and narrative stand far apart. They record "the continuous event of generation following generation" (Westermann 1984: 16). They preserve (1) a constant—the same sentences recur, begetting, lifespan, more offspring, age, death (chap. 5; chap. 11 is a little different), and (2) a variable—names and numbers. Yahwist source (J): In the Yahwistic genealogies, genealogy and narrative are closely linked and the form is flexible. Notes are added: (1) names are explained (4:1b, 25b; 5:29; 10:25b); (2) the progress of civilization is recorded (4:2, 17b, 20b–22; 5:29; 9:20; 10:8–9); (3) the expansion of the race is noted (9:19b; 10:18b, 25b); (4) there are geographical descriptions (10:10–12, 19, 20); (5) there are songs and proverbial sayings (4:22–23; 5:29; 10:9b); (6) the invocation of YHWH is projected back to the beginnings (4:26).

The genealogies of chaps. 1–11 are a witness to the effects of God's blessing.

Genealogies frame the Abraham cycle (11:27–32 [with itinerary information]; 25:1–6 [an *ad hoc* creation]; 25:7–11[P]); and the Jacob cycle (25:19–20[P]; 35:8, 16–20[J?], 22b–26[P], 28–29[P]).

Wilson (1977: 11–55) has demonstrated the importance of genealogies and their setting in life for non-writing peoples, to which the genealogies of the patriarchal stories bear a close resemblance, and that the OT genealogies cannot be understood apart from their oral prehistory. They serve to specify the position of an individual in the community and form, so to speak, the family coordinates. They have their origin in tribal life and did not arise out of mere historical or antiquarian interest.

From the point of view of form, the genealogies may be classified as linear or segmented (Wilson 1977: 18–20, 196–97), the latter giving the relation to each other of the members of a group:

Linear	Segmented
5:1–32; 9:28–29	10:1–32
11:10–26; 11:27–32	25:12–16 (segmented of one generation)
22:20–24; 25:7–11	36
36:9–14	

The genealogy of Esau in chap. 36 is a "collection of Edomite and political information, most of which is presented in genealogical form" (Wilson 1977: 167).

5. Itinerary. The itinerary is a literary genre which stems from the nomadic or interant lifestyle. It reflects the process of movement from place to place. The patriarchal itineraries are not mere constructions (Davies 1974: 80–81); patriarchal tradition knows of an immigration of Abraham into Palestine. The itinerary form comprises: (1) information about the route, (2) the place of departure, (3) the place of arrival, (4) brief notes about events on the way (Westermann 1985: 56–58, 62). Itineraries run quietly through chaps. 12–25. Typical examples are: 11:31–32: Terah took … went forth from Ur … to go to the land of Canaan … came to Haran … settled there … died; 12:4–9: Abraham took … set forth to go to the land of Canaan … came to Canaan … passed through to the oak of Moreh … built an altar … moved to the east of Bethel … built an altar … journeyed further to the Negeb; 12:9–13:1: Abraham went from the Negeb … arrived in Egypt … event there … went up from Egypt; 20:1: Abraham journeyed toward the Negeb … dwelt … sojourned in Gerar; 22:19: all returned to Beer-sheba; hence, they must have started from there. Add to these 26:1–6.

The motif of flight-return enters the itineraries of chaps. 27–33. Gen 28:10 and 29:1 are itinerary notes with an episode on the way in between. There are fixed itinerary formulas and data in 33:16–17, 18–19. In chap. 35, there is the departure from Shechem (vv 1, 3, [5]) and the arrival at Bethel (v 6); then come the two episodes on the way, the building of an altar (v 7), and the death of Deborah, Rebekah's nurse (v 8). There follows the departure from Bethel (v 16), the episode on the way, Rebekah's death as she gives birth to Benjamin (vv 16b–20), the stop beyond Migdal-Eder (v 21), and the arrival at Mamre. In 36:1–8, an itinerary is joined to a genealogy: Esau took (v 6a) … and went, (v 6c) … and dwelt in the hill country of Seir (v 8). There is a concluding note, "Esau is Seir," (v 8b). Finally, Anah "found hot springs," (v 24b), quite likely on a journey.

6. *Hieros Logos* (Cult Legend). This is a formula, or the sacred words of a story, which is attached to a place and sets out to explain the origin of the sacredness of the place together with the customs which are observed at it. Jacob's experience at Bethel (28:10–20) is usually considered to be a cult legend (but see the preceding article, 28:10–20), as is the purchase of land at Shechem (33:18–20), which concludes with "there he erected an altar and called it El-Elohe-Israel," God, the God of Israel. The same is said of 35:1–7, where Jacob's family puts away all foreign emblems and he erects an altar at the place which he names El-bethel. In 35:9–15, Jacob sets up and anoints a pillar at Bethel. Three of these episodes, all of them "on the way," concern Bethel which became an important shrine in Israel.

7. Lists. A list is a serial document. There is the list of the names of the sons of Jacob (35:22b–26), of Esau's wives (with genealogy; 36:1–6), of the names of the chiefs of the sons of Esau (36:15–19, 40–43), of the Edomite kings (Wilson 1977: 167–98). Gen 36:9–14, 20–36 are lists/genealogies, as is 46:8–27, the enumeration of the descendants of Israel who went down into Egypt. There is a list of peoples whom it was important to know about (15:19–21), and a list of 16 places or personal names in the genealogy of 25:1–6.

8. Reports. This is a genre that communicates events for the sake of the record and without developing a narrative: (1) birth reports (4:25–26, Seth and Enosh; 21:1–7, Isaac; 26:19–26, Jacob and Esau); (2) death reports (23:1–2,19, Sarah; 25:7–11, Abraham; 25:17–18, Ishmael; 35:16–20, Rebekah; 35:27–29, Isaac; 47:28–31; 49:1,29–33, Jacob; 50:22–26, Joseph); (3) various: a marriage report (19:30–38; 36:1–5); a report of Esau's move (36:6–8); an adoption report (48:1–12); and a blessing report (48:15–16, 19,20a).

The Priestly creation account has been described, with reservations, as a report (Coats *Genesis* FOTL, 47), as a narrative, at least as a point of departure (again with reservations; Westermann 1984: 80), and as a document that sets out priestly doctrine (von Rad *Genesis* OTL, 63). The account, however, is unique in form and does not fit into any generic literary category. It is a solemn and stylized statement of the priestly teaching that creation proceeds immediately from the word of God which is itself event. The best parallels to the creation account of chap. 1 are Psalm 104 (a hymn of descriptive praise) and Psalm 136 (the great Hallel, a litany of praise to God for his action of creation and redemption). The flood story

(6:13–8:19) is a composite narrative set within disparate theological reflections (6:5–8; 6:11–12 and 8:20–22; 9:1–17), rather than a report.

D. Fixed Formulas and Genesis

Gunkel (1906: 109; Rollmann 1981: 184), after careful study of the biblical texts, arrived at a description of a literary type *(Gattung):* it must exhibit, (1) a common store of ideas and attitudes, (2) a clear and constant form of speech, and (3) a setting in life from which alone the content and form can be understood. This description applies better to the shorter sayings, formulas, and episodes rather than to the longer episodes or stories. The following are the main fixed, short formulas that occur in Genesis.

Accusation: mah zo›t ‹āśît, "what is this you have done," or a very similar formula, or a formula with *lāmmâ,* "why": 3:13; 4:10; 12:18–19; 20:9; 26:10; 29:25; 31:26, 30; 43:6; 44:15. It formulates a direct accusation of a misdemeanor.

Blessing: The verb *bārak,* "bless," is used as an imperative or a jussive: 1:28; 9:1–2, 27–28; 12:2–3; 22:18; 26:1–3; 27:27–29; 28:3–4, 14; 32:28–29 (—Eng 27–28); 46:1–5a; 48:13–20.

Call to attention: The word *hinneh,* "behold, here I am," or the like, 22:1, 7, 11; the particle draws attention.

Covenant formula: "I shall be your God, and you shall be my people." The formula, typical of Jeremiah, is expanded and varied in 9:8–17; 17:10.

Curse: ›ārûr, cursed, specifying person and content: 3:14–19; 4:11–12; 9:25; 27:29b.

Dirge: a lament over a misfortune: 37:35; 42:36; 43:14.

Farewell speech: An old man is to die; he expresses resignation, exacts a promise or oath, or gives a commission: 24:2–4; 46:30; 47:29–31; 48:11, 21–22; 49:29–32.

Narrative link: the phrases *›aḥar haddĕbārîm hā›ēlleh,* "After these things …," or *wayĕhi ›aher …* "Now it happened after …"; a formula connecting otherwise noncontinuous pieces: 15:1; 22:1, 20; 39:7; 40:1.

Self-revelation (or self-identification): God or a person identifies himself; *›ānōkî, ›ănî,* "I" plus a noun: 15:1, 7; 17:1; 24:34; 26:24; 27:19; 28:13; 31:13; 35:11–12; 45:3, 4; 46:3.

Tôlĕdôt: Scholars are not in agreement about the translation of *tôlĕdôt* (Wilson 1977: 158, n. 57; Tengström 1982). Suggestions are: generations, successions, descendants, family history, genealogy. In Genesis the formula occurs in "These *(›ēlleh)* are the *tôlĕdôt* of" or "This *(zeh)* is the book *(sēper)* of the *tôlĕdôt* of" (once, 5:1): 2:4a (heavens and earth); 5:1 (Adam); 6:9 (Noah); 10:1 (sons of Noah); 11:10 (Shem); 11:27 (Terah); 25:12 (Ishmael); 36:1 (Esau-Edom); 36:9 (Esau); 37:2 (Jacob).

Transition formula: "Now it happened at that time," *wayĕhî bā›ēt hahiw›,* 21:22; 38:1, "Now it happened at the end of (after)," *wayĕhî miqqēṣ,* 4:3; 8:6; 41:1.

Word of YHWH: "The word of YHWH came to Abram," *hāyāh dĕbār YHWH ›el* (15:1); this is a common expression for prophetic revelation, but occurs only here in Genesis. It is frequent in narrative texts in Samuel-Kings: 1 Sam 15:10; 2 Sam 7:4; 1 Kgs 12:22; 16:1; 17:2, 8, etc.

The pioneering work in the study of literary forms in the OT, and in the book of Genesis in particular, was done by Hermann Gunkel (1862–1932). He not only made use of the results of Near Eastern archaeology, but also applied the methods of comparative literature to the study of the OT. Gunkel based his study of literary types on the assumption that the rhetorical forms and literary types in OT times were more fixed than they are in modern times and, as it were, imposed themselves on the writer. If a poet or writer or cultic official wished to speak on a certain theme or in a particular situation, then he did so in a certain way. Forms and formulas became highly stylized. Now there is much truth in this insight which was a major contribution to the study of the Bible. But literary forms and form criticism are tools for the understanding of the Bible and not tyrannical masters. Naturally there were exaggerations in the use of this newfound tool.

One must be aware of the literary type of a whole book as well as of its component parts, large and small (see the preceding article). One must be aware also that fixed formulas are often used in different circumstances. For example, it has been well argued that the formula "fear not" *(›al tīrâ)* is a key component in the language of war, in particular the Holy War (Conrad 1985). But it is an exaggeration to

say that every time the phrase is used it is in the context of war or evokes associations with war. In Gen 15:1, the Lord addresses Abraham, "Fear not, Abraham, I am your shield." To say that Abraham is addressed as a warrior because he has taken part in a battle in the previous chapter (14:14–16), and the root of the word "shield" *(māgēn)* is used as a verb in 14:20b *(miggēn),* is to strain the exegesis of the text. A birth formula, "Behold, you are with child and shall bear a son; you shall call his name Ishmael," occurs in 16:11 and in other places in the OT (Gen 17:11; Judg 13:3–5; Isa 7:14; 1 Kgs 13:2; 1 Chr 22:9) as well as in the NT (Luke 1:31), but always with slight variations. The form has not imposed itself as if it were a straitjacket.

There is no such thing as a "pure" literary form, that is, a form that appears always word for word without variation. But there is a definite pattern according to which certain forms of speech are pronounced, e.g. the oracle of salvation (Westermann 1987).

A literary form is not something that one can choose or not choose to adopt. One writes or speaks in some form and there is no form which is not stylization. The whole person is expressed through the form. It is not partly person, partly form. The style is the person. We must not equate the style merely with kinds of embellishments, with terseness, prolixity, continued metaphor, insistent parallelism. It is not possible to separate completely form from content. Any attempts to give precedence to the message must be very delicate when the work is of any degree of sophistication. A literary form is not like the skin of an orange which one peels off to get at what really matters. In brief, then, it is neither the form nor the content that prevails. The meaning of the text emerges from a fine blending of both. And the person who speaks or writes, and the situation out of which the speech or writing comes, will regularly modify the form.

JOHN J. SCULLION

GENEVA BIBLE. The Geneva Bible is the translation made by the Marian exiles in Geneva and issued in 1560 by Rouland Hall at the expense of the English Church in Geneva. The preface describes the work as requiring "two yeres and more day and night." William Whittingham, Anthony Gilby, and Thomas Samson, influenced by the issuing of Pagninus' Latin Bible as well as by Oliveton's French, and the Italian version, corrected Tyndale's text by Beza's Latin NT. The OT is based on the Great Bible corrected from Hebrew and Greek compared with the Latin text of Leo Juda. The NT revised Whittingham's Testament of 1557.

The Geneva Bible (Herbert 1968: No. 107; all number references hereafter refer to Herbert 1968) printed in Roman letter borrowed the innovation of printing the verses within the chapters as separate paragraphs from Whittingham's NT. Words not in Greek, but necessary for English, were in italics. There were long prologues, chapter summaries, and copious marginal notes. There were woodcuts like those used in a French Bible published in Geneva the same year. The size was small quarto (28 × 20 cm).

Geneva Bibles printed after 1587 have a NT revised by Laurence Thomson who was secretary to Sir Francis Walsingham, and those after 1599 have the notes on the Apocalypse done by Junius, making three types of Geneva Bibles in all.

John Bodley received a patent for the exclusive right of printing the revision in England for seven years; Archbishop Parker in 1565 requested that a twelve year extension of Bodley's patent be granted. However, no Geneva Bibles were printed in England until after the death of Parker in 1575. The Barker family retained the printing rights for 130 years, when it passed to the Baskets for sixty years, and they sold it to John Eyre of Landford Wilts. The Geneva was the first Bible in English, printed in Scotland in 1579.

Though never authorized and never needing it, the Geneva Bible proved to be extremely popular. Between 1550 and 1644 there were an estimated one hundred and forty editions of the Bible and the NT. After 1611 when it could no longer be printed in England, editions printed in Amsterdam and Dort gave the date 1599 and the name of Christopher Barker as printer. It is estimated by Butterworth (1941: 231) that nineteen percent of the wording of the King James is due to the Geneva. It influenced the translators of the King James version in their revision more than any other English version.

Though the rendering had earlier appeared in Wycliffe, in Caxton's *Golden Legend,* and in Coverdale, the Geneva is known as the "Breeches Bible" from its translation of the clothing of Adam and Eve in Gen 3:7. While it has commonly been said that the Geneva was the Bible of the home in the Elizabethan period and the Bishops' was the Bible of the Church, there were many exceptions. There were quarto printings of the Bishops' Bibles and folio printings of the Geneva. Churchwarden's accounts of the period record the purchase of Geneva Bibles for some parishes. Even after the making of the Bishops' Bible, Andrews, Dillingham, and Overall continued using the Geneva in their sermons. The Geneva was used by William Shakespeare in his later plays and by John Bunyan. While it is known that the Puritans favored the Geneva, that it alone was allowed on the Mayflower seems disproved by John Alden's King James Version (on display at Pilgrim Hall in Plymouth, Massachusetts).

The notes of the Geneva are Calvinistic and anti-Catholic and are equal to a running commentary. In Junius' notes the images of the Apocalypse are applied to the church of Rome. Though popular with the people, the notes were described by Archbishop Parker as "prejudicall notis which might have ben also well spared." The Geneva was decried by King James at the Hampton Court Conference as the worst of all the translations, and its notes described as "partiall, untrue, seditious, and favouring too much of daungerous, and trayterous conceites." Nevertheless, there were printings of the King James Bible with Geneva notes in 1642 (No. 564), 1649 (No. 620), 1679 (Nos. 742, 743), 1863 (No. 782), 1708 (No. 987), and 1715 (No. 936).

Selections from the Geneva were used in the *Soldier's Pocket Bible* of 1643 (No. 677). The Geneva was reprinted in facsimile by Bagster in 1842 (No. 1846), and the text in the *English Hexapla* of 1841 (No. 1840) and by Luther A. Weigle in his *The New Testament Octapla* in 1962. The text of Psalms was printed in the *Hexaplar Psalter* of 1911 (No. 2173) and the text of Genesis included in Weigle's *Genesis Octapla* of 1965. The Geneva Bible was again reissued in a facsimile reprint in 1969 by the University of Wisconsin Press. The making and influence of the Geneva Bible is the subject of a multivolume (in 1988 twenty volumes) study by Lewis Lupton.

GENITALIA. The Bible often employs euphemism when referring to the male and female sex organs. See BIBLE, EUPHEMISM AND DYSPHEMISM IN THE.

GENIZAH, CAIRO. See DAMASCUS RULE.

GENNAEUS (PERSON) [Gk *Gennaios* (Γενναιος)]. Father of Apollonius, one of the five military governors of a district of Syria in the time of Antiochus V, 164–162 B.C.E. (2 Macc 12:2). The father of Apollonius is mentioned to distinguish him from another Apollonius, son of Menestheus, mentioned earlier (2 Macc 4:21). The five local governors would not let the Jews live quietly and in peace to go about their farming (2 Macc 12:1–2). It is not clear from the text whether the governors had orders or permission for the central government to oppress the Jews. This passage has no parallel in 1 Maccabees, but it may have been derived from a common source (Goldstein *2 Maccabees* AB, 432). The Jews did fight with neighboring peoples (1 Maccabees 5), but this reference seems to say that they fought with local Macedonian officials.

BETTY JANE LILLIE

GENNESARET (PLACE) [Gk *Gennesaret* (Γεννεσαρετ)]. **1.** A plain thirty stadia long and 20 stadia wide (3.5 × 1.5 miles) on the NW side of the Sea of Galilee between ancient Tiberias and Capernaum (*Ant* 3.521). As part of the rift valley, the plain is located 200 m (660 ft.) below sea level. Apparently, one of three branches of the Via Maris passed through the plain linking Megiddo and the coast with Hazor,

Syria, and Mesopotamia (Negev 1972: 327); local roads connected it to important cities such as Sepphoris. The area is associated with Chinnereth of Jewish tradition (Deut 3:17; Josh 11:2; 12:3; 19:35).

Much of the early activity of Jesus and the Jesus movement apparently took place in or near this area. According to gospel tradition, Jesus and his disciples were blown off their journey to Bethsaida and landed instead in the region of Gennesaret (Matt 14:34=Mark 6:53). A variant from D reads Gk *Genesar*. The basaltic red soil carried by three brooks, Nahal Ammud, Nahal Zalmon, and Nahal Arbel, made the plain fertile and allowed the growth of a variety of species including walnut, palm-trees, figs, and olives (*Ant* 3.515–18). According to Theophrastus, papyrus was planted and harvested by Egyptians near the lake (*HP* 4.8.4). Strabo mentions that balsam plants, a major export item, grew around the Lake, no doubt in this area (16.2.16). Hengel argues that the Romans may have extended balsam production to Galilee in order to increase profits (Hengel 1974: 45). The region was heavily populated during the Greco-Roman period and included the major urban centers of Tiberias and Tarichaeae/Magdala as well as the large village of Capernaum on its northern boundary.

2. City overlooking the fertile plain whose name became associated with the plain and the Sea of Galilee; see CHINNERETH.

3. An alternate name for the Sea of Galilee (Luke 5:1; 1 Macc 11:67).

GENRE. See FORM CRITICISM.

GENTILES, COURT OF THE. A portion of Herod's temple square open to Jews and gentiles. An enclosure or barrier (Gk *druphaktos;* Heb *soreg*) surrounded the inner sanctuary beyond which gentiles were forbidden to go. Tablets written in Greek and Latin were apparently placed at thirteen entrances on the low parapet that marked the boundary to the area specifically reserved for Jews; the tablets warned non-Jews not to enter (Joseph. *JW* 5.5.3; 6.2.4; *Ant* 17.11.5; cf. *m. Mid.* 2.1–3). Two tablets with a Greek inscription have been found, a complete one in 1871 (Clermont-Ganneau) and a fragment in 1935 (Iliffe). The complete one reads "No foreigner is to enter within the forecourt and the balustrade around the sanctuary. Whoever is caught will have himself to blame for his subsequent death" (Schürer *HJP²* 2:222, n. 85; cf. 285, n. 57). In Acts, Paul was accused of taking a gentile, Trophimus the Ephesian, into the temple, presumably meaning that they passed from the court of gentiles through the enclosure (Acts 21:28–29). Around the court's perimeter were porticoes; it was probably in one of these porticoes that, according to gospel tradition, Jesus overturned the money changers' tables (Matt 21:12; Mark 11:14; Luke 19:45; John 2:15). Josephus reports that Samaritans (ca. 6–9 C.E.) secretly scattered human bones in some of the porticoes and temple area, no doubt referring to this large area (*Ant* 18.30). The total area of the temple court could comfortably hold 75,000 people (Meyers and Strange 1981: 52).

GENUBATH (PERSON) [Heb *gĕnubat* (גְּנֻבַת)]. Son of Hadad, an Edomite of the royal house who found favor in Egypt where he took refuge when David conquered Edom (1 Kgs 11:20). Genubath's mother is the sister of the queen, Tahpenes. That Genubath is weaned by the queen and raised with the sons of Pharaoh indicates the high esteem in which his father was held in Egypt. The name Genubath may be of N Arabic origin *(gnb)* or stem from an Egyptian name *(qnbt).*

PAULINE A. VIVIANO

GEOGRAPHY AND THE BIBLE. This entry consists of two very different types of articles. The first article surveys not only the physical geology and geomorphology of Palestine, but also the human geography, including land use and settlement patterns characteristic of the land. The second article examines how, in antiquity, biblical and early Jewish writers themselves configured the world and Israel's geographical relationship to it.

GEOGRAPHY OF PALESTINE

Geography is a spatial science which seeks to explain location and distributions on the earth's surface. Palestine expresses this geographical tradition rather well. For example, the region is located 31 degrees N of the equator. At such latitudes desert and Mediterranean climates converge. Palestine is also approximately midway between the Nile and Tigris/Euphrates River basins indicating a sense of centrality and geopolitical consequences between great civilizations of the past which emerged to the W and the E. These basic patterns, to a high degree, have directed human occupance and cultural activity of the diverse landscape.

The discipline of geography is also viewed as a bridge between social and physical sciences. The task of geographers is to interpret the meeting and the interrelationships between natural history and cultural history (Sauer 1972: 1–2). That is, they seek out interrelationships between land, humans, and time. The landscape is often dictated by geological forces and the structure of the earth's rocks in the subsurface. The physical forces such as weather and climate over eons of time break down the exposed rock to create soil and prepare the way for erosion by water. Such geological and climatically controlled processes and events began millions of years ago.

Superimposed on the geologic and climatic mosaic of Palestine is the much more recent imprint of people. Palestine is a long settled region and its peoples are heirs to old and culturally diverse civilizations. With each new skill humans seized opportunities and resources to improve their well-being. Human groups benefited from the natural resources such as springs for water, topography with defensive advantage, and lowland soils which could be cultivated with ease. Geography may be viewed as human ecology since interactions between human and physical processes do occur. Humans are not set apart from the natural landscape but are participants or even motivators in its changes. Since the recession of the glaciers which began some 20,000 years ago the most significant modifier of the landscape has been people—not physical processes. Within the short span of occupance the geography of Palestine has been transformed from a physical entity to a culturally modified environment.

In the brief survey of the geography of Palestine which follows, the physical elements including its geology, geomorphology, climate, soils, and water resources are discussed. This overview is followed by the human geography through biblical times. Included are subsections on land use, settlement patterns, rural and urban settings, and road networks.

A. A Geographic Perspective of Palestine

Since ancient times Jerusalem was portrayed as the *omphalos,* that is, the earth's navel, from which order was established and diffused to "those who dwell at the earth's farthest bounds" (Ps 65:8). The preeminence of Palestine and particularly Jerusalem was cartographically expressed on O and T maps. The Cottonian map, a 10th-century Anglo-Saxon predecessor to the traditional O and T maps which followed, depicts Europe to the left, Africa to the right and the Middle East and Asia at the top (i.e., east) (Elster 1970). The "O" of the map was represented by a universal ocean which circles the land masses. The "T" represented the Red Sea to the right and the Black Sea to the left. These two seas joined the Mediterranean Sea at approximate right angles which in turn, vertically bisected the map. The intent was, of course, to geographically highlight the importance of the Holy Land. When the map was oriented, E was naturally to the "top" of the map where it, figuratively speaking, belonged.

Although T and O maps are geographically expressions of the past they do illustrate the theological significance of the Holy Land. Other maps also reveal salient geographical characteristics about Palestine. The region is situated midway between the Nile and the Tigris and Euphrates River basins which were centers of exceptional civilizations. The routes which led from Asia to Africa and Europe funneled through the narrow sliver of arable land called the Fertile Crescent which terminated in Palestine.

In terms of geology, natural vegetation, and climate, Palestine is a meeting place. It is here that several crustal plates of the earth are pushing, pulling, and sliding past one another. The end product of these global subsurface forces are contorted land forms and inland seas created in the region which are manifested in the earthquakes and recent volcanic activity recorded in the exposed rocks.

Palestine is a botanical boundary where three major natural vegetation zones meet: Mediterranean, Saharo-Sindian and Irano-Turanian. Trees and xerophytic shrubs of the Mediterranean zone contrast sharply with the sparse plant cover of the arid Saharo-Sindian zone. The Irano-Turanian zone is an intermediate grass steppe land forming a transition between the other two zones. A combination of climatic conditions for plant growth as well as modification or deforestation of the vegetation due to long human occupance has left little of the original cover.

The land is also a place where arid and wet climates meet. Parod in Galilee annually receives 1,000 mm of precipitation whereas the Negeb 450 km to the south receives almost none. The boundary between the desert and the wetter zone is elusive and flexible which is illustrated by the repeated shifts of human settlements over time.

The region was a meeting place of tillers and urban dwells. Semblance of urban status appeared with Jericho in the 6th millennium B.C. The site covered an area of 32 hectares and was protected by a stone wall.

Curiously, the coastal plain and its shoreline were less significant to the people of Palestine than to others in the Mediterranean Basin such as the Phoenicians, Greeks, and Romans. The occupants were oriented toward the land not the sea. The land was a meeting place for farmers and nomads. The farmers

preferred stability and lived in secure villages whereas the nomads tended to the needs of their flocks. In both cases water was key to their economic pursuits. During periods of ample water supply both prospered.

B. Physical Character

1. Geology. Although the geology of Palestine and the Sinai, in terms of rock types, structures and history is complex, it is significant in terms of land forms, water resources, and human occupation of the landscape. The rocks which make up the region may be broadly divided into three sequential types. See Figs. GEO.01 and GEO.02. The oldest rocks are of Precambrian age which chronologically are followed by a prolonged record of sedimentary deposits. The youngest earth materials are the most recent deposits occupying the lowlands.

The most ancient rocks are some two to three billion years in age (Precambrian) and with the exception of the Sinai are of limited exposure. The rocks were derived from magmas which cooled in the subsurface to form calc-alkaine and alkaine magmatic rocks. These igneous rocks went through repeated folding to form high mountains in the S part of the region. The Sinai Peninsula, Arabia, E Egypt and the Sudan form the geologic core of the Middle East which is referred to as the Arabo-Nubian Massif. Over the millions of years the region was fractured and split by earthquakes. The ruptured zones were filled with younger crystalline rock and volcanic deposits which locally metamorphosed the existing rock. Today, the only aerially significant Precambrian exposures N of the Sinai occur NE of the Gulf of Elat.

The Precambrian Era was followed by Paleozoic, Meszoic and, most recently, the Cenozoic Eras which covered a span of 0.5 billion years. This period of geologic time was generally characterized by deposits of sedimentary rocks. The land mass rose and subsided many times causing repeated inundations and subsequent exposures by the ocean which geologists refer to as the Tethys. During a period of drowning by the Tethys Sea, marine deposits, primarily carbonates, were laid down as muds which gradually hardened into sedimentary strata. Limestone, chalk, marl, dolomite, and flint were the common depositional products. The limestones frequently were composed of marine fossils such as foraminifera and coral. When the land was exposed during the regression of the sea, terrestrial deposits such as sandstone and gravels were deposited and lithified. The widespread Nubian sandstones in Palestine and the Sinai are evidence of the terrestrial regime in the region.

On the basis of the geology, eight transgressions of the sea took place: five during the Paleozoic Era and three during the Mesozoic Era. The geographical distribution of the marine and terrestrial rocks reveal that the Transjordan to the E experienced greater periods of subaerial deposition. In contrast the Cisjordan to the W and N is predominantly characterized by marine deposits, suggesting that this region was submerged for a longer period of time and regression of the sea was a sporadic intermittent event.

The present era of geologic time (Quaternary Era) has witnessed terrestrial deposition in basins along the Mediterranean Sea and the trough from the Sea of Galilee (Lake Kinneret) southward beyond the Dead Sea to the Gulf of Aqaba. During the Early Quaternary, more familiar features such as sand dunes along the shoreline, loess of the N Negeb and red sands of the coastal plain were deposited by winds. Also the Terra Rossa of the hills of Judea (e.g., Hebron Hills, Bethel Hills) and the marls in the Jordan Valley were deposited during this time.

Although the glaciers of the “Ice Age” did not directly effect Palestine, the accompanying Pleistocene climatic change did. With its onset, cooler climatic conditions occurred between 600,000 and 30,000 years ago and are referred to as pluvials. The lower evaporation rates coupled with a probable increase in precipitation created lakes and wetlands in valleys and more intensive weathering of the exposed rocks. Streams with higher discharges carved canyons and deposited coarse debris in valley bottoms. Additional deposits included the Lissan marls of the Jordan Valley and a volcanic episode which poured lavas onto the Golan, E Galilee and Basan in Transjordan.

2. Geologic Structures and Plate Tectonics. During the long periods of geologic time, marine and terrestrial deposition dominated the scene. However, skeletal clues suggest mountain building occurred during Precambrian time. More recently, however, the more salient geologic structures were formed. During the middle Cenozoic Era (Lower Miocene Epoch), the region from Spain to the Middle East and

beyond experienced a principal mountain building event which is continuing. Referred to as the Alpine-Himalayan revolution, simple folds were created in the sedimentary rocks of Palestine. Earthquakes accompanied the displacement of the land which were manifested as faults outlining the linear depression of the Jordan Valley. Over time, the rift deepened and tributary valleys formed. The rift valley which is one of the most outstanding geologic features on the surface of the earth is clearly visible as a linear trough occupied by the Sea of Galilee, the Jordan River, and the Dead Sea, and continuing southward to Elat, a total distance of some 360 km.

In overview, the structural changes occurring in Palestine are related to the concept of plate tectonics. The earth's crust is composed of several plates, like broken slabs of ice on a lake. Along their margins, the crustal plates are converging, diverging, or sliding laterally past each other. Since motion is occurring along the edges of the plates, earthquakes due to faulting, vulcanism and related geological displacements such as mountain building commonly take place along relatively narrow zones. A boundary separating the Arabo-Nubian Plate from the African Plate is located in the Red Sea where separation of Africa and the Arabian Peninsula is occurring. The plate boundary extends into the Gulf of Elat and farther N, creating the Dead Sea Rift. The plate boundary has the appropriate geological characteristics: volcanic activity, earthquakes and displacement of the earth's crust.

Seismological stations have been in place in the Middle East only since the 1930s. Therefore the seismic activity is historically not well documented. In spite of this, noninstrumental and instrumental observations indicate that between 1900 and 1980 over 50 earthquakes occurred adjacent to the Dead Sea Rift (Aryeh 1985). The seismic activity along the fault system is the result of the relative movement of the African and Arabo-Nubian plates which on the average have been one-half to one cm per year. Bowen and Jux (1987: 159) believe the total displacement was 105 km since the end of Mesozoic time.

Recent investigations (Neev et al. 1987) based in part on Landsat satellite pictures suggest that vertical displacements are actively occurring along the E Mediterranean shoreline. Faulting has uplifted the land whereas the Mediterranean basin off the coast of Palestine has been submerged as blocks of the ocean crust subsided. "The sea looked and fled, Jordan turned back. The mountains skipped like rams, the hills like lambs" (Ps 114:3–4), poetically describes the geological instability of the region.

3. Geomorphology. The present-day topographic expression of Palestine began to evolve with the withdrawal of the Mesozoic seas and the Cenozoic uplifts and faulting. Orni and Efrat (1971) recognized six geomorphological provinces. See Fig. GEO.03. These are: the coastal plain; the hill country; the Dead Sea Rift and its branches; the Transjordan; the Negeb; and the Sinai Peninsula to the S and SW.

a. The Coastal Plain. The coastal plain of the Palestine is a rather straight depositional surface extending along the Mediterranean shore. Topographically, the region is characterized by beaches and sand dunes occasionally interspersed with wetlands. There appears to be two source areas for the sediment. Currents moving northward supply quartzic sand-size particles to the shoreline from the Nile River. It has been suggested (Orni and Efrat 1971) that during the Pleistocene pluvials, which corresponded to periods of lower sea levels, the Nile River transported coarse sands from the Abyssinian highlands to the sea, which were then moved by coastal currents to the Palestinian coast. An alternative or supplemental source of sand is Wadi el-Arish which drains most of the Sinai and debouches into the Mediterranean 80 km W of Gaza. The siliceous sands are clearly derived from non-carbonate sources and are thus not local sediments. The deposits N of Haifa, however, are essentially composed of calcium carbonate and are derived locally from the weathered rocks of the interior of Palestine.

Much of the shoreline has precipitous rock cliffs 10 to 40 m high suggesting that the coast is erosional in nature. Sandstone outcrops locally called "kurkar ridges" parallel the shoreline. Kurkar are thought to be sand dunes deposited during the Pleistocene and cemented by calcareous solutions. However, recent investigations (Neev et al. 1987: 4–5) suggest that fault activity and earthquakes may account for the position and trends of the kurkar ridges.

b. The Hill Country. The hill country occupies most of the country between the coastal plain to the W and Jordan to the E. The hills were formed during the relatively recent Alpine-Himalayan mountain building period and are landforms of the Cenozoic age. With the exception of lower Galilee where

volcanic basalts cover the surface, the rocks are sedimentary carbonates and include limestones, chalk, marl, and dolomite.

Morphologically, the hills in the S (Judea) tread in a general north-south direction. Breaching and erosion has exposed the interior of some of these features, thus forming anticlinal valleys with interior drainage. Northward in Samaria over a distance of 50 km, three northeast–southwest ridges paralleled one another to form Mount Carmel in the NW, the Irron Hills in the center and the Tevez Hills in the SE. Structurally, the ridges are anticlines separated by two downward synclinal valleys. The subregion to the N is abruptly terminated by faults set at approximate right angles to the Jordan Valley, making the lineation of the ridges less clear.

The geomorphic picture in the hills of Galilee is less clear because folding was complicated by faulting. It has been suggested (Orni and Efrat 1971: 74) that an anticlinal ridge striking N/S is paralleled by secondary folds on its flanks similar to the hill country to the S. However, faulting across the strike of the folds created tilted blocks. An additional element adding to the complexity of the topography was the more recent volcanic activity which has produced basalt plateaus. In summary, the topography consists of isolated narrow ridges, elevated plateaus, and dissected valleys and basins.

c. The Dead Sea Rift. The most striking topographical feature in Palestine is the elongated valley created by rifting between the Cisjordan and Transjordan. The rift is the N sector of a plate boundary which extends southward into the Red Sea. A branch of the rift extends into E Africa which is occupied by well known lakes such as Lake Tanganyika and Lake Rudolf of the African Rift Valley. In Palestine the width of the rift varies from 5 to 25 km. Three lakes occupy the rift. From N to S these are Lake Hula (el. +70 m), Sea of Galilee (el. –209 m) and the Dead Sea (el. –395 m). Both Lake Hula and the Sea of Galilee were created by lava dams which impounded the drainage to the S. Prior to the 1950s Lake Hula, which was a basin colonized with papyrus and other marsh plants, was converted to fertile farmland (Fisher 1978: 414). The difference in elevation between the rift floor and adjacent upland is explained in part by vertical faulting which intensified during Late Cenozoic time. However great thicknesses of sediment have also contributed to the subsidence of the rift. On the basis of geophysical evidence, (Orni and Efrat 1971) 7000 m of alluvium overlie the bedrock in the Dead Sea area. The river readjusted its gradient as the water level of the Dead Sea oscillated. During higher lake levels the Jordan River meandered within its valley depositing alluvium (Kallner and Rosenau 1939). As the level of the Dead Sea fell, the river incised the valley bottom, creating a lower floodplain and abandoning the formerly deposited older and higher surfaces which now stand as river terraces.
